If there was ever any question that the power and discretion of the Labor Board should be redefined and limited, this decision should settle it. Unquestionably it is the Board's practice to fix its findings to fit a predetermined decision. This communication is addressed to you, first, because of your awareness of the misadministration of the Wagner Act by the Labor Board, and, second, because, although the C. I. O. could not and never will muster enough votes to defeat our independent union, we fear the Labor Board's statement that it will not hold a new election "until such time as we are satisfied that the effects of the respondent's unfair labor practices have been dissipated sufficiently to permit a free choice of representative" can only mean that they hope to stall us into disintegration. They have failed to accomplish this in the last year and a half, but human nature can only stand so much injustice.

We request that you read this communication to your distinguished colleagues, and thereby let the country know that promises of self-correction of abuses of authority by the Labor Board are being violated even before Congress adjourns.

G. T. JONES, *President.*

The following is a copy of a letter directed to the Secretary of Labor, sent me by Mr. Harry Strom, of Moline, Ill.:

MOLINE, ILL., *June 21, 1939.*

SECRETARY OF LABOR,
Department of Labor, Washington, D. C.

DEAR MME. SECRETARY: I wish to enter a protest against the procedure adopted by the Labor Employment Offices in placing men in employment.

About the middle of April of this year the Labor Employment Office in Rock Island, Ill., had a call for several millwrights. The demand was greater than their supply of registered millwrights. So the employment office requested radio station WHBF to announce the opportunity for employment for several millwrights. So much, so good.

I was unemployed and have had considerable experience as a millwright and as a millwright foreman.

I have not filed as unemployed with the employment office for over 2 years, so my name was not in their files.

I went to the Rock Island office and tried to find out who it was that wanted the millwrights but this information was refused me because I was registered.

I was then requested to fill out a registration card and a man employed there began to ask questions and fill out the card. There was not one question asked regarding my qualifications as a millwright.

This work comes under the jurisdiction of the carpenters, and I have worked at that trade for over 40 years.

In filling out this card this man wanted my entire work record covering over 40 years of employment in several States. It was impossible for me to furnish this information. I finally became disgusted and told him to "tear up the card. I have lived nearly 64 years without your help, and I can live the rest of my life without help from a labor office."

It makes any red-blooded citizen see red when he begins to see the trend, which is. It will not be long until every employer in our land will be forbidden to employ a worker other than through a Federal employment office.

Us workers will then find that we will be given employment only at the pleasure or whim of some clerk in the Labor Office. Unless I belong to the right political party and vote right (according to the employees of the employment office) there will be no work for me.

I want to ask you in all fairness: What business is it of the employer or the Government who my parents were and where they were born; if I am married and how many dependents I have?

I have employed hundreds of men, and the only thing I was interested in was their qualifications for the work they were doing. Certainly, married or single-blessedness; religion and paternal ancesters are not qualifications for citizenship in the United States of America under our Constitution, and these should not be used in favor of, or opposition to employment.

Why not change those questions so as to make some effort to furnish the employer with competent labor instead of political preferment?

Young men just completing an apprenticeship need only answer back that far, which is generally 3 or 4 years. Why should any citizen be required to go back any further? Are we not supposed to be equal before the law?

Some of the questions are humiliating. They might be proper in a divorce court, but for the purpose of seeking employment are of no economic value either to the employer or the Government.

This protest will not doubt fall upon deaf ears, but I must get this off my chest to inform you that at least some of us workers are getting plenty tired of our Federal Government meddling in the economic field as respects the interests of employers and employees. We are aware of the trend of leading us piecemeal into a communistic dictatorship.

Yours for more freedom in America.

HARRY STROM,
2630 Fourth Avenue, Moline, Ill.

Tacoma Light and Power Rates Compared With T. V. A. Rates

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1939

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I insert a statement of the Public Light & Power System of the city of Tacoma, Wash.

I hope every Member of the House, and everyone else who reads this RECORD, will study this statement carefully. It is a complete answer to every criticism that has been lodged against the T. V. A. yardstick rates for electric lights and power.

You will note that the residential rates at Tacoma, as shown under schedule A–1, are as follows:

Cents per kilowatt-hour	
First 20 kilowatt-hours	4.5
Next 400 kilowatt-hours	1.0
Over 420 kilowatt-hours	0.5

Minimum charge, 50 cents per month.

NOTE.—For house-heating purposes the second or 1-cent step of the above rate is increased 25 kilowatt-hours for each kilowatt of heating capacity installed in excess of 10 kilowatts.

The T. V. A. yardstick residential rates are as follows:

Cents per kilowatt-hour	
First 50 kilowatt-hours	3.0
Next 150 kilowatt-hours	2.0
Next 200 kilowatt-hours	1.0
Next 1,000 kilowatt-hours	0.4
Excess over 1,400 kilowatt-hours	0.75

Thus you will see that the T. V. A. residential rates are considerably higher than the Tacoma residential rates.

Tacoma is a town of about 110,000 population, and has an investment of $26,953,292.51, which it has paid down to $4,563,000. By 1951 this indebtedness will be entirely paid off and then the rates will be dropped to the irreducible minimum.

Now, let us take the commercial rates. The Tacoma rates as shown under schedule B–1, are as follows:

Cents per kilowatt-hour	
First 100 kilowatt-hours	3½
Next 400 kilowatt-hours	2½
Next 1,000 kilowatt-hours	1½
Over 1,500 kilowatt-hours	1

Minimum charge 67 cents per kilowatt of connected motor load, but in no case less than 50 cents per month.

The T. V. A. yardstick rates for commercial consumption are as follows:

Cents per kilowatt-hour	
First 250 kilowatt-hours per month	3
Next 750 kilowatt-hours per month	2
Next 1,000 kilowatt-hours per month	1
Excess over 2,000 kilowatt-hours per month	.8

So you will see that the Tacoma commercial rates are about equal to the T. V. A. rates.

A comparison of the industrial rates will show about the same ratio.

I know it has been said by friends of the private power interests that public power plants pay no taxes. You will note from this statement that Tacoma in 1938 paid taxes in the amount of $248,391.05. That is more than the average private power company pays in any city the size of Tacoma.

Remember also that private power companies never amortize their indebtedness but will continue to charge interest as well as dividends on it throughout all time to come if permitted to do so.

I am inserting this Tacoma annual statement in full, and, as I said, I invite each and every one of you to study it carefully and then join us in our efforts to place electricity in every home, in every business establishment, and on every farm in America at these rates. By doing so we would reduce electric light and power rates to the American people by approximately $1,000,000,000 a year, and would make this country a richer, a brighter, and a better place in which to live.

The statement referred to follows:

1938 FINANCIAL STATEMENT AND OTHER GENERAL INFORMATION—CITY OF TACOMA, DEPARTMENT OF PUBLIC UTILITIES, LIGHT DIVISION

Annual income, profit, and loss, year ending Dec. 31

	1936	1937	1938
Current annual income:			
Operating revenues	$2,359,964.91	$2,546,314.88	$2,473,734.27
Less operating expenses	494,075.76	605,248.70	706,401.09
Gross operating income	1,865,889.15	1,941,066.18	1,767,333.18
Less depreciation	460,352.68	467,604.87	474,084.63
Operating income	1,405,536.47	1,473,461.31	1,293,248.55
Miscellaneous revenues and expense	(8,788.27)	(7,665.94)	31,266.66
Gross income	1,396,748.20	1,465,795.37	1,324,514.61
Deductions from gross income:			
Interest	319,791.87	284,597.30	248,610.31
Amortization of debt discount	13,259.41	11,616.32	11,368.20
Taxes	236,411.42	256,833.54	248,391.05
Total deductions	569,462.70	553,047.16	508,369.56
Net annual income	827,285.50	912,748.21	816,145.05
Profit and loss:			
Current annual period	(1,571.16)	(19,860.58)	2,621.47
Prior periods	794,718.88	3,067.11	110,948.21
Income profit and loss, total	620,433.22	895,954.74	929,714.73
Less appropriations to bond redemption reserves	679,333.34	714,333.32	745,833.34
Add bond redemptions	678,000.00	713,000.00	744,000.00
Income profit and loss balance to unreserved surplus	1,619,099.88	894,621.42	927,881.39

Comparative balance sheets, Tacoma Light Division

	1936	1937	1938

[1] Cents per kilowatt-hour.

Operating expenses

	1936	1937	1938
Production	$127,277.14	$185,781.39	$184,346.18
Transmission and transformation	72,705.27	91,211.38	124,122.55
Distribution	96,679.57	129,080.27	149,736.10
Utilization	23,184.96	26,973.47	59,930.25
Commercial	83,288.10	93,477.46	110,216.08
General	90,940.72	78,724.73	78,049.93
Operating expense	494,075.76	605,248.70	706,401.09
Depreciation	460,352.68	467,604.87	474,084.63
Total operating expenses	954,428.44	1,072,853.57	1,180,485.72

Taxes—direct and indirect

	1936	1937	1938
Gross-earnings tax, State	$64,824.63	$71,313.87	$68,229.06
Gross-earnings tax, city	171,586.79	185,519.67	180,161.99
Gratuitous work	1,226.85	1,667.58	442.12
Hydro, gas, and miscellaneous taxes	35,296.89	21,064.70	31,585.53
Total	272,935.16	279,565.82	280,418.70
Percentage to gross operating revenues	11.57	10.98	11.34

The light division also pays to the city of Tacoma general fund for services rendered 30 percent of all salaries in the following city offices: Treasurer, controller, attorney, city clerk, civil service, and city purchasing agent, as well as rental for quarters occupied. This expense for last 3 years amounted to: 1936, $18,004.97; 1937, $19,665.01; 1938, $21,554.26. See further explanation under Revenue Dollar.

CONDENSED RATE SCHEDULES

Residential rate

Schedule A–1: The residential rate for lighting, cooking, heating, and incidental single-phase power is as follows:

Cents per kilowatt-hour

First 20 kilowatt-hours	4½
Next 400 kilowatt-hours	1
Over 420 kilowatt-hours	½

Minimum charge, 50 cents per month.

NOTE.—For house-heating purposes, the second or 1-cent step of the above rate is increased 25 kilowatt-hours for each kilowatt of heating capacity installed in excess of 10 kilowatts.

Commercial light and power rates

Either one of the following rate schedules is available for nonresidential lighting, cooking, heating, and incidental power:

Schedule B–1: *Cents per kilowatt-hour*

First 100 kilowatt-hours	3½
Next 400 kilowatt-hours	2½
Next 1,000 kilowatt-hours	1½
Over 1,500 kilowatt-hours	1

Minimum charge, 67 cents per kilowatt of connected motor load, but in no case less than 50 cents per month.

Schedule C–1: The kilowatt-hours used per month up to 100 times the billing demand measured in kilowatts are charged for according to part I below and the remaining kilowatt-hours according to part II below.

Cents per kilowatt-hour

Part I:	
First 1,000 kilowatt-hours	3½
Over 1,000 kilowatt-hours	2
Part II:	
First 2,500 kilowatt-hours	1
Excess	½

Minimum charge, 67 cents per kilowatt of connected motor load, but in no case less than 50 cents per month.

General power rate

The general power rate is available for commercial heating and cooking, industrial and general power service.

Schedule E–1: The kilowatt-hours used per month up to 70 times the billing demand measured in kilowatts are charged for according to part I below, and the remaining kilowatt-hours according to part II below.

Cents per kilowatt-hour

Part I:	
First 5,000 kilowatt-hours	2
Over 5,000 kilowatt-hours	1
Part II:	
First 20,000 kilowatt-hours	.5
Excess	.3

Minimum charge, 67 cents per kilowatt of billing demand, but in no case less than $2.50 for polyphase service per month.

The connected load is taken as the billing demand for connected loads up to 15 kilowatts. A demand factor is used on connected loads of from 15 to 30 kilowatts to determine the billing demand. The billing demand for connected loads of over 30 kilowatts is determined by means of demand meters.

Contract power rates

Contract power rates that provide for a lower step in the rate than quoted above are available to large consumers who maintain a power factor of 90 percent or better; provided, however, that each contract is approved separately in writing by the commissioner of public utilities and the city council.

1938 revenue dollar

	Percent
Operating expense	47.1
Commercial utilization and general	9.9
Distribution	6.0
Transmission	4.9
Production	7.4
Depreciation	18.9
Deductions from gross income	20.3
Interest	10.4
Direct taxes [1]	9.9
Net income	32.6
Appropriated for bond redemption	29.7

[1] Direct taxes include gross revenue taxes paid to State and to city only. The total taxes amount to 11.34 percent of the total revenue, and are detailed below:

State of Washington:	
Public utility, tax 3 percent	$69,965.10
Business activities, sales, and compensating taxes	6,048.13
Auto licenses and gas tax	3,514.55
Power license fees	2,966.66
Total State of Washington	82,494.44
Mason and Pierce Counties:	
Mason County schools	4,442.98
Pierce County schools	3,500.00
Total counties	7,942.98
City of Tacoma:	
Gross earnings tax (7½ percent)	180,161.99
Inspection services	9,377.11
Gratuitous work	442.12
City of Tacoma	189,981.22
Total	280,418.64
Additional contributions and services to the city of Tacoma:	
Street lighting energy (1938) unpaid	69,613.04
Street lighting operations and maintenance (1938) unpaid	41,460.40
30 percent general fund office expenses [a]	21,554.26
Additional to city of Tacoma	132,627.70

[a] Contributions to offices of city controller, department of public finance, city clerk, board of contracts, and awards, and the Civil Service Commission.

Statement of bonded debt Dec. 31, 1938

Name of bonds	Date of issue	Amount of issue	Interest rate	Amount outstanding	Purpose of issue
Light and power general bonds	1909	$300,000.00	4½	None	Nisqually light and power.
Electric light and power refunding bonds	1913	250,000.00	5	None	Refunded part of water and light bonds, 1893.
Do	1913	60,342.79		None	Nisqually light and power.
Electric light and power revenue bonds	1910	1,700,000.00	5	None	Construction of Nisqually plant.
Do	1919	300,000.00	6	None	Purchase of Cushman power site.
Electric light and power revenue bonds, series A	1924	4,000,000.00	5½	$500,000	Construction first Cushman unit.
Electric light and power revenue bonds	1926	200,000.00	5	None	Plant improvements, Commerce St.
Electric light and power revenue bonds:					
Series B–1	1929	1,000,000.00	5	None	Construction second Cushman unit.
Series B–2	1929	1,500,000.00	4¾	816,000	Do.
Series B–3	1929	1,350,000.00	4¾	1,350,000	Do.
Series "C"	1930	500,000.00	4¾	322,000	Construction third Cushman unit.
Electric light and power revenue bonds	1930	2,000,000.00	4¾	1,575,000	Construction steam plant No. 2.
		13,160,342.79		4,563,000	

Plant investment, $24,429,241.93. Bonded debt, $4,563,000. Balance of cost of plant paid for from earnings of system. Final bond payment on present indebtedness will be paid on Apr. 1, 1951.

North East Air Base

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

LETTER FROM THE WILLIAMSPORT COMMUNITY TRADE ASSOCIATION, AND ALSO A STATEMENT OF FACTS RELATIVE TO LOCATION OF THE NORTHEAST AIR BASE AT WILLIAMSPORT, PA.

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

WILLIAMSPORT COMMUNITY TRADE ASSOCIATION,
Williamsport, Pa., June 19, 1939.

Hon. ROBERT F. RICH,
House Office Building, Washington, D. C.

MY DEAR MR. RICH: In his special message to Congress on national defense, January 12, 1939, President Roosevelt declared:

"I have called attention to the fact that 'we must have armed forces and defenses strong enough to ward off sudden attack against strategic positions and key facilities * * * essential to insure sustained resistance and ultimate victory.' I have said, 'We must have the * * * organization and location of those key facilities so that they may be immediately utilized and rapidly expanded to meet all needs without danger of serious interruption by enemy attack.' * * * I repeat that 'there is new range and speed to offense.' * * * 'Therefore, it has become necessary for every American to restudy present defense against the possibilities of present offense against us.'"

In conformity with the request of the President we are addressing your personal attention to a highly "strategic defense position" that would prove of the greatest possible military and tactical value in defending "strategic positions" and "key facilities" against "sudden offensive attacks by enemy aircraft," so ably described by the President.

In response to the Presidential request, the Committee on Appropriations has now favorably reported H. R. 6791 from that committee. In that bill provision has been made for the construction of new air-defense bases and the enlargement of existing corps bases. These include the building of the northeast air defense base, the location of which has not as yet been decided upon either by the War Department or the Congress of the United States.

Now comes the Williamsport Community Association to point out to the President and Members of Congress, as well as to the War Department, the almost invulnerable strategic position available for defense air-base development, coupled with the highest natural defense values which could characterize such a base if constructed adjacent to the city of Williamsport. This, because of peculiarities and uniqueness of physiography, topography, climatology, and transportation and facilities, as well as other characteristics equally essential and necessary to peacetime trainings as well as wartime operations. These are existent and now available at Williamsport.

The city of Williamsport, located in the center of Pennsylvania, one of the North Atlantic States, lies behind the Blue Ridge Mountains and nestles on a plateau on the Allegheny front.

To locate the northeast air defense base on this plateau would enable United States defense forces to avail themselves not alone of strategic location of a base from which to launch an offensive attack, but, by virtue of the surrounding mountain terrain, it would afford the highest type of defensive protection against any and all surprise attack by enemy aircraft. The northeast air defense base located at Williamsport would be located in the center of America's industrial and chemurgic industries, and transportation systems and would permit of the highest degree of defensive action brought to the aid of more than 50 percent of all United States wartime activities, comprehending those of mining, manufacturing, transportation, and finance.

Its location would enable effective defense in less than 1 hour of flying time to engage any, or all, military action against the Nation's Capitol in Washington; the seaports of New York, Philadelphia, Baltimore, and Boston; the lake ports of Buffalo, Erie, and Cleveland; the industrial cities adjacent to these ports; the great chemical industries of New Jersey; the mining industries of Pennsylvania; the steel-producing areas of Bethlehem, as well as those of the Monongahela and Allegheny Valley. Pittsburgh, Wheeling, and Youngstown would be less than 1 hour by fast plane, while Rochester and Albany, N. Y., Trenton and Camden, N. J., Springfield and Boston, Mass., Wilmington, Del., Hagerstown, Md., and to scores of other areas and industries, all of which lie within a limited 200-mile radius of the city of Williamsport.

Twenty-five percent of the population of the United States, embracing more than 33,000,000 of our civil workers, could be effectively defended against foreign attack by Army or Navy planes and bombers, roaring out of hangars, located on the Allegheny front, adjacent to the city of Williamsport. The defense facilities themselves would be land-locked and mountain-protected by various ridges of the Allegheny system which would encompass their location. Please find attached factual and statistical data in support of our proposal to locate the northeast air defense base in the Lycoming Valley of the Susquehanna.

Thanking you to give consideration to Williamsport, Pa., in the location of this most important of all strategic defense bases, and for your every courtesy in this matter, we are

Very truly yours,

WILLIAMSPORT COMMUNITY TRADE ASSOCIATION,
C. E. NOYES, *Secretary.*

The city of Williamsport, which is virtually the industrial and chemurgics center of the great industrial East, numbers among its many industrial operations the Lycoming Motors Co., the Aviation Corporation, the Piper Aircraft Corporation, and other small industries engaged in the manufacture of aircraft and aircraft parts.

Several of these concerns are at this very moment working on Government air defense contracts embodying tests upon special appliances, engines, and instruments of great value both to the Army and to the Navy of the United States. Almost every hour of the day and night, test planes making use of the municipal airport are in the air testing various aircraft and parts.

The interest of the citizenship of the city of Williamsport in aviation is indeed an interest of long standing. It found its expression in part by the establishment several years ago of an accredited course in aviation and aircraft mechanics by the board of education, which course is now given as part of the public school educational system.

The Williamsport Vocational Training School, its faculty, and curricula are nationally known and recognized throughout the entire country. The National Youth Administration, as well as the C. C. C., are at present availing themselves of the splendid facilities afforded by the Williamsport vocational training course for aviation mechanics, at which school at present there are conducted both day and night classes.

More recently, moreover, a group of prominent Williamsport civic air-minded citizens have been conducting incursive researches at their own expense with a view to interesting the War Department in locating an air-defense base adjacent to and directly south of the Williamsport municipal airport.

This committee has no profit motive, is thoroughly disinterested in the location of the proposed northeast air defense base, and * * * has no land to sell the Government. * * * In fact, the members of the committee have themselves personally subscribed a sum upward of $30,000 with which to purchase the existing municipal-airport land, and, after having acquired the same, donated it to the city of Williamsport. In addition thereto they later contributed additional sums for the further development of the Williamsport civil-airport facilities, and this municipal airport, now about completed, will rank among the finest civil airports in the country.

The committee is now addressing its attention primarily to securing in behalf of the Nation's defense the establishment of a northeast national air base, and second to that objective is that of securing for the city of Williamsport such economic benefits as might accrue from the establishment of a national air defense base adjacent to the city of Williamsport.

From a standpoint of strategic location the committee is authoritatively and reliably informed that there is probably no site in the North Atlantic States which is so admirably and highly suited, nor is there any other site or location which so readily lends itself to economic improvement as would the development and improvement of this location in the west branch Susquehanna, Valley of Lycoming.

The site herein proposed lies inland behind the Blue Ridge chain of mountains, is situated across the boundary, and on a plateau of the Allegheny front. The northeast air defense base located on this plateau would not alone enjoy a maxima of concealment against discovery but would inherently enjoy natural defense aids through mountain protection, against any and all surprise attack from enemy aircraft. In effecting defense tactics, it affords impregnable defense action in behalf of practically 50 percent of America's wartime industrial activities.

The location itself affords splendid flying conditions throughout the year. Recent tests have been made over the last 6 months which comprehends the worst flying weather period of the year. These tests and observations disclosed the fact that there was but 1 single day when the Pennsylvania Central Air Lines had to fly over this area and over the municipal airport due to local "Williamsport weather conditions."

Although virtually surrounded by mountains, it is accessible through a pass to the west through which the Susquehanna enters on to the south through which it leaves the valley. The rail lines follow the river. The site itself is on an average of 560 feet above sea level. It is slightly more than 1 hour by air in fast planes from the Nation's Capitol in Washington, the Atlantic seaports of New York, Philadelphia, Baltimore, Boston, as well as from the Great Lakes ports of Buffalo, Erie, and Cleveland. The cities of Rochester, Syracuse, Pittsburgh, Wheeling, Hagerstown, all of which are to be found on the periphery of a 200-mile circle drawn about the city of Williamsport would likewise be less than 1 hour from the northeast air defense base if located at Williamsport.

A fleet of defense bombers and pursuit planes roaring out of Army and Navy hangars located at the proposed northeast air defense base, if located at Williamsport, could within 1 hour give an effective air defense against enemy aircraft to more than 33,000,000 of our civilian population, all of whom are located and live within a 200-mile radius of Williamsport.

From the standpoint of accessibility by air as well as by highway and rail lines and from the standpoint of existing educational, recreational, housing, hospitalization, religious, and other economic and social factors, they are already available and existent. The committee is reliably assured that there is no other location possessing the necessary characteristics for effective training in peace as well as effective defense in war-offensive operations that is comparable to the facilities existent and available adjacent to the site proposed for development at Williamsport.

The West Branch Susquehanna forms the western boundary of the area. Landing bases for the receipt of seaplanes could quickly and economically be developed by damming up any of several live streams at any one of more than a dozen dam sites on the properties for receipt and dispatch of seaplanes. Large areas of practically flat lands would lend themselves to development as landing and flying fields for landplanes. Federal highways of great military and strategic value radiate from the entrance and exit to the valley and the site to all points north, south, east, and west.

The Pennsylvania Railroad system, a highly developed line with double-track roadbed, as well as the Philadelphia & Reading Railroad skirt the site to the west. These afford rapid and quick rail transportation to practically every important strategic location on the eastern seaboard as well as all inland cities.

Vast acreage of mountain lands are available at low cost. These are highly suited to the development as air-bomb and machine-gun ranges. They could be located with absolute safety and convenience in the surrounding hill country.

What is virtually a plain of gently rolling and billowy plateau lands with thousands of acres of rich alluvial soils, large areas of which are cleared and now under cultivation to various field and row crops. The soils are predominantly of a gravelly silt loam to depths below the low level of the adjacent Susquehanna. These soil types afford most excellent natural drainage and aeration facilities.

Being warm soils, the frost penetration is at a minimum. The temperature in the valley is notably moderate. The winters are comparably mild, the temperatures averaging 10 degrees less on the plateau than in the surrounding mountains. Snowfall on the plateau and in the valley is comparably light, as compared with the snowfall in the surrounding hill lands.

Local fliers, pilots, and military men have advised this committee that, from a strategic, tactical, air, and military defense standpoint, no base for a second line of defense can be found anywhere in the North Atlantic States equal or comparable.

There is an abundance of good potable water as well as of building materials in the shape of sand, gravel, and building stone accessible and subject to quarrying operations with a minimum of expense now upon the project site. The right-of-way of an abandoned railway bisects the land. The culverts and bridges of this road, but recently abandoned, are in fairly good shape, ready to receive new rails.

Concrete highways, with county macadam roads, are already constructed, so that the War Department could develop at this point the Northeast Air Base with a minimum of expenditure, compared to the cost of developing such a project upon raw lands attended by a complete lack of transportation, educational, recreational, religious, and commercial facilities.

The splendid educational, recreational, religious, financial, and commercial facilities afforded by the city of Williamsport are close at hand. Williamsport is possessed of one of the finest hospitals in the State of Pennsylvania. The area is served by high-tension power lines powered by the Pennsylvania Electric Light & Power Co., which utility has ample generative reserves upon which the Government could readily draw. The hard- and soft-coal fields of Pennsylvania are close at hand.

It was only after the most incursive analysis had been made into meteorology, climatology, topography, soils, drainage, educational, sociological, and recreational conditions and facilities, coupled with a knowledge of the local transportation, finance, and trade conditions, that the Williamsport Community Trade Association decided to submit to Congress and the Government this highly suited location for the northeast air defense base.

As a Member of Congress, the Williamsport Community Trade Association submits to your consideration the fact that there is no such centrally located point in the North Atlantic States which is so highly suited from tactical, strategic, and militaristic and aeronautical standpoints as is the Lycoming Valley of the Susquehanna for the development of this powerful defense arm, which is a base designed primarily to defend the North Atlantic States and the industrial area of the United States from foreign air attack.

Relief Program

EXTENSION OF REMARKS

OF

HON. CHARLES O. ANDREWS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, June 26 (legislative day of Thursday, June 22), 1939

RADIO ADDRESS BY HON. LEWIS B. SCHWELLENBACH, OF WASHINGTON, JUNE 25, 1939

Mr. ANDREWS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the very able address delivered over the radio on June 25, 1939, by the junior Senator from Washington [Mr. SCHWELLENBACH] on the all-important subject of the relief program.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

To fully discuss the question of unemployment relief would take many hours. My time tonight is 12 minutes. Therefore, I must limit my remarks to a few of the fundamentals involved in this very complicated problem.

The first question confronting us is whether, in a democracy, government has the responsibility of assisting those who, through no fault of their own, are unable to find employment in private industry. This may have been debatable when President Hoover was arguing that Government funds should only be used to help the railroads and the banks. It is not even a subject of dispute today.

In this morning's issue of the New York Times one of the financial editors says: "Virtually everyone will agree today with the general proposition that the Federal Government must spend whatever is necessary to keep those who are unemployed from serious privation. There are even supporters among the biggest Wall Street bankers of the theory that in hard times government should make compensating expenditures to help stimulate a revival."

My good friend from Kansas, Senator CAPPER, has, by his record during the past several years, indicated his acceptance of the proposition.

To those who view problems with sympathetic understanding, an appeal only to humanity is necessary. To those who insist upon some selfish reason for their motive, an equally potent answer can be given. If our present economic system is to be retained it must have the support of our democratic system of government. We cannot maintain our democracy if our Government refuses to recognize responsibility to its people. Men submit to the limitations of government in order to secure protection against foes within and without. Privation, starvation, sickness, and despair constitute as much a threat to the people of the Nation as do the armed forces of any foreign foe. Men have always demanded protection against them. When their governments failed in that protection they have turned upon those who

ruled them. Revolutions come when people starve. It was the starving unemployed in Russia who made possible Lenin and Trotsky. It was the starving unemployed in Italy who paved the way for Mussolini's march upon Rome. It was the starving unemployed in Germany who gave Hitler his Nazi power. We want none of that here. The unemployed of America must know that their democracy will not fail them.

There are, however, those in this country who say that this responsibility rests with the States and counties and the cities to administer any program of relief. They would limit the Federal Government's activity to furnishing the money to be handed over to the local authorities for expenditure. They would overlook the fact that such a system would result in several thousand different systems and different standards both of qualifications and pay. They would have you overlook the fact that if the money was administered by the States, programs would have to be laid out on a 2-year basis because State legislatures only meet biannually or that repeated calls for special sessions of legislatures would be required.

These advocates of local administration say it would be cheaper. The facts don't bear out this contention. Assuming the monthly payment to unemployed workers would not be changed, the only saving would come in a reduction of administrative expense. The States and local units today are administering expenditures for direct relief to unemployables. The administrative costs of this operation certainly should be less than the administrative costs of the more complicated task of the Federal work-relief program. Yet the percentage of administrative costs to total expenditures by the States and local units is 16 percent, and with the Federal program it is less than 3½ percent.

Our opponents say that better projects would be secured under local administration. The fact is that today the selection of the projects rests exclusively with the local units. Can anyone seriously contend that we can secure a better selection by a board of county commissioners simply by ha. ding it a lump sum coming from the Federal Government than we have today, when they choose the projects, subject to a check thereon by representatives of the Federal Government.

The advocates of local administration say that it will eliminate politics. I make no claim that Works Progress Administration has been perfect so far as the question of politics is concerned. On the other hand, without casting any reflections on county commissioners, I ask you if you know any place in the country where you'll find more politics than the average county courthouse? The great political machines of the country, many of the leaders of which are now residing in penitentiaries, have been local political machines. Can anyone imagine a State legislature or a board of county commissioners or a city council placing the restrictions on political activities upon any of their workers such as the Congress places upon the administrative employees of W. P. A.? The law provides that campaign contributions cannot be solicited from W. P. A. workers. Employment, compensation, or other benefit can neither be promised, given, or received as a consideration of favor or reward of political activity for the support or opposition of any candidate or political party in any election. No person may be deprived of or threatened with the loss of work on W. P. A. because of the way he votes. The violation of any of these sections is a felony, subject to a thousand-dollar fine and a year in the penitentiary. Furthermore, ever since the Federal relief program started the selection and certification of those entitled to work relief has been done by the States and local units. The Federal Government has never had anything to do with that part of the task.

This last fact also answers the argument that a better selection would be made and that more worthy people would receive jobs if administration was in local hands. The selection would remain precisely where it is now. If the Federal Government is to collect the money from all the people in the country to finance the work program for unemployment, it not only has the right but the duty to all the people to see that the same relative standards are maintained in all parts of the country. That would never be done under a purely local administration.

The other alternative proposed is that we should abandon work relief and go to what is politely called direct relief. I say "politely called direct relief" because the real name for it is the dole. The argument for it is that we could save money. I will admit that it would seem that the administrative costs should be cheaper when we are simply handing out monthly checks than when we are going through the elaborate process of a work program for which those checks are given. But, as I said a few minutes ago, the facts are that administrative costs for direct relief for unemployables are 16 percent as compared with 3½ percent for work relief for employables.

I will admit that money could be saved under the dole system. It would be much easier to justify drastic reductions in the amount paid to each individual when he doesn't work for it than when he does work for it. The conscience of those industrialists whose incomes under the first 6 years of this administration were about twice what they were under the 4 years of the Hoover administration probably would be much eased in forcing starvation on a nonworker than on one who added to the wealth and resources of the Nation; that is, of course, assuming that they have a conscience. For myself, I think a dole is entirely out of place and will never be accepted by democratic America.

I know some of the cruel stories that are told about W. P. A. workers. I know they are accused of leaning on a shovel. Maybe a few of them do lean on shovels. I prefer to have them lean on a shovel under a democracy here than to have them lean on a rifle as they do under dictators in Europe.

According to our Republican friends, men get lazy after they get on W. P. A. and don't want to get a job. On that point, let me read from the United States News, published by David Lawrence, who certainly cannot be classified as a New Deal supporter. Mr. Lawrence says: "Contrary to popular belief, the relief population is a shifting one. W. P. A.'s personnel is constantly changing, with a turn-over of approximately 8 percent a month or 100 percent a year. The average worker spends 12½ months in continuous W. P. A. employment, but as one worker leaves another usually applies for his job."

We have passed through dangerous times in this last 6 years. Governments all over the world have changed in their forms. Men and women almost everywhere have sacrificed liberty and the rights for which their people have fought through the centuries. Yet we here maintain a system of government with democratic rights, liberties, and privileges. In my opinion, the most powerful weapon we have used in defense of these rights is the fact that since March 4, 1933, the people of the country have known that they had a government in Washington which had enough understanding of them and their problems to give them a chance to work and keep the wolf of starvation from their doors.

Furthermore, the work program has brought concrete results in the form of actual assets belonging to the Federal, State, and local governments which never would have come through the dole system. I could continue on indefinitely reading lists of useful projects which have been constructed. Let me give you just a few: Seventeen thousand new public buildings have been constructed and 46,000 public buildings have been repaired; 279,000 miles of highways, roads, and streets have been constructed; 153 airports have been constructed, and 1,483,000 air beacons; 6,000 miles of water mains have been installed. These and hundreds of other similar projects stand as a monument to the effectiveness and the industry and the willingness to work of those who are today being made the butt of poor jokes about W. P. A. labor.

A work-relief program has not only made it possible to furnish to each worker the difference between starvation and food for himself and his family, but the payment of this difference has increased the value of the assets belonging to all of the people of the country in the form of projects of which even the most tight-fisted budget balancer should be proud.

At first, they objected to W. P. A. as a leaf-raking operation; now that it is actually producing tangible and valuable results, they want to convert it into a starvation dole.

Last week over this same program I warned against the danger of whipping up social and religious hatreds. These are the seeds which ripen into revolution. The unemployed, the starving, the desperate, those in despair furnish fertile fields for this ripening process. It is to prevent this that your Federal Government furnishes a program of employment to the millions of unfortunates during this period of world economic crisis.

Odd Fellows' Memorial Service at the Tomb of Unknown Soldier

EXTENSION OF REMARKS

OF

HON. M. M. LOGAN

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, June 26 (legislative day of Thursday, June 22), 1939

ADDRESS BY HON. EDWIN C. JOHNSON, OF COLORADO, JUNE 18, 1939

Mr. LOGAN. Mr. President, on June 18 of this year the Senator from Colorado [Mr. JOHNSON] delivered an address at the Odd Fellows' memorial service at the tomb of the Unknown Soldier. I ask unanimous consent to have the address printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is well that our grateful fraternity has set aside a day in which to pay honor not only to our country's military heroes but to indicate our eternal devotion to our own sisters and brothers who have finished their earthly assignment. All of them have well earned this poor tribute which today in deep humility and sweet recollections we offer. We have chosen an especially fitting place—our Nation's most impressive shrine, the Tomb of the Unknown Soldier—for this sincere ceremony.

BROTHERHOOD THE ANSWER

Our great and good fraternity recalls on this day set aside for that purpose our debt to the brothers and sisters of mankind who

have finished life's course. They fought a good fight against ignorance, hate, intolerance, and selfishness; they ran a good race against great obstacles; and like the revered St. Paul, they kept the faith. We cherish their blessed memory. When they lived their warm hearts formed a barricade against the pointed darts of inhumanity and injustice.

It is fitting that the Independent Order of Odd Fellows make this solemn pilgrimage to this beautiful hallowed spot to render tribute not to war but to peace. Our fraternity lives to promote peace. Our wise founders discovered long ago that the cause of all violence is selfishness, and that the cure for it is brotherhood. We believe that when men everywhere will band themselves together in a universal brotherhood of love and friendship, then, and then only, will strife, wars, and violence be no more.

WAR AGAINST SELFISHNESS

Indeed today's pilgrimage is not made to pay tribute directly or indirectly to war. Odd Fellows are not pacifists; we are realists and know that wars are sometimes forced upon a peaceful people with no other choice than armed defense, but since it has been our privilege to experience the perfect understanding of brotherhood, we know that there is a better way than fighting. Human selfishness is the demon that causes every war. Odd Fellows have sworn an unrelenting, bloodless war of education and persuasion against this ugly monster. Many courageous fraternal soldiers have already fallen in that long conflict which we have undertaken and we are met here today to do their memory loving honor and to show our gratitude for their patient leadership and service.

THE UNKNOWN SOLDIER

While we most earnestly believe that God in His infinite goodness has not forgotten the grave of a single American soldier wherever he may be taking his long sleep, we recall now that in the World War we buried 1,600 heroic lads without knowing who they were or from whence they came. All we know is that 1,600 torn and broken bodies—all that remained of these life-loving American boys who had answered their country's command to "go over the top" and bare their naked breasts to the murderous shrapnel, bursting bombs, and cannon fire of the enemy as they climbed through entanglements of barbed wire and floundered over ghastly shell holes carrying the Stars and Stripes forward—all we know, I repeat, is that these 1,600 were buried in unidentified graves across the Atlantic. It was not possible for our officers in charge of burial to identify these poor mangled bodies, and so they entered the silent legion of unknown soldiers—America's human sacrifice to the god of war. We also recall now that in the War Between the States there were 156,000 such graves. In the next war—and I pray to God there will never be another American war—there will be even a greater proportion of unknown soldiers, because modern munitions are becoming more and more adept in the destruction of human bodies.

HE IS OUR BROTHER

One from among the patriots who were slaughtered in France was selected to receive in this hallowed spot the tears and the tributes which America richly owed to the whole 1,600. The lad who rests here may have been a farm boy from the West or a tradesman from the North or a student from the East or a planter from the South. He may have been a college man, talented, cultured, well-bred, or he may have been of very humble origin, having had only meager opportunities. He may have been a Protestant, a Jew, or a Catholic. Ah, but he is everyone of these, for he represents here the whole 1,600.

Many of the gallant 1,600 were active, enthusiastic Odd Fellows—that we know—and we therefore have every right to pay our fraternal tribute today to the immortal American who rests here. He is our brother. I love to think of the Unknown Soldier as a typical happy-go-lucky American boy suddenly vaulted into mature manhood by his very grave responsibilities. I like to think of him as one who had had the privilege of the wholesome doctrine of Odd Fellowship and who as a brother had received it with a firm determination to make it the guiding light of his life. I can see now the older members of his lodge exchanging glances of approval during his initiation as he pledged his undying allegiance to the good cause, for they saw in him good fraternal material and a new brother of great promise. I like to think of him as the joy of his home, bubbling over with happy enthusiasm and full of the sparkling energy of youth, ready for any adventure the world had to offer him—however dangerous—the pride of his father, the love of his mother, the hero of his sisters and brothers and the soulmate of his young sweetheart.

A LASTING PEACE

Every Memorial Day should fortify the natural inclination of the American people to keep out of war, for on this day we forget its glories and in deep sorrow consider the human sacrifice incidental to it. This monument to the Unknown Soldier is the most eloquent plea for peace possible; it drives home the horrors of war as nothing else can drive them home. In the cold silence of the tomb the Unknown Soldier has become the Nation's most eloquent speaker in behalf of a lasting peace. He is a constant reminder of the folly and futility of armed conflict. He proves over and over and over that wars settle nothing and points out to all who will listen that when the killing is finished statesmen do what they should have done in the first instance—gather around the conference table and determine upon terms of peace. He demonstrates again and again that the god of war is not only a cruel bloodthirsty god who would destroy all humanity but that he is a false god as well. This silent brother teaches us that the God of love is the true and only God. Let us resolve here and now as fraternalists that insofar as we are able there shall never be another grave of another unknown American soldier in Flanders Field or in any other place.

MORAL EDUCATION

May we, therefore, preach the brotherhood of man and the fatherhood of God with every ounce of energy which we possess; teach it and live it and labor for it; for it alone will save mankind from men. The world today needs, more than it needs anything else, a course in moral education that will bring about a moral rearmament to end war. Our inspired fraternal leader, the grand sire of Odd Fellowship of the world, the Honorable Burton A. Gaskill, whom I have the great honor to represent today, started a movement for moral education the hour the purple robes of his high office were placed upon his broad shoulders. Moral education, as conceived by him, is the forerunner of the moral rearmament movement now growing so rapidly on both sides of the Atlantic. The time, is indeed, at hand for humanity to espouse in a vigorous manner such a cause.

"For our country, home, and flag we die"—some on the bloody battlefields of physical combat, others in humbler places along life's peaceful pathways. There is a patriotism of peace just as there is a patriotism of war. The patriotism of peace is splendidly exemplified in the loving service which fraternity has contributed to make life for every human being in all the world better and finer.

Cotton-Rubber Exchange

REMARKS

OF

HON. STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

Mr. PACE. Mr. Speaker, on behalf of the cotton farmers of the South I want to publicly express my appreciation of the efforts of the Department of State in negotiating an agreement for the exchange of 600,000 bales of surplus cotton for a like amount in value of rubber. I sincerely hope that this will prove to be only the first of similar exchange agreements, for not only do we now have an enormous surplus of cotton on hand but this Nation is in immediate need of an adequate supply of tin, tungsten, and manganese for purposes of national defense. In fact, the supply of rubber acquired by the present agreement would be consumed in a few months, while we should have a minimum stock pile of all four of these strategic materials sufficient for 2 years. That is the recommendation of the War Department.

It is also very necessary for improvement in the economic condition of the cotton producers of the South that we make early disposal of some of the surplus on hand. May I briefly outline the situation at this time?

We have on hand the smallest amount of free cotton, subject to sale, that we have had for many years—less than 3,500,000 bales. This is 42 percent less than this time last year and 34 percent below the last 10 years' average. And American cotton in foreign warehouses is only about two-thirds of what it was last year and only about one-half of the 10-year average. Unofficial estimates indicate that only about 25,000,000 acres have been planted in cotton this year, and we should have only a normal crop of not over 12,000,000 bales this fall. So that much of the picture is all right.

But in addition there are 11,317,860 bales in our warehouses covered by Government loans totaling $560,894,986. If we could just dispose of the extra 6,000,000 bales produced in 1937, our supply would be reduced to nearly normal. All this year I have been trying to get the Government to permanently set aside two or three million bales of this for military purposes and to swap or exchange three or four million bales for these needed metals and materials for national defense—that is, manganese, tungsten, tin, and rubber.

We must face the fact that we now have on hand, free and under loan, a total of nearly 15,000,000 bales of cotton, with another crop of 12,000,000 bales in the field, or more than 2 years' supply. On top of that, our exports or foreign

sales have dropped from the annual 10 years' average of 7,880,000 bales to less than 3,500,000 bales. In addition, production of cotton in foreign countries is rapidly increasing, and they are taking our foreign markets. Exports from Egypt in April were 48 percent larger than in April last year. For the first 8 months of the season exports from India were 54 percent larger than last season, and during the first 7 months exports from Brazil were 25 percent larger than last season and the largest in its history.

For example, for April, during the 10 years, 1923 to 1933, we sold Germany 99,000 bales of cotton; this April we sold Germany 15,000 bales of cotton. The average sales to England in April during the same 10-year period was 98,000 bales, while this April we sold them 20,000 bales. The same reduction is true as to our sales to France and Italy. But during the same period the monthly sales by Egypt to England increased from 37,000 to 78,000 bales; by Egypt to Germany, from 9,000 to 14,000 bales; and, by Brazil to Japan, the monthly sales increased from less than 1,000 to over 30,000 bales.

Mr. Speaker, it should therefore be readily understood how important it is that we not only seek exchange agreements similar to the one just concluded with Great Britain but that every agency of this Government participate in a vigorous fight to recapture our foreign cotton markets.

Mr. Speaker, I ask unanimous consent to extend and include in these remarks the text of the agreement just concluded between the United States and Great Britain.

The SPEAKER. Is there objection to the request of the gentleman from Georgia [Mr. PACE]?

There was no objection.

The text of the agreement referred to follows:

Agreement between the Governments of the United States of America and the United Kingdom for the exchange of cotton and rubber:

1. The United States Government will supply to the Government of the United Kingdom, delivered on board ship, compressed to high density, at New Orleans, La., and at other Gulf and Atlantic deep-water ports, to be agreed upon between the two Governments, 600,000 bales of raw cotton of grades and staples which will be specified by the Government of the United Kingdom. The United States Government will make available in adequate quantities for such purpose cotton from the stock on which the United States Government has made advances to growers.

(A) The price will be fixed on the basis of the average market price as published by the Bureau of Agricultural Economics for Middling seven-eighths inch cotton during the period January 1–June 23, 1939, for spot delivery at New Orleans, plus 0.24 cent per pound for cost of compression and delivery on board ship with adjustments in price for other grades and staples according to differences above or below Middling seven-eights inch quoted in that period.

(B) The cotton will be inspected to determine its classification in accordance with the universal cotton standards for grade and the official standards of the United States for staple, and will be accepted by experts appointed by the Government of the United Kingdom. Any disputes which may arise will be settled by boards of referees constituted of three members, of whom one shall be nominated by the Government of the United Kingdom.

WILL BE INVOICED

(C) Samples representing the cotton of the grades and staples specified by the Government of the United Kingdom will be made available for inspection and acceptance during a period of 6 months, beginning 15 days after the entry into force of this agreement, and such inspection and acceptance will be made within a reasonable time after the cotton is so made available. Delivery at the warehouse at the port of sailing with provision for free delivery on board ship at high density will be made within 15 days after inspection and acceptance, and storage and insurance charges will be borne by the United States Government for a period of 2 weeks, but no more, after delivery at the warehouse at the port of sailing.

(D) All cotton will be invoiced and accepted on gross weight at the time of delivery.

2. The Government of the United Kingdom will supply to the Government of the United States, delivered on board ship at Singapore and, by agreement between the two Governments, at other convenient ports, rubber in bales, of the grades which will be specified by the Government of the United States, to a value equivalent to that of the total value of the cotton to be supplied in accordance with paragraph 1 of this agreement. In determining such equivalent value, the rate of exchange between Straits Settlements dollars and United States dollars shall be deemed to be the average of the buying rate during the period January 1–June 23, 1939, in the New York market, at noon, for cable transfers payable in Straits Settlements dollars, as certified by the Federal Reserve bank to the Secretary of the United States Treasury and published in Treasury decisions.

CALCULATED ON AVERAGE PRICE

(A) The quantity of rubber will be calculated upon the average market price, as published by the department of statistics in the Straits Settlements, for No. 1 ribbed smoked sheets, during the period January 1–June 23, 1939, for spot delivery at Singapore plus 0.25 Straits Settlements cent per pound for cost of baling and delivery on board ship, with adjustments in price for other grades according to differences quoted in that period.

(B) The rubber will be inspected and accepted by experts appointed by the United States Government. Any disputes will be settled in accordance with the normal custom of the trade.

(C) The rubber will be made available for inspection and acceptance by experts appointed by the Government of the United States during a period of 6 months beginning at a date to be agreed upon by the two Governments, and such inspection and acceptance will be made within a reasonable time after the rubber is so made available. Delivery at the warehouse at the port of shipment with provision for free delivery on board ship will be made within a period of 15 days after inspection and acceptance, and storage and insurance charges will be borne by the Government of the United Kingdom for a period of 2 weeks but no more after delivery at the warehouse at the port of shipment.

3. If either Government should find that delivery in accordance with the arrangements specified in paragraphs 1 and 2 is likely to restrict supplies available to commercial markets unduly or to stimulate undue price increases, the two Governments shall consult with a view to postponing delivery or taking other action in order to avoid or minimize such restriction of supplies or such price increases.

WILL BE STORED FOR 7 YEARS

4. The intention of the United States Government and the Government of the United Kingdom being to acquire reserves of cotton and rubber, respectively, against the contingency of a major war emergency, each Government undertakes not to dispose of its stock (otherwise than for the purpose of replacing such stocks by equivalent quantities insofar as may be expedient for preventing deterioration) except in the event of such an emergency. If, however, either Government should at any future date decide that the time has come to liquidate its stock of cotton or rubber, as the case may be, it may do so only after (a) consulting the other Government as to the means to be employed for the disposal of such stock, and (b) taking all steps to avoid disturbance of the markets. In no case may either Government dispose of such stocks, except in the case of a major war emergency, before a date 7 years after the coming into force of this agreement.

5. The Government of the United Kingdom will use their best endeavors to secure that the export is permitted under the international rubber regulation scheme of an amount of rubber approximately equivalent to the amount of rubber which would under normal operation of the scheme be released to meet current consumption needs.

6. Each Government undertakes, in shipping to its own ports the stocks of cotton and rubber, respectively, provided for in this agreement, so far as may be possible, to distribute the tonnage equally between the ships of the two countries, provided that the shipping space required is obtainable at reasonable rates. Consultation for the purpose of giving effect to this paragraph shall be between the board of trade and the Maritime Commission.

7. Should the United States Government, before the delivery is completed of the cotton provided for in paragraph 1 of this agreement, take any action which has the effect of an export subsidy, they will deliver to the Government of the United Kingdom an additional quantity of cotton proportionate to the reduction in price below that provided for in paragraph 1 of this agreement caused by such action.

8. This agreement shall come into force on a date to be agreed between the two Governments.

Done in London in duplicate this 23d day of June 1939.

[L. S.] JOSEPH P. KENNEDY.
[L. S.] OLIVER F. G. STANLEY.

Ten Percent Reduction in Appropriations

REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

Mr. MARTIN of Massachusetts. Mr. Speaker, the country is shocked by the record of appropriations of this session of Congress. Despite much talk about economy, there has been no action to that end because the administration and its spokesmen in Congress have refused to cooperate with the

earnest efforts of Republicans and a small group of patriotic Democrats, in the House, to curb unnecessary spending.

This session of Congress, it now appears, will appropriate approximately $13,000,000,000, including permanent appropriations and trust funds. This sum is almost 20 percent of the income of all the American people estimated for this year. On top of that, the President now urges legislation authorizing the issuance of Treasury-guaranteed bonds totaling another $3,860,000,000.

Republicans in the House have insisted that a start should be made toward reducing our swollen Budget so that eventually Federal revenues and expenditures may be brought into balance. The country is disturbed and economic recovery is being prevented because nothing whatever has been done toward this end.

With that thought in mind I propose to introduce in the House of Representatives tomorrow—Monday—a bill calling for a reduction of 10 percent in all appropriations made by this session of Congress that are properly susceptible to such a reduction, except those for social security and relief of distress. This bill contains flexible provisions in order to avoid undue hardships and specifically exempts from its provisions appropriations for relief, old-age pensions, war veterans' pensions and benefits, interest on the public debt, and other fixed charges. But, even excluding such items, this bill, if adopted, would result in economies totaling at least $500,000,000.

Small though the amount saved might seem compared with the funds appropriated this year, the action would be interpreted by the country as a step in the right direction, and would give new hope to millions in business, in industry, and on the farms that at last their Federal Government was turning toward a sound financial policy.

With the exceptions which I have noted, this year's appropriations for various departments and agencies can be reduced 10 percent without curtailing efficient operation of any function the Federal Government is now carrying on. Indeed, appropriations for the next year which starts next Saturday are substantially larger than the actual expenditures during the current year.

This is a sound and constructive proposal. President Roosevelt himself in July 1937 instructed the heads of all executive departments and establishments to impound not less than 10 percent of funds appropriated to them susceptible of such treatment. Mr. Roosevelt said he undertook that step in an effort to effect savings of approximately $400,000,000, which he asserted would have resulted in a "layman's balance" of the Budget.

Unfortunately this proposal proved to be only a gesture. Like so many proposals started with a fanfare of ballyhoo by the New Deal, it was soon forgotten. At all events, the total expense, exclusive of debt retirement, for that fiscal year reached the gigantic sum of $7,626,000,000, with a net deficit of $1,384,000,000.

We are now completing a fiscal year with a net deficit in the neighborhood of $3,500,000,000. We face a deficit at least that large in the coming fiscal year. Before us is the prospect of a national debt of $45,000,000,000 on June 30, 1940, with six or seven more billions guaranteed on the side. Surely if what the President proposed in 1937 was feasible, such a step is more practical and urgent today.

By writing a 10-percent reduction into the law, it will be made mandatory on all New Deal departments and agencies and thus what Mr. Roosevelt promised can really be achieved. If this is done, our Government will take a major step toward economic recovery and reemployment in private industry at decent wages of our 11,000,000 unemployed men and women. Such an act as this represents a real, sound step in the direction of putting America back to work.

Together with millions of my countrymen, I am seriously disturbed over our financial situation. During the last 5 months Republicans and patriotic Democrats have fought hard to impress the gravity of the situation on the House. We all know that the Federal Government cannot continue, year after year, to spend billions in excess of its revenues. I sincerely believe that unless this tendency is checked now there will be destructive consequences for this country. It is for that reason that I am moved to make the last possible effort before the next fiscal year begins to help avert what may be an overwhelming disaster.

Financial Aid to South America Good Economic Policy

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

Mr. CELLER. Mr. Speaker, arrangements made recently with Brazil and Paraguay providing for the extension of credit to the southern Republics by the United States Government, and plans for similar deals with other Latin American republics, are being subjected to a certain degree of criticism in various quarters, particularly those who do not see their way clear, even mildly, to endorse the administration's foreign policy. Attention is being directed to the fact that it was under the Roosevelt regime that foreign loans, sold to the extent of hundreds of millions of dollars in the American market, have been the subject of a senatorial investigation, in the course of which the Chief Executive was led to describe many of the foreign loans as worthless.

Under date of June 5, an editorial, entitled "Pump Priming a Hemisphere," was published in the New York Herald Tribune, where the administration is taken to task for reported plans to make possible an expansion in the commercial relations between the United States and the nations south of the Rio Grande. I think one might, to advantage, remind the paper and its readers that not so very many years ago, when American banking firms were in the process of negotiating Germany's orgy of lending, the late President Calvin Coolidge in an address before the members of the Associated Press made the following observations:

> I trust that private American capital will be willing to participate in advancing this loan. * * * It will benefit our trade and commerce, and we especially hope that it will provide a larger market for our agricultural production. * * * Besides this there is the humanitarian requirement, which carries such a strong appeal, and the knowledge that out of our abundance it is our duty to help where help will be used for meeting just requirements and the promotion of a peaceful purpose.

It is a thousand pities that President Coolidge could not live to see his prophecy fulfilled and to note the extent to which Germany has been meeting her "just requirements"; and the extent to which American money loaned to Germany had served the "promotion of a peaceful purpose."

It is erroneous to compare the nature of the Brazilian and Paraguayan deals and that of similar arrangements expected to be entered into with other Latin-American republics with publicly floated Latin-American obligations. It was not the foreign loan as such which was criticized, but, rather, the circumstances which in some instances surrounded the origination and distribution of loans. Had all foreign issues floated in the American market been employed for strictly constructive and revenue-producing purposes, defaults would not have occurred with the distressing frequency of which so much has been said and written. Nevertheless, despite many defaults, even the most outspoken critics of America's foreign loans are obliged to admit that only a very small percentage of the publicly floated foreign obligations were issued under what one might term irregular circumstances.

The opinion unfortunately prevails that most Latin-American issues were sold at exorbitant profits to the underwriters and that the money derived from the sale of all went into nonproductive channels. All this was the result of a most unfortunate publicity, to combat which no steps have been

taken by those prominently identified with the sale of the bulk of foreign loans.

It is admitted that the credits established on behalf of Brazil and Paraguay will be employed for productive purposes which are bound to benefit not alone the recipient but the lenders as well.

According to opinions in well-informed quarters, Chile, Colombia, and Nicaragua are next in line for accommodations. One commentator points out that "Whatever may be said for advances to Chile and Nicaragua, our relations with Paraguay have been so modest as hardly to warrant the proposal." This observation appears to be in accordance with the facts, as is evident from statistics relative to American trade with and American investments in the southern republic.

	1938	1913	Increase
			Percent
United States exports to Paraguay	$644,000	$480,000	34.16
United States imports from Paraguay	1,095,000	11,000	9,854.54
Total United States trade with Paraguay	1,739,000	491,000	254.37
United States investments in Paraguay	15,250,000	3,000,000	408.33
Balance in favor of Paraguay	451,000		
The same in percent on investments	2.96		

It will be noted from the above that America's trade with Paraguay is still modest, even though American imports from the Republic have shown a spectacular increase compared with the pre-war figures. In terms of actual value, the increase is less impressive. However, is it not fair to assume that a credit to Paraguay, if properly employed, may do a great deal toward increasing America's commerce with the Republic? The latter has a favorable balance of trade with the United States, which suggests that Paraguay may be in a position to take care, in a modest way, of whatever aid she may succeed in obtaining in the United States.

In view of recent developments in Bolivia and the possibility of far-reaching consequences of German penetration, is it not reasonable to assume that the arrangement made with Paraguay, Bolivia's neighbor, might go a long way toward neutralizing the effects of recent developments in Bolivia?

A Worthy Official of Veterans' Administration

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

Mr. PATMAN. Mr. Speaker, recently there appeared in a column known as the Federal Diary, in the Washington Post, published in Washington, D. C., an article on the Honorable George Henderson Sweet, who is Personnel Director of the Veterans' Administration. It is as follows:

As director of personnel for the vast Veterans' Administration, George Henderson Sweet is confronted with problems possibly unique among those enjoyed or borne by his compatriots who share elbow space at the big table over which the Council of Personnel Administration tries to iron out Federal personnel difficulties.

Director Sweet is one of the most retiring of men. He is perfectly sincere in his attitude that publicity and himself are incompatible. He has a great love of what he is doing, dealing in the human quantities, and the success he finds in the work suffices him. The public's smile doesn't particularly engage him. His pleasure, again, seems to be entirely in doing a good job—and despite all the talk about such matters, this attitude of Mr. Sweet's is an extraordinary one. He is the good public servant.

And his job is unique. Approximately 38,000 men and women work for the Veterans' Administration. Many of these are in the Administration's facilities, where disabled veterans are seeking health. These employees must have very specialized training. There can be nothing haphazard about it. All of this goes, in one detail or another, across the desk of the personnel director. That much is obvious. It also is, obviously, a day full. Then, too, he has the usual functions to attend to, those familiar to the other directors, for there is a large number of employees here in Washington in the Administration, and the responsibility for their efficiency is on the director.

He was born in Washington on August 17, 1894; was educated in local public schools and at Georgetown University. He has an LL. B. degree. He has been in Government service approximately 22 years, and began work in personnel administration in the Veterans' Bureau in September 1922. He has been assistant and chief of personnel, and was appointed director of personnel on February 1, 1939.

Now he is especially engaged with the question of periodic promotions for employees and the movements for a development of the merit system.

This slight, thumbnail sketch embodied in the two preceding paragraphs was actually all that Director Sweet was willing to say for himself. But the interviewer, leaving his office, came on an official of the Administration who was more open on the subject of the Director.

"You have just been talking to one of the most efficient men in the service. And with his efficiency he keeps human. Everybody likes him here." This statement from the necessarily anonymous source is the high point in this record.

Having served on the World War Veterans' Committee of the House of Representatives for a number of years and having worked with Mr. Sweet, I know that this statement is no exaggeration and that he is highly regarded by all the Members of Congress with whom he has come in contact.

Shall Constitutional Government Prevail?

EXTENSION OF REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

Mr. THORKELSON. Mr. Speaker, it is my desire to call attention to an article which was published in the Pathfinder of June 24, on page 15, which to me clearly revealed the character of those who own or manage the paper. True to their stripes, and similar to all Communists, the editors of the Pathfinder evidently disapprove when Members of Congress respect their oath of obligation. These editors are no doubt of the variety which prefers the protocols of Zion to the Constitution of the United States. I am rather amused when this obnoxious tribe begins to spit its communistic venom for it can only end, as it has before, in endless wandering.

It is the first time the Communist Defamation League has made a personal attack upon me, and I hope it will be the last time, for I want to be charitable. Thousands of real patriotic Americans in all classes of society are very well aware that character destruction or smearing is a Communist stock in trade, but the cloak is now worn and frayed.

The gentleman from Illinois [Mr. SABATH] is quoted in this paper as having said:

The gentleman from Montana has time and again stuffed the RECORD with column after column of material generally of a highly obnoxious and bigoted nature. At the same time, while the extended remarks were never made on the floor of this House, they appear as having been actually spoken here. * * * I will object to any intolerant and ridiculous dissertations calculated to promote prejudice and class hatred.

I shall refrain from criticizing the most venerable gentleman from Illinois, for he is only his master's voice, wailing in the wilderness of communism. When the venerable gentleman blows warm, he glorifies the President. When he blows cold, he reviles an ex-President, Mr. Hoover. This, I observe, is the extent of the venerable gentleman's statesmanship.

In replying to the Pathfinder's observations on cost for inserts in the CONGRESSIONAL RECORD, I can say such expense will be a mere bagatelle as compared to the cost of internal strife and revolution which is now contemplated and financed by the same people who financed the World War, the Russian revolution, and the Spanish revolution. As a matter of fact, if every Member in Congress would stand forth in the protection of the constitutional rights of the people, communism and its allied creed would find no place in the United States.

I am, however, delighted to find that the writer of the article in the Pathfinder compares me with General Moseley, for the general is, indeed, a stanch American, and so recognized in the United States Army, in which he served with distinction. He is also recognized as a loyal American by Congress, for he has been decorated twice for distinguished service to the country. His clarification of an issue before the Dies committee again entitles him to further national distinction for his service to the Nation.

The venerable gentleman's objection did not prevent my remarks from being placed in the RECORD, as the Pathfinder's article implies, for my remarks will be found in the issue of June 19, and I shall ask the editorial staff of the Pathfinder to read them.

I am not upset about the international press, as implied in this article, except in its abject submission to the rulers of the invisible government, and in its betrayal of the people whom it is supposed to serve with truth.

I am not looking for, neither do I desire mention in any publication of the international subsidized press, or in the Pathfinder, and it is indeed unfortunate that it took the liberty of mentioning me in the manner it did, for it has now classified itself.

I can only say that the press is using good judgment in remaining silent upon patriotic activities, a quality which the Pathfinder should observe, for unjust criticism might entail danger. When 120,000,000 people discover how they have been sold down the river by those who swore to preserve, protect, and defend their rights and liberties, it is possible that reprisals may result.

I also note in the June 26 Times-Herald that the Washington Merry-Go-Round labels myself and two others "Nazis." This is not strange, for when anyone speaks on the constitutional rights of the people and opposes communism one of the wailing prophets sticks out his head and shouts "Nazi."

The capitalistic barons who are financing the "red" activities in the United States may believe that their agents have a stranglehold on American labor, but they might find themselves mistaken in that, for as I know labor, they are stanch and patriotic American citizens. During my campaign, when I talked on communism and on constitutional government, the greatest appreciation was expressed, not by the white collar group, but by the real workers, or the men that I, as a doctor of medicine, called upon in their private homes. It was these men who said, "We heard you over the radio. When are you to speak again?" And it was these people who expressed their firm belief in the Constitution of the United States. It was our so-called professors and educators who were slightly pink or even "red" in their expressions. It is this same group of professors, economists, and educators that are now attempting to run the sovietized Government of the United States, and their lack of ability is clearly evident in the condition in which we find ourselves today.

When the American working people realize that they are used as stooges by the money changers, and the international Communists who are now promoting and paying for the cost of such activities in the United States, I am sure that they will wash their hands of this deadly communistic poison, and rally to the colors, as all patriotic citizens of course will do.

The plan to sovietize the United States should be clear to everyone, for it is now coming to the front in its true light. Congress has been an instrumental aid in bringing this thing about by bestowing greater and greater powers on one man. He, having the power to appoint and place anyone he chooses in key positions in the governmental departments and forces, may, of course, provide people upon whom he can depend to support him in consummation of whatever plan he has in mind. There is an advantage in having good Communists in key positions, and I do not deny that this is a part of the Soviet plan. It should be clear to all. If the Government intended to adhere to the Constitution, Congress would not be requested to mutilate the document by bestowing power on individuals contrary to what is set forth in the Constitution itself. There is no purpose or reason for breaking constitutional government down unless it is to be replaced by some other form, and the people should ask themselves just what the President intends to do.

Conversion of our Government can easily take place without the public being aware of such intrigue, and this is particularly true when those who are supposed to represent the people fail to maintain the commanding power of Congress itself. I am now dealing with cold facts, and I challenge Congress to prove that we are not departing from sound constitutional principles.

If the President of the United States had the interest of the people at heart, why did he allow the money changers to take charge of all the gold and establish ownership of it? If the President had the interest of the United States and the welfare of the people at heart, why does he not order the Army, Navy, and the F. B. I. Intelligence Services to bring in and apprehend all Communists and those who are advocating destruction of our Government? Is it to the interest of the United States to allow military secrets to be revealed to foreign nations, particularly to Russia? Is it to the interest of the Nation to destroy business and replace it with Federal-owned corporations similar to many of those now operating contrary to the Constitution itself? Is it to the interest of the people that we maintain the Export and Import Bank? Is this all for the general welfare of the people, or is it for the general welfare of those who are anticipating taking charge of the Government?

Is it for the general welfare of the United States to loan money to South America when it is already indebted to us, to be used in competition with our own agriculture and manufacturing industries? Is it for the general welfare of the people to import agricultural products when the same can be produced in the United States? Is it for the general welfare to destroy our own agriculture and balance international trade by the sale of war machinery? Does unsound and unsecured hocus-pocus money bring about business confidence; and are excessive taxes an aid to business?

These are questions that someone—maybe the Pathfinder—can answer.

If the President is interested in sound constitutional government, it may be well for him to follow the Constitution, because he has assumed the same obligation that I and other Members of Congress have assumed. I am trying to live up to mine. Let the others do the same, and the people and the Nation will be well protected.

We must have a premise or fundamental basis from which we may set our course. In the United States it is the Constitution, and we must use this as it was given to us—namely, as a point of departure. Sovietizing this instrument, as has been done in the past, can only lead us off the course, and the plight we are in today is sufficient evidence to anyone that there are breakers to the lee of us.

Marine War-Risk Insurance

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

Mrs. ROGERS of Massachusetts. Mr. Speaker, the taxpayers of the country will undoubtedly be surprised to learn of a new spending measure now being considered by the House Committee on Merchant Marine and Fisheries. I say this with consideration, realizing that the American taxpayer during the last 6 years has become so inured to watching the Federal Government squander his money on unheard-of projects that it takes a great deal to surprise him.

The measure to which I refer is the so-called Bland bill (H. R. 6572) to provide for marine war-risk insurance. Under

its provisions the Federal Government would be permitted to insure not only United States ships and cargoes but those of any foreign country "not an enemy of the United States," but engaged in the foreign or domestic trade of this country. No mention is made of belligerents, so apparently this Government, as a supposed neutral, would be empowered to take the risk of insuring ships and cargoes of countries which might be at war, just as long as they were not at war with us.

In the first place, the measure is ill considered and embodies a striking departure from standard wark-risk insurance practices. No country in the world insures the ships of other nations, and why in the name of common sense should this Government go into the business of insuring foreign ships?

In the second place, the bill takes very lightly the matter of spending the people's money. It does not attempt even to guess how much money the Treasury would have to supply for the project, but, in line with New Deal philosophy, it authorizes the appropriation of "such sums as may be necessary."

It is a blank check, in that it would leave the administering agency, the Maritime Commission, free to spend the sums appropriated with very little guidance from the statute. The money so spent, nevertheless, would come out of the pockets of the people.

From the point of view of international peace, the bill has extremely dangerous potentialities. For it would give the Commission discretionary power to decide who should be insured, bound only by the specifications that no enemy of the United States is eligible. Could not discrimination, then, be interpreted as the Commission's expression that some particular country is an enemy of the United States? And are these provisions not in circumvention of the cash-and-carry provisions of the Bloom neutrality bill? And is not the situation with regard to neutrality delicate enough without giving to a Government agency power to insure foreign ships on a basis involving decision as to who is our enemy?

The committee has scheduled hearings on the bill, beginning tomorrow, Tuesday, June 27, and I sincerely hope that interested persons who are alert to the dangerous and far-reaching effects of the measure will voice their protests.

Banquet of House Pages

EXTENSION OF REMARKS

OF

HON. WILLIAM A. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

REMARKS BY EDMOND E. WALSH AT THE SEVENTH ANNUAL BANQUET OF THE PAGES

Mr. ASHBROOK. Mr. Speaker, our faithful pages on both sides of the aisle had their seventh annual banquet at the Mayflower Hotel last night, thanks to the generosity of our genial and generous colleague the gentleman from Missouri [Mr. SHANNON], who has become the godfather and Prince Charming for these boys who daily so splendidly look after our wants here on the floor of the House. If a man's heart is right there is usually not much wrong with him, and anyone who believes Congressman SHANNON's heart is not just right had best not give expression to that opinion in the presence of any of our forty-odd pages who idolize our lovable colleague.

Mr. Speaker, Edmond E. Walsh, one of the pages, made some reminiscent remarks at the banquet Sunday night which I ask unanimous consent to insert in the RECORD:

Mr. Chairman McCabe, Mrs. Deveney, Mr. Sovey, Chief Page Ashbrook, Colonel Emerson, Overseer Martin, and fellow pages, the custom of holding an annual dinner for the pages was inaugurated by Congressman SHANNON 6 years ago. Each year since then, as the final adjournment of Congress has approached, Mr. SHANNON has given us a dinner. This dinner has now become a yearly custom.

Little is known of the first and second dinners except the dates and places where they were held. The first dinner took place at the Raleigh Hotel in 1933; the second dinner was held on Sunday, June 10, 1934, on the terrace of the Shoreham Hotel. These dinners were very much like Topsy—just grew; these dinners were just held.

But at the first session of the Seventy-fourth Congress H. R. 1935 was introduced in the cloakrooms of the House of Representatives by Mr. SHANNON, of Missouri, and referred to the pages. This bill provided for an adjournment dinner for the pages. It was passed unanimously and without amendment and attested by Chief Pages Roher and McCabe. The provisions of the act were carried out fully on Sunday, August 18, 1935, on the terrace of the Shoreham Hotel.

In 1936, under the authority of the act of 1935, Mr. SHANNON issued a proclamation. This proclamation designated Sunday, the 24th of May 1936, as the day; the Shoreham Hotel, Washington, D. C., as the place; 7 o'clock p. m. as the time, when, and where each and every page of the House of Representatives shall meet and assemble in happy and hungry mood for their fourth annual adjournment dinner. The proclamation was attested by Chief Pages Martindale and McCabe and ravenously fulfilled.

The fifth annual dinner was held on Sunday, July 25, 1937, in the garden room of the Mayflower Hotel. There was no official paper providing for this dinner as it was believed that the act of 1935 was constitutional. The dinner was served and eaten whether it was constitutional or not.

In 1938 a resolution was introduced in the cloakrooms of the House of Representatives and referred to the pages. It provided for the sixth annual dinner to be held on Sunday, the 15th of May 1938, at the Pan American room of the Mayflower Hotel. The resolution was adopted unanimously by the pages, attested by Chief Pages McCabe and Ashbrook, and its provisions carried out to the letter.

Each of these dinners was begun with prayer, and after dinner there has been some entertainment. Speeches, dancing, music, and plays have been given. It has been primarily for Mr. SHANNON that this entertainment has been given as a gesture of thanks. The past 3 years, however, he has not been present and we have missed him.

Two other items are worth mentioning in connection with the history of this dinner. One is the nearness of the dinner to the time of the adjournment of Congress. The second item is the publicity which has been given to the dinner in past years. It has favorable and extensive notice and it is hoped that the press and radio will this year again do their duty.

Mr. SHANNON is in Kansas City tonight, but we are honored to have his family represented. His daughter, Mrs. J. F. Deveney, and her son, Robert, who was a page here this year until May 15, are here with us. We wish that Mr. SHANNON were also here, but we are glad that he is so well represented.

Tonight we are writing another chapter in the history of these banquets. This is the seventh annual Shannon pages' banquet. Let us hope that this custom will continue and that our future banquets will be as pleasant and successful as those in the past.

The Right to Vote in California

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 20, 1939

ARTICLE BY ANDRAE B. NORDSKOG

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following major portion of an article appearing in the Independent Review (Los Angeles) and written by Mr. Andrae B. Nordskog. His discussion of the significance of recent Supreme Court decisions is certainly food for thought.

[From the Independent-Review of Los Angeles, Calif.]

CALIFORNIA CONSTITUTION AFFECTED

Section 1, article 2, of the Constitution of California provides that "* * * no person who shall not be able to read the Constitution in the English language and write his or her name shall ever exercise the privileges of an elector in this State: *Provided*, That the provisions of this amendment relative to an educational qualification shall not apply to any person prevented by physical disability from complying with its requisitions, nor to any person who had the right to vote on October 10, 1911 nor to any person who was 60 years of age and upwards on October 10, 1911; * * *."

WOMEN DENIED RIGHTS

On October 10, 1911, woman's suffrage was adopted, so that this "grandfather clause" creates the same discrimination against the women of California as did the Maryland and Oklahoma laws against the Negroes.

In reviewing the case of Lane against Parks, Wilson, and Moss, the Supreme Court said that the so-called "grandfather clause" in the Oklahoma Constitution had previously been declared to be unconstitutional as being violative of the fifteenth amendment to the Federal Constitution, because it permitted discrimination in favor of descendants of those who had the right to vote prior to January 1, 1866. That opinion was handed down by the Supreme Court in the case of *Guinn* v. *United States*, June 21, 1915 (238 U. S. 347). Reference was also made by that high Court, in reviewing the Lane case, to the decision of the circuit court of appeals in the case of Anderson against Myers in Maryland, October 28, 1910, wherein it was decreed that the plaintiff was entitled to damages from the election officials for having refused to permit him to register and to vote because of the discriminating features of the election laws of that State, wherein that court said that "though such acts did not provide a race or color disqualification in terms, it nevertheless effectually disfranchised and discriminated against Negroes," and was therefore unconstitutional as violating amendment 15 of Federal Constitution. The Maryland law contained a "grandfather clause" similar to that of the Oklahoma Constitution, except that in Maryland descendants of those entitled to vote prior to January 1, 1868, should enjoy said rights under the new law, whereas the Oklahoma Constitution provided such franchise for descendants of those entitled to vote prior to January 1, 1866.

ENTIRE AMENDMENT INVALID

In the case of *Guinn* v. *United States*, the Supreme Court, when considering the "grandfather clause" which fixed a certain date prior to which time all persons and their descendants were given privileges not accorded those who attempted to qualify after that date, held that "Certainly it cannot be said that there was any peculiar necromancy in the time named which engendered attributes affecting the qualification to vote which would not exist at another and different period * * *." And the Supreme Court held that because the "grandfather clause" was unconstitutional and was not separable from the remainder of the amendment to the Constitution of Oklahoma of 1910, the amendment as a whole was invalid.

Section 1, article 2, of the California Constitution was amended November 6, 1894, and for the first time since 1849, when the original constitution was adopted, made provision for a literacy test affecting only those attempting to qualify as voters after that date discriminating in favor of those who had a right to vote prior to that date, November 6, 1894. This section was again amended October 10, 1911, this time moving the literacy test down to a period following that date instead of 1894. The amendment of 1922 carried the same provisions for a discriminatory literacy test beginning in 1911, and the amendments of 1924, 1926, 1928, and 1930 carried the same provisions.

CALIFORNIA LAW QUASHED

The original section 23 of the California primary election law which made provision for voting privileges for all native-born citizens "who since the last general election have become of legal age, and who have been legal residents of the county for 30 days prior to election," and required naturalized citizens to have lived in the county 90 days prior to election, was declared by the California Supreme Court to be discriminatory, and that law was held to be unconstitutional and therefore void; and it has never been enforced since that time. (See *Spier* v. *Baker* (1898) 120 Cal. 370.)

IS CONSTITUTION UNCONSTITUTIONAL?

The provisions of section 1, article 2, of the California constitution, are just as discriminatory as were the outlawed provisions of section 23 of the California primary law in that they grant immunities and privileges to those who had the right to vote prior to a certain date while denying those immunities and privileges to those who attempted to qualify for voting after that certain date. In the language of the United States Supreme Court in the case of *Guinn* v. *United States*, "Certainly it cannot be said that there was any peculiar necromancy in the time named which engendered attributes affecting the qualification to vote which would not exist at another and different period." That high court has held that these discriminations are improper and that such provisions in State constitutions and laws are invalid and therefore void.

ENTIRE AMENDMENT AFFECTED

Under the caption of "Right of suffrage," section 1, article II, appears in the California Constitution; and this section contains one continuous sentence without a period, excepting at the close of the section; and the provision relating to the literacy test to be applied after a certain date is part and parcel of the entire amendment and is not separable therefrom; and, as the United States Supreme Court said in the case of *Guinn* v. *United States* that such "grandfather clause" being unconstitutional, "and not being separable from the remainder of the amendment to the constitution of Oklahoma of 1910, that amendment as a whole is invalid."

The literacy test in our California constitution is in the nature of a "grandfather clause" in that it confers on certain grandfathers immunities and privileges in matters of voting not granted to others; and the attempt on the part of the California Legislature to grant such special privileges in section 23 of the primary law to native sons as against naturalized citizens was held by our own California Supreme Court to be discriminatory and therefore unconstitutional; and it would seem that any person being denied the right to register or to vote in California because of the restrictions contained in the "grandfather clause" in our State constitution would be entitled to damages as provided for in the decision of the United States Supreme Court in the case of *Lane* v. *Parks, Wilson, and Moss*, which opinion was handed down on the 22d day of May 1939.

In event of a test of the validity of section 1, article 2, of the California constitution, should the United States Supreme Court logically hold that our "grandfather clause," like that of Oklahoma's constitution, was invalid, it would follow that the entire section affecting our right of suffrage would be stricken out, owing to the fact that the "grandfather clause" is inseparable from the entire amendment as it stands today; thus leaving us without a constitutional guide as it affects our privileges relating to registration and voting.

LEGISLATURE TAKE NOTICE

While we have before us the prospect of a special election in California to determine the proposal for a $30-every-Thursday pension constitutional amendment, it would seem proper to suggest to the members of the legislature, now in session, that an amendment to section 1, article 2, of our State constitution, be submitted to the electors at such special election in order to eliminate the discriminations now existing in our fundamental law; discriminations which, when found in constitutions and laws of other States, have been outlawed by the United States Supreme Court.

Does the Seventy-sixth Congress Represent the Thought of a Majority of the People of the United States?

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

Mr. BURDICK. Mr. Speaker, I am alarmed over the action of this Congress in its failure to relieve suffering among so many millions of the people of this country. I do not know whether it is the complete arrogance of Congress or whether the Members are registering the thought of their constituents. As a general rule, the action of Congress represents the thought of the people, but I hope that is not the case in the present Congress.

Mr. Speaker, if what this Congress is doing represents the wishes of a majority of the American people, then I say there is little hope of our ever getting out of this depression, and finally we shall head into a depression that will make all past depressions look like waves of prosperity. When this happens the vital question then will be how to save this Government from absolute collapse. If such a situation ever comes in this country, the Paul Reveres who will make midnight rides to arouse the people to the defense of their Government will be the same ones who refuse now to hear the voices of the distressed, the miserable, the weak, the defenseless.

When this Congress deliberately refuses to feed those who are hungry; when it refuses to provide clothing to cover the nakedness of poor people; when it refuses to provide jobs for those who are willing to work to provide the plain necessities of life for themselves and families; when this Congress deliberately destroys jobs as it has done in taking away adequate W. P. A. funds; when this Congress begrudgingly appropriates for the Youth Administration and will actually cut the appropriations to a point where our young people must be turned away, I say the Congress is "fiddling while Rome burns." This attitude of Congress is either due to the consummate indifference of the Members or it is due to the prevailing sentiment in the United States. If the latter is true, and I trust it is not, we are headed down the last road to the destruction and ruin of this once great democracy.

Whatever it is that actuates Congress, there seems to be a complete feeling of certainty and confidence amounting to arrogance written on the faces of those who vote to deny relief. These Members become much alarmed when the

word "communism" is mentioned, and they immediately launch into a tirade that this vicious "ism", or whatever it is, must be immediately stamped out, root and branch. There is no party division in this movement; or I may better say, hysteria. The Members who are willing to stand still or move backwards are perhaps better classified as "reactionaries", "standpatters", or "Tories." We have seen example after example of this action on the part of the House of Representatives. The leadership of the House is, of course, in the hands of the Democrats, but the vicious committee system under which we have for years misrepresented and misgoverned the people, permits party betrayal and disaster to the people and the country. When the relief bill was before Congress a few days ago, the gentleman from Virginia, because of this committee system, was in charge of the bill for the Democratic Party. He is also a Tory. On the Republican side were some 160 votes, and practically all of them followed the leadership of a Republican Tory, the gentleman from New York. The gentleman from Virginia, in denying relief to the needy, had every advantage. The Republican Party stood at the snubbing post to which the Democratic chairman could and did tie his rope on every occasion. He was always sure of 160 votes, and as many Tory Democrats as he could muster, and because of his position and the mental make-up of other Democrats, he had the votes, and rode over all opposition roughshod. Every amendment was voted down. If this chairman thought too much debate would convince the House against him, he moved to shut off debate, and the Republican snubbing post held fast. Motions to adjourn and give the Members a chance to see what a Tory frame-up was being enacted were lost in a veritable howl of "noes." So the relief bill was passed, and the only hope now the people who are suffering have is the Senate.

Many more bills could be cited to show this Tory alinement, but a full understanding of this relief line-up will be enough to show which way the wind is blowing. Why was this done? Surely these Congressmen know that there are millions in distress; surely they know that if the bill becomes law as they wrote it, 700,000 now working will have to quit for at least 2 months. The W. P. A. never granted any wages except just enough to keep soul and body together. What will happen to these families dependent on Government work? The philosophy of this majority is substantially as follows: Balance the Budget and let the people shift for themselves; save money on relief but squander billions on war preparations; let the aged slowly starve, but do not tax a Congressman; contrive to cut down production of food and then advise the poor to hunt through garbage cans for something to eat. The State relief office at South Pasadena actually issued and circulated a bulletin telling the people to pick up what the farmers left after preparing their vegetables for market.

Everyone knows it is hard on everyone to have to pay the tax load of relief, but is it not much harder for those who have to accept relief? Balancing the Budget in figures is a mathematical process; starving people in a land of plenty or directing them to live off garbage is murder.

These Tories are determined to balance the Budget and stamp out communism. Very few, if any of them, would know what communism is if they saw it. They do not understand what builds communism and the action they have taken is the surest way to build that particular "ism." Communism never shows up anywhere unless there is a failure of Government to protect the people in their inalienable rights. If we today were able to say to every citizen, "you have been guaranteed life, liberty, and the pursuit of happiness in our fundamental law, and you now enjoy it," there would never be mentioned the name of communism. When people are hungry, down and out, with no job in sight, and have hungry families, what do they care about a Constitution that permits such results? Naturally they cannot revere a government of that sort. When any other plan is presented that promises them food, clothing, and shelter, can they be prevented from entertaining the "ism" that has some hope in it?

These Tories do not know this, or if they do they ignore it. Their program is to make the people more hungry, more homeless, more jobless, and thereby stamp out communism. Communism will be here or some worse "ism" just as long as we deny our citizens what they are entitled to as a matter of law and as a matter of right.

I wonder if it ever occurred to the Tories that today we are paying close to a billion and a half in interest on the public debt, all of which would be unnecessary if Congress by a resolution took over to itself the power to issue money and regulate the value thereof—as provided for in the Constitution. Instead of issuing bonds drawing interest, we could issue currency or greenbacks drawing no interest and save this billion and a half in interest annually. No, sir; the Tories believe in this practice because the private-bank machine and the interest system would be denied their usual profits, and too many Congressmen come from districts where the banking system is powerful.

I wonder if these Tories know that through this private control of the Nation's credit the interest system on private loans is sustained and encouraged. Do they know that interest works while farmers sleep their 6 hours from their labors? Do they know that interest works right along, although a laborer be out of a job? Do they know that finally the interest system will take the farmers' homes and the laborers' homes? Do they not know that drama is being enacted right here before us at this moment?

Do they know that there is demand enough for all we can produce in this country and much more too, if the people who actually want our products could buy them. Money is useless unless it circulates. Today the banks are full of money but there is no circulation. Small-business men will testify to that. They will say that many times they are required to pay unconscionable rates of interest in order to borrow. Money must circulate in such quantities as will supply a medium with which people can exchange their production. Could North Dakota use any cotton? If the people of North Dakota had any money with which to buy, they could use, as a matter of necessity, cotton in the value of $13,000,000 before a standard of actual decency could be obtained. What is true of North Dakota's population of 680,000, is true of the 132,000,000 people in the United States. It would take the expenditure of $2,560,000,000 in cotton at 15 cents per pound to establish the people of the United States with the necessary cotton products for clothing. Remember also that this expenditure would bring the standard up to the present, and if maintained, we would never have a surplus of cotton with 50 percent of the present importations maintained. We cannot relieve the cotton farmers and cotton pickers because there is no money in circulation. Cannot everyone see that money is the key to the exchange of goods? Why leave this key in the possession of the money changers—those who can raise or lower the prices of all commodities by increasing or diminishing the circulation of money.

What is true of cotton is true of wheat. If all the people in the United States were eating all the bread they should eat to maintain a decent standard of living, according to the Department of Agriculture, there would be no surplus and the question of exports and imports would be eliminated. Hungry people cannot buy bread, and farmers cannot stave off bankruptcy, because there is no money. They cannot sell to the hungry, because the hungry have no money; the farmer cannot buy the products of labor because he has no money.

Corn occupies a similar position. Essentially a stock-feeding product, the farmer cannot sell his beef and pork because the hungry have no money; the hungry—former laborers and dispossessed farmers—cannot buy meat because they have no money. Here again money is the key. What there is actually in existence does not circulate because the banking trust circulates money on security only—and the security is all gone among 62,000,000 people in this Nation.

Still these Tories insist that this "key" to prosperity and life be left with the Banking Trust, and whenever a voice is raised

to smash this unjust system that has made slaves of over half of our population the Tory shouts, "Communist," and by the use of that word frightens Members of Congress into following the program of the invisible government—the Money Trust of the United States and of the world.

When the Townsend recovery program was before Congress the Tories united as they never united before. They saw what the plan would do. They saw that this plan was not essentially for the protection of the aged of the United States, but a plan to revive all business in the United States by forcing the circulation of money. That would have done effectively the following things: First, the Money Trust would have lost its power to control circulation; they could not arbitrarily send up or down the price of commodities by the automatic withdrawal of money. In spite of them and all their past control of money, that necessary medium of exchange would be circulating, and with that circulation idle men would go back to work; idle factories would open; bankrupt farmers would gradually extricate themselves from the mire of debt through the rise in price of their products; laborers would save their homes; professional people would save their homes; distributors would save their homes; because the increased business activity would create work. Secondly, gambling in food products and bond manipulations would have been destroyed root and branch, because the tax on repeated transactions would consume the gamblers' money. This last result was clearly foreseen, because the boards of trade, the chambers of commerce, the Banking Trust—the father of them all—violently revolted against the plan. The newspapers and magazines, which are supported by and are the servile tools of the Banking Trust, sent forth tons of literature condemning the plan and everyone who was for it.

This propaganda had tremendous effect—so much that Congressmen who had promised the voters on bended knee that they would stand by the people deserted the people in their stampede before this organized campaign of "money against the people." Members who had signed their names to promises of support and obtained the votes of the people because of it treated their promise and signature as a scrap of paper and joined the "money crowd." Some of the most able of these deserting Congressmen were also induced to actually make speeches against the plan on the floor of the House. These able Congressmen became abject tools of the "money crowd" when the time came for them to stand up and be counted. These Congressmen made a disastrous mistake. The people have lost confidence in them, and those whom they served instead have no respect for them, because the "money crowd" knows these men can be had at any time, any place. They have forgotten that Benedict Arnold was cast aside by the British after he had served them through treachery.

I am not in a position to know what the general sentiment of the people of the United States is. I do not know whether Members of Congress are obeying the voice of the people in their districts or not. If it is the will of the majority of the people of the United States to maintain this Money Trust at the expense of a daily increase of distressed people, then I say this great democracy is headed for absolute ruin and destruction. If the people of the United States love liberty, they should remember the words of Patrick Henry, "Eternal vigilance is the price of liberty."

If the people will sleep on their rights and let the mouthpieces of the money press do their thinking, we shall soon see that our democracy is gone and in its place will be established a more dreaded feudal system than Europe ever knew—a money feudalism that will consume all liberty and leave the people of the United States the abject vassals whose very lives will depend upon the barons of industry. As I look around me and see the results of this system—foreclosures and dispossessions, millions unemployed, other millions living on substandard foods, clothing, and shelter, millions of our youth without a chance to work and without hope for the future, with other millions living daily from what they have saved for generations—I feel that a great awakening in the United States is near at hand. I cannot believe freemen will permit themselves to be yoked to slavery. It may be that they must be punished more before there will arise in this country a clear-cut conception that will be widespread, that we all live in a land of plenty; God has granted us unlimited natural resources, enough to sustain countless millions more than we now have; we are capable of producing and consuming a national income of $150,000,000,000 and all will find work, peace, and happiness. We are capable of making the words in the Declaration of Independence literal truths. Why do we not do it? We do not because the majority of the American people have been lulled to sleep by the propaganda of special privilege and because too many public officials and industrial leaders are afraid to stand up against the power of credit unlawfully and unconstitutionally lodged in the hands of the private banking trust. As long as that power remains in their hands our great democracy is in danger of destruction; unless we destroy this power financial feudalism will continue to develop in this country until all liberty is destroyed. Will sons of freemen, sons of patriots, remain complacent while the shackles of slavery are being forged for their absolute subjugation?

W. P. A. Befriends Aged and Youth

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

Mr. RABAUT. Mr. Speaker, I should like at this time to partially examine the work and achievements of one of the most extensive Federal undertakings ever attempted, one that provides work for approximately 3,000,000 men and women, and all the more important to the general welfare of the Nation in that it functions at the same time as a means of keeping up the general morale of those on its rolls, besides contributing greatly to the solution of the grave problem of national recovery.

The Works Progress Administration, to which I allude, since its establishment by Presidential Executive order in May 1935, has an on-the-whole outstanding record for aiding both the national wealth and material well-being and the general happiness and national loyalty of the citizens of our Nation in a time of serious economic distress. Judged from a purely cultural standpoint, perhaps no other agency has contributed so much to the preservation and development of those skills, both in the arts and crafts, upon which the significant achievements of our American civilization rests.

In approaching this matter, I think it is well to recall to mind the events which preceeded and led up to the establishment of the W. P. A. as an emergency measure some 4 years ago. The Federal Government, it will be remembered, first undertook the task of caring for the needy jobless in 1933 when this country was in the throes of the bleak days of the depression. The National Government carried on this work of direct relief for 2 years, but after several methods had proved both inadequate and inefficient, it was decided that it would be best to direct Federal funds to provide work for those unemployed who were able to earn relief pay. Through this new policy of work relief, which was substituted for the dole, the Government found that it would not only provide the economic relief that was so sorely needed in this time of emergency but that it would also accomplish many other desired ends, among them the maintenance of acquired skills which the unemployed worker stood in danger of losing, the realization of many valuable public improvements, and the erasure of the feeling of stigma and inferiority which was undermining the character of many who had been forced to accept direct relief. Further, it was realized that this program of the W. P. A. would serve as an important stimulus to employment in most of the major industries, putting men to work on the many jobs needed to supply materials, tools, and machinery to be used on its projects.

These facts, I think, should be well in mind when we approach the problem of the W. P. A. today. That the agency in question has made mistakes is not to be denied, but I would point out that in so large an enterprise a certain percentage of error is always to be expected and is understandable. I am not one who would defend the mistakes that have been committed, but it is necessary in fairness to notice that as soon as these errors have been discovered, the Administrator has taken swift steps to prevent a recurrence of them in the future. Above all, it is important to consider that the many notable achievements of the W. P. A.—the roads, new schoolhouses, and library buildings, sewer lines and water mains, parks and playgrounds, city streets and sidewalks, and many others—all stand as ample testimony to something upon which the vast majority of the people are agreed, namely, that the program of work relief is a much better policy from all aspects than that of a direct dole.

My record as a member of the Committee of Appropriations shows that I am not deaf to the cries of economy that are in the air. However, my record further reveals that I believe the economies can, and should, best be effected by warring upon waste and inefficiency and not through sacrificing our humanitarian duties to our fellow man. The W. P. A. not only provides the very means of life itself to millions of men and women who have felt the boot of circumstance, but it is also contributing greatly to our national wealth, raising our standard of living, and stimulating our whole business structure.

Figures cited by its Administrator show that the administration of the W. P. A. has been a relatively efficient one. The administrative expense of this agency for the current fiscal year up to April 1, 1939, has been only 3.5 percent as opposed to the authority to expend up to 5 percent for administration costs. Further, W. P. A. administrative salaries average only $1,581 a year, which is $290 under the average for the regular Government service. That is an enviable record in itself, but when it is remembered that 86 percent of the entire expenditure of W. P. A. is going directly into the hands of those on its rolls in the form of wages, we begin to realize a little more fully what a great part the W. P. A. is playing in our national recovery. Nearly all of this money is in a revolving fund, since 95 percent of all W. P. A. workers have been taken from certified relief rolls and must spend their wages for their basic necessities of food, clothing, and shelter. Further, in addition to the countless businessmen who profit from the spending of W. P. A. salaries in their establishments, the other 10.5 percent which W. P. A. spends for materials and equipment for its projects has provided jobs for millions of other men and women in factories, plants, and the agricultural industries.

With these many achievements in mind, I now wish to point to a few concrete contributions which the W. P. A. has made to the city of Detroit. I shall call attention only to one phase of W. P. A. work, the construction or rehabilitation of public buildings at a total cost in excess of $25,000 per unit, and I am so limiting myself because the vast additional service which the W. P. A. has rendered both to Detroit and the State of Michigan in the form of roads, streets, sewer lines, sidewalks, water mains, parks, landscaping, playgrounds, and airports is by far too large to be cited at this time.

Among the larger undertakings in the city of Detroit of the type to which I have referred are the following: New State police post, $45,474; new State naval armory addition, $143,278, as well as an additional $160,317 for reconstruction work; new police radio station, $25,776; repairs on the Detroit Public Library Building, $276,975; rehabilitation of Herman Keifer Hospital, $41,019; alterations and modernizing of the Wayne County Building, $307,412; and rehabilitation of the Fort Wayne Military Reservation, $450,900.

These, then, are a few of the valuable results of W. P. A. emergency relief jobs. To look beyond them and into the hearts of the 3,000,000 men and women who have worked on the projects of this agency is to find written there in indelible letters a new hope for America and a reaffirmed belief in the greatness of democratic government. This is especially true among the aged and the youth of our Nation, and it was with their interests in mind that I offered my amendment to the W. P. A. bill for the next fiscal year—an amendment which the Members of this body saw fit to adopt. This amendment, which exempts heads of families over 45 years of age from the automatic suspension—60-day lay-off—provision, I deem to be in keeping with the basic spirit and intent of W. P. A., as I also regard the amendment appropriating additional funds for the National Youth Administration.

Today, more than ever before, we need a realistic vision in dealing with the complex affairs of Government. We have before us the serious problem of wiping out our national debt and of stimulating business to the point where it will be able to reemploy most, if not all, of those now compelled to look to the Government for their very subsistence. Almost all of us at Washington are concerned with these matters, but we must not forget the fact that we do have millions of needy citizens and that experience has proven that the method of work relief as exemplified in the W. P. A. is a much better system of caring for their wants than that of the dole. The W. P. A. assists all; it befriends the aged and youth; its abandonment would stifle hope; its destruction would be disastrous.

The Attempted Purge of Kenneth F. Simpson—Mr. Dewey's Political Fate Is in the Balance on This Issue

---

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

Mr. CULKIN. Mr. Speaker, the ground gained by the Republicans in the 1938 congressional and State elections seemed to indicate that the party of Lincoln was on the way to victory in 1940. These encouraging signs are now being offset by the acts of certain alleged leaders who are again attempting to get control of the party and drive out all who think in terms of a progressive Nation. In recent months certain gentlemen who regard themselves as leaders of the Republican Party in New York State and in the Nation have been openly making plans to remove Kenneth F. Simpson as Republican leader in New York and as national committeeman from New York State. They already have been able to prevent his election to the executive committee of the Republican National Committee. This stupid performance brought a vigorous protest from the Young Republicans and gave much joy to the new dealers now in the saddle in Washington.

On behalf of the millions of American men and women who will return to the fold of the party if it shows a decent, progressive liberalism, I wish to sound a warning against this procedure which in my judgment spells certain defeat in 1940.

These gentlemen who are warring on Simpson represent the Old Guard of the Republican Party which has been repudiated by the people in two national elections and in many State elections in New York. They are the group which wishes to move time back in its course and restore the conditions and abuses of days which are gone forever.

Let us see what these men did to the Republican Party in New York State. From 1922 to the present there has not been a Republican Governor in the State of New York, and in only two of the elections in that period was the contest close. It should be noticed that from 1922 to 1930 the Republican Party was dominant in the Nation. In 1924 and 1928 the Republican national ticket swept the country, including New York State, but in New York the people already

had turned against the "old guard" and were defeating its candidates by a wide margin.

REPUBLICANS LOSE POPULAR TOUCH

It is easy to see why this happened. Despite the fact that during this period they controlled both houses of the State legislature, seldom, if ever, did the Republican leaders propose any reform legislation. Gradually the farmers, who are the backbone of the party in New York, and the mechanic and toiler in industry went over to the democracy in State elections. The people of the State came to believe that the Republican leaders recognized only the influence of special interests and not that of the people as a whole. The "old guard" leaders made little or no effort to disabuse them of this belief. Their only ambition seemed to be to gain control of the legislature so they and their patrons could maintain a stranglehold on legislation. No serious effort ever seemed to be made to capture the gubernatorialship.

CONTINUED DEFEAT

The well-meaning and even able gentlemen who carried the Republican standard were severely restricted in the campaign issues which they were allowed to discuss, and even when these candidates fulfilled all the requirements there was no real serious effort made to elect them to office. It almost seems as if these gentlemen were afraid to elect a man who, once he obtained office, might not be so easy to control. As a result the Democratic plurality in each election grew larger and larger, and at one time going over a million votes. In 1932 the Republicans lost control of the State senate but retained control of the assembly. As long as they could retain control of the assembly these gentlemen seemed satisfied.

THE DEWEY CAMPAIGN

In the 1938 campaign the Republicans nominated Thomas F. Dewey for Governor. Simpson's influence and intelligent leadership, be it said, brought about Dewey's nomination and election as district attorney of New York County. Everyone expected that after the convention was over Mr. Dewey would subside in the usual half-hearted efforts made by Republican candidates for the past 18 years, with the exception of a blast or two at the National Democratic Party as a whole. Instead he waged a vigorous campaign, recognizing that certain liberal reforms had been made in the structure of the State government and that those would have to be retained. He castigated graft and corruption which had entered into State politics and promised real relief for the beleaguered New York State dairy farmer. Dewey was defeated by only 64,000 votes. It was even suggested that he was counted out. His predecessors had been defeated by upward of 400,000 votes. In the same campaign it will be noted that John Lord O'Brien, Republican candidate for the Senate, who waged an able campaign but solely on a conservative basis, was defeated by the usual 400,000 plurality.

RANK AND FILE LIKE SIMPSON

The Republicans of New York State have come to have confidence in Simpson's leadership. Under his leadership the standing and reputation of the party at Albany and elsewhere has been completely restored. He has brought to the front a group of young, clean, and vigorous leaders. He represents a group, to put it in his own words, who believe that "since 1932 a lot of water has gone over the dam and some of it is not going to go back." It may be that Mr. Dewey today is listening to the siren calls of some of the more reactionary leaders of the party, but the fact stands that the 1938 campaign was waged on substantially the platform that Mr. Simpson stands for. To abandon this platform now by throwing Simpson to the wolves of reaction would relegate both Dewey and the Republican Party to the position in which we stood in 1936.

If Simpson is discarded because he sought the votes of labor for candidates who were pledged in advance to decent local government defeat of the Republican Party in the 1940 campaign is certain. It will certainly cost the party several hundred thousand votes in New York State.

Mr. Simpson is also accused of allying himself with the American Labor Party to obtain the election of Fiorello H. LaGuardia as mayor and Thomas E. Dewey as district attorney in the city of New York in 1937. In joining with the Labor Party in 1936 he was merely doing what his predecessors had done in 1933 when Mr. LaGuardia was first elected. The American Labor Party represents a group of liberals and radicals with whom Mr. Simpson does not agree on national issues, but he and all right-thinking New York citizens happened to agree with them on local issues. Labor and Simpson, by this alliance were able to prevent the return to power of a political machine with all its vice and corruption. It is strangely significant that a good many of the Old Guard Republicans favored an alliance with Tammany Hall in preference to an agreement with the Labor Party which, on the issue of city government at least, stood for honest and fair nonpolitical municipal government.

Mr. Simpson has time and again asserted that he has no intention of maintaining an alliance with the Labor Party. He insists that his and their views on National and State issues widely differ. This is clearly shown by the fact that in the 1938 New York election the Labor Party vehemently opposed the candidacy of Mr. Dewey and by their activity were undoubtedly able to elect Governor Lehman.

The country east and west is watching this preliminary battle between the progressive and reactionary groups in the Republican Party with intense interest. More than Mr. Simpson's career is at issue in this fight. This fight, in my judgment, involves the very existence of the Repubican Party as a potent force in American political life.

The great independent liberal vote of the country now estimated at 10,000,000 strong, will not follow this old leadership. This group is, of course, nauseated with the pseudo liberalism and endless demagoging of President Roosevelt. For years the middle western farmer supported the Republican Party, relying upon vague promises, but finally after years of nothing but promises, in 1932 and 1936 they tore loose from their moorings and supported the New Deal. They are now ready to return to the roof trees of their fathers but only if this reactionary leadership is cleaned out.

These people will never support the Republican Party as long as it has the type of leadership which leads only to defeat and special privilege. They want a real house cleaning in party leadership nationally and replacement with sound thinking, progressive leaders of the Simpson type. They showed that in 1936 despite the fact that the Republican candidate was a middle western liberal. He was overwhelmingly defeated, even in his own part of the country. The people liked Governor Landon, but could not brook many of his fellow travelers.

WHAT SIMPSON STANDS FOR

Nationally the Republican Party must come to recognize that the conditions facing the Nation today are far different from those which faced it 50 years ago. At that time this was an expanding country with a frontier which could take up the shock of economic and social abuses. The need for developing the country was such that those abuses could be tolerated. Today we have a different story. Today our Nation is much more interdependent and the economic woes of one group of the population are reflected in all the others. The opportunity for national expansion is no longer existent. Each group, whether city or rural, must be made to recognize the rights of the other.

Capital must recognize the rights of labor and labor must not conduct itself in disregard of the rights of capital. Marketing monopoly must be taken off the backs of the farmer. There must be some control of the national financial system and no longer can we allow ruthless financial manipulators to play with the finances of trusting and inexperienced people. Relief must be provided for those of our population who are unfortunately out of work. Proper social security should be provided for those who are either too old to work or unable to work.

These are the objectives that Simpson fights for. Because he stands for these things his political scalp is demanded. The past 8 years have produced certain reforms along these lines and the great mass of the people have come to regard them as absolutely essential in American life. Any party which sets itself against these reforms is doomed to defeat

and perhaps extinction. It may be said that the 1938 election indicated a swing of the pendulum toward the conservative. That, of course, is true, but it is not a step toward the type of conservatism that the old crowd represents. It is a conservatism which recognizes the needs of the future and does not attempt to encase itself in the shell of the past. The vote in 1938 was an expression of discontent with the gross inefficiencies and experimentations of the New Deal; that the people are tired of the expanding national debt, which will place a vast burden upon them and their descendants. They are growing tired of the great mass of political graft and corruption that has sprung up in Washington in the past 6 years. But the people will not go back to the old jungle days. The people want a progressive liberal government that stands for full opportunity and an America free from special privilege.

CONSERVATISM NOT REACTION

True conservatism does not mean reaction. All the great leaders of the Conservative Party in England and the Republican Party in the United States have been men willing to break with the traditions of the past when it seems necessary for the future. In 1866 Disraeli, the great British Prime Minister, sponsored a bill which greatly expanded the suffrage of that time. Ever since that time the position of the Conservative Party in England has been constantly growing stronger, with the result that since 1920 the party has only been out of power about 4 years. In the past 20 years, despite the fact that for a considerable portion of that time England was plunged into a depression resulting from the war, the British Conservative Party has constantly sponsored broad social legislation that has bettered the lot of the English working men and women. Through some economic changes, combined with a liberal social philosophy, the British Conservative Party has been able to lift England to the foreground of those countries recovering from the great depression. Republican leadership everywhere would do well to study and consider the English procedure.

CONSIDER LINCOLN AND THEODORE ROOSEVELT

Abraham Lincoln and Theodore Roosevelt, the two greatest Republican Presidents, both were willing to break with the past when they felt it necessary. The first Roosevelt especially stood for opposition to the great combination of wealth which would stultify the economic condition of the people. The people of New York and the country believe that Kenneth Simpson stands for the principles of Lincoln and Theodore Roosevelt. To kick him out now at the behest of men whose leadership means certain defeat would be a disservice to the Republican Party and the country. Again, as in 1912, the party of Lincoln is at the parting of the ways. Which path will it follow?

Increase In Collective Bargaining Contracts

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, June 26 (legislative day of Thursday, June 22), 1939

ARTICLE BY DAVID J. SAPOSS AND SARA GAMM

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Rapid Increase in Contracts," by Mr. David J. Saposs, chief economist, and Sara Gamm, associate economist, National Labor Relations Board. The article shows the increase in the number of collective-bargaining agreements entered into under the National Labor Relations Act, and is taken from the Labor Relations Reporter.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RAPID INCREASE IN CONTRACTS—NUMBER AND EXTENT OF WRITTEN COLLECTIVE BARGAINING AGREEMENTS HAVE INCREASED WITH RECORD SPEED IN RECENT YEARS, ACCORDING TO STUDY BY LABOR BOARD COVERING INDIVIDUAL INDUSTRIES AND UNIONS—CHANGE IS SEEN AS EVIDENCE OF EFFECTIVENESS OF WAGNER ACT AND IMPROVED LABOR RELATIONS

(By David J. Saposs, chief economist, and Sara Gamm, associate economist, National Labor Relations Board)

Since the purpose of the National Labor Relations Act is to encourage collective bargaining, one measure of its achievement is the increase in the number and coverage of written trade agreements during recent years.[1]

The extension of collective bargaining may be attributed to many factors, and it is not presumed that the operation of the Labor Board is solely responsible. However, the growth in trade agreements is indicative of the effectiveness of the act and the new spirit engendered by its operation.

"In less than 5 years the picture of employer-employee relations has markedly changed. By expanding first in industries only partially organized and then to the mass production industries, collective bargaining through trade-union agreements has grown to the point where it has now become the accepted procedure in establishing wages, hours, and working conditions in a considerable part of American industry."[2]

Although this development cannot be measured, there is sufficient evidence to indicate a tremendous growth in the extent of collective bargaining, measured in terms of written trade agreements. The most spectacular gains have been in the mass-production industries where there was little or no collective bargaining—steel, rubber, flat glass, automobile, and electrical manufacturing—but equally significant gains have been made elsewhere. (See table at end of article.)

STEEL INDUSTRY

The phenomenal progress of collective bargaining in the steel industry is well substantiated by its record of trade agreements. During the period 1913–35, 41 was the highest average number of companies with which the Amalgamated Association of Iron, Steel, and Tin Workers had agreements; generally the figure was much lower.[3] During the N. R. A. years the number was unchanged. The union began the code period with written agreements covering 13 companies (all small but one) and ended the period with recognition from 15 small companies. In addition there were numerous examples "of the informal open-shop bargaining arrangements so widely used during the Recovery Act period."[4] These arrangements were usually haphazard, having been reluctantly granted by employers and accepted by weak labor organizations. The picture changed radically during the next few years. Not only did the number of agreements increase by leaps and bounds, but a carefully constructed machinery providing for continuous bargaining was established for a considerable portion of the industry.

INCREASE IN AGREEMENTS

In midsummer of 1937, the steel workers organizing committee[5] had more than 350 agreements; only 50 of these, however, were with companies classified under the iron and steel industry.[6] The following year substantial progress was recorded in written agreements covering 532 steel manufacturing, processing, and fabricating plants, ranging widely in size and covering more than 400,000 workers.[7] By September 1938 the number of plants covered by written agreement had increased to 541. More than three-fourths of the basic iron, steel, and tin-producing industry was under S. W. O. C. agreement; in addition, agreements extended into twenty-odd allied metal fabricating and processing industries where agreements cover from one-fourth of the entire industry to four-fifths.[8] In December, the number had increased to 565, covering practically every State in the Nation and many Canadian provinces as well. During the year, agreements had been signed with 57 steel firms which had never before operated under union

[1] U. S. House of Representatives, Committee on Labor, report to accompany S. 1958 (No. 1174), 74th Cong., 1st sess., p. 20.

"The fifth unfair labor practice, regarding the refusal to bargain collectively, rounds out the essential purpose of the bill to encourage collective bargaining and the making of agreements.

"* * * collective bargaining is not an end in itself; it is a means to an end, and that end is the making of collective agreements stabilizing employment relations for a period of time, with results advantageous both to the worker and the employer."

[2] U. S. Bureau of Labor Statistics, Labor Information Bulletin, November 1937, p. 7. Since the completion date of this study, April 24, 1939, the authors state that a large number of additional agreements have been reported.

[7] The number of workers refer to those employed under normal working conditions. Steel Labor, July 15, 1938.

[8] Letter from H. Ruttenberg, research director S. W. O. C., September 27, 1938; in the files of the Division of Economic Research.

contract.[9] Evidence that collective bargaining is becoming a continuous process in steel is given by the fact that more than 130 of these agreements were renewed upon their expiration dates; cases of renewal include important subsidiaries of the United States Steel Corporation (Carnegie-Illinois, American Steel & Wire, National Tube, American Bridge, et al.), Allegheny-Ludlum Steel, Jones & Laughlin Steel, and Crucible Steel.

AUTO INDUSTRY

Another illustration of an increase in trade agreements is given by the automobile industry, where written agreements and collective bargaining were practically nonexistent before 1933. In the summer of 1937, 270 agreements had been negotiated, the largest number with manufacturers of automobiles and auto parts.[10] By June 1938, the number had increased to 537, distributed as follows: [11]

Assembly and manufacturing plants	37
Automobile parts	429
Automobile dealers	12
Garages	12
Aircraft	5
Farm implements	6
Miscellaneous	36

These agreements cover all the large manufacturing companies with the exception of Ford Motor Co.

ELECTRICAL INDUSTRY

"The manufacture of electrical equipment, including radios, was one of the important mass-production industries almost untouched by union organization before the National Industrial Recovery Act of 1933." At present, the United Electrical, Radio, and Machine Workers of America has signed agreements in about 500 plants. (Note No. 12.) Collective bargaining was initiated with a written agreement covering the Philadelphia Storage Battery Co. (Philco) in 1935. Between that year and 1938 all of the company unions in the larger establishments were displaced, "frequently after an election held by the National Labor Relations Board."

Agreements have now been secured with all the larger companies except Westinghouse.[12] These include General Electric (covering 7 plants and approximately 30,000 employees), Radio Corporation of America (covering 12,000 employees), and Allis Chalmers (covering approximately 1,500 employees). During the past year, 45 new agreements were secured and 78 were renewed. Practically all agreements have been renewed upon their expiration.[13] In addition, there are numerous agreements negotiated by the International Brotherhood of Electrical Workers. Examples are agreements with the Crosley Radio Co. and National Electric Products Co.[14]

RUBBER INDUSTRY

The rubber industry provides additional illustration of the tremendous growth in collective bargaining. Because a special study has been made for this industry,[15] it will be possible to indicate the growth more fully than in other areas. P. W. Litchfield, president of Goodyear, wrote in 1928: "Although efforts have been made at various times to organize a rubber workers' union, the industry generally is open shop." [16] Today there are 73 agreements covering more than 40,000 rubber workers. Table 1 shows the growth in the number and coverage of agreements from 1932 to 1939. A substantial majority of the total number (55 out of 73) were secured in 1937 and 1938; these cover approximately 58 percent of all workers under agreement.[17] The difference in time period is more sharply indicated in table 2. Of the 73 current agreements, 29 (40 percent) were signed prior to April 12, 1937,[18] and 44 (60 percent) were signed after that date. In terms of number of workers, 82 percent were covered by agreements signed during the later period. It is significant that most of these have been renewed one or more times.[19]

TABLE 1.—*United Rubber Workers' local agreements signed and workers covered, from July 1932 to March 1939* [1]

Year	Number of agreements	Workers covered by agreements	
		Number	Percent
1932	1	85	0.13
1933	0	0	0
1934	6	2,706	6.11
1935	2	308	.69
1936	8	2,650	5.99
1937	38	19,850	44.78
1938	17	17,718	39.97
1939	1	1,014	2.29
Total	73	44,331	99.96

[1] Includes only signed agreements in effect as of March 1939.

TABLE 2.—*United Rubber Workers locals under signed agreements, and workers covered—1932–39* [1]

	Number of contracts	Percent	Number of workers under contract	Percent
Contracts signed prior to Apr. 12, 1937	29	39.73	7,920	17.87
Contracts signed after Apr. 12, 1937	44	60.27	36,411	82.13
Total	73	100.00	44,331	100.00

[1] Of the 73 contracts in effect only 2 questionnaires were incomplete as to the number of workers under contract. Both locals are very small.

GLASS INDUSTRY

The Federation of Flat Glass Workers was organized in 1934. Today it has a membership of 22,512, almost entirely covered by an agreement with the Independent Fourcault Window Glass Manufacturers Association and several agreements signed with individual companies.[20] A detailed picture of the growth in written agreements is given in the accompanying table.

TABLE 3.—*Written agreements in the flat-glass industry* [21]

Year	Number of agreements	Number of firms	Number of workers
1933	2	5	5,000
1934	2	9	14,000
1935	4	31	19,000
1938	[a] 128	186	22,850
1939	130	138	[b] 21,683

[a] Including agreements with 100 small New York City mirror shops, employing 250 people.
[b] As of February 1939.

All of the agreements have been in existence by renewal or modification since their first signing.[21] The agreements with the Pittsburgh Plate Glass and Libby-Owens-Ford Co. were renewed in 1936 and again in 1938; that with the Fourcault Association, in 1937 and 1938. Territorially the agreements cover New York, Ohio, Illinois, Indiana, and Pennsylvania.[22]

The industries discussed above represent the more spectacular developments in collective bargaining. There are many other industries in which written agreements have been introduced almost for the first time during the past few years: Aluminum, cement, canning, petroleum, and metal mining. The agreement of the Aluminum Co. of America is additional illustration of large-scale production only recently covered by union contract. Other examples of similar character are the agreements which have been negotiated with several Sinclair Oil companies, the Anaconda Copper Co., and the American Smelting & Refining Co. These and other agreements are outlined in table I.[23]

Discussion beyond this point will be limited to the extension of collective bargaining in industries and trades that were substantially organized before 1933: Clothing, coal mining, maritime, and printing, with passing mention of a miscellaneous group.

CLOTHING INDUSTRY

In the clothing industry collective bargaining has a long history, but prior to 1933 organization was confined to certain areas and sections of the trade, principally the large cities producing men's and women's outergarments. Since that time organization and collective bargaining have been extended both geographically and industrially.[24] The garment centers have become entirely organized, and there have been significant extensions in cleaning and dyeing establishments, in the cotton-garment industry, the shirt and neckwear industries, laundries, and textile employments.

The men's garment industry in New York City has been entirely organized, and for the first time in the union's history a national agreement was signed in 1937.[25] Written agreements now cover 1,200 alteration tailors and 2,000 custom tailoring and retail clothing establishments. Equally significant increases have been effected in other sections of the men's clothing industry. In the cotton-garment and shirt industries organization has reached into the South and the Middle West, as well as into the nonunion fringes remaining in the East.[26] Approximately 40,000 shirt workers are now covered by union agreements. Laundry workers in New York City are now organized in the number of 27,000. Nearly 500 contracts exist in the larger laundries, and several thousand workers in and about 1,400 hand laundries are under written agreement.[27]

Although no figures of increase are available for written agreements in the women's garment trade, other statements indicating a development in the type of relations under collective bargaining in the dress industry are relevant to this discussion. Recent negotiations between the union (International Ladies' Garment Workers, Union) and four employer associations resulted in new agreements "assuring peace in the industry for the next 2 years." Unlike many earlier agreements, these were secured without resort to strike. More than 100,000 workers in the metropolitan area are affected by the agreements, "which constituted a renewal of the old 3-year contract expiring January 31." More than 2,000 dress-manufacturings firms, producing 85 percent of the total output of dresses in the country, are covered by the agreements. They contain provisions for technical reforms in the interest of stabilization and greater uniformity in the enforcement of labor standards. Agreements are also being extended to cover nonunion areas outside of New York City. One example is a recent Boston agreement, signed with a firm that had opposed the union for 18 years.[28]

TEXTILE INDUSTRY

The textile industry is another area that has experienced an unusual growth in unionism and collective bargaining. Organization proceeded rapidly "as agreements were negotiated with key firms in woolen, silk, rayon, cotton, carpets and rugs, and braids, in the various producing regions, including the South." [29] Agreements have been secured covering the bulk of workers in the highly integrated rayon and carpet and rug industries and in the silk weaving and throwing industries. An agreement with the American Viscose Corporation covers 20,000 workers and 36 percent of domestic output; subsequent agreements carried the total to 60 percent; 75 percent of the silk and carpet and rug sections of the industry are covered by agreement. In the South there are agreements covering 25,000 workers. "A significant feature of the southern drive is the increasing number of elections," [29] conducted by the National Labor Relations Board to determine collective bargaining units. These often precede the negotiation of a written trade agreement.

SHOE INDUSTRY

Substantial progress in collective bargaining has occurred in the shoe industry. In 1937 the United Shoe Workers of America was formed; an organizational drive brought the membership from 16,000 to the present total of more than 50,000. The union now has signed agreements with three branches of the industry; component parts manufacture (lasts, leather findings), shoe manufacture, and repair shops, covering 149 firms and employing approximately 22,000. Most of the agreements provide for continuous bargaining with "definite termination dates and provisions for negotiation of a new contract." In addition, there are many cases of automatic renewal.[30] Additional agreements are found in plants organized by the Boot and Shoe Workers Union.[31]

COAL INDUSTRY

Collective bargaining has functioned in the coal industry for many years.[32] However, from 1927 until 1933 the bituminous branch of the industry operated largely on a nonunion basis. Following the National Industrial Recovery Act the union regained its strength, and collective bargaining was considerably extended, although some areas continued to be unorganized.

"The general recognition of the U. M. W. A. and the signing of contracts by nearly all important producers did not remove all of the elements of instability to collective bargaining in the bituminous coal industry. In a few instances important employers held out in their opposition to the union, and many of the smaller truck and wagon mines continued to operate on a nonunion basis. In Harlan County, Ky., a number of operators persisted in combating the U. M. W. A. by discharging and discriminating against its members, by interfering in various ways [33] with organizing activity, and by refusing to recognize the union as the representative of the miners." [32]

The National Labor Relations Board found, after hearings, in the Clover Fork Coal Co. case that the Harlan County Coal Operators' Association had exerted its power against unionization, restraining and coercing the miners to prevent organization. The informal settlement of this case is highly significant; the association signed its first agreement with the union,[34] thus extending the field of collective bargaining to cover the entire industry. The total experience in coal is summarized in the following terms:

"These factors (conditions within the industry), with the encouragement afforded by Federal legislation, help to explain the phenomenal success of the organizing campaign of the U. M. W. A. in 1933. A new interstate bargaining device, the Appalachian agreement (was adopted). This inclusion of the formerly nonunion areas within the scope of the basic contract promises greater stability of contractual relation and more freedom from strikes than under contracts based on the central competitive field." [35]

The Harlan agreement, signed after this writing, extended the bargaining system to cover the entire industry.[36]

MARITIME INDUSTRY

Prior to 1934, written agreements were at an ebb in the maritime industry. After the war period "collective bargaining, for all practical purposes, had disappeared and the crews found themselves virtually helpless in the face of the employers' ultimatums and pronouncements. * * * The unredressed grievances and the unexpressed hatreds of these years go far toward explaining the chaotic outbursts and the hotly contested strikes of the period after 1934." [37] Since that date agreements have been negotiated to cover a large section of the industry.

The seamen on the Atlantic and Gulf coasts are covered by 52 agreements, affecting passenger, freight, tanker, and collier companies. Included among these is an agreement with the American Merchant Marine Institute covering 210 ships and 20,000 men.[38] "Collective bargaining elections held under the supervision of the National Labor Relations Board have resulted in contracts covering more than 30,000 seamen." [39]

Other unions covering the unlicensed seamen on the Pacific and Gulf coasts have written agreements affecting their members. Among the licensed personnel, the marine engineers provide an illustration of increase, having secured 54 new agreements during 1938.[40] The longshoremen have also increased the coverage of their written agreements during the past few years. Directly as a result of a Board election, the longshoremen on the Pacific coast secured a coastwise bargaining unit; [41] their agreement, negotiated with the Waterfront Employers Association of the Pacific Coast, covers 12,000 workers in all Pacific coast ports.[42]

PRINTING AND PUBLISHING

In the newspaper branch of the printing industry where organization has always been widespread, the number of new and renewed agreements in 1936 (347) was larger than the corresponding figure

for any previous year and more than double that for 1934.[43] The following year, the number had increased to 570, thus more than doubling the corresponding figure for any previous year. The total number of written agreements in 1937 was 629, representing an increase of 47 over 1937.[44] In 1938, the metal engravers reported that the number of their agreements had increased 100 percent over the previous year.[45] In addition, a new field has been organized under the Newspaper Guild. The union had 77 agreements in 1938. The following comment describes the extension of collective bargaining among newspaper writers and office workers:

"Not only has the volume of contracts increased, the number of conditions covered—and hence the number of provisions—has greatly increased in the aggregate." [46]

OTHER INDUSTRIES

In a miscellany of other trades and crafts, many of which were partially organized, there has been a similar extension. The machinists have more than 4,000 written agreements, 2,000 of these representing additions or renewals during 1938. Many of them were secured in industries previously unorganized; aircraft, automobile repairs, office equipment, petroleum, aluminum.[48] The teamsters have recently secured an agreement covering 17 truck companies which operate "in 12 States extending from northern Kentucky to Nebraska." [47] In lumber and woodworking there have been substantial increases. The International Woodworkers, for example, had an agreement covering approximately 25 of their locals in 1938, 1 year after their formation. In addition they had a written wage scale covering two-thirds of their membership (given as 100,000).[48] Other unions have secured written agreements in related fields.

Several extensions have been made in the service industries, including retail trade and office employment. Major hotels in Kansas City, San Francisco, and New York have recently been covered by written agreement. During the past year 10,000 workers in retail and wholesale trades were similarly covered.[49] A recent agreement between the retail meat dealers and the amalgamated meat cutters and butcher workmen "includes uniform provisions for 30,000 retail meat dealers on all points except wage rates, which are negotiated locally by the unions and meat dealers' associations." [49] Agreements were negotiated for the first time in 1937 to cover the local transportation system in New York City.[50]

ISOLATED AGREEMENTS

Finally, there are a few cases of isolated agreements representing important extensions of collective bargaining. One of these, signed by the Golden Eagle Life Insurance Corporation and the United Office & Professional Workers, is "noteworthy as one of the first contracts executed between an insurance company and a labor union in behalf of industrial insurance agents in the company's employ." [51] An agreement between the Postal Telegraph-Cable Co. and the American Communications Association covering 13,000 employees followed a certification by the National Labor Relations Board.

"It covers the company's entire continental system, with the exception of certain offices for which the Commercial Telegraphers Union has contracts." [51]

IMPROVED RELATIONS

In addition to this evidence of numerical increase there are many statements indicating an improvement in industrial relations concomitant with the extension of collective bargaining and written trade agreements. These statements are made by students of collective bargaining and by employers. A few sample statements are included here. The steel industry:

"By 1938, however, it was evident that the transition had been made much more easily than had been expected, and both groups expressed satisfaction with the progress made. The union representatives, on the whole, believed in the good faith of the managements in accepting and dealing with the union, while management, on the whole, testified to the responsibility, honesty, and intelligence of the union representatives, both national and local. There had been no problem of union violations of the contract or interference with efficiency in the mills. The year's experience had built up unexpected reserves of mutual respect and confidence." [52]

* * * * * * *

"The impact of New Deal legislation has stimulated a notable change in the attitude of steel managements toward collective bargaining. While most companies were lukewarm to any type of group relations during the twenties, after 1933 outspoken steel executives have praised the 'collective cooperation' and the 'two-way channel of communication' offered by employee representation plans. Formerly opposed to dealing with any outside labor organizations, many executives now seem acquiescent to national collective bargaining with a responsible union." [53]

The following is an excerpt from a report describing a director's meeting of the United States Steel Corporation. The bulk of the statement is in the words of Myron Taylor, chairman of the corporation:

"The union has scrupulously followed the terms of its agreement and, insofar as I know, has made no unfair effort to bring other employees into its ranks, while the corporation's subsidiaries, during a very difficult period, have been entirely free of labor disturbances of any kind. The cost of a strike—to the corporation, to the public, and to the men—would have been incalculable.

"The officers of the company urged upon me and upon the board of directors, late in 1936, that we make a written contract embodying wage changes which would be made effective after negotiations with employee representatives, and that it be coupled with a sliding-scale arrangement based upon changes in the cost of living."

His remarks on labor policy were applauded, and a resolution * * * was adopted unanimously expressing approval of the corporation's labor policy.[54]

The automobile industry:

"To local union officers and the rank and file of union members, appraising their experience, however, the gains through the union seemed very substantial. Control of speed and better enforcement of seniority rights were among the most important. Better working conditions were frequently mentioned, and even more often a reduction of discrimination and favoritism by foremen, and generally better treatment in the plant.

* * * * * * *

"The representatives of management also frequently admitted abuses under the old system, especially of favoritism, difficult to control in huge organizations. The pressure for production had undoubtedly in some cases gone too far at the expense of the men. One plant manager, although on the whole very critical of the union, summed it up in the words, 'The union does keep supervision honest.'" [55]

The Jefferson National Expansion Memorial in St. Louis a National Disgrace and Unlawful Diversion of Public Funds Voted for Relief

EXTENSION OF REMARKS

OF

HON. WILLIAM P. LAMBERTSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

Mr. LAMBERTSON. Mr. Speaker, as the final act in the consummation of that national disgrace known as the Jefferson National Expansion Memorial in St. Louis, the National Park Service, acting through the United States district attorney in St. Louis last week, by court order obtained title to 40 blocks of business and industrial property in the heart of downtown St. Louis for the memorial the real-estate promoters have been working on for more than 5 years.

After 4 years of pressure 307 of the buildings in the area are still occupied by firms, to whom moving will be not only a great expense but for some it will mean the end of their business. Yet the Government has given these employers but 60 days to get out.

The St. Louis Post-Dispatch, a fearless newspaper, which contributed much to the exposure of the frauds behind this memorial promotion, last Monday reports the realty men thick on the river front as moving day nears. Quite a fitting climax to the brazen advertisement of one of their number, who in 1935 advertised "Salesmen wanted, river-front project going through."

As previously mentioned on several occasions, this project is being carried forward, solely by authority of an Executive order allocating $6,750,000 of funds appropriated by the Emergency Relief Appropriation Act of 1935 to the project, under the guise of preserving historic sites which long since have passed out of actual existence.

If we are to allow the Presidential order to go unchallenged what is to prevent the next Executive order from reading much like this:

WILL THIS BE THE NEXT EXECUTIVE ORDER?

Allocation of funds to the Secretary of the Interior for the acquisition and development of a historical site to be known as the New Amsterdam National Memorial

Whereas the act of August 21, 1935, Public, No. 292, Seventy-fourth Congress, declares it to be a national policy to preserve for public use historic sites, buildings, and objects of national significance for the inspiration and benefit of the people of the United States; and

Whereas the Secretary of the Interior through the National Park Service has determined that certain lands situate on the east bank of the Hudson River at and near the site of old New Amsterdam, possesses exceptional value as commemorating or illustrating the history of the United States and are a historic site within the meaning of the said act, since thereon were situate the site from which Hendrick Hudson began his voyage of exploration and discovery up the Hudson River as the result of which this territory was claimed for the Netherlands, the home of Peter Minuit, who in 1625 purchased the entire island of Manhattan from the Indians for trinkets to the value of $24, the building where the Dutch East India Co. opened the first trade between the Dutch and the Indians, the home of Peter Stuyvesant who was the first great administrator of the new Dutch colony, the site where in 1655 Peter Stuyvesant embarked upon his campaign against the Swedish settlements along the Atlantic, the place where in August 1664 the Dutch governor surrendered New Amsterdam to the British, the place where in 1755 Sir William Johnson organized his expedition to march against the French and the Indians, the site of the ancient house on the Bowerie where Wilhelmus Kieft, in 1634, assumed the governorship of Nieu Amsterdam, the home of Hans Renier Oothout the famous explorer, and Wynant Ten Brecches, the land measurer; the place where Adrian Van der Douck reported the discovery of gold in the colony; the place on the Battery where the Dutch burghers swapped stories and products with each other. The place where George Washington took the oath of office as first President of the United States; the building in which the First Congress of the United States assembled; the home of Samuel Osgood, first residence of any President of the United States, and many other incidents and places associated with the development and expansion of our Nation from the shores of the Hudson River to the Pacific Ocean; and

Whereas, the city of New York has agreed to contribute $1 for the purpose of acquiring and developing the said site which is but a small fraction of the amount to be expended for such purposes; and

Whereas I find the said project will provide relief, work relief, and increase employment:

Now, therefore, by virtue and pursuant to the authority vested in me by various emergency relief appropriation acts of Congress (ibid) I hereby allocate to the Secretary of the Interior from the funds made available by said acts, the sum of $300,000,000 which together with the sum of $1 to be contributed by the city of New York and accepted by the Secretary of the Interior under authority of the said act of August 21, 1935, will make available for the said project the sum total of $300,000,001; and the Secretary of the Interior, through the National Park Service, is hereby authorized and directed to expend the said sum of $300,000,001 in acquiring the said property and in developing and preserving it for the purposes of the said act of August 21, 1935, if and when the city of New York shall make the said sum of $1 available to the Secretary of the Interior for such purposes.

WASHINGTON, D. C.

This would be an ideal chance to drive the money changers out of the temples in Wall Street and carry Mr. Strauss' slum-clearance projects to final perfection.

Now, there is no Member of Congress who will not agree that Manhattan Island is the most historic spot on the North American Continent. It is all historic ground. It has been not only the center of intrigue but also the scene of exploits of bravery unexcelled in our colonial history.

It would be far more appropriate to preserve historic sites on the island of Manhattan than on the western banks of the Mississippi River. But there was no real-estate pressure coming from New York City and there were no political debts to pay in this way there.

MONEY WOULD REVERT TO THE TREASURY UNLESS SPENT BY JUNE 30, 1939

The funds allocated by the President to this project would revert to the Treasury on June 30 if this scheme to evade the

will of Congress had not been concocted by the memorial promoters. Whether or not the plan will succeed remains to be seen. If the General Accounting Office follows the procedure established by the United States statutes this memorial will be laid low. If the laws of the United States are strictly observed, and not winked at as many other laws too frequently have been winked at, the Government will protect the interests of the people by halting this nefarious scheme very quicky now.

Section 627, title 31, U. S. Code, provides:

No act of Congress passed after June 30, 1906, shall be construed to make an appropriation out of the Treasury of the United States, or to authorize the execution of a contract involving the payment of money in excess of appropriations made by law, unless such act shall in specific terms declare an appropriation to be made or that a contract may be executed.

If Congress and the courts insisted upon the integrity of this act there would be no question about this memorial. If Congress and the courts insisted that the act which provides all funds shall be deposited with the Treasury of the United States, the registry of the district court in St. Louis would not be set up as a disbursing agency for the Government to evade the will of Congress and to prevent this relief money from reverting to the uses for which it was appropriated.

Mr. Speaker, mere words cannot describe the lengths to which the National Park Service has cooperated with the memorial promoters in their attempt to put this rotten deal and this unlawful diversion of public money to the use of the real-estate promoters and the politicians of St. Louis. This memorial is not a work-relief project—it will put men permanently out of work in St. Louis and destroy many small firms. The superintendent in charge of the project for the National Park Service filed an affidavit in the Appellate Court of the District of Columbia 2 years ago in which he stated the project will provide employment for only 600,000 man-hours of skilled and unskilled labor. This able superintendent now declares that the 486 buildings on the site can be wrecked and the site cleared for $250,000.

When I recall the fact that it cost the W. P. A. $1,440,000 to demolish 647 small buildings of an average size of one story and a half in Chicago, I wonder just what kind of wrecking experience this park superintendent has had.

LAND APPRAISEMENTS

The site for the proposed memorial has recently been appraised at $6,985,000. This sum exceeds the entire Federal allocation, yet the agents of the Government have deposited but $5,970,000 into court for settlement of claims against the Government. Where the extra million dollars or more will come from is no mystery to me. Every year we will be called on for appropriations to make up these deficiencies.

WHAT WILL WE DO ABOUT IT?

Mr. Speaker, Congress has never voted a dime for this project. In fact, as late as this April the Clark amendment to the Interior Department Appropriations Act of 1940 was rejected by the conferees. The only strength behind this memorial scheme is political strength. The only necessity is political necessity. Within the strict meaning of the law it is neither a useful project nor a public project, for it has not been adopted as such by Congress.

Mr. Speaker, the city of St. Louis is broke and cannot afford this expensive bauble. The deficit last year in St. Louis was $3,332,000. The city has dug deep into the Federal Treasury heretofore for assistance. St. Louis has received $52,705,608 in Federal funds during the last 4 years for local projects yet has been able to contribute only $3,100,000 in sponsorship for these projects. The mayor ought to explain to his people where he can dig up $2,250,000 to contribute to the building of this memorial when he cannot find funds to balance the city's budget and feed the hungry people of St. Louis.

Mr. Speaker, the Federal Government is also about broke. Our national debt will be over the $45,000,000,000 limit next year. Our contingent liabilities mount into the billions. We cannot afford this memorial any more than can the city of St. Louis. If we are to allow this expenditure to go unchallenged and without investigation, who can object if an Executive order taking over Manhattan Island would bob up some day?

Mr. Speaker, are we mice or are we men? Are we to sit here in idle complaisance while another precedent is set and bureaucracy marches on? Are we to permit the further loss of legislative powers by Presidential usurpation? Are we to permit constitutional liberty to sink into the lost horizons of a Roosveltian dictatorship? When the final day of reckoning comes, I trust that I shall not be alone in this fight to preserve our congressional prerogatives and our congressional integrity. We have a duty to the American people to protect the Federal Treasury against raids of this character. This money is being spent, not for relief, not for work relief, not for the increase of employment, but principally for the relief of the memorial promoters and the Dickmann machine in St. Louis. The time has come to quit paying political debts with relief money. This should be another job for our new crusading Attorney General, the Honorable Frank Murphy. In the words of a famous Federal judge, the time has come to move on the higher ups behind this memorial scheme.

Royal Samuel Copeland

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 26, 1939

ARTICLE BY ERNEST RISLEY EATON

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tribute to the memory of the late Senator ROYAL SAMUEL COPELAND by Ernest Risley Eaton, of New York City:

[From the Journal of the American Institute of Homeopathy, September 1938]

A TRIBUTE TO THE MEMORY OF ROYAL SAMUEL COPELAND

Children liked him; boys felt friendly toward him; young men admired him; working people hung upon his word; many people grown old in years found comfort in what he said to them. He had an alert sympathy and understanding of human problems which drew people to him. In these bewildering and harassing days that have befallen us it does not seem quite right that we shall no longer have the benefit of his honest, kindly counsel and broad insight into our Nation's needs.

ROYAL SAMUEL COPELAND, A. M., M. D., F. A. C. S., achieved the highest distinctions attainable in the medical profession. Eminent specialist in diseases of the eye, dean of the New York Medical College, noted lecturer and author, he was not content to be a physician to the exclusion of all other aims. From the time he was my preceptor in a medical school many years ago I watched him grow in mind and soul under the heavy responsibilities of affairs of state which he so willingly assumed. He was an unusual combination of physician and statesman, and I believe that his commendable career as a statesman can be traced directly to the fact that he was a successful physician.

When COPELAND practiced medicine he looked upon his patients as living human beings. To him the disease exhibited was secondary. Practitioners of medicine recognize the importance of personally meeting the patient and understanding his needs. Text books of medicine, published long before the commercialized scientific phase came into vogue, intimate how much can be learned from a study of the patient. This stands out in contradistinction to complicated procedures, many of which have proved to be no better than an armory in which there are a thousand rifles, not one of which can be used to fire a single shot. COPELAND regarded the patient as a person—the patient who is forgotten today—and knew how to meet him, when as a stranger he came to him professionally.

COPELAND did not have to read books on how to make friends; instinctively, he made them. His voice, his courtly manners, his obvious sincerity, his open-mindedness and frankness of manner won him a myriad of friends who never forgot him. He possessed fine bedside manners, and met people easily. They liked him on first glance and immediately took him into their confidence. Keeping abreast of medical knowledge is not difficult, but for the physician to have real understanding of the patient is a difficult

problem. COPELAND understood this important function, and talked about it to his students in the classroom. In his contribution on refraction, he says: "It would be presumptuous to add to the large and growing list of excellent and exhaustive treatises on the subject of refraction * * * it is important for the student to supplement studies by verification on the patient himself." COPELAND was well qualified to thus admonish his colleagues.

When COPELAND became a statesman he chose a career which he thoroughly liked, as he often affirmed, and one in which he knew that he could be useful to others. It is true that on the road to statesmanship he passed through byroads of politics, but for him politics was a means and not an end. I recall an answer he gave me one day to my question as to why he belonged to Tammany: "Eaton," he said, "man is a social being and cannot work without cooperation. Organization is a necessity, and my organization is Tammany. Tammany has many fine qualities deserving of admiration of Democrats and Republicans alike." His conversation on this occasion implied that the party system of this country is a necessity, but must be confined within normal limits.

COPELAND started his political career in Michigan, where he was born in 1868. He was active in civic, educational, and religious affairs of Ann Arbor, of which city he was made mayor in 1901. It was not many years after coming to New York that he found opportunity to increase his capacity for work on behalf of others. This was largely made possible by the position he held as dean of the New York Medical College and Flower Hospital during the most noteworthy period of this institution. He resigned as dean to become commissioner of health in 1918.

In 1903 COPELAND was elected president of the American Institute of Homeopathy upon which organization he exercised a far-reaching influence for good. He was elected United States Senator in 1923 after filling with distinction the office of commissioner of health of New York City. He passed to his rest suddenly on June 17, 1938.

People who met COPELAND swore by him, and whether a newspaperman, a farmer in upper New York State, a city dweller, or a suburbanite—they were his friends. He become personally known to them and enlisted their loyalty. He was like Franklin D. Roosevelt in this respect. His was the radio voice of a persuasive personality, impelling loyalty. Perhaps for the reason that in many respects he was too much like Roosevelt he was constantly in disagreement with Roosevelt and his political policies. There could not be two Roosevelts or two COPELANDS.

People did not think that a truant doctor could be a good statesmen, and they smiled as they shook their heads and said so. COPELAND proved that the training and experience of a physician is the best foundation for building a political career, spent in significant service on behalf of others. One naturally led to the other. People always depend on the doctor—the person with the common cold, the young man with pneumonia, the father with high-blood pressure, the mother half-crazed for fear her child will die—they all crave comfort (fortis, strength), and COPELAND prescribed this in politics. He was depended upon as a statesman, and he did his best to fulfill his obligations even among the most simple folk.

Many men in politics make favorable first impressions which are not always easy to live up to. Most men mean well, but with COPELAND it was more than that. He meant more than what he said at the time, and did his utmost to carry out his promises. As time went on he did more because he could do more. His magnificent personality was not a failure. Plimsoll's Mark was never submerged with COPELAND. He knew his own political handicaps, and as he grew older he promised less and was able to accomplish more. He did not make the mistake, as many do, in offering strength of feeling for strength of manhood. He made friends and kept them.

He was highly esteemed by those who knew him and came to him. As he grew older the imperative need for earning money grew less, and this enabled him to devote more of his time to better things which he had really wanted to do. I can recall very well, just as though it were yesterday, his dignified and cordial friendship with professors and students alike, as dean of the New York Medical College and Flower Hospital. He struggled to make this medical college second to none, drawing students from all parts of the country. He was happy in the thought of this rising school and the men who made its success possible. With ample resources, which the city of New York afforded in money and sick people, his was the only medical school available for students that had an attached hospital for bedside study; he himself was an able lecturer, with decision of thought in opinions he offered at the bedside in surgical clinic and classroom. Even at that time his large practice, writing, hospital work, and executive duties, did not absorb all of his time, and he could be found in his office in the morning, the operating room at noon, and later preoccupied with the duties of college administration. He still found time to write, read and farm. He paid attention to medical jurisprudence, and as a lecturer he was interesting and popular. He was a friend of the student in every sense of the word.

One of the reasons why this country suffers today is because we have forgotten that the world at large is more indebted to Socrates than to Croesus; to William Cullen than to political plunderers of provinces; to the Great Teacher, rather than to the money changers in the temple. Too little time has been spent in cultivating the ideals and aspirations taught us by all the great teachers. The historian of the future will measure our advancement not by the height of our skyscrapers but by the results teachers have attained in the true education of man; and it is my firm belief that COPELAND, during the period he presided over his medical school, left there a clear imprint of the truth. One student, I well remember, who sought to secure a medical education was helped even to the extent of being loaned money out of COPELAND's meager salary.

Among many positions he held was that of health commissioner of New York under Mayor O'Brien; and an interesting story is told as to how COPELAND came to be appointed. The health commissioner had suddenly resigned that day. In the neighborhood of the city hall subway station the mayor met Commissioner Coler of the department of charities, who, in introducing COPELAND, said, "Here is a real commissioner of health for you." The mayor, visibly impressed at once, offered COPELAND the position. COPELAND accepted the appointment, and the three walked over to the office of the mayor where COPELAND was sworn in.

With his many attainments, he had a horror of undue flattery. Many years ago, upon being introduced as speaker of the evening in rather extravagant terms by the superintendent of a downtown Sunday school, COPELAND said, "You know, I am reminded of the story of the farmer who attended an agricultural show wearing a large medal upon the lapel of his coat. When asked by a neighbor how he got the medal, he replied, 'My cow won it in the self-same show 1 year ago.'" COPELAND said, "Please don't pin any cow medals on me."

This was natural for one who was accorded love and respect such as few men receive. His common sense could not accept such high-sounding phrases. In speaking to the children and parents he lamented the absence of patriotism and chivalry which give championship and protection to the weak, and to enemies mercy. He took for his life text the words—the immortal words of the ancient Hebrew prophet—"Love mercy, do justly, and walk humbly with thy God."

With his knowledge of the classics, science, and wonders of the microscope and spectroscope, his heart and the Bible blended well together. He knew that because truth was above reason it was not necessarily contrary to reason. He believed the Bible, and he knew it perhaps better than any other book, and he was continually quoting its passages. He did not have to be a physician to know that this is a sick world and that government for the people and by the people has not yet been able to solve the problems created by itself. He saw America in danger and knew that the man who doubted it was blind.

There is no topic of inquiry more completely baffling to the statesman than the attempts to discover means of preventing crime and punishing criminals. Discussions regarding the right to punish offenders and the disposition of them have filled many books. COPELAND was the first statesman who believed in stopping crime before it begins by educating the children correctly in the first place. This is an old philosophy of truth, but not a philosophy of statesmanship, and it is a long stretch from deportation by ships as discussed in politics 100 years ago to COPELAND's plan—the most correct code so far advocated by any lawmaker.

COPELAND had vision extending far beyond other statesmen, when, in straight and simple fashion, he sought to solve, through the children, the problems of crime. His sympathy was big enough to try to save city people in a better way than by redeeming their losses. To teach children is a solution by prevention, not reconstruction but construction; saving folk before, not after the commission of a crime. He tried to give his aid to the solution of a problem he knew well, and he focused on the kiddies as offering ways and means by which it could best be accomplished. In his kindly, sympathetic manner, it was as if he placed his hand on the forehead of a symbolic sick child and said: "We will not let you suffer; we will prevent your pain and suffering, now and forever."

In a letter I received from him on April 8 of this year he said: "You will be astonished to learn that for 2 or 3 years I have had it in mind to write a book on education for character. As chairman of the Senate Committee on Crime I became imbued with the idea that America's greatest social problem is juvenile delinquency. Of course, if the home and the church can do the right kind of a job, we would not have to leave the solution of the problem to the public school. As it is, however, that seems to me to be about the only place to look for relief," and after a personal request he writes: "What I am seeking is to find an individual church that is helping the kids to stay in the straight and narrow way. What can you tell me?" I completed the study of the problem he asked of me and the results were mailed the day the announcement was made over the radio that Senator COPELAND had come suddenly to the dusk of his days.

Apparently firm in health, honorable in his dealings, having no petty quarrels with his brethren, not envious of the success of others, uniting courtesy with independence, determined, but not bigoted, he worked hard in the field of endeavor, made large by his own broad interests—a field in which he gave of himself so vigorously that he was stricken down before his time; yet in sight of multitudes of men he still is living in their praise.

"Glory of Warrior, glory of orator, glory of song,
Paid with a breath flying by to be lost on endless sea;
Glory of virtue to fight, to struggle, to right the wrong—
Nay but be aimed not at glory, no lover of glory he;
Give him the glory of going on and still to be."

Vesper Flag Service

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, June 26 (legislative day of Thursday, June 22), 1939

ADDRESSES BY HON. ALBEN W. BARKLEY, OF KENTUCKY, CHAMP CLARK, AND DENIS E. CONNELL

Mr. CAPPER. Mr. President, on Sunday, June 11, the holy Sabath preceding Flag Day, it was my good fortune to witness on the east center steps of the National Capitol a colorful and inspiring patriotic ceremony. The event was the climax of the National Patriotic Revival, culminating in Flag Week, which was so successfully conducted by the United States Flag Association, a patriotic society headed by the President of the United States as honorary president general, and whose active head is a distinguished retired Army officer, Col. James A. Moss.

Three excellent addresses were delivered at the vesper flag service: A Message to the Youth of the Nation, by our distinguished colleague, Senator ALBEN W. BARKLEY; Station Y-O-U-T-H is calling Station E-L-D-E-R-S, being an appeal for peace by Champ Clark, the 15-year-old son of another one of our distinguished colleagues, Senator BENNETT CHAMP CLARK; and The Spirit of Lincoln Speaks Today, by Denis E. Connell.

I ask unanimous consent to have these three addresses printed in the CONGRESSIONAL RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

A MESSAGE TO THE YOUTH OF THE NATION

(Delivered at the vesper flag service of the United States Flag Association, Sunday, June 11, 1939, by Hon. ALBEN W. BARKLEY, of Kentucky)

Ladies and gentlemen, throughout America today there arises before the portals of every school and every university a serious question mark; and the graduates of these institutons are anxiously scanning the horizon for an answer.

This question may be couched in two words, Whither America? To the youth of this Nation is perhaps given the task of finding the answer; and it will not be phrased in optimistic terms unless youth clings to the faith which inspired our forefathers who have passed this great heritage on to us.

The first article of this political creed is courage. It required dauntless will and rugged character to erect in America a new commonwealth dedicated to "life, liberty, and the pursuit of happiness" and to the equality of all men.

It was a courage that counted not the cost of the sacrifice, a courage which has been immortalized in the whole epic of American history.

This Nation has grown to greatness by the labor and the inspiration of men and women who not only endured but laughed at misfortune and adversity.

From the days when adventurous pioneers founded a new nation at Jamestown, Va., to the breathless moment when Lindbergh blazed a new trail along the skyways, America has been the habitation of men and women who dedicated the sum total of their lives to the advancement of this land of opportunity.

To these men and women of the yesteryears barriers that seemed insuperable served as a challenge to their determination and success. National skies were often overcast, and the thunders of impending disaster at times rolled across our continent; but our forefathers never doubted that these storms were necessary to clear the atmosphere for the enjoyment of brighter days.

At Valley Forge the American soldier, in his bare feet and pitiful rags, saw the glowing vision of a strong and united nation, in which religious and political freedom would move forward in unison with social security and economic opportunity.

In the dark days of the Civil War, when the great heart of Lincoln was depressed with doubts and fears, the courage of the common soldier and his faith in a reunited country in which now we all rejoice were indispensable contributions to the victory at Appomattox.

American history is a pageant of constant progress, made glorious by the conquest of bitter adversity.

The "home front" has borne its burdens with the same spirit which has typified the fighting forces.

To weld a nation out of the fragments of 1789, and to keep that nation strong and militant and united since that day, have required an unextinguishable fire of zeal and devotion.

Our steps have been pursued by economic disaster no less than by foreign and domestic warfare. Business depression has alternated with periods of great prosperity. The hard times following the Revolution were banished by the financial wisdom of Hamilton, Madison, and other great souls, while the crisis that followed the War of 1812 was solved by the genius of young America, as typified by the youthful Henry Clay and a strong group of his compatriots.

In 1837 a great panic swept over America that paralyzed commerce and caused business to languish for nearly a decade until the gold from the hills and valleys of California formed a new foundation for hope and economic stability.

Some of us can dimly remember what are called the "gay nineties," but which to those of that period constituted "the heartbreaking nineties."

During that period the expenditures of the National Government rose to a billion dollars per annum, amid the moans of the faithless and the pessimistic to the effect that our country was headed for national bankruptcy. Speaker Thomas B. Reed gave the crushing answer when he uttered that cryptic sentence, "America is a billion-dollar country."

By the exercise of courage and determination such as this America surmounted the difficulties that beset her during the decade before the turn of the century; and the panics or depressions or recessions of the pre-war and post-war years were met without serious difficulty by the Government of the United States, because the people had faith in that Government.

Following, and it may be in part because of, some of our previous excesses, we have for nearly 10 years suffered from economic and social maladjustments which cannot have escaped the attention and consideration of patriotic and devoted men and women. These problems will be solved. We are not less courageous than our forefathers, if we are worthy of them. We must continue to have faith in our country, in our Government, in our fellow men. Under the aegis of this system of government and social progress which we call the American system we have become a great power, and that power must be exercised for the advancement of American life, for the preservation of honorable relations among the nations of the earth, and for the efficient and faithful exercise of the functions of democracy in a world of chaos. The battles of the past inspire us. The battles of the future beckon us.

AN APPEAL FOR PEACE FROM THE YOUTH OF THE NATION

(Delivered at the vesper flag service of the United States Flag Association, Sunday, June 11, 1939, by Champ Clark, son of Senator and Mrs. BENNETT CHAMP CLARK, of Missouri)

This is station Y-O-U-T-H calling station E-L-D-E-R-S. Station Y-O-U-T-H calling station E-L-D-E-R-S.

I have a message for you, station E-L-D-E-R-S. It is an appeal from the Youth of the Land.

In every one of America's wars the elders have planned and guided while the youth of the land have suffered and sacrificed, fought and died on the field of battle. Thus will it ever be, for this is in the natural order of things.

In the Civil War, for example, Grant and Sherman, Sheridan and McClellan planned and guided, but it was soldiers between the ages of 17 and 20 who did nearly all the fighting that won the war.

In the World War Pershing and Harbord, Liggett and Bullard planned and directed, but it was the youth of the Nation who fought and won the battles. In every war it is the flower of the youth of the land that is decimated—not the maimed, the halt, and the blind. What a terrible sacrifice the god of war demands. Every war leaves its scars, which, like scars on the body, remain indefinitely. It was the great English historian, Edward Freeman, in the latter part of the nineteenth century, who said the scars of the Norman Invasion, 800 years before, were still visible. And how plainly do we of today see the scars of our Civil War of three quarters of a century ago.

In the destruction of life and property, in suffering and sorrow, in modern war the price of victory is so great that the victors lose as do the vanquished.

It is the elders of the Nation who send to war the youth of the land, who have no voice in the matter.

We, the youth of America, appeal to you, our elders, not to send us to war, to suffer and sacrifice, to fight and die. Let us live in the enjoyment of life and die natural deaths; do not have us, in the glow of youth, killed or maimed for life. Do not misunderstand us, elders: while we, the youth of the land, want peace, we do not want it at any price. We want peace with honor.

If you do send us to war, we will, of course, answer the call of the flag as did the youth of yesterday—and we will suffer and sacrifice, we will fight and die, as they did.

But please, oh please, elders, do not send us to war. There must be some honorable way of avoiding war—there must be some way for nations that claim to be civilized, to settle with honor their differences without resorting to mass human carnage—to untold suffering and sacrifice, untold sorrow and destruction.

May we, the youth of America, suggest to you, our elders, that tolerance among men—tolerance in all things—in religion, race, business, and other matters would make possible the settling of differences among nations without resorting to war, as tolerance makes possible the settling of differences among individuals without resorting to violence?

Again, elders of the Nation, do we, the youth of the land, appeal to you, please, please do not send us to war.

This is station Y-O-U-T-H signing off.

THE SPIRIT OF LINCOLN SPEAKS TODAY

(Recited by Denis E. Connell, the leading actor of the Nation's Capital)

Eight score and three years ago our fathers brought forth upon this continent a new Nation, conceived in liberty and dedicated to the proposition that all men are created equal and that the people shall rule.

Now, you of today are engaged in a war with anti-American forces and influences, testing whether that Nation, or any nation, so conceived and dedicated, can endure. Though these forces and influences be moral, they are as dangerous and as deadly as any physical ones that have ever threatened the life of the Nation.

Your fathers who, through their trials and tribulations, their sufferings and sacrifices, created this Nation, in passing to the Great Beyond threw the torch from falling hands to future generations, of which you of today are one. Be yours to hold it high—otherwise ye shall break faith with your fathers.

Let you who are now living dedicate yourselves to the task of preserving the great heritage left you by those of us who have gone before; let you renew your allegiance to the ideals symbolized by the flag we gave you, among them being national unity, patriotic cooperation, and racial and religious tolerance. Let you reaffirm your faith in the institutions of democracy embodied in the Declaration of Independence and the Constitution of the United States we bequeathed you, among them being freedom of speech, freedom of the press, freedom of religion, freedom of assembly, and personal liberty. Let you highly resolve that we, your fathers, shall not have suffered and struggled, sacrificed and died in vain; that this Nation, under God, shall have a new birth of freedom—freedom from class hatred; freedom from materialistic greed; freedom from contention between capital, labor, and government; freedom from racial and religious intolerance; and that, with malice toward none, with charity for all, a government of the people, by the people, and for the people shall not perish from the earth.

Oh, you Americans of today, who, without having undergone sacrifices and privations in creating or saving the great Republic under whose flag you are enjoying such blessings of life, we, your fathers now in the realm of the Great Beyond, beseech you to awake to the dangers which are menacing you, your homes, your children. Awake and unite, cooperate and tolerate before it is too late!

Tennessee Chapter of National Association of Postmasters

EXTENSION OF REMARKS

OF

HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, June 26 (legislative day of Thursday, June 22), 1939

ADDRESS BY HON. JAMES A. FARLEY

Mr. STEWART. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an address delivered by Hon. James A. Farley, Postmaster General of the United States, at the annual convention of the Tennessee Chapter of the National Association of Postmasters, held at Chattanooga, Tenn., June 5, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is good to be in Chattanooga today and I want you postmasters of Tennessee to know how much I appreciated the invitation which was extended to me to be here with you today on the occasion of your first annual convention.

In the 6 years that I have been associated with your distinguished senior United States Senator, my good friend, KENNETH MCKELLAR, chairman of the Senate Committee on Post Offices and Post Roads, I have come to know a great deal more of the sterling character, the industry, and the loyalty of the people of this splendid State. In fact, Senator MCKELLAR himself is the living embodiment of the fine quality of citizenship of which Tennessee is so proud, and which is one of the brightest jewels in the crown of American democracy. I and everyone in Washington share the high esteem and sincere affection in which Senator MCKELLAR is held by the people of this State.

And well may you be proud of him, because no living person in these times of difficulty at home and chaos abroad has done more in the Nation's Capital to promote the welfare of his country and to preserve its noble traditions. It is my earnest wish personally and as Postmaster General and chairman of the Democratic National Committee that Divine Providence will spare his health and continue to bless him with unlimited success in his great and good work.

And may I pay tribute also to your excellent Governor, Prentice Cooper, and his splendid administration. I am sure he will go down in history as one of the best men who has ever occupied the office of chief executive of Tennessee. I wish him and his associates continued success.

This State is also to be congratulated on its selection of your new junior United States Senator, TOM STEWART. He has already won his spurs in the United States Senate and the people of this State will never have cause to question their good fortune in choosing him as the teammate of Senator MCKELLAR.

Here in Chattanooga, may I also publicly acknowledge the good work and outstanding achievements of Congressman SAM D. MCREYNOLDS. He is a credit to his people, his State, and the Nation, and is one of the most valuable Members of the House of Representatives.

I always welcome an opportunity to talk with postal people and enjoy contacting the postmasters, supervisors, clerks, carriers, railway postal clerks, and rural carriers. It gives me an opportunity to get first-hand information from you who carry on this great business day in and day out. Your viewpoint is of great value to us in the Department and helps us in formulating our policies. At the same time these meetings enable me to keep you more directly informed concerning our plans and the progress we are making in the solution of many perplexing problems.

It is through you that we carry out our administrative policies. It is through you that we present to the public our messages of service. It is through you, and by you, that we operate this vast business. It is, therefore, obvious that the efficiency of the service, the welfare of the employees, and the economical and businesslike conduct of the Service is dependent in a large degree on your capacity as business executives, your honesty, your sincerity of purpose, your willingness to help us, to help the patrons, and to help the employees. I can say to you in all frankness that a great majority of the postmasters are living up to the high standards set for them by the Department, and I would be most ungrateful if I failed to acknowledge publicly my appreciation. I do thank you most sincerely for your splendid cooperation. You should not feel, however, that we have reached, or as a matter of fact, even nearly approached, a state of perfection in the Postal Service that would justify a relaxation of our efforts to improve. Eternal vigilance is required if we are to meet our obligations to business and to the citizens generally. It is along these general lines that I want to talk with you today.

At the outset, all of us should bear in mind that we are the servants of the public. Great care is exercised in the selection of our officials and in the selection of our personnel. You can be justly proud of the appointment you hold. It is an honor you should cherish. At the same time you should feel quite humble and thankful to your fellow citizens and to your Government for the opportunity you have been given to serve them. By the faithful performance of your duties you justify the confidence reposed in you.

Your first duty as postmasters is to see that the mails are safeguarded; that dispatches and deliveries are prompt and regular; that schedules of service are such as to meet the ordinary requirements of your community. Regularity is most important. The Department insists on performance based on rigid schedules. The public has a right to expect punctual and uniform deliveries. Of course, there are occasional delays due to unforeseen transportation difficulties caused by storms and wrecks, but those interruptions are relatively few and under such conditions the public is most tolerant.

Next in importance is courtesy. There is an old saying that courtesy, kindness, and thoughtfulness always have their reward. The need for politeness is more pronounced in the post office than in most other public services. It is fundamental and an important part of what we term efficiency. If a patron of a private business is rebuffed or treated with scant consideration he can retaliate by withholding his patronage from the offender. Such is not the case with us. To a large extent we enjoy a monopoly—at least insofar as the transmission of a letter is concerned. Therefore, the patron is compelled to bring his business to us regardless of his wishes in the matter. The fact that we alone can render this service, which is so necessary to all, should make us feel all the more our responsibility for its faithful performance. I do not want postmasters and postal employees to be servile, neither do I want them to be condescending in their attitude toward the public. By all means I do not want them to become ridiculous in their efforts to be polite and courteous.

I do not think that the patron is always right. Many times a disappointed and complaining customer is entirely in the wrong. The annoying incident of which he complains may be due to his own negligence or to the negligence of others outside the Postal Service. However, you should be patient and polite. Hear him out, then tactfully explain the requirements. Express your regrets over the annoying incident, and in most cases the complainant will become a friend of the Postal Service. On the other hand, if the Service is at fault due to the carelessness of an employee, admit the error. Be entirely frank about it. Take immediate steps to prevent a recurrence. Apologize for the error, and you will have made another friend for the Postal Service.

Cultivate a quiet, courteous manner in all your dealings with the public and the employees. Encourage those around you and under your supervision to do likewise. Be firm when occasion demands,

but never harsh. Urge the window clerks and others contacting the public to acquire the habit of saying quickly but quietly, "May I help you?" and "Thank you." Then observe what generous return your office gets in good will from the patrons. Good manners also require that those serving the public be careful of their personal appearance. See to it that you and your staff meet that requirement. In all your official conduct simply treat others as you would like to be treated.

Courtesy and efficiency also go hand in hand in the dispatch of your correspondence with the public and with the Department. All correspondence should be answered promptly. A simple, clear, direct form of expression should be used. Letters should be prepared carefully and neatly. Often the person receiving your letter has no other means of judging you. Your letters speak for the Service and for you. See that they are truly representative. You may be sure that you will promote the best interest of the Service if you keep before you always the necessity for courtesy.

Next in importance, I would say, is the welfare of the employees. I am greatly interested in that. You should be, and I am quite sure you are. It has often been said that the post office renders a personal service to everyone in our country. That is true, and for that reason our employees should have every consideration in the matter of working conditions and hours of employment, in order that they may reflect in the performance of this personal service the policies of a progressive government.

This administration has proven the wisdom of offering greater opportunity to the man who works. Its policies are exemplified to a greater degree in the Postal Service than in any other public or private establishment. I have believed for a long time that good wages and good working conditions are essential to good business. I had that in mind when I approved the 40-hour-week law for postal employees and directed that it be generously applied.

With reference to the welfare of the employees, I think all postmasters and supervisors know by this time, but it will bear repetition, that I have followed a policy of straight, fair dealing with the employees. Of course, we can do no bargaining with any group regarding rates of pay, as the rates are fixed by Congress and the President. We do, however, receive the employees and their representatives. They present their requests and grievances in a business-like way. We have a free and open discussion with them, and after considering all the elements involved we make our decisions. The officials of the Department and the officers of the organization do not always agree. It would be strange indeed if they did.

The frank discussions of the employee's problems are helpful and we have not had, to my knowledge, a single instance where bad feeling was shown in these discussions. This is to the credit of all concerned. Postmasters will find it most helpful if they follow this practice with their local groups. You do not surrender one iota of your authority when you receive representatives of postal organizations for a proper discussion of their grievances. Some of the grievances presented are probably imaginary or greatly exaggerated. But even in those cases it is better to hear them.

Try to settle your local problems at home. By doing so you will render a real service to the administrative staff in Washington. By all means bring to our attention the things we should know, particularly matters relating to policy, and ask for help from us when you feel you need it. But in the main, run the post office within the scope of the Department's regulations and within the limits of your authorized allowances as you would run your own business. In every proper action you can be assured of our whole-hearted support. Use good judgment and common sense, and we will back you to the limit.

My primary purpose in coming here was to address this postal gathering, but in view of the fact that many persons here are not connected with the postal organization, I feel that a few general observations on national affairs may be of interest.

This has been a period of change and transition, not only in the United States but throughout the world. The old order disappeared in the financial and industrial crash that had its beginning in 1929, and with its passing there came a realization of the fact that the so-called expansion period which followed the World War was based on riotous speculation and other unhealthy economic conditions. It was an artificial prosperity, and because it was artificial, the task of rebuilding on a sound basis was made doubly hard.

It was only natural that those who had made huge profits under the old order desired its continuance. They opposed every single effort made by the administration at Washington to remedy evils and to restore the spirit of order and justice to the economic and social condition. They fought against the insurance of bank deposits, against aid for agriculture, against the regulation of the stock markets, against the enactment of social-security legislation.

Yet despite their heated protests, these wholesome reforms were written into law and today they are accepted as a basic part of the American system. The test of their merit is disclosed by the fact that even the Republican Party is ready to concede that these reforms were not only necessary but long overdue in their enactment.

A single objective has been the underlying factor in every step taken by President Roosevelt in his efforts to readjust the social and economic machinery of the American Nation. Despite the flimsy objections raised to many of his proposals, he has not tried to benefit one class of citizens at the expense of the other. On the contrary, he has tried to bring about a balanced economy, in which all shall have their just share, because no other kind of economy should be tolerated in this country. When the President seeks to raise the buying power of agriculture he is not seeking to rob the consumer but to better the condition of both. When he seeks to abolish sweat conditions and starvation wages he is not seeking to destroy the basic rights of employers.

The question has been asked, What has the administration and its supporters in mind? What do we want? Let me emphasize the objectives of the administration in a few sentences.

We certainly want business to make a reasonable profit on its investments, because capital takes the risk.

We want labor to secure a wage that is sufficient to bring a sense of dignity and security, and to have working conditions commensurate with the dignity of toil; for capital without labor would be as barren as money on a desert isle.

We want the farmers to reap rewards from their toil sufficient to lift or keep the mortgage from the farm and enough besides to leave a balance in the bank.

We want the banks to thrive and to use their hoarded gold to meet the needs of constructive industry and safely to finance the building of people's homes.

We want business to boom—but we want all America in on the business.

We want the aged worker free from the haunting fear of a twilight of misery and poverty; and the widowed mother to have a chance to rear her children at home; and the crippled child to have a chance to support himself in self-respecting toil; we want a reasonable provision to tide the worker over the occasional periods of unemployment—and these are the reasons we have written into the statutes the Social Security Act, which is the emancipation proclamation of the masses.

We want a free press, freedom of speech, and the right to worship God according to the dictates of conscience.

These in brief, are the objectives of the Roosevelt administration. To those who like to say that the ultimate goal is still far from being realized, I should like to point out that under President Roosevelt, the United States has gone further along that road than any other nation on earth. He has laid the ground work and brought about necessary reforms which will endure as long as the United States endures.

I do not wish to suggest that political foes of President Roosevelt should forego their constitutional right to protest and to oppose, but I do wish to emphasize that in this period of international unrest and uncertainty, the basic need now is for national unity.

In view of the perilous conditions throughout the world, the time has come for all Americans to work together as Americans and to end the internal feuds that rest on nothing more substantial than spites and prejudice and foolish hates. We have seen too many unseemly hates, and our great American family has engaged too bitterly in family feuds that only tend to threaten the existence of the common heritage of the fathers.

Let the American people lay aside all backbiting and bickering and let us present a united democracy as an example to the world. Liberty and freedom can never be extinguished while the torch light of Jeffersonian democracy is held aloft by the citizens of this Republic.

Let us cherish the great heritage that has come down to us from worthy leaders of the past, and let us hand down to our children the blessings and benefits of a united national family. Let us persevere with a common determination that no matter what befalls in less fortunate lands, we will make the American family, as Jefferson had planned, the most united, the most contented, the most tolerant, the most prosperous in all the world.

That was the dream of the mighty men who founded the American Republic.

That is the ambition of Roosevelt.

And that must be the common vision and the common aspiration of us all.

Our Challenge to the Prophets of Doom

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, June 26 (legislative day of Thursday, June 22), 1939

ARTICLE FROM PUBLICATION OF FRATERNAL AERIE OF EAGLES

Mr. MALONEY. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an interesting foreword which appeared in a publication of the Fraternal Aerie of Eagles issued in connection with its State convention held in Connecticut last week. I think it most appropriately sets forth the patriotic views of the membership of a great patriotic fraternity at a time when we need to be fortified with expressions of courage and confidence.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR CHALLENGE TO THE PROPHETS OF DOOM

The world has entered upon age of hate. It is aflame with war and the threats of war. In Europe there is hatred among classes, among religions, among races, and among nations. Hatred is abroad even in our country. Labor is arrayed against labor. Capital is suspicious of labor and Government, and labor and Government are in turn distrustful of capital.

It is no wonder, then, that prophets of doom are abroad in the land. They paint a dark picture of the future. They ring the knell of Americanism, of democracy, of free enterprise among men, of freedom of thought and speech, and of freedom of worship. Will dissension born of hatred ultimately engulf us? Will internal strife born of ignorance destroy us in the end?

The answer is emphatically "No." It matters not how dire the problems of our day may seem. If we have the will to do so, we can master them. No one who knows our history can doubt the ability of Americans to triumph over every obstacle.

The United States was born 150 years ago under the most disheartening circumstances. The nations of Europe waited hourly for the collapse of the new nation. We had no money. We had no credit. That was a century and a half ago. Today the United States is the most powerful nation in the world. The little Nation which could get no credit 150 years ago, is today the creditor of practically all the countries of the world. Nations vie with one another for our trade. No other people on earth have a higher standard of living. In no other country are workingmen paid better wages. We are by common consent the leaders in education, in industry, and in science.

We've gone a long way in so short a time. Why? Because each generation solved in the best possible way the problems that confronted it. One generation had to conquer the pirates at sea. Another had to subdue the terrors of a vast unknown continent. Another had to face the possible breaking up of the Union. In each instance, Americans faced their particular problem squarely in the face, tapped their ingenuity for a workable solution, and won.

The problem of this generation is unemployment. If we solve the problem presented by the shut-down and lay-off signs, we shall have routed the forces that today are working against our "going forward together" in peace and harmony. Offer a self-respecting man a place in the breadline instead of an honest job, and you've sown the first seeds of rebellion and perhaps anarchy in his heart. A man without a job who sees his family starve while all around him are evidences of wealth and plenty—such a man cannot but be an easy prey to propaganda subversive to American democracy. History proves that wherever anarchy has overthrown existing government, the basic reason was economic rather than political.

Unemployment—millions of men out of work in a land where there is so much work to be done—that's our problem. And we can solve it. Ten years ago the Fraternal Order of Eagles drew up a plan for its solution. That plan is embodied in our Eagles-Ludlow bill for the stabilization of employment. This bill calls for the creation of a Federal industrial commission which will watch business trends and call for such legislation as will keep our economic system on an even keel and prevent depressions and wholesale laying off of men. The commission is to work toward one end: To protect the right of the American workingman to work continuously at a saving wage, and to protect the right of the investor to reasonable returns on his investment.

In a free country, anyone can propose a plan of action. The weight of a proposed plan, therefore, depends upon two things—its inherent soundness and the soundness of the proposer. The Eagles' plan to stabilize employment is sound because it is based on justice. It seeks to give the workingman the fruits of his labor, and at the same time it grants capital its due—a reasonable return for the money it has invested to give the workingman the opportunity to work. As to soundness of the proposer—the Fraternal Order of Eagles—we have but to unfold the record of our achievements over the past 30 years.

The Fraternal Order of Eagles wrote the first mothers' pension law. A member of the Fraternal Order of Eagles wrote the first workmen's compensation law. And the Fraternal Order of Eagles wrote the first constitutional old-age pension law in the country. We have always been on the side of wisdom, reason, and sound foresight. Whatever movement we have originated and sponsored, the time has always proven wise and sound.

And so, too, with our Eagles-Ludlow bill. Leaders of government and business are beginning to see the wisdom of our plan. Only recently President Roosevelt asked Congress for an appropriation of $250,000 to be used by the Secretary of Commerce, Harry Hopkins, "to hire business experts to advise him on industrial economics." The administration hopes that this group of business experts will be the nucleus of a projected bureau of industrial economics which will become "a vast and vital storehouse of data to assist operations of American business and guide businessmen in planning their future courses."

We urged this same plan 10 years ago. The Fraternal Order of Eagles has always claimed that "the United States, with its unparalleled wealth, possesses business, political, and labor leaders capable of reorganizing production and consumption so as to reduce unemployment to a minimum." But we have not as yet achieved our ends. Why? Because Government, business, and labor have been at each other's throat. Any advance made by one group is immediately attacked and nullified by the other. What we need is cooperation between the three. Eventually we shall get it. For certainly, in the interest of our country, unselfish and patriotic men in Government, business, and labor should be able to bury the hatchet and work together to reduce unemployment to the desired minimum.

This, therefore, is our challenge to the prophets of doom: Protect the right of every American adult to work continuously at a saving wage. Protect the right of the investor to receive a reasonable profit. Stabilize employment, and you will have eliminated the greatest threat to our democracy—the existence of a vast number of helpless, unemployed, starving people who prove fertile ground for discontent, unrest, and ultimate anarchy.

You Can Make Your Government Save

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, June 26 (legislative day of Thursday, June 22), 1939

ARTICLE BY WILLIAM HARD

Mr. BYRD. Mr. President, there has been published in The Forum magazine an article entitled "You Can Make Your Government Save," by William Hard. This article has so much worth-while information, and contains such valuable suggestions, that I ask unanimous consent to have it inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOU CAN MAKE YOUR GOVERNMENT SAVE

(By William Hard)

I begin here to try to interest the home-town citizen in governmental economy as far away as Washington, D. C. I hope to be able to show him that economy by Washington must begin in his own home town.

The question is not a partisan one. The Republicans began our present experiment in extravagance.

In the fiscal year 1927 our national governmental expenditures were a bit under $3,000,000,000. In 1929 the depression arrived. In the fiscal year 1932 the Republicans raised expenditures to $4,500,000,000.

In 1933 we got the Democrats. They at first intended to reverse the Republicans and go in for economy.

But what happened? Some people say that the President listened to "theorists" who wanted "spending for recovery." He did. But there is a much more powerful explanation than that.

The citizens were at that time demanding spending. I was in Washington. I saw and heard their representatives. I saw and read big heaps of their letters and telegrams. They had never heard of John Maynard Keynes or other spending-for-recovery "theorists." They knew simply that business was bad. Thereupon—butcher and baker and candlestick maker—they demanded spending to help business and give employment.

The Democrats decided that if they were going to do it they would do it right. In the fiscal year 1934, they spent $6,000,000,000. In the fiscal year 1936, they spent $8,500,000,000. In this current fiscal year of 1939, they are spending $9,500,000,000.

And the depression seems to like it. We have more unemployed today than we had 4 years ago. We have more people on relief and work relief and unemployment relief today than we had 4 years ago.

Why? I say it is because of certain things that we have done to capital. And I say that governmental spending turns out to be one of the worst of those things.

It takes at least $4,000 of capital to equip a job for a worker.

In 1928 new capital was going into private enterprise at an average monthly rate of $446,000,000. Last year, the average monthly rate was less than $70,000,000. That was not enough to modernize the equipment of the workers now working. It represented a minus quantity for really new equipment for really new workers.

In 1928, 75 percent of our new capital went into private enterprise, and 25 percent of it into governmental expenditures. Last year less than 20 percent of it went into private enterprise, and more than 80 percent of it into governmental expenditures. Twenty percent into jobs which produce the wherewithal to pay taxes. Eighty percent into jobs which consume taxes.

There is only one end to such a road. It is a government apparently richer and richer and a population actually poorer and poorer.

THE ADDING MACHINE BROKE DOWN

Most citizens really see that fact today. The polls of public sentiment show that most citizens have now gone over from favoring extravagance to favoring economy. But why, then, does economy fail to happen?

The chief reason is that the citizens, though favoring economy in the polls, uniformly fail to demand economy of their Representatives in Washington. And, particularly, they fail to demand it in the case of one huge item of Government expense that concerns them directly in their own home towns.

That item is the $1,250,000,000 we are spending annually for public works.

I pass over the other billions being spent—to relieve the plight of the unemployed, of the farmers, of war veterans. The possibility of savings here—of eliminating graft, inefficiency, extravagance—has been repeatedly urged and widely discussed. But here, since we are dealing with human needs and suffering, economies must be achieved gradually, discriminatingly.

Not so with public works. Here is spending at its purest. These expenditures are not aimed with any directness or marksmanship at citizens in distress. They are aimed in blunderbuss fashion at citizens in general and at large. We need no discriminating surgical instrument to cut these expenditures down. We can cut them down with an ax. And we, the citizens, have it in our power to do it promptly by our own action.

I say so with humility. I believed once in public works for recovery's sake. I can see now that they are not helping. I am cured. Here is the cure:

Public-works expenditures, 1931, $421,000,000; 1933, $472,000,000; 1935, $766,000,000; 1937, $1,100,000,000; 1939, $1,250,000,000.

Faster and faster to nowhere. In 9 years now we have spent approximately $7,000,000,000 in public works—and recovery is still behind the clouds. And that figure does not include the Works Progress Administration. It includes only nonrelief public works.

There may be something to looking for a pot of gold at the end of the rainbow; but I am sadly driven to think that there is nothing at all to planting a pot of gold and then expecting the rainbow.

I suggest earnestly that the citizen's first duty in Federal governmental economy is to unplant that pot of gold—right in his own locality.

MOBBING THE TROUGH

I will now detail the contents of the public-works pot.

1. Federal aid to public roads; estimated expenditures this year: $232,000,000.

This aid covers the country like a drizzle. At first it extended only to roads between municipalities. Now it extends also—in millions of dollars a year—to roads within municipalities.

Till lately it extended only to main roads. Now it extends also to feeder roads. Last year, for feeder roads: $5,000,000; this year: $20,000,000; next year: $25,000,000.

Till lately it did not extend to the elimination of local grade crossings. Now it does. Last year, for grade crossings: $10,000,000; this year: $40,000,000; next year: $50,000,000.

I should like to see a letter to a Congressman from a local chamber of commerce saying: "We will improve the pavements of our town or we will leave them unimproved; but we want the Federal Treasury to start going solvent."

It would shake the Capitol from cellar to dome.

2. Rivers and harbors improvements; estimated expenditures this year, $83,000,000.

These expenditures range from $10,000,000 for the Fort Peck Dam, in Montana, to $4,300 for Cypress Creek, in Maryland. They cover some 168 projects in, or affecting, 36 States. Only 12 States are left out.

When the improving of a stream is complete, then comes the maintaining of the improvement. This year, besides spending $83,000,000 on improvements, we are spending $43,000,000 on maintenance.

There is always the Ocmulgee River, for instance. It is in Georgia. For a hundred miles from its mouth it is as much as 2 feet deep. We began improving it more than half a century ago. Every year we now spend several thousand dollars maintaining it. In the last full year of record, it carried 5,000 tons of freight, to a total value of $15,000.

We used to improve only navigable streams. Then we began to remove snags from tributaries to navigable streams. We limited the cost to $1,000 per year per tributary. The new rivers and harbors bill just introduced into the Congress proposes to raise that limit to $3,000 per tributary.

Never yet has any Congressman received a petition from citizens resident on the banks of a tributary saying: "We can remove our own snags from our own sub-sub-creeks."

Some of these rivers and harbors improvements are purely political. Some are commercially necessary. Others, while not necessary, are worthy. I could concoct worthy projects to improve various transportation facilities that would cost this country a billion dollars a year, if only we could afford it.

The National Economy League uttered a solemn truth the other day. It said that the problem was not merely "wastes." It said: "If we really want governmental economy, there are many expenditures for worthy purposes that will have to be drastically curtailed."

3. Flood control, estimated expenditures that year: $98,000,000.

A worthy purpose indeed. And watch it grow.

For flood control in 1932: $28,000,000; in 1938: $61,000,000; this year, $98,000,000.

The Federal Government was at first asked to control interstate floods. Now it has to control them wholly within States or even wholly within counties.

This year we are spending $11,600,000 of Federal money on flood control in California, wholly within Los Angeles County. That project, before it is finished, will cost $70,000,000.

Then there are also little projects as, for instance, $15,000 this year to control floods at Penny Slough, on the Rock River in Illinois.

Our projects this year for flood control at Federal expense are distributed to some 131 spots in 36 States. I said that 12 States this year are left out of rivers and harbors improvement projects. Eight of them are embraced in flood-control projects. That leaves only four now really out in the cold.

4. Reclamation, estimated expenditures this year, $93,000,000.

Another worthy purpose—very worthy. But is this just the time for so much of it?

In 1933 we began paying farmers to remove land from cultivation. Ever since then we have spent more and more money every year on reclamation projects in arid and semiarid regions to bring land into cultivation as follows: In 1934, $25,000,000; in 1938, $65,000,000; in 1939, $93,000,000.

The Bureau of Reclamation says: "Reclamation projects now being constructed will add 2,500,000 acres to our cultivated area."

The Bureau reclaims an acre from the desert. A farmer plants it to sugar beets. The A. A. A. pays him for not growing too many. Thus we arrive at a perpetual circular motion of expense. Couldn't we slow it up just a bit?

I shed a tear a few paragraphs back for the four States that this year get neither river and harbor improvement projects nor flood-control projects. I can now stop weeping for them. All four are blessed with reclamation projects. Our Federal Government this year is doing something—something—for the waters of all 48 States. This shows that Congressmen are efficient. It even more conclusively shows that constituents who want expenditures make themselves heard.

5. Federal public buildings: Estimated expenditures this year, $60,000,000 in more than 700 American cities and villages.

6. Grants to local governments for structures wholly non-Federal, wholly local: Estimated expenditures this year, $392,000,000.

These projects in 48 States cover pretty nearly the whole possible range of local public cultural aspiration—grants for school buildings, dormitories, zoos; for hospitals, laboratories, nurses' homes; for viaducts, street lights, traffic signals; for police stations and jails; for sewers, water mains, drains; for bird farms and fish hatcheries; for gymnasiums, stadiums, bathhouses, swimming pools, parks, country clubs.

The Public Works Administration does not have to wrestle with citizens to accept these gifts. The citizens wrestle with the Public Works Administration to get them. The citizens' latest list of "applications" covers 5,807 proposed projects which would cost $778,163,800.

I note Monroe County, N. Y. It is a strong Republican county. Its big city, Rochester, is already getting a grant of $400,000 for a sewer.

But is Rochester satisfied? Are its surrounding communities satisfied? They are not.

Rochester now wants a grant of $1,233,121 for a city hall. Henrietta wants $148,500 for a school. Honeoye Falls wants $53,100 to improve its streets. Irondequoit wants $54,000 for a town hall. Fairport wants $17,659 for an incinerator.

I said at the start that this is not a partisan question. I say it again. Republican localities are just as voracious for Federal funds as Democratic localities.

LET THE GOVERNMENT DO IT

This concludes the contents of the Public Works pot of gold. The trouble with these expenditures is not waste in their administration. The true trouble is the expenditures themselves. The true trouble is the tendency to go to Washington and strike the Federal rock for bigger and bigger gushes of supposedly costless money.

That tendency is on its way to destroying two things: one, the citizen's character and, two, his pocketbook.

Last year New England had a very destructive hurricane.

In the old days, New England would have struggled through the consequences by herself. In these days, she demanded—and got—a Federal appropriation of $5,000,000 to clear fallen logs off private land—not public land; private—and she also induced the Federal Government to adopt a plan for buying the fallen logs at its own risk. The Government pays the owners a price. It then resells the logs. But note. If there is a profit on the resales, the profit goes to the owners. If there is a loss, the Government takes it.

This plan involves some $15,000,000. Not all New England, not all her six proud, self-reliant States, not all her ancient and historic financial institutions, not all her great private fortunes could organize a local $15,000,000 timber-salvage deal. The Government at Washington had to undertake it.

An equal destruction is on the way now to the citizen's pocketbook. The citizen can no longer flatter himself that the Federal gratuities to his home town are getting paid for by the ultrarich.

The ultrarich are commonly defined as those citizens who have incomes of more than $100,000 a year.

In 1929 we taxed their incomes at a rate that worked out to a mathematical average of 15 percent and collected $653,000,000 from them.

In the last year of complete record—1937—we taxed them at a rate that worked out to a mathematical average, not of 15 percent, but of 50. And we extracted from them only $432,000,000.

The ultrarich are flickering out fast as a source of first aid to the Treasury. Their place is being taken by all of us. The Government's taxes this year on the people as a mass—taxes on drinks, on pay rolls, on tires, gasoline, candy, matches, radios, refrigerators, sporting goods, sugar, etc.—will amount this year to some $2,500,000,000.

YOU TELL THEM

Federal gratuities to the localities are sapping the citizen's self-reliance and are on their way to sapping his means of self-support. He now begins to realize it. He now begins to tell the polls of public sentiment that he wants governmental economy. He wants it principally in the Government's administrative expenses. But what does he do even about that?

I will quote from one of our most astute politicians, Senator ASHURST, of Arizona:

"During the years I have been a Member of the Senate, I have received upward of 30,000 telegraphic dispatches. Many thousands of them have urged me to vote in favor of appropriations. Only three or four have urged me to vote against appropriations. When the taxpayers cease sending telegrams requesting Congress to provide unnecessary appropriations, the taxpayers will obtain relief from high taxes."

I go a bit further than Senator ASHURST. I am convinced that citizens must not merely refrain from sending telegrams for extravagance. They must send telegrams and letters and postcards against it. And not against it simply in general. No; against it in particular, in some specific instance, in their own States and preferably in their own cities, towns, villages.

At the time of the American Revolution we had committees of correspondence throughout the Thirteen Colonies writing to their fellow citizens and to their outstanding leaders on behalf of the American cause. We need local committees now to ferret out unnecessary local Federal expenditures and to write to Washington and to one another, protesting against them. If in every county in this Nation we had a citizens' committee against Federal extravagance in that county and if these committees cooperated with one another in vigorous representations to Washington, we should begin to see the sproutings of economy in Washington absolutely on the instant.

There is no such pressure on Washington today from the localities. Many citizens are still demanding expenditures. Virtually no citizens are demanding elimination of expenditures.

The citizen pushed Washington into extravagance. Only he can push Washington back into economy.

Don't try to alibi yourself by talking about "spending theorists" and radicals and bureaucrats. Begin to talk about the people who are really responsible: you and your neighbors. The Federal Government, if it is ruining itself on nothing else, is ruining itself on what it is doing for the neighborhoods. Each neighborhood now says: "Every other neighborhood is getting its. We must get ours."

Some neighborhood must lead the way out of that suicidal swirl. Why not yours? Why not start Federal economy county committee No. 1?

When such committees tell Washington to save, believe me, it will.

Cost of Production, Etc.

EXTENSION OF REMARKS

OF

HON. LYNN J. FRAZIER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, June 26 (legislative day of Thursday, June 22), 1939

RADIO ADDRESS BY EDWARD E. KENNEDY, JUNE 24, 1939

Mr. FRAZIER. Mr. President, I ask unanimous consent that there may be printed in the Appendix of the RECORD a radio address delivered by Edward E. Kennedy, Washington representative of the National Farmers' Guild, during the National Broadcasting Co.'s Farm and Home Hour on Saturday, June 24, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow farmers and friends, my listeners join with me in thanking the National Broadcasting Co. for granting me the privilege of replying to Mr. Vesecky.

This Farm and Home audience and myself are friends of long standing. I have spoken to you on this hour some 50 times within the last 8 years, 1931 through 1936. At that time I was national secretary of the Farmers' Union, of which Mr. Vesecky is now president. I am now the Washington representative of the National Farmers' Guild. The guild is composed of more than one-half the members who were formerly members of the union. The guild members dissolved the bond which connected them with the union and have assumed among the national farm organizations the separate and equal station to which they are entitled. The fundamental issue causing the separation and the issue being discussed today are the same.

On May 27 last, on this same program, Mr. Vesecky saw fit to attack me, and to condemn the nonpartisan cost-of-production farm bill, S. 570, and to challenge the integrity and patriotism of the 18 liberal United States Senators and the 16 Representatives in Congress who sponsored the cost-of-production bill, S. 570, and companion House bills.

In my reply I shall take but a few moments to answer Mr. Vesecky and the "associates" to whom he refers, and I shall then discuss the cost-of-production bill itself, its application, its principles, and what it will do for the farmers and the Nation.

On the whole Mr. Vesecky's speech on this program a month ago was a futile defense of what seems to be an abandoned trust. Mr. Vesecky complains that he was not consulted and that he was not asked to help frame or sponsor the legislation. He complains that Edward E. Kennedy, your speaker today, did everything that he could to put the officers of the Farmers Union on record as opposed to legislation of the S. 570 variety—all of which is ridiculous.

This legislation was first introduced in Congress in 1931 by Senator ELMER THOMAS and Congressman Swank, both of Oklahoma, and has been before the Congress from that day to this. It was voted on in both the House and the Senate in 1933 and again in the special session in 1937. It was advocated and supported by the National Farmers Union under the leadership of the late John A. Simpson and his successor, E. H. Everson, of South Dakota, while they were national presidents and during the years that I was national secretary.

Mr. Vesecky was in Washington during, at least, several of the days that the hearings on S. 570 were in progress. He was asked by Senators and he was asked by Congressmen who were sponsors of the bill, whether he would testify on the legislation. On several occasions I asked him myself. He said that they had not made up their minds what he and his associates would do. He had 8 weeks to make up his mind—there were 8 weeks of hearings. The Senate Agricultural Committee reported the bill, S. 570, out, unanimously, with a strong recommendation that the bill be passed. The House Agricultural Committee was considering taking similar action. Success seemed assured. Five days before the House committee was to vote on the legislation, Mr. Vesecky and his associates sent one letter to the members of the House Agricultural Committee, attacking the bill. Then they sent another similar letter to the Members of Congress.

The letters criticized the bill but nothing was offered in its stead. The evident intention was to confuse the issue. We have every reason to believe that the National Farmers Union officers would never have made this move if the vote of the Senate committee members had not promised to indicate passage. As it was the House committee by its vote tabled the cost-of-production bill, and at least one of Mr. Vesecky's associates boasted that they were responsible for denying the farmers the cost of production.

Now, there is just one other chapter concerning Mr. Vesecky and his associates. I have one letter from Mr. Wallace, dated May 31, 1939, and another from his Acting Secretary, Mr. Wilson, dated June 1, 1939. These letters reveal that at least five of Mr. Vesecky's associates who sent the two letters to the Members of Congress held formal appointments under the Department of Agriculture, where their traveling expenses to and from the Department of Agriculture would be taken care of. Some of them received a per diem and subsistence. Under such appointments they had the use of the franked envelope in the transmission of their official correspondence for the Department of Agriculture of the United States of America. And this—during the time that they held their positions as officers of the Farmers Union organization.

Far be it from me to assume that Mr. Vesecky or his associates were in any way influenced by having their transportation paid when on official business of the Department of Agriculture, or per diem and subsistence where such was allowable or the use of the franked envelope for the transmission of correspondence on official business of the Department of Agriculture. I have some difficulty, however, in understanding how they can serve two masters and serve them both faithfully. I may not understand the modern technique of deception, but I see farmers in the Wheat Belt selling wheat for 60 and 61 cents per bushel, cotton farmers selling cotton for 8 cents a pound, corn at 47 and 48 cents, and other farm products selling at comparable prices—which is less than one-half of the cost of production.

Mr. Vesecky made one desperate attempt to give respectability to his argument which he thought it otherwise did not possess when he said: "I believe that our departed leader, John A. Simpson, were he alive now, would disclaim not only the parentage of such a child as is S. 570, but under present world conditions would have entirely changed his viewpoint as to the kind of legislation needed and desired by the farmers."

If this statement had come from a man or his associates who were friends of Mr. Simpson and his principles while he lived, we might give it some weight. But such was not the case. Mr. Simpson had qualifications that set him apart from those who

would use his name in defense of the ill done. He was courageous, he was honest, he was competent, he was loyal to the farmers he represented, and he was a true patriot.

I have a letter from Mrs. John A. Simpson that answers Mr. Vesecky in this respect, dated June 20, 1939. The letter, in part, I quote:

"Dear Ed: * * * I am sure John would be for S. 570. Mildred and I have read it over and have studied it. We consider the attacks made are not fair, and are deceiving * * * John has been gone 5 years. I consider it an improper use of his name by saying he would be for or against any bill introduced now. However, from his writing, speeches, and legislative work, and knowing my John, we have a right to believe he would be for S. 570. * * * (Signed) Mother Simpson."

THE COST-OF-PRODUCTION PRINCIPLE

There is nothing new in the cost-of-production bill. The cost-of-production principle is as old as business and industry. Business cannot survive on less than the cost of production and neither can farmers stay in business when they receive less than the cost of production.

The nonpartisan cost-of-production farm bill calls into use the same Federal power and applies it in the same manner to the aid of agriculture as the same Federal power has been used in the aid of business, labor, and industry. Its application to the aid of agriculture is new, but the principle and the use of the principle in Federal legislation is old.

We have the example in the Interstate Commerce Act. We have the example in the Packers and Stockyards Act, the Patman-Robinson Act, and the Federal wage and hour law. All of these acts of Congress employ the Federal power to regulate the rates of transportation, the minimum rates of services, minimum wages to be paid by those doing business in interstate commerce.

S. 570 AND COMPANION BILLS

Now, let us briefly examine the provisions of S. 570 and companion House bills:

S. 570, in section 1, provides that all agricultural products of 1 year, having a value of $10,000,000 or more should not be sold in the domestic market for less than the cost of production for that part consumed within the United States.

There will be no practical difficulty in administering the bill because the first year's cost of production will be based upon conditions as they exist at this time which will not vary greatly from year to year. The experience of the first years will lay the foundation for a permanent program and for any changes that may be needed.

Section 2 provides the rules and the formula for ascertaining the cost of production. The efficient farmers will not be penalized nor the inefficient farmers favored because this section sets out the factors to be used in computing the cost of production. The Secretary of Agriculture is given no new powers, but he is given certain definite and specific duties to perform.

Section 3 provides that the Secretary of Agriculture shall estimate (1) the volume of production and (2) the volume required for domestic consumption. The actual volume will not vary greatly from the estimated volume nor will the actual consumption vary greatly from the estimated consumption. When the consumers have the funds, they will not buy inferior substitutes.

Section 4 provides (1) that the Secretary of Agriculture shall announce the cost of production as determined by section 2; (2) that buyers and others shall have to secure licenses to operate; (3) that production in excess of the domestic requirements shall be received for warehouse reserves or for export; that in the case of cotton the excess shall be marked as excess and may be used to fill the producers' quota for domestic consumption the following year.

The farmers in every section of the Nation producing any of the 50 major agricultural products should be for this bill 100 percent because it gives them more protection than any other proposal that has thus far been made. The producers of the other commodities will prosper when each group is assured its cost of production for the new wealth produced in this country.

Section 5 provides that all warehouse reserves and export quantities shall be delivered to the Secretary of Agriculture, who shall not sell any of them for domestic consumption except in the case of a shortage but may allow withdrawals for processing for export purposes.

This provision will prevent dumping, market slumps, manipulation, and gambling in the price of farm products. This will also prevent bootlegging, because certainly the Secretary of Agriculture, who administers the act, would not bootleg farm products to defeat the act which he is required to administer.

Section 6 provides that the holders of the excess receipts may be paid at the local post offices. This will prevent the long delays the farmers have experienced under the previous Agricultural Acts and will reduce the cost of administration.

Section 7 provides that the Secretary of Agriculture shall administer the act. He shall license the dealers and handlers, except producers, and prescribe the necessary regulations.

Section 8 provides a moderate but adequate penalty for any dealers paying the farmer less than the cost of production.

Section 9 provides that all warehouse reserves and export surpluses shall be disposed of only in accordance with the provisions of the act. This includes agricultural products now or hereafter owned by the Federal Government. This closes the loopholes against speculators and chiselers.

Section 10 provides that the tariff on foreign-grown products, sold or produced for less than our products cost, shall be raised so the landed cost will equal the cost of production plus 10 percent. This will stop enriching the foreigners at the expense of the American farmers.

Section 11 as amended provides that the act shall apply to 1940 production.

Section 12 provides that this act shall not affect the soil conservation, crop insurance, loans on agricultural commodities, and certain parts of the A. A. A. that do not conflict with the cost-of-production bill.

This bill is a protection to agriculture in general. It may work some hardship on the large producer, but for the average farmer it will do the job. The average farmer operates the family-sized farm. This is America. The average or family-sized farm in Iowa is 154 acres, in Wyoming it is 1,610 acres, in Nevada it is 970 acres, in Maryland it is 98 acres, in North Dakota it is 462 acres, and in Alabama it is 71 acres. This bill is a farm bill. It is not a social-reform bill. It takes farmers and farms as they are and is intended to make them prosperous by assuring them the cost of production.

This bill will enable the farmers to produce freely and abundantly without restrictions, to supply the home market, producing as much or as little as the farmers choose to produce.

It provides the simplest machinery possible, with no cost to the Federal Government. No restrictions or regimentation of the farmer; the total cost of administering the act would be charged to the proceeds from the sale of exportable surpluses and assures cost-of-production prices to the farmers of this Nation for products consumed domestically.

This bill, when enacted into law, will give the farmers of the Nation a stable, annual cash income of approximately $15,000,000,000. This is double what the farmers received in 1938. It represents the essential difference between prosperity and depression for the entire Nation.

This is an American bill advocated and supported by American citizens, introduced and sponsored by 34 patriotic, liberal Members of the United States Congress who believe in the "American principle" of Government as set forth in the Declaration of Independence and the Constitution of the United States.

We who have supported this measure believe in the agrarian principle that the prosperity of the Nation is dependent upon agricultural prosperity; that when agricultural cash income increases, within a few months there is a corresponding increase in retail sales, in industrial production, in factory employment, in industrial pay rolls, and in general prosperity; and an increased national income is the result of the increase in the incomes of the American farmers.

On the other hand, when the cash farm income declines and falls, within 3 to 6 months there is a corresponding decline in retail sales, in factory production, in employment of labor, in industrial pay rolls and national income, resulting in general business stagnation and depression throughout the Nation.

The cost of production bill (S. 570) will bring prosperity to the farmers and that in turn will bring prosperity to the Nation. It is sound legislation that is written within the framework of the Constitution of the United States and in accordance with our American principles of government.

When Mr. Vesecky and his associates set themselves up as the opponents of the cost-of-production bill they are fighting the farmers whom they pretend to represent. They are fighting against prosperity. They are fighting against the welfare of 130,000,000 American citizens. When Mr. Vesecky and his associates fight this kind of farm legislation they are giving aid and comfort to the gamblers and the manipulators of farm prices in the market places. They are giving aid and comfort to the farmers of foreign nations, instead of to our own. They are giving aid and comfort to the enemies of the agrarian principle of prosperity. They are defending the status quo. They are giving aid and comfort to the enemies of home ownership among the farmers and our urban friends.

It is not necessary for me to offer a defense on behalf of the 34 Members of Congress who have introduced and sponsored this legislation. They need no defense. Some of them are new Members, many of them have a long and honorable record in the Congress of the United States. They have a record of supporting honest legislation in behalf of the farmers and for the welfare of the Nation.

It is not necessary for me to offer a defense on behalf of my associate here in this fight, Mr. Louis B. Ward, for he needs none. His record over the years in support of liberal legislation speaks for itself. Neither need I offer a defense for the organized farmers whom I represent. Their intelligence in supporting this legislation and my work speaks for itself.

In advocating and supporting this legislation, I represent organized farmers in 24 States, some by special appointment, most of them through the National Farmers' Guild, and, in addition, the cost-of-production clubs composed of farmers and local businessmen, organized in Illinois, Michigan, Pennsylvania, and other States.

The farmers who are not in the employ or on the pay roll of the Triple A know that nothing less than the cost of production is the remedy. They know that they cannot continue in business, receiving less than it costs them to produce, any more than a busi-

nessman can operate at a loss and continue in business. Some of the more intelligent leaders in business and industry and labor are beginning to appreciate and understand the agrarian philosophy that the road to their own prosperity and the prosperity of the Nation depends first upon the prosperity of the American farmer.

Labor, business, and industry must therefore be as vitally concerned with agricultural prosperity as are the farmers themselves. Every real patriot must be vitally concerned with agricultural prosperity and stability whether he be a farmer or not.

If you believe the legislation embodied in S. 570 should be enacted into law, you should write to your Representatives in Congress, both in the Senate and the House of Representatives, and insist upon him voting for this bill in this session of Congress. If you want this legislation you must work for it. There is probably a month or more remaining in this session. There is yet opportunity to work, organize, and support this legislation, for the benefit of the farmers and for the benefit of the 130,000,000 people of this Nation.

Copies of this address may be had by writing to me at Washington, D. C. You may address your letter to Edward E. Kennedy, 109 First Street NE., Washington, D. C. If you forget the address, just address it Edward E. Kennedy, Washington, D. C.

There Is a Difference Between Levying Taxes and Paying Them

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

STATEMENT BY STATE SENATOR HARRY W. BOLENS, OF PORT WASHINGTON, WIS.

Mr. KEEFE. Mr. Speaker, I am pleased to be permitted to incorporate in the RECORD a statement by State Senator Harry W. Bolens, of Port Washington, Wis., addressed to the people of Wisconsin on the subject of taxation. What he says can be read with interest and profit by Members of the Congress as the ever-mounting and crushing burden of State and Federal taxes menaces the present and future welfare of every citizen in the Nation.

The legislator who votes for tax bills usually sings high about the amount of money he will make available for this group and that group, but he sings very low about where it comes from. He, very naturally, tries not only to make the taxes painless but to make them invisible to the 1,129,000 employable group who pay them.

It is customary to point out that taxes are levied upon the "big fellows"—the business corporations, banks, railroads, and manufacturing concerns——because he tells them that they can carry the load. He never tells them that they do not pay these taxes, nor that they are levying the taxes on the 1,129,000 employable group. The businessman, whether he is a corporation executive or a partner, or an individual storekeeper, must charge these taxes in his costs to the people to whom he sells his goods or he wouldn't be in business. That means he charges them to the consumer.

What happens when taxes are levied upon corporations, upon partnerships, upon small business enterprises? The producer of the raw materials charges them to his costs and passes them on to the converter or manufacturer. He charges all taxes to the wholesaler and the retailer; and the retailer must put them in the price of his goods.—there they stop—finally in the hands of the consumer. The 1,129,000 of the employable group who support 710,000 families, maintain 624,000 dwellings, and support 455,000 little children under 10 years of age must take the taxes out of his daily wages. Out of $62,000,000,000 of national income earned by 42,000,000 gainfully employed in the United States last year there will be taken this year or in the future, from the employable group, across the United States, for Federal and State taxes $16,000,000,000, leaving $46,000,000,000. That means the Federal Government and State will spend $16,000,000,000 out of the $62,000,000,000 of money earned "by the sweat of the brow" or a present and future annual tax burden on the employable group of 26 percent of their annual income.

Just how can legislators look the employable group in the eye when they take, jointly from Federal and State standpoint, taxes amounting to 26 percent of income by direct and indirect taxes from the gainfully employed group in the United States?

The overwhelming portion of our taxes are levied at the top by unthinking politicians, but are paid at the bottom, no matter where they are collected—95 percent of them are taken out of the sweat of the brow of the employable group of the State and Nation. Hidden, concealed, taxes.

In conclusion, I am sending out to the 500 newspapers of this State, daily and weekly, my document of last Friday and this one of today, and I am pointing out that $35,000,000 of highway funds are in the hands of a small, political-minded, public-servant class, known as the highway commission, and its employees, who are listening to three great pressure groups: (1) Producers of cement and other materials; (2) road contractors; and (3) producers of road machinery.

I have proposed that the legislature of the people take over (a) the highway commission and (b) motor taxes as part of the general taxes of the State, and (c) lay out a permanent policy of future road improvement for the State comparable with the economic power and capacity of the 1,129,000 employable group to pay for it.

What value is it to the farmers of this State, the private-forest landowners, and the public-forest lands, comprising 32,729,000 of the 35,364,000 acres of land in this State, to have a glorified, uncontrolled expenditure on an unorganized highway system passing through this vast farm and forest district?

(1) While 13 percent of the homes of that district were sold for taxes last year;

(2) While 720,000 family heads in that State are in financial wage distress trying to support 455,000 children under 10 years of age;

(3) While 624,000 owners and occupants of little homes on the farms, in the villages, and cities are endeavoring to make both ends meet a heavy real-estate tax as well as heavy hidden taxes;

(4) While the stockholders of corporations throughout this State, big and small, are receiving but few dividends, with most of them "in the red," causing these corporations to build their extensions in other States, to the loss of the merchants in the cities and the dairy farmers in the State;

(5) While the dairy farmers in this State are going broke because of a failure to find a market for their products, even at the ruinous prices, because a large part of the parents of 720,000 families cannot buy it for their small children—26 percent of their income is taken by "the tax spenders"—carelessly, ruthlessly, and without regard to either "the employable group" or their children; and, finally,

(6) While the Nation and the State stagger midst a great national depression, why destroy the farmers and the rest of the employable group as well as the manufacturers, the doctors, the dentists, and "the ministers of God" by back-breaking hidden taxes—these are the great forgotten groups in this State—forgotten by the legislature.

Do we legislators believe that we are kings—that we can carelessly and ruthlessly press down on the backs of the 1,129,000 employable group further tax burdens that will destroy all of us?

In view of the fact that the Governor of our State has repeatedly stated that "he is only an office boy"; that he has no power to create a just basis of economic tax reform in the State; and, in view of the divergence of opinion, due to pressure groups, now acting upon the legislature, I will move on next Tuesday (1) that the legislature recess until September 15 so that the Governor and the members of the legislature "may take the advice and get the consent of the governed" before we put an additional burden of $22,000,000 on the employable group; (2) that the legislature pass an omnibus bill fixing all State taxes as they now are until November 1, 1939, and prohibit any further commitments by the highway commission until further action by the legislature. This can be done in a few days.

Let the people rule. Let us put aside personal and political prejudice once and for all—drive out class hatred from our midst. Let us put aside the desire of private or political gain and find out whether we should place on the backs of 1,129,000 employable group an additional $22,000,000 for the next 2 years. Let us find out whether the time has not now arrived to cut the size of the State government to the economic ability of the people to support it. Let us not further be ruled by tax eaters and tax spenders, whether within or without the public service.

What gain to the proud, intelligent people of this State to destroy the machinery of production on farm and in factory, which provide the tools of industry for the 1,129,000 employables, and break our ability to maintain homes for our children and our children's children in an insane method of taxation?

Shall the courageous people of Wisconsin, in this, their hour of danger, become disheartened in the belief that they cannot stop this foolishness at Madison? Have they the energy and will to follow the example of the Revolutionary hero, Israel Putnam, who cut the traces off his plow horse, left the plow standing in the field, and rode off to the call of his country? Will the courageous, intelligent, thinking men and women arise to this crisis in the State's affairs? Will they, too, leave their farms, factories, and desks and move now upon Madison?

I now appeal to the people of the State, by letter, phone, personal contact, and by public meetings, to support my request that sane action in laying taxes for the next year may prevail.

The State needs honest help right now—start discussions before your Rotary, Kiwanis, Civitan, Tax Alliance, lawyers', and doctors' clubs. Invite in your senator and assemblyman. Visit them and discuss the real issue.

Let them know how you stand. In 1 week an aroused citizenry in this State can protect itself with a sane policy of tax spending and tax laying.

Respectfully submitted.

HARRY W. BOLENS,
State Senator, Port Washington, Wis.

Archibald MacLeish

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, June 26 (legislative day of Thursday, June 22), 1939

EDITORIAL FROM THE NEW YORK WORLD-TELEGRAM

Mr. MALONEY. Mr. President, I ask unanimous consent that there may be published in the Appendix of the RECORD an editorial from the New York World-Telegram of June 8, 1939, referring to the nomination of Archibald MacLeish to be Librarian of Congress.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

[From the New York World-Telegram of June 8, 1939]

GOOD FOR MACLEISH

Almost the last berth that one might have thought of for Archibald MacLeish was to be Librarian of Congress, and yet there is a fine appropriateness in his appointment which potshot objectors cannot obscure.

Notably versatile in college, a bright student and fair athlete, with special promise for literature, he became a lawyer and during the war a captain of artillery. Sixteen years ago he forsook the law to give himself to poetry, and there proved himself not only as a prize winner but by particular originality and strength of manner and by pioneering in radio drama. His poetic themes were the most burning of contemporary problems, while in prose he earned his way as an editor of Fortune.

This vigorous background doesn't indicate that Mr. MacLeish could be calmly laid upon the shelf in any cloistered library. But in praise of the Library of Congress it must be noted that it does not in any way follow a shelf-sitting or dust-gathering policy. It is vital aid and stimulant to living literature.

The President has made a valuable contribution to the Library, in line with its superb tradition, by sending to it the incisive mind and leaping imagination of Archibald MacLeish, while the appointment itself is graceful recognition to literature.

The Townsend Old Age Pension and National Recovery Plan

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

ADDRESS BY HON. MARTIN F. SMITH, OF WASHINGTON, AT THE NATIONAL CONVENTION OF THE TOWNSEND CLUBS OF AMERICA AT INDIANAPOLIS, IND., JUNE 23, 1939

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks, I insert the address which I delivered before the national convention of the Townsend Clubs of America at Indianapolis, Ind., June 23, 1939.

The address is as follows:

Mr. Chairman, Dr. Townsend, distinguished guests, and delegates to this great convention, under our revised bill, H. R. 6466, which was voted upon in the House of Representatives, we propose to prorate among the pensioners past 60 years of age who cease gainful employment and agree to spend the pensions within 30 days the proceeds from a 2-percent transaction tax on retail sales and a one-half of 1 percent tax on the gross revenues of all producers, manufacturers, wholesalers, and jobbers.

NATIONAL GROSS BUSINESS TURN-OVER—INCOME—REVENUE

Nobody knows to a certainty what the present national gross business turn-over and total business transactions amount to, but Dr. E. A. Goldenweiser, Director of Research and Statistics of the Board of Governors of the Federal Reserve System, who is probably in a better position to make a reliable estimate than anybody else in the country, has estimated the total for 1938 at $553,000,000,000. Dr. Robert R. Nathan, chief economist for the Bureau of Foreign and Domestic Commerce, has estimated the gross revenue and income of the Nation for 1936, the last year for which the figures have been compiled and are available in his office, at $449,000,000,000. From these estimates, which both authorities declare to be conservative, Mr. Louis C. Silva, deputy tax commissioner of the Hawaiian Islands, our tax expert, has made a further deduction to be on the safe side and remove all grounds for any argument by our opposition that we are inflating our figures and further making a very liberal allowance for all exemptions, and has placed his estimate of the present national gross income under this bill at $360,000,000,000. Mr. Silva estimates that one-third of this sum can be figured as derived from producers, manufacturers, wholesalers and jobbers, or $120,000,000,000 subject to a tax of one-half of 1 percent and yielding $600,000,000 per year. This would leave the remaining two-thirds, or $240,000,000,000, for all retail transactions, business and professional activities of all kinds, subject to the 2-percent tax with an annual yield of $4,800,000,000. The aggregate total yield, therefore, would be $5,400,000,000, this sum to be divided among 8,000,000 pensioners of the age of 60 years and past and amounting to $56.25 per month for the first year and, of course, certain to increase commensurate with the increase in money circulation, velocity, and turn-over and consequent increase in gross business turn-over and business transactions until the full maximum of $200 per month is attained.

TAX FORMULA OF THE TOWNSEND PLAN

This form of tax is in the nature of a pyramided turn-over or sales tax and is superior to the ordinary sales tax levied only against the retailer. We propose to tax each stage as the article or commodity passes from the producer to the manufacturer, then to the wholesaler and to the jobber, levying at each stage a tax of one-half of 1 percent, and finally 2 percent on the sale by the retailer to the ultimate customer.

STATE SALES TAXES

It is regrettable that Members of Congress and newspaper writers have never taken the time nor made the effort necessary to familiarize themselves with the operation and effects of the sales taxes in force in 27 States and in New York City.

HAWAIIAN GROSS REVENUE AND INCOME TAX

It is even more regrettable that they have not studied the history of the gross revenue or gross income tax in the Hawaiian Islands, which was introduced at 1¼ percent and proved so successful that it was soon reduced to 1 percent and later to nine-tenths of 1 percent, as a result of which the Government was lifted out of the red, balanced its budget, and went upon a cash basis.

INDIANA GROSS SALES AND INCOME TAX

Nor has proper consideration been given by these people to the experiences and outstanding success of the State of Indiana during the past 6 years with its tax of 1 percent on gross receipts from sales to consumers (retail sales); one-fourth of 1 percent on gross receipts from wholesale sales, and 1 percent on gross receipts from professional services, salaries, sales of real estate, investment of capital, etc.

TRANSACTIONS TAX IN FRANCE—EXPERIENCE OF GERMANY AND HUNGARY

They should study the French turn-over tax in operation since 1920, and which is at the rate of 1.1 percent at the present time, as well as the experiences of Germany and Hungary. Germany, with a tax of one-half of 1 percent on wholesale transactions and a general tax of 2 percent on retail transactions, has successfully financed her system of old-age pensions, health insurance, public works, low-cost housing, and national defense.

GROSS BUSINESS TURN-OVER TAX IN RUSSIA

I do not consider Russia an especially good example, owing to the fact that the profit motive and credit capitalism are in the discard. However, something can be learned from the fact that in 1937 the general sales or turn-over tax yielded in revenue the stupendous sum of 67,795,459,000 rubles, or $15,360,000,000 in our money, or approximately 83 percent of all the money raised to defray the entire cost of the Soviet Government. In 1938 the revenue collected amounted to the stupendous sum of $17,000,000,000, much of which was returned to the citizens in the form of old-age pensions, social security, education, public-sanitation measures, housing, and other public benefits.

GROSS BUSINESS TAX ADVOCATED BY BIG BUSINESS IN 1921

No one can read the testimony of some of the leading businessmen, manufacturers, and financiers of the Nation before the Committee on Finance, United States Senate, in 1921, when there was under consideration a 1-percent gross turn-over tax, and not be impressed by the logic and soundness of their views and the unanswerable arguments presented by them, which are just as applicable and revelant today as they were then.

SIR JOHN AIRD RECOMMENDED TURN-OVER TAX

I have repeatedly called attenton to the opinion expressed by one of the greatest financiers and authorities on the subject of government finance and taxation in Canada, the late Sir John Aird, who, when he recently passed away, was eulogized in the Canadian press as the "grand old man of banking." He was for many years president of the Canadian Bank of Commerce, and at the annual meeting of shareholders held at Toronto, Canada, January 14, 1936, he uttered these significant words:

"It is now quite generally agreed that continuous borrowing to cover deficits and to maintain social services on the present scale cannot go on indefinitely, and therefore that the most rigid public economy and higher taxation must be faced. Intensive study

should be given to the problem of establishing a broader and more equitable basis of taxation. In this connection I again advocate a nation-wide turn-over tax as more likely than any other new form of levy to meet the need for a balanced budget."

MORGENTHAU RECOMMENDS TURN-OVER TAX OR TRANSACTIONS TAX

Why did Secretary of the Treasury Henry Morgenthau 3 years ago recommend to President Roosevelt as an alternative tax proposal a "1½-percent turn-over tax?"

CONGRESSMAN BARTON FAVORS NATIONAL TRANSACTION TAX

As recently as April 15, 1939, in an article published in Collier's Weekly, Congressman BRUCE BARTON, of New York, recognized as one of the ablest and clearest thinkers in Congress and in private life a leading member of one of the foremost advertising firms in the United States, handling the advertising accounts of some of the largest industrial and business corporations in the Nation, made this significant statement:

"We must, in my opinion, broaden the income tax base and enact some sort of a national transaction tax; distribute the burden of taxation widely."

DISTRICT OF COLUMBIA BUSINESS-PRIVILEGE TAX

As I pointed out preceding the vote on H. R. 6466, even the District of Columbia has imposed for the last 3 years upon business here in the National Capital a percentage tax based upon gross receipts at approximately the same rate as is proposed by the Townsend plan. This tax has been repealed by the House but its renewal was restored in the Senate.

TIME FOR HONEST, SERIOUS, FAIR-MINDED STUDY

Isn't it about time, my friends, that all the Members of Congress and our friends in the newspaper profession put aside their preconceived notions and prejudices, undoubtedly arising out of the original demand for $200 per month, and make an honest, serious, and open-minded study of the taxing feature of the Townsend plan, and join with us in perfecting it legislatively so that we can make use of the meritorious and beneficial ideas which it obviously contains?

The experience of the numerous States with their sales taxes, our experience with the gasoline and cigarette taxes, the experience of the District of Columbia with its business-privilege tax based on gross receipts, the experience of the various nations which have adopted this form of taxation, all refute and absolutely disprove the claim that as low a tax as is proposed under the Townsend plan would raise prices unreasonably or be inflationary. There is nothing fantastic or absurd about our proposal excepting the expressed views of those who discuss it and write about it without apparently ever having made any study or investigation of the subject matter nor the factual information relating to it.

ONE-THIRD ARE ILL-FED—WHY?

My friends, we are living in a wonderful but also a strange period of American and world history.

During the past two decades scientific, inventive and technological developments have progressed to such an amazing degree that we now have surpluses of almost every known commodity, product, and article required for the sustenance, comfort and happiness of the human family. This is especially true in our own country and the opinion is frequently expressed by the most eminent agrobiologists, chemists, and physicists that if we were to apply the very latest discoveries for the chemical processing and treatment, the fertilization and increased productivity of the soil available to agriculture, we could here in America raise enough foodstuffs with which to feed the world. Yet we are constantly reminded of the fact that one-third of the population of the United States is ill-fed; indeed, the percentage is probably much more than that, for it has been established by Government reports that even in the halcyon year of 1929 approximately 42 percent of our people subsisted on a substandard and wholly insufficient diet and did not enjoy "a decent or healthy standard of life." What a paradox, what a travesty, what a tragedy.

ONE-THIRD ARE ILL-CLAD—WHY?

Our country is by far the richest in lands, in natural resources, in raw materials, in skilled manpower, in electrical energy, in inventive genius, in our agricultural and industrial facilities of any nation on earth. Although we possess only one-sixteenth of the population and one-twentieth of the area of the earth, we produce 45 percent of the iron, 35 percent of the coal, 50 percent of the copper, 65 percent of the oil, 60 percent of the cotton, 23 percent of the wheat, 50 percent of the corn, and 33 percent of the tobacco, and recently W. J. Cameron, of Detroit, Mich., broadcasting for Henry Ford, made the interesting and significant statement: "Five-sixths of all the wheels that turn on this earth are in the United States, and where the rest of the world have one wheel of any sort, this country has five," as evidence of our superior mechanical and industrial development and progress as compared with the other nations of the earth, notwithstanding the fact that most of the other important nations are also rapidly becoming industrialized and mechanized to a phenomenal extent. We possess the raw materials, the wool, the cotton, the rayon, the cellulose (wood pulp), the hides, the fibers of every description to clothe from head to foot in regal fashion every man, woman, and child in America and still have a huge surplus sufficient to clothe many millions of our fellow men in other lands less fortunate than our own. Yet be it said to our humiliation and everlasting shame that one-third of our own citizens are ill-clad, and again it must be repeated that the percentage is undoubtedly higher than that, according to every survey made by our Government.

ONE-THIRD ARE ILL-HOUSED—WHY?

We have made extraordinary strides in recent years in the development and perfecting of building materials of every character—fireproof, waterproof, and stormproof—impervious to all the elements of nature and acts of man—woods chemically treated, plywood, veneer, plastics, metals, glass, air conditioning, cooling and heating apparatus, marvelous lighting, ventilation, and sanitation, so that we could house in comfort and even in luxury every family in America and still have a large surplus of these multifarious building materials to export and ship abroad to less-favored peoples in other parts of the world. Yet we are assured that one-third of our own people are ill-housed, which again is a very conservative statement, for it is only a few years since a survey made by the Home Owners' Loan Corporation disclosed the fact that there were over 11,000,000 families living in quarters that were dilapidated, improperly plumbed, without proper sewer connections, with leaking roofs and sagging foundations, insanitary and unhealthy, many of them infested with vermin and overrun with rats, and unfit for human habitation.

THE TERRIBLE PECUNIARY LOSS TO THE AMERICAN PEOPLE

To keep these submerged one-third or more of our population existing under these disgraceful and shameful conditions of hunger and rags and hovels is costing the America which we love a fearful price. These unfortunate and unhappy victims lack the money tokens and the purchasing power with which to acquire the comforts and luxuries of food, apparel, and housing which could be furnished to them in such profusion and abundance. Consequently, countless farms and factories are idle and labor and capital are unemployed, causing a terrible pecuniary loss to the American people.

The conservative Brookings Institution has estimated the direct loss of wealth which could have been created since 1929 at $200,000,000,000. Witnesses before the Temporary National Economic Committee at Senate hearings have estimated the loss at $178,000,000,000. What these sums represent in loss of physical, moral, and spiritual values, in human misery and suffering, in stark poverty and blighted hopes and ambitions cannot be measured in terms of mere dollars. What a crime against childhood and the millions of innocent children whose bodies have been undernourished and whose physical and mental growth have been stunted beyond repair, of whom a few years ago the Secretary of Labor declared that there were probably 7,000,000 who suffered from malnutrition. The loss to our entire citizenry and the damage to the future of America is incalculable, and the sad pity of it all is that it could have been and still can be avoided by the intelligent cooperative utilization of our natural, mechanical, and human resources. J. Edgar Hoover recently declared it to be his opinion that we could probably cut our annual crime bill of $15,000,000,000 in half and save seven and one-half billions per year by bringing about better social and economic conditions among our people, many of whom are driven into careers of crime by poverty.

WHY A LACK OF MONEY AND PURCHASING POWER WITH SIXTEEN BILLIONS IN GOLD?

I referred a moment ago to a lack of money and purchasing power. Gold is piled high in the Treasury of the United States—nearly $16,000,000,000 worth—two-thirds of the whole world's supply. The precious yellow metal is the orthodox base for currency, credit, and reserves. In 1929 the Nation held $3,900,000,000 in gold, and based thereon was $58,474,000,000 in bank loans and investments. In other words, about $15 in credit was based on each $1 in gold, a ratio which had prevailed for many years. The action reducing the gold content of the dollar resulted in gold stocks that had totaled four billions becoming by Government edict $6,800,000,000.

Since then over $9,000,000,000 more of gold has flowed into the Treasury from the four corners of the earth. However, the volume of credit has substantially decreased until today over sixteen billions of gold support but $48,929,000,000 in loans and investments and the ratio that has been normally 15 to 1 between gold and credit is approximately 3 to 1. If loans were to get back to the 15 to 1 ratio, loans that today are forty-eight billions could increase to two hundred and forty billions. Indeed, 3 years ago, in 1936, Roger W. Babson, conservative New England business analyst and statistician, declared it to be his opinion that at that time, when we had only ten billions in gold, this was gold adequate to expand available credit to two hundred and fifty billions. We possess the largest potential supply of credit that this or any other nation has ever possessed in the history of mankind.

A FACT OF TREMENDOUS IMPORTANCE TO THE AMERICAN PEOPLE

Aside from this enormous reservoir of potential credit to finance upon a sound basis a program of reconstruction and modernization of our social and economic structure in accordance with the latest developments of science and invention, and thereby give employment to every idle, able-bodied citizen in the Nation for several decades, I desire to point out briefly another fact of tremendous importance to the American people.

For many years in the past our currency had a 40-percent gold and silver base, as compared with 10 percent underlying the British pound sterling during the past 100 years, the soundness of which was never questioned.

USE IDLE GOLD AND SILVER TO FINANCE TOWNSEND PLAN

Today, if we were to pay off the member banks of the Federal Reserve System the $134,000,000 they have invested and thereby extinguish their lien on our gold store, we could issue against the

nearly sixteen billions of free gold and the silver of nearly two billions, upon the old conventional 40-percent basis, sufficient sound currency which would be in a class by itself as the soundest currency in the civilized world, to the maximum amount of $45,000,000,000 and gradually retire the national debt, finance the Townsend old-age pension and national-recovery plan, public-works and national-defense disbursements, and do it all on a cash basis without interest. This could be accomplished gradually and just as rapidly as the new wealth would be created and produced in productive enterprise through the employment on the farms, in the factories, mills, and workshops, the mines and the forests, of those millions who are now idle and through no fault of their own are nonproductive. Consequently, the money tokens issued, in addition to having the gold and silver backing which they have had during our previous history, would also have behind them the plethora of foodstuffs, clothing, and housing necessary to raise the living standards of the unfortunate submerged one-third of our population and increase to the extent of their value the national income.

INCREASE THE NATIONAL INCOME TO ONE HUNDRED BILLIONS AND MORE

In this connection, it is worthy of note that our leading manufacturers, engineers, and economists are agreed that due to the far-reaching technological improvements in the past decade our full productive capacity has increased to such a degree that in this year of 1939 it is probably 50 percent greater than in 1929. The enormous extent to which we could increase our national income is indicated by the estimate of the Brookings Institution that in 1929 when it was ninety-four billions in goods and services we only utilized 81 percent of our capacity—allowing 19 percent to remain unused—we could readily have produced twenty billions more, or one hundred and twelve billions of goods and services instead of ninety-four billions. The Government's national survey of potential production capacity shows that in 1929 we could have produced one hundred and thirty-five billions, or forty-one billions more than we did.

ABOLISH POVERTY, DISEASE, AND CRIME

Our national income this year will probably be about sixty-eight billions, as compared with the figure of eighty billions envisioned by President Roosevelt and the one hundred billions which Senator McNARY, of Oregon, recently declared to be possible. Estimates of possible national income run as high as one hundred and fifty billions by some of the most eminent engineers, scientists, architects, and builders living today, based, of course, upon the assumption that we would utilize upon a sound economical basis our full productive capacity by producing first and foremost a maximum of foodstuffs, clothing, and housing for all our people and then proceed to provide slum clearance, superhighways, airports, flood control, health and sanitation, antistream pollution, river and harbor improvements, reforestation, irrigation, reclamation, and armed and equipped with the products of the test tubes and crucibles in our laboratories, by adopting the Townsend old-age pension and national-recovery plan, abolish poverty, disease, and crime in America.

Can the Country Stand a Third Term?

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

Mr. PLUMLEY. Mr. Speaker, as I see it President Roosevelt is an avowed candidate for a third term in the White House.

This new $3,800,000,000 spend-lend program is but another desperate attempt to achieve an appearance of business recovery in time to influence the 1940 Presidential election.

This new program is a public confession that the Roosevelt policies of the last 6 years have failed to bring recovery. Since 1933 the New Deal has spent more than $55,000,000,000, yet this new scheme acknowledges that we still have more than 10,000,000 unemployed. It acknowledges that there are billions of idle capital in our banks awaiting investment when national confidence is restored. It acknowledges that 6 long years of wanton waste, shameful extravagance, and hysterical experimentation have not brought peace, progress, or prosperity.

If a business manager reported month after month for 6 years that he could not get things going, he would be dismissed. The President is the Nation's business manager. Yet he is now asking the people to embrace once more his discredited theory of pump-priming.

REVIEWS FAILURES

If the Roosevelt deficit to date were to be paid off at the rate of $500,000,000 a year, the Nation by the end of 1980 would have the national debt back to the point at which Roosevelt took over in March 1933. At that time the Federal debt was roundly, $20,000,000,000. Today it is a little more than $40,000,000,000.

This means that reducing at the rate of $1,370,000 a day, it would take more than an entire generation to pay off the Roosevelt deficit already created—and the New Deal spendthrifts still have 18 months to go on their second term.

It is easy to imagine what a third term would mean to the people—billions and billions more of deficits, and a crippling burden of taxation for a century to come.

The attempt in 1937 to pack the Supreme Court was the first omen of the third-term campaign, now in full swing.

The will to subjugate the Supreme Court to the personal commands of the President gave us Roosevelt's real conception of constitutional government. His third-term campaign now reveals his deep contempt for the fundamental spiritual traditions of the Republic.

Recent test polls of public opinion by the National Republican Congressional Committee indicate that the people want a change.

Real recovery will begin when Roosevelt leaves the White House, not before.

Another Spending-Lending Program

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

EDITORIAL FROM THE WASHINGTON POST

Mr. MASON. Mr. Speaker, the following editorial taken from the Washington Post expresses more completely and effectively than I can my thoughts concerning the new spending-lending program that has been recommended by the President to the Congress. I think it is worthy of very serious consideration by the Members of this House on both sides of the aisle and to the country at large, and for that reason I believe it should be placed in the RECORD.

[From the Washington Post]

ANOTHER SPLURGE

Toward the end of the session, when a weary Congress will find it the more difficult to examine the implications involved, the President tosses into the legislative pot a grandiose pump-priming scheme involving governmental expenditures of $3,060,000,000. This without inclusion of an $800,000,000 extension of the borrowing power of the United States Housing Authority, discussed elsewhere on this page today.

The excuse seized upon for making this proposal, vaguely foreshadowed for some weeks, is Senator BYRNES' inquiry as to the President's attitude on the $125,000,000 earmarked for P. W. A. in the relief bill as passed by the House last week. Mr. Roosevelt shows clearly that he does not like this modest endeavor to combine public works and relief. He believes "there is a better way to accomplish the laudable purposes of this bill." The "better way" is the spending program now advocated.

The program, as sketched by the President in his letter to Senator BYRNES, has six parts, each one of which deserves, and must receive from Congress, the closest scrutiny. If this is given, sharp modification of the plan may be expected.

For non-Federal public works an expenditure of $350,000,000 over 2 years is suggested. There is certainly scope for development of this sort in most American municipalities, although the P. W. A. has already filled many of the obvious needs. It is much more dubious that new projects under this heading will prove, as the President optimistically suggests, "self-liquidating."

This is even less likely with the second classification—road building. While the national highway system is still susceptible of broad improvement, such construction is very unlikely to pay for itself. Toll roads and bridges might do so, but these are anathema to Congress.

The third part of the program anticipates governmental purchase of $500,000,000 worth of rail equipment over 3 years, to be leased or sold to the carriers. As a matter of policy this step would be open to grave doubts even if the R. F. C. did not already possess authority to lend money to the railroads for equipment purchases.

The fourth category, of expanded rural electrification, seems subject to less criticism. Possibly the same is true of the proposal to expedite farm-tenant purchases through the Farm Security Administration. It does seem questionable, however, that $500,000,000 can be spent constructively in this way in 2 years if security of the loans, and consequent repayment, is regarded as important.

The sixth and last part of the proposed program is perhaps the most subject to criticism. It suggests $500,000,000 to be spent in 2 years in extending governmental loans to foreign countries "for the purpose of promoting our foreign trade."

Such loans, current examples indicate, would probably be much more political than economic. They should never be considered as part of a "recovery program." And the amount suggested is wholly out of the picture in view of the fact that this Congress has already limited the Export-Import Bank to a $100,000,000 outlay for loans of this type.

In balance it is impossible to regard this program as "self-liquidating." If half of the proposed advances were returned to the Treasury the Government could consider itself lucky. It is as a spending program, as a heavy addition to current deficit financing, that the plan must be considered.

Once bit, twice shy. Undoubtedly the $870,000,000 extra fillip asked for the next fiscal year would be achieving some temporary reemployment next summer, as the presidential campaign gets into full swing. But skepticism is wholly in order as regards any fundamental and permanent improvement from this further development of the merry game of playing ducks and drakes with public funds.

Help Wanted: One Kipling

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

ARTICLE BY HARLAN MILLER

Mr. DIRKSEN. Mr. Speaker, a recent column by Harlan Miller, which appeared in the Washington Post on Sunday, June 18, 1939, under the caption "Help Wanted: One Kipling," is so timely that it is worthy of republication in the CONGRESSIONAL RECORD.

It reads as follows:

OVER THE COFFEE

(By Harlan Miller)

HELP WANTED: ONE KIPLING

America needs a Kipling. An hour spent in the Senate gallery, or at gabfests of the sheepish leftists, or in any House committee room, or with a rich man at the Treasury wailing wall, or in the company of any Washington official makes it painfully clear that this Republic sorely needs a Kipling to massage its weary muscles.

America needs a Kipling to remind it that patriotism is not a shameful thing, but means national courage; to remind us that Americans can fight harder, run faster, build taller buildings, spit farther, eat more, jump higher than anyone else.

Americans need a Rudyard Kipling of their own to remind them that they can lick their weight in wildcats; that their women are lovelier, their men braver, their children smarter, their history more dazzling, their future rosier with romance and glory now than it was 100 years ago.

America needs a Kipling to rewrite all the nervous, jittery, suspicious, pusillanimous speeches uttered on Capitol Hill and tell our countrymen that they can dig more out of the soil, fly faster through the sky, organize better, produce more, sing louder, shoot straighter, and buy more groceries than the next one.

Americans need a Kipling to remind them that one American soldier can lick two of any other kind; that we build a bungalow or a school for every outhouse that any dictator builds; that we pay a W. P. A. road worker enough so he can live better than a skilled mechanic who makes machine guns elsewhere.

America needs a Kipling to wipe its tears away, to pat the heaving shoulders of the tremulous rich, to convince them that their children will do very nicely, thanks, even if they don't inherit from their fathers a hundred times as much as their fathers inherited.

America, if you listen to conversations, speeches, harangues, and the keening in the Capitol, desperately needs a Kipling to blow its nose and tell it there aren't any boogermen hiding in the grass that isn't growing in the streets, and that we can sleep later, crawl slower, sob louder, view with greater alarm than our own maiden aunts.

America is crying for a Kipling to tell her that nothing much can be wrong with a land where workmen getting $13 for a 7-hour day have the audacity to go on strike to get $14 for a 6-hour day, or maybe $15 for a 5-hour day.

America needs a Kipling.

It doesn't need a lot of male Louisa Alcotts or Katherine Mansfields, or a lot of third-rate Menckens to make 100-percent Americanism unfashionable or funny, or a lot of journalistic Spenglers mourning in daily columns the decline of the east or west, or a lot of melancholy Leonard Merricks weeping for the good old days.

America needs a Kipling to fill her full of prune juice and vinegar and remind her of her glorious destiny.

Meditating an hour in the Senate press gallery, I realized how badly we need him.

Fraudulent Neutrality

EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

Mr. BOLLES. Mr. Speaker, I ask unanimous consent that I may extend my remarks in the RECORD and use the text in part of a speech that I made to the Veterans of Foreign Wars at their State convention of the Department of Wisconsin, Friday, June 23, as follows:

As an honorary member of this body of virile American citizens I am proud to greet you.

In this hour of world and national crisis wherein you occupy so strategically, an important place, this new army of an old army has a great campaign laid out ahead. It is the battle for America, bloodless, but nonetheless important. It should be decisive.

If America is to be dominant you cannot be dormant. You have to be a living, moving, mobile army. If you thought that just to be a veteran of other days you were through you were mistaken. If you thought you were through fighting you were wrong. You have just begun to fight.

Peace hath her victories no less than war. You are still climbing San Juan Hill. You are still in the Argonne. You are not using bullets. You still have the ballot.

If America is ever destroyed, if this Nation ever disintegrates it won't come from outside attack; it will be from within. If the facade of the temple of liberty is marred or thrown down it will not be from foreign invasion, it will come from enemies within our gates. And to protect that temple of liberty, to save it, to save America, the Veterans of Foreign Wars will be at the right of the column.

We have become jittery over a possible war—some war somewhere. We began this Nation in war. And then we started the great struggle for peace. We erected a beacon of liberty; we called upon the world to come and enjoy its light. We dedicated it to individual opportunity. We followed the teachings of George Washington. We kept out of foreign entanglements. We minded our own business. We maintained neutrality under international law.

What is international law? It is the outgrowth of the conflict of nations in recent centuries, the slow but steady development and triumph of justice and the principles of humanity over tyranny and force resulting in the amelioration of the horrors of war and the greater reign of reason. The world has not always abided by this law; it has been frequently violated by international outlaws. We have some in the present decade.

The United States from its birth made itself the champion of a freer commerce, of a sincere and genuine neutrality operating without a congressional law, not set down by statute; of respect for private property in war of the most advanced ideas of national rights and justice; and its existence of 160 years, by its example and its persistent diplomatic advocacy in spite of violation, has exerted a greater influence in the recognition of these elevated principles than any other nation in the world.

So, says John W. Foster, great diplomat, once Secretary of State.

But we face the present—this moment—a worried and bewildered world, with bullies carrying chips on the shoulder, Goliaths defying all nations.

Is there any reason why we should be involved? There have been a score of wars in Europe, little and big, since we became a nation. We did not get into them. Nations have been partitioned, territories changed, new boundaries set up, new kingdoms built since the Constitution was adopted. Did we get into any of those sanguinary conflicts? No; we maintained the principles set down by Washington and kept the strict neutrality as of international law.

We saw Germany take over Alsace-Lorraine after the Franco-Prussian War. We made no protest and wrote no sharp letters to

Bismarck; nor did we put our fingers into Europe when Schleswig-Holstein was taken from Denmark.

Now what do we propose to do? We plan a neutrality law. It isn't a law for peace, it is a law for war. We propose by statutory enactment to get into all these conflicts in Asia and Europe. We have such a bill called the Bloom bill. I hope to get back to Washington in time to vote against it. It is a fraudulent neutrality. It invites war. I have not time here to discuss it in detail. Suffice to say that when we name an aggressor nation we become that nation's war enemy and the ally of the defense nation. When we name belligerents we are between both. If we maintain the old policy which kept us from war so many years when Europe was in turmoil and the kind of neutrality of those days, we need not worry over war.

For we are not going to war. If anybody comes over here to land on these shores, we shall be ready to meet them even as the minutemen of Concord and Lexigton met the red coats in 1775.

Wars do not decide. Nations fight to exhaustion and halt only to get breath. It has been that way for centuries. The visions of Alexander became the dreams of Rome; the dreams of Rome became the hope of Napoleon. Each coined these ambitions into military action. We are not concerned with how the World War began, how it came that we entered it, or how criminal it was to start it. But we are deeply concerned that we shall have no other like it and no other war at all. It may not have settled which army or which nation fought the best. But it impressed the world with terror. It appalled the world with its frightfulness. It has made the ambitious hesitate and caused statesmen to look for some way out of international differences other than the arbitrament of arms.

If that war told us anything, it was that we were a nation of boys and young men who became supermen when the time came—when the clock struck the hour and the answer for American manhood had to be given. If that war told us anything, it was that we never wanted another either like it or of any kind whatsoever.

There is no glory in war. It is a fiction of the timid. Imperishable deeds? Yes. Sacrifice? Yes. Glory? Yes; if cheering mobs and brilliant words and tears of joy and shouting and tumult make glory. But in the final answer they are meaningless and only half sincere.

The crowning glory of the American soldier is that he came home—those who came—and went to work.

That is the highest type of manhood. Such a life is worth living; such a manhood is imperishable and everlasting.

Yesterday the stamping feet of marching men, hungry and footsore, going into the doors of hell, whistling and singing, doing the drudgery of camp uncomplainingly. Today the commonplaces of occupation.

There is such a thing as mass bravery. There is less of the individual bravery. The American soldier was an American citizen. All his life he had been trained in individual responsibility. That is why, in 6 weeks, he became a soldier. And he gave his life, or his body over to wounds and his brain and his health in that rendezvous with death or to camp training and its drudgery as a something expected of him.

For 10,000 years or more there has been a struggle between liberty of the individual and authority of the few. We gained that liberty in war 160 years ago. We have spent that 160 years in a struggle for peace. We set a new plan for a war-torn world. We never raised any sons to be professional soldiers. The few who went to school for military training we kept busy at engineering or policing the West against the Indians. And while we have deviated a few times from the course set down by the fathers of the Republic, we have never forgotten that we were the apostles of peace and freedom.

If the World War meant anything at all, it meant that we should never again be unprepared.

The New Spending Program

EXTENSION OF REMARKS

OF

HON. HARRY SANDAGER

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

EDITORIAL FROM THE PROVIDENCE (R. I.) JOURNAL OF JUNE 23, 1939

Mr. SANDAGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Providence Journal of June 23, which warns against the dangers of the President's new $4,000,000,000 spending program. The editorial is as follows:

[From the Providence (R. I.) Journal of June 23, 1939]

A DANGEROUS PROPOSAL

Mr. Roosevelt's new spending program was dispatched to Congress yesterday, and it is, far more than anything the administration has done in many months, a threat of national disaster. It is rooted, of course, in his oft-repeated pledge to do something for the unemployed and to restore recovery. It abounds in easy talk of self-liquidating projects to be financed out of Government revolving funds, which, he says, will cost the taxpayers nothing.

It is, as we say, an exceedingly dangerous proposal, and the American people better think several times about it before they agree to its adoption. It is a $4,000,000,000 spending program, nearly one billion of which will be expended during the fiscal year of 1940–41 over and above the amount to be appropriated for relief. It is the administration's new spending program, its great bid for the suffrage of American voters in 1940, and no amount of eloquent talk about loans and revolving funds and recoverable assets can change that fact.

The public should understand, first of all, that the plan is no more than a dodge to take Mr. Roosevelt's spending outside of the Budget and to avoid the $45,000,000,000 limitation which Congress has placed on the Treasury's outstanding debt. It should realize that once that is accomplished all checks, congressional or otherwise, are off. It will be more than giving the President a blank check to draw on appropriations. It will be giving him carte blanche to raise funds, all of which ultimately will have to be repaid, either in increased taxes or collapse of the Government's credit, and to pour them into numerous projects of his own choosing.

But if there is danger to the Government's credit, there also is grave danger to American business and industry, for there is no doubt that the scheme is the first step in a well-conceived plan to rule the country's economy. The complete socialization of industry is one of its great possibilities.

The program must be considered against the background of the Mead bill, which would provide for Government insurance (up to 90 percent) of bank loans to business, and the Berle plan for the creation of a system of Government-investment banks. These undoubtedly are the measures Mr. Roosevelt had in mind when he wrote Mr. BYRNES that "some supplementary legislation will be necessary" to make the program effective.

If not these, then certainly the creation of other Government corporations, which can raise money by selling their own obligations in the market, instead of obtaining funds from the Treasury. But in either case the trend would be the same; Government competition with numerous private businesses and industries and ultimately the socialization of all. Mr. Berle himself is authority for this, for he said that adoption of his plan (the same is true of the Mead bill) would mean the gradual acquisition of "most of the productive plant of the United States."

There is little need, at this time, to analyze Mr. Roosevelt's respective proposals. They all involve the use of the old revolving fund idea for financing the various projects. The argument, of course, is that self-liquidating funds will provide enough revenue, not only to meet interest and principal payments, but to pay upkeep and keep the original funds revolving for other undertakings. Such funds haven't been conspicuous for success in the past. Indeed, they usually have been liquidated at huge losses to the taxpayers. Mr. Hoover's Farm Board revolving fund of $500,000,000 is an excellent example.

Lending-Spending Program

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

Mr. SPRINGER. Mr. Speaker, we have just observed the suggestion of the President by which he requests the appropriation of the huge sum of $3,860,000,000 for a so-called lending and spending program in this country, and it is respecting that subject that I desire to make a few observations, which, I believe, should be carefully weighed in the light of the request so made.

At this time, when this staggering and appalling sum of money is requested by the President, our national debt is almost, if not quite, $45,000,000,000. The limitation now fixed by law for our national debt is in the sum of $45,000,000,000. The enormous expenditure of money made by the national administration now in power for the various departments and agencies has exceeded by far the most liberal thought of any American citizen, and the deplorable situation which now confronts our people is that these vast expenditures of money have not accomplished the desired result. We have today approximately 13,000,000 people who are unemployed and unable to support themselves and their families, our industries and business are at a very low ebb, taxes and impositions of many and various kinds have mounted higher and higher, thereby preventing any worthwhile progress, and the confidence of our people has been completely shattered and de-

stroyed in our Government. This unhealthy condition is continuing.

When we analyze the sad plight of our farmers, our laboring men and women, and our citizens of every bracket in life, we are constrained to view this most recent plan, and its revelation by the President, in the light of all of his past performances—that this is just another policy of spending the people's money in an effort to regain "that mythical pot of gold planted at the end of the rainbow."

We are told that this proposal will be entirely self-liquidating and that it will not cost the people anything. That is a fine philosophy, indeed. We sincerely hope that assertion is literally true. However, I am certain all of our people would like to know to whom this money will be loaned, if loans are to be made, and what character of security will be exacted from the borrower. If the money is to be spent by the President, by and through his agencies, then the people are entitled to know for what particular purpose their money is to be so expended. I am certain the people would like to know whether any part of this vast sum of money which the President wants will be used to construct or aid in the construction of the $750,000,000 canal in Nicaragua; and they would be very glad to have the information as to whether or not any part of this money will be used to force through the Florida ship canal, which it is estimated will cost approximately $300,000,000, which project is sponsored by the President but which was defeated in the Senate, and which canal, if constructed, would be highly detrimental to the people of the great State of Florida.

This "lending and spending" program is couched in high-sounding phrase and is calculated to strike a responsive chord—but, when that reaction comes, we should ask ourselves whether the "pump priming" in the past has resulted in any permanent progress or permanent recovery in our Nation. And one very vital question suggests itself to every American, and that question is, Will the loans, or the money which is spent, be repaid? We understand, of course, in the event the money is not repaid to the Government, then the taxpayers of this country will have to foot the bill."

Let us go one step further. We do know the "greater the expenditure the greater the tax burden." If the tax is not imposed today, it will be imposed tomorrow. These vast sums of money which the President is spending must be repaid by the people, with interest. The field day will soon end and the sad struggle of the people will continue. Our depressed condition today is largely caused by reason of the wild orgy of Government spending during the past 6 years—which spending of money has been wasteful and in some respects wanton, and which has deferred recovery rather than to accelerate it; the oft-repeated axiom "that we can never spend our way into prosperity" is literally true and should be well and carefully considered in this instance.

Mr. Speaker, I desire to include in my remarks a very carefully written editorial which appeared in the Washington Daily News on Friday evening, June 23, 1939, which is very illuminating on this subject:

[From the Washington Daily News of June 23, 1939]

MORE BILLIONS

Another spending-lending program, in the usual grand manner, but this time involving two of the most illusory and delusory terms in all the history of finance—self-liquidation and contingent liability.

If you absolutely knew that a proposition would be self-liquidating, wouldn't everything be lovely?

But if a project doesn't happen to liquidate, then the liability ceases to be contingent and becomes actual, grim, and harsh, like when you go on another man's note and he doesn't pay.

Mr. Roosevelt would advance billions more in credit for toll roads, bridges, bypasses, waterworks, sewage plants, hospitals, foreign loans, land ownership for farm tenants, and what have you, on the theory that the projects would liquidate themselves.

If they didn't, the Government—that is, the United States Treasury, the taxpayer—would have to bail them out. But Mr. Roosevelt's proposal is to disguise that unpleasant fact behind the false whiskers of contingency. The so-called self-liquidating loans would not appear now as liabilities on the Treasury's books. There would be a form of Government spending which would seem to cost the Government nothing. But a delayed fuse, so to speak, would be burning. And when, the fuse having burned down to the end, some of the projects turned out to be not self-liquidating, the Government would have to come through and add the loss to the national deficit.

Some self-liquidating projects do pay their way. And there's an abundance of private capital right now looking for investment in other projects which can be demonstrated as sure self-liquidators.

But Mr. Roosevelt's bland assumption that there are billions of dollars worth of such projects lying around the country just waiting for Government-guaranteed loans, gives us almost the same sort of shudders that we get from the Elmer Thomas greenback-and-silver scheme.

For—self-liquidation being a field in which optimists flourish—we've known of too many propositions that were undertaken as self-liquidating and that turned out to be not so. And we recall that among projects recently advocated as self-liquidating are such ventures as the Florida ship canal and Passamaquoddy.

Says a correspondent in Pennsylvania: "The plan to lend money to municipalities for hospitals, sewers, and the like is hooey, because the cities are already broke trying to put up their share of costs and to equip and maintain projects already built or building."

That's something to think about. And, incidentally, the cities and local governments have had access for years to P. W. A., which makes them free gifts of 45 percent of the costs of their projects. What reason is there to believe that they have held back a great number of certain self-liquidators and will now undertake them with 100-percent borrowed money?

This new scheme should be viewed with a cold and fishy eye by the Congress, which, after all—and not the President—is responsible for the appropriation of money. It is no plan to be bum's rushed through in the heat of a Washington summer by lawmakers who "wanna go home."

And, Mr. Speaker, respecting this same subject, and which adds much to the question under discussion, I desire to include in my remarks an editorial entitled "Another Spending Plan," which appeared in the Washington Evening Star of date June 23, 1939, and which editorial I fully endorse:

[From the Washington Evening Star of June 23, 1939]

ANOTHER SPENDING PLAN

President Roosevelt's latest pump-priming scheme is another indication that the New Deal, despite its optimistic assurances, really has no formula for economic recovery.

Under the proposal advanced yesterday, various Federal agencies would be authorized to issue over a period of years Government-guaranteed bonds in the aggregate sum of $3,860,000,000. The agencies then would lend the proceeds from the sale of these bonds for what the President calls non-Federal, self-liquidating projects.

Viewed in its most favorable light, the plan is an improvement on its predecessors only in the sense that it contemplates no outright gifts of Federal money. There is, of course, little basis in fact for the President's belief that the self-liquidating projects will not cost the taxpayers anything. It may be safely assumed that some of the projects—the loans to foreign governments, for example—will not be fully repaid. Obviously it is impossible to determine in advance how many of the loans will prove to be nonrecoverable, but on the basis of past experience it is only reasonable to suppose that they will not be repaid in full.

There is a greater objection to the plan, however; namely, that it marks a continuation of a policy which, despite its appalling cost, has not only failed to stimulate recovery in the past but which, in the judgment of many competent observers, has definitely retarded industrial improvement. This Nation is going through a period of transition. Many of the old processes of expansion and consequent business stimulation are at an end. At such times the accumulation of debt is dangerous and depressing in its effects because of the knowledge that it can only be paid by the imposition of heavier taxes. But the President apparently chooses to ignore the realities of the situation, and the folly of that course is not minimized by calling these new loans a contingent debt, for if the Government guarantees the bonds, it assumes responsibility for their repayment just as though the money had been borrowed directly by the Treasury.

Congress, with little if any encouragement from the President, has made some progress toward eliminating the difficulties enveloping the country by correcting faulty tax policies and reforming the relief program. It is to be hoped that the legislators will not permit these gains, however slight, to be more than offset by another ill-advised pump-priming adventure.

Competition—Free Enterprise

EXTENSION OF REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

EDITORIAL FROM THE CHICAGO DAILY NEWS OF JUNE 22, 1939

Mr. CHURCH. Mr. Speaker, as an interesting thought-provoking article, I ask unanimous consent to insert in the

RECORD an editorial entitled "Competition—Free Enterprise," which appeared in the Chicago Daily News of June 22, 1939.

[From the Chicago Daily News of June 22, 1939]

COMPETITION—FREE ENTERPRISE

There is no class in the country more emphatic in its denunciation of the trend toward a regimented, planned economy, directed by political officials, than the leaders of business and industry. There is no group more vocal in its lament over the progressive emasculation of the free enterprise system than the men who occupy responsible managerial posts in the American factories, mills, banks, and stores. These men lift strident voices in shrill protest as they see Government assuming greater and ever greater authority over private business, determining more and more what business can do and cannot do; supervising investment and the returns investment may earn; relations with, and compensation for, those employed, and other conditions of employment; specifying methods of accountancy; and every year impounding more and more earnings for the support of a recklessly extravagant administration of public affairs.

Of all these things, American businessmen are intensely aware, and most of them become almost lachrymose when they attempt to recite them.

But what are the leaders of American business and industry doing to save the free enterprise system?

No one can doubt that economic freedom provides the very foundation for all other freedoms—freedom of speech, freedom of press, freedom of religion. If someone else holds complete control over your own and your family's means of livelihood, how much are you going to indulge in speaking your mind? If a dominant political bureaucracy controls the sources of a publisher's income, how free will be the press, the pamphlets, the books that find circulation? How free will religion be if it must rely upon political largess for its support?

Similar certainty characterizes the bald statement that there can be no free enterprise system without competition.

It is competition, and competition alone, that gives feasibility and usefulness to a free enterprise system. Without competition to correct the abuses that flow from selfish rapacity, or from an equally dangerous reaching for power, the free enterprise system cannot operate at all. If competition is not given the chance to operate its corrective powers, the substitution of the socialistic system, either Fascist or Communist, is certain.

There are only two choices.

We can restore a free-enterprise system by reviving the competitive spirit, and getting back upon the same prosperous road that, in 150 years, made the United States the most prosperous country in the world, with the highest living standards; or—

We can surrender to those elements who believe the free-enterprise system is outworn, and no longer workable, and who are deliberately planning to change our economy to that of the socialized state, where everything and everybody is regimented by an all-powerful political dictatorships.

There is no middle ground. We cannot be half free enterprise and half socialistic.

What has been the plainly marked policy of American business, as a whole, ever since that fateful day in October 1929 when our flimsy house of paper profits, following upon a period of frenzied borrowing upon future prospects, collapsed about our head?

It has consisted of an unceasing effort by leaders of commerce, industry, labor, and agriculture to keep prices up.

This in the face of a fall in income from eighty billions in 1929 to a low of forty billions in 1932. The farmers were subsidized not to grow crops, when millions of people in the cities were without many of the necessities. The labor unions insisted upon wage and hour schedules that increased unit costs of manufactured products and thus inexorably reduced sales volume and increased unemployment. Industry sought shelter from a competitive price war behind the N. R. A., which it cried aloud for and helped to organize. Commerce demanded the bolstering aid of an R. F. C. to shield it from the penalties of overcapitalization. And all this was done in a futile effort to preserve the price level of an $80,000,000,000 income on a $40,000,000,000 national pay check.

No wonder we piled up a debt of $20,000,000,000. No wonder taxes mounted until out of every dollar of a depleted income everyone surrendered 38 cents to the tax collectors.

And we did this while stifling competition.

We said we wanted to preserve the free-enterprise system, but we deliberately side-stepped the sole corrective in that system that makes it work.

We would not face the realities.

We refused to pay the inexorable price of our excesses and our follies of the wild, mad days of the twenties.

We are either going to witness a steady slide into the hopeless, level morass of a socialized civilization and economy, or we are going to face the bitter truth to which history, with unerring finger, points. The only way this, or any other nation, has recovered from previous depressions was to let prices follow the immutable law of a sharply lessened demand to lower levels, until they reach the bottom, following as they will, and must, the lowered purchasing power of depression income. We have tried all sorts of artificial expedients to avoid this, but none of them has succeeded. None will succeed. None ever has.

We will get back to a healthy free-enterprise system, and a new prosperity, when we remove the restraints and impediments we have put in the way of real competition. Excessively high tariffs, which make a monopoly of our domestic markets for certain favored industries, are one of the artificial barriers that must be swept aside. The efforts of labor leaders to raise wages and shorten hours, in a time of depression, and thus increase unit costs, is another deterrent to a revival of widespread employment and the return of good times. Trying, by means of loans from the Government, to keep afloat businesses that ought to undergo capital reorganization, only helps to postpone ultimate recovery. Paying billions of dollars in subsidies to farmers for not growing crops, has left the farmer worse off than he was before the Government assumed control of agriculture, and has increased food costs to the consumer, including the worker out of a job.

And we have all been guilty. We are intellectually dishonest if we try to load it all on the shoulders of the new dealers. They did, in the main, what the majority of us wanted them to do—that is, try to avoid the penalty of our own folly. Now, when all of the New Deal expedients have failed, we raise a great cry that we want a return to the old, accustomed successful methods of a free economy.

If we do, then there is one vital move upon which the majority of us must agree, and that is, actually to restore competition.

New York World's Fair, 1939

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I include the following observations concerning New York World's Fair.

I have been to the world's fair three times, and am happy to state that it is one of the most stupendous undertakings that I have ever witnessed. Words fail in my endeavor to describe the magnitude and the glories of this fair. It has never been equalled anywhere at anytime. It would take days and days to exhaust its possibilities. Its foreign-government pavilions are crowded with exhibits from the far-flung regions of the globe; from Africa, from Asia, from the North Pole, from the South Pole, from South America, from Europe—from everywhere have come striking exhibits—the flora and fauna of many lands. Its commercial exhibits are most enlightening and instructive. No less amazing and enjoyable are the murals, displays, and shows of our own United States pavilions.

Last Saturday evening I had the rare pleasure of taking my family to the French pavilion, and while eating our evening meal we witnessed, in the Lagoon of Nations, a most extraordinarily striking fountain display with colored lights synchronized with music. The like of this harmony of color, water, and fireworks has never been seen. It was tried at the Chicago Fair on a smaller scale, but here at the world's fair in New York it is a stupendous success. Well nigh a quarter of a million people witness this fountain exhibition each Saturday and Sunday night, and many hundreds of thousands have already gone away from this spectacle awe-stricken.

I cannot take the time to detail the various shows and exhibitions, commercial and noncommercial, that may be witnessed free of charge. The only answer to all this is come and see the fair! Do not miss this treat of a lifetime! No matter where you are or what you are, a journey to this fair is well worth while!

I cannot let this occasion go by without paying tribute to the remarkable genius of my friend, Grover A. Whalen, who did so much to plan the fair, and whose ideas made this fair possible. A word of praise is due also to his administrative assistant, Mr. J. C. Holmes, and to their excellent staff and board of directors.

It gives me great pleasure at this time to call to the attention of the members of the House that $155,000,000 monu-

ment to American industry and effort, the New York World's Fair.

Inasmuch as the fair is the product of the combined efforts of Americans from almost every State in the Union, I am sure that you, as their duly elected representatives, will be interested in some of the primary facts concerning it.

There are many conflicting stories in circulation about the fair and it is therefore particularly appropriate that I should present these facts now.

In the first place, the fair is fully finished. Its 1,200 acres house a splendid and colorful city containing over a hundred exhibit buildings, the amusement area, stately pavilions of our neighbors, the great participating foreign nations, and structures erected by the Federal Government and many States of the Union.

Laid out with painstaking care, the fair site is traversed by broad, tree-shaded promenades, lined with comfortable benches, and studded with landscaped gardens, masterpieces of sculpture and scores of fountains. All that science could create and art devise has been thoughtfully utilized to create this stupendous world of tomorrow.

Although it has come to my attention that certain rumors to the effect that prices at the fair are not low enough, it gives me great pleasure to inform you that these rumors are not founded on fact. Prices at the New York World's Fair are most moderate, and it is interesting to note that the average visitor's expenditure, after paying his entrance fee to the grounds, is $1.17. The general admission charge of 75 cents entitles the visitor to enter 105 exhibit buildings and view 1,500 free exhibits, some of them costing millions of dollars to create. It gives him free access to the pavilions of the 60 participating nations and to those of the several States. It provides him with an endless and varied program of band concerts, spectacles, and entertainments, including the magnificient Lagoon of Nations fountain display, which has been pronounced the most marvelous fountain spectacle ever conceived by man.

Food at the fair is provided by 60 restaurants and over 300 refreshment booths. The culinary gamut runs from the traditional 10-cent frankfurter and 5-cent bottle of pop, through American regional dishes and foreign specialities. A full meal may be had for as little as 40 cents. Rumors about excessive food prices are completely without foundation.

The fair is reached from Manhattan by the Long Island Railroad for 10 cents, or by Rapid Transit lines for 5 and 10 cents. A splendid network of motor parkways lead to the fair, and make driving there quick and comfortable. Parking is provided for 52,000 cars at 50 cents for 12 hours.

In New York itself every effort has been made to contribute to the comfort and well-being of the visitor. Hotels have agreed to maintain the prices prevailing on January 1 of this year, and in addition a quarter of a million rooms at prices beginning at a dollar are available. Information on such rooms may be obtained from the Mayor's Official Housing Bureau, at 122 East Forty-second Street, New York. Restaurants and stores have made no increase in their prices and the city is adequately equipped to house and entertain the fair visitors comfortably and economically.

The fair and the city have received the approbation and praise of all visitors. A typical example is the following letter which appeared in the New York Sun on May 25, 1939, and other New York newspapers. It is signed by a group of Canadian visitors and reads as follows:

THEY LIKED THE FAIR—A CANADIAN TRIBUTE TO THE EXPOSITION IN ALL ITS DETAILS

To the EDITOR OF THE SUN.

SIR: We, the undersigned, a party of Canadian tourists, have just returned from a visit to your world's fair.

We were never so pleasantly surprised, particularly at the reasonable prices charged for food. Judging from what we had heard and read concerning the latter, we figured our budget would take a beating. To our amazement, we had no difficulty in dining comfortably, happily, and, from a pocketbook angle, reasonably.

We returned to our hotel wondering how many visitors and potential visitors to New York and the fair are being kept away or are hesitant in coming here due to the misstatements concerning the fair food prices. Hence, this letter, to let everyone, especially our Canadian friends, know the true picture.

Another thing—we had no difficulty in obtaining hotel room. We found the rates reasonable, too, and all New York eager to greet us. We're coming back—real soon, we hope.

I know a great many Members of this House have had the pleasure of visiting the fair, and I am happy to recommend it, without qualification, to every American man, woman, and child—as well as to visitors from abroad—as the most absorbing and valuable experience of our time.

I feel, moreover, that this great public undertaking merits the individual and collective support of every Member of Congress of the United States. It is a courageous and worthwhile enterprise which has given profitable employment to thousands and has, without any doubt, contributed substantially to the well-being of manufacturer, supplier, wage earner, and all those who have been touched by its many ramifications. The New York World's Fair has gathered together in friendly competition exhibits from more nations than have ever taken part in any international exposition of the past. In this there is a definite note of hope and faith in the future for at New York the participating countries are showing to millions of Americans not only their accomplishments but their peaceful aspirations for the future. It is a great compliment to the United States that practically every nation on earth should have accepted our invitation to take part in the New York World's Fair and to bring to it the best they have to offer in art, science, and economic and social progress.

I think that we should all stop and think of the potential good which will flow from this great exposition and realize that its beneficent influences may be felt for generations.

W. P. A.

EXTENSION OF REMARKS

OF

HON. A. F. MACIEJEWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

LETTER FROM THE PARK DISTRICT OF FOREST PARK, ILL.

Mr. MACIEJEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the park district of Forest Park, Ill.:

PARK DISTRICT OF FOREST PARK,
Forest Park, Ill., June 20, 1939.

Hon. ANTON F. MACIEJEWSKI,
House of Representatives, Washington, D. C.

DEAR SIR: We wish to express to you, in behalf of the people of Forest Park, our genuinely sincere gratitude for the assistance we received from the Works Progress Administration in the construction of our beautiful new park just recently completed.

Within its boundaries Forest Park has approximately 16,000 people, comprised chiefly of working folk, who, without outside financial assistance, would have been unable to afford this fine park with its many recreational facilities which has become the hub of activity not only for our own residents but for those of neighboring towns as well.

To vent our sentiments we wish to add that the worth-whileness of the Works Progress Administration is once again demonstrated by the magnificent work done here. This park will forever be a monument to that agency and a living tribute to the administration which made it possible.

And to give credit where credit belongs, we wish to add that we have always received every help and consideration from district, State, regional, and national offices, to which we are indebted immeasurably.

With profound thanks to all those officials who cooperated with us in making this wonderful achievement and improvement possible, we are,

Very sincerely yours,

PARK DISTRICT OF FOREST PARK,
By RAYMOND H. WARNECKE, *President.*

Royal S. Copeland

MEMORIAL ADDRESS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROYAL S. COPELAND, late a Senator from the State of New York

Mr. MICHENER. Mr. Speaker, few men in public life in his day and generation had the broad acquaintance and the personal following of the late Senator COPELAND. There was a reason for this. His friendliness and his courtesy were only equaled by his industry, his ability, his integrity, and his desire to be helpful to his fellow men.

Born in the countryside, he enjoyed the privileges of the average boy, reared in a Christian home and in a genuine American environment. His early ambition was to be a great physician, and in this he succeeded. It seemed that his undertakings were always crowned with success. When he died, he took a man's life with him. He was a great Senator for the State of New York. He was a great American citizen, but he always preferred to be classed as a physician. Undoubtedly, his professional training made him the more valuable in the halls of Congress.

A few miles from the city of Ann Arbor, Mich., is the village of Dexter, and it was here that Senator COPELAND first saw the light of day. In Dexter, the older citizens called him "Roy." The middle-aged citizens called him "Dr. COPELAND." The younger generation knew him best as "Senator COPELAND." In Ann Arbor he was a professor in the medical school of the great University of Michigan. He was mayor of the city of Ann Arbor in 1901. He was a public-spirited civil and religious leader in Michigan. When he sought broader fields of activity, Michigan lost one of its real citizens.

In New York he soon became a distinguished member of the community and it is not strange that he came to the United States Senate. It would be very difficult to convince the people of Dexter that Senator COPELAND had reached the top of his political ladder when the final summons came.

Unlike so many men, born in the countryside and in humble surroundings, Senator COPELAND never forgot the old home town. Here his family resided, and he always returned at least once each year to renew acquaintances, enjoy the village life, and, as he oftimes said, receive additional inspiration to carry on the work in hand. Professional success, business accomplishment, and political preferment did not change the man. In these circumstances, you will realize that while the great city of New York sorrowed at his passing, the village of Dexter and the people who knew him intimately grieved because of the loss of a personal friend.

Mr. Speaker, as the Representative of the Second Congressional District of Michigan in the Congress, permit me to pay my tribute of love and respect to the life, character, and memory of this good man.

The Retailer's Interest in National Fiscal Policy

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Tuesday, June 27 (legislative day of Thursday, June 22), 1939

STATEMENT BY BEARDSLEY RUML

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement under the title "The Retailer's Interest in National Fiscal Policy," by Mr. Beardsley Ruml, treasurer of R. H. Macy & Co., Inc.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The problem of unemployment is the crucial problem before the country today. We know that it is not a political problem. We know that it is not only an American problem. We know that in some countries where unemployment has been largely reduced or has disappeared, there has been an enormous national effort for armament, the most wasteful of all public-works programs. And we do not want to solve our unemployment problem with an armament program.

We know that a proper solution of the unemployment problem will mean vastly greater production. We know that this increase of production must be in consumers' goods, even if it is by way of capital goods in the first instance. We know that a very large proportion of this increased production will pass across the counters of retailers, counters that are already there. On this increased production, distribution costs will be lower and net margins better than they are today.

The arithmetic of the situation is fairly simple, but it is generally ignored. The National Resources Committee estimates that with our present productive capacity and at the present price level, we can turn out about $90,000,000,000 in production annually. It would take a year or two to tune up and open a few bottle necks, but it would not require any "white rabbits" in the shape of discoveries we do not now have.

At the present time national income is bumping along at an annual rate of about $65,000,000,000. Of this $65,000,000,000, between six and ten is being generated by the Federal deficit of $3,000,000,000 a year. Thus the national income, without benefit of Federal deficit, cannot be running at an annual rate greater than $60,000,000,000, and it may be as low as $55,000,000,000. And so there is about $30,000,000,000 a year of additional production that has to be made, distributed, and consumed if we are to have a reasonably full employment with a balanced Federal Budget.

This means simply that the average standard of life in this country could be 50 percent higher than it is today, with no great strain on our manpower or on our physical plant.

Study of these figures will convince you that the magnitude of the problem precludes its solution solely on the basis of private investment in capital goods. Take all the realistic possibilities of annual investment in housing, in utilities, in railroads, in retooling, and assume that all these things could be done simultaneously and every year, and then apply as large a turn-over factor to each dollar so invested as you prudently can. You will find that you have only halfway closed the gap between present realized production and potential production, and with this new investment in capital goods you have raised the ceiling on potential production still higher than it is today.

In observing these plain limitations on what private investments in capital goods can be expected to do, we do not in the slightest degree disparage their very great importance in any program of reemployment. Every appropriate encouragement should be given for such investment. But we must realize that in the end the solution of the unemployment problem must come within a much higher average standard of life—a standard of life that in large measure will be embodied in consumers' goods.

Just as we cannot expect to get an over-all solution to the unemployment problem through private investment in capital goods, neither can we expect a solution exclusively by the application of one or another national fiscal policy. For hundreds of years men have been fascinated by the dream of solving the production problem and the problem of poverty by some variety of monetary scheme. In spite of these efforts and these dreams, wealth still continues to be produced the hard way.

But, although we may deplore excessive and exclusive preoccupation with monetary measures, nevertheless, we cannot ignore the crucial position of national, fiscal, and monetary policy as one element in a recovery program.

Fundamentally, all possible Federal fiscal and monetary policies are variants of one of two opposite policies. These may be designated briefly as (1) the balanced Budget policy and (2) the compensatory fiscal policy.

Strong arguments can be made in behalf of each of these policies; important difficulties stand in the way of adopting either. Let us see what these policies are.

The essence of the balanced Budget policy is, of course, so to manage Federal fiscal operations that, over all, receipts and disbursements balance. The purpose of this policy is to remove or to neutralize the effect of national budgetary operations, as such, on the private economy. If expenditures balance income, the net effect on dollar purchasing power in the hands of the public is presumed to be zero. Under those circumstances, the private market place can function. It becomes possible for supply and demand to determine price as a result of free, open, private competition. It is argued that price so determined is the best method of assuring that desired goods and services are supplied, that initiative is stimulated and rewarded, that prices are fair, that quantities are right, that the correct balance is maintained between savings and consumption, and that all who want to work shall have employment at the then economic wage for the particular skill or service offered.

The essence of the compensatory fiscal policy is very different. It argues that in the absence of demand, the market place cannot function because the factors of production—capital, management,

labor, and agriculture—will not permit prices to fall to the point where full production would be maintained. Accordingly, for the reasonable maintenance of demand, and therefore of production, the intervention of the Federal Government is required from time to time to provide purchasing power in the hands of the public. Conversely, it is possible that, through the private banking system or otherwise, purchasing power might be created in excess of our capacity to produce. Under such circumstances, to avoid a privately induced inflation, the intervention of the Federal Government would be required to provide decrease of purchasing power.

Thus it is clear that in certain respects a compensatory fiscal policy is the exact antithesis of a balanced Budget policy. The balanced Budget policy requires that ideally the Federal Budget should be in balance every year; the compensatory policy requires that ideally the Federal Budget should be related to the activity of private business and therefore should show either a deficit or a surplus of some amount.

It is also clear that between these policies an absolute choice must be made if we are to have any fiscal policy at all. The policies are opposite, and do not permit of any compromise or intermediate position.

There are some important variants of these two policies. One variant of the balanced Budget policy asks that the Budget be balanced, not only on a strictly cash basis of intake and outgo, but that various statutory and other reserves be currently provided out of tax income. Although this is not a true balanced Budget policy, it is in no sense compensatory. It is consistently deflationary and is advantageous from the standpoint of real income to all who command fixed income of various types, such as rents, annuities, interest on bonds, and certain salaries and wages.

One variant of the compensatory policy asks for a Budget that will some day be balanced. It is important to notice that the postponed balance policy is really a compensatory policy since the reason for the postponement is recognition that Federal budgetary intervention is necessary to sustain purchasing power. If the advocates of postponed balance did not so believe they would demand an immediate balance. The National Economy League has shown in detail how a balanced Budget can be achieved year after next. There is no need for further postponement, except on the basis of compensatory policy.

The so-called pump-priming or lending-spending policy is a crude variant of the compensatory policy. It is crude because it applies to only one phase of the compensatory problem, namely, the phase when there is need for expansion. Also, it looks to only one side of the Budget, namely, expenditures. The pump-priming policy is too frequently advocated by interests who have some particular program or specific expenditure at heart and who use fiscal arguments improperly to justify disbursements without the pain of increasing taxes.

A third variant of the compensatory policy calls for a balance of ordinary receipts and ordinary expenditures, and obtaining compensatory effects through the character of taxation and expenditure and through items outside the Budget. Such a formula makes concessions to popular beliefs as to fiscal orthodoxy, but it has the disadvantage of obscuring the true issues involved, and of almost invariably leading to increased expenditure as the sole compensatory method.

The arguments in favor of a balanced Budget policy are of three general kinds—economic, political, and psychological. The economic argument states that any policy other than that of a balanced Budget will disturb the free competitive markets and will prevent supply and demand having their natural effect on prices of goods and services, and therefore on production, distribution, and consumption. The political argument states that any policy other than a balanced Budget policy puts too much power in the hands of the controlling political party and that no Congress can be depended upon to stand up against special pressures for expenditure and for tax reduction. The psychological argument states that confidence in public credit requires a balance of receipts and expenditures. Confidence is a matter of conformity to accepted beliefs, assumptions, and practices. The prevailing beliefs that are relevant to fiscal policy are: First, no individual, corporation, or State can live beyond its income indefinitely; second, debts contracted must be paid, and honor requires that no debt should be contracted unless there is intention and possibility of repayment; third, you can't get something for nothing; fourth, irredeemable paper currency in the end becomes worthless.

It is generally conceded that these beliefs are held by a majority of the population. Accordingly, even though they may be false, or only partly true, or irrelevant as applied to national fiscal policy, nevertheless fiscal policy must conform to them to maintain confidence in public credit, and through confidence in public credit confidence in the soundness and stability of the economic order generally.

There are also exceedingly strong arguments in favor of the adoption of a compensatory fiscal policy. The fundamental arguments for such a policy rest on two separate but related considerations.

First, we have in this country a private, competitive capitalist system. This system is based on the private and voluntary use of debt, credit, and savings by individuals and corporations. The operation of this system involves necessarily from time to time increases and decreases in aggregate purchasing power with no corresponding increase or decrease in potential production. The consequences are distorted price relationships, boom and depression, and persistent underemployment. Such instability is morally and politically destructive. Therefore, for these changes in aggregate purchasing power, arising from the very nature of private capitalism as we know it, the national state must compensate in the management of its fiscal and monetary operations.

Second, the effect of the application of science and technology to production is to increase potential production. The mere creation of this increase in potential production does not of itself insure either (a) that there will be corresponding increase of purchasing power, or (b) if there be such increase of purchasing power that it will be spent on consumption or invested in new plant. Unless and until the increase in potential production results in increased purchasing power and this increased purchasing power is spent on consumption or is invested in new plant, the result will be unemployment, and partially idle plant. Accordingly, to maintain reasonably full employment and full production, the Federal Government must be prepared to provide from time to time necessary additional purchasing power through the management of its fiscal and monetary operations.

In summary, a private, competitive capitalist system with progressive technological improvement, by virtue of its intrinsic nature, requires deliberate operations of a compensatory character affecting purchasing power. The necessary compensatory action is most readily taken with least interference with private enterprise through the management of the Federal Budget, and the adoption of related and consistent monetary policies.

A compensatory policy is not new to American experience. The powers of the Federal Reserve System with respect to open market operations, reserve requirements, and rediscount rates have been established with compensatory action in the monetary field in mind. The extension of this policy to the management of the Budget and of taxation would supplement existing compensatory devices. It is argued that this extension is now made necessary by the violence of recent swings in business activity.

The principle of the compensatory Budget requires an important extension of the common concept of the function of taxation.

The compensatory effect of the Budget is produced, not by the absolute level of income or expenditure, but by the magnitude and method of obtaining the net cash deficit or surplus. This deficit or surplus may be altered either by changes in disbursements or by changes in receipts.

It follows therefore that taxation, in providing revenues to the Government, concurrently gives one method of controlling the size of the deficit or surplus. That is to say, taxation provides a mechanism whereby purchasing and investing power in private hands can be reduced or increased in amounts and in a manner conforming to general public policy.

Similarly, it follows that the expenditures and disbursements of the Federal Government, in providing for the common services, concurrently gives another method of controlling the size of the deficit or surplus. That is to say, expenditures and disbursements provide a mechanism whereby purchasing and investing power in private hands can be increased or decreased in amounts and in a manner conforming to general public policy.

It is important to understand this point of view on taxation since it becomes at once clear that the question of a compensatory fiscal policy is quite separate from the question of how large Federal expenditures ought to be. The magnitude of Federal expenditures should be determined solely by consideration of what are the proper activities of the Federal Government. If we want a compensatory fiscal policy, this can be administered as well by reducing taxation as by increasing expenditure.

The choice of fiscal policy is also independent of questions of efficient expenditure. Under either a balanced Budget policy or a compensatory policy, expenditure should be honest, efficient, and directed toward worth-while objects and objectives.

Many businessmen favor a balanced Budget program, not so much because they want to get a free competitive market in which prices will be determined by supply and demand, but because they feel that a balanced Budget policy will mean lower taxes. Such hopes may turn out to be wholly illusory. A reduction of more than $3,000,000,000 in Federal expenditure would be necessary to warrant a beginning in the reduction of tax dollars received under a balanced Budget policy. Such a reduction of Federal disbursements would have to be achieved partly by stopping some expenditures and partly by turning some activities back to State and local budgets.

The effect therefore of reduction of Federal expenditures will be to reduce purchasing power and increase local taxes, which are primarily taxes on consumption and on real estate. The taxes required by the Federal Government to balance the Budget will be lower in dollars, but the rates will have to be higher since the taxes will apply to a smaller national income. The possibilities of real tax reduction are much better under a compensatory fiscal policy than they are under a balanced Budget policy.

It is my feeling that some day we will come to a compensatory fiscal policy. I think we will come to it because we shall want to have a national program that will be decisive with respect to the elimination of unemployment and the provision of reasonable economic security and stability. Such a program will almost certainly include a compensatory fiscal policy in some acceptable form.

As to the balanced Budget policy, I have grave doubts whether the free competitive market in the form required for a balanced Budget policy to work can in fact be brought about. I do not believe that equity capital, management, labor, or agriculture would make the sacrifices in price structure necessary to make it work. The political arguments favoring a balanced Budget are weighty, but they seem to me to judge democratic institutions at their worst and to ignore practical evidence of what democratic

Royal S. Copeland

MEMORIAL ADDRESS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROYAL S. COPELAND, late a Senator from the State of New York

Mr. MICHENER. Mr. Speaker, few men in public life in his day and generation had the broad acquaintance and the personal following of the late Senator COPELAND. There was a reason for this. His friendliness and his courtesy were only equaled by his industry, his ability, his integrity, and his desire to be helpful to his fellow men.

Born in the countryside, he enjoyed the privileges of the average boy, reared in a Christian home and in a genuine American environment. His early ambition was to be a great physician, and in this he succeeded. It seemed that his undertakings were always crowned with success. When he died, he took a man's life with him. He was a great Senator for the State of New York. He was a great American citizen, but he always preferred to be classed as a physician. Undoubtedly, his professional training made him the more valuable in the halls of Congress.

A few miles from the city of Ann Arbor, Mich., is the village of Dexter, and it was here that Senator COPELAND first saw the light of day. In Dexter, the older citizens called him "Roy." The middle-aged citizens called him "Dr. COPELAND." The younger generation knew him best as "Senator COPELAND." In Ann Arbor he was a professor in the medical school of the great University of Michigan. He was mayor of the city of Ann Arbor in 1901. He was a public-spirited civil and religious leader in Michigan. When he sought broader fields of activity, Michigan lost one of its real citizens.

In New York he soon became a distinguished member of the community and it is not strange that he came to the United States Senate. It would be very difficult to convince the people of Dexter that Senator COPELAND had reached the top of his political ladder when the final summons came.

Unlike so many men, born in the countryside and in humble surroundings, Senator COPELAND never forgot the old home town. Here his family resided, and he always returned at least once each year to renew acquaintances, enjoy the village life, and, as he oftimes said, receive additional inspiration to carry on the work in hand. Professional success, business accomplishment, and political preferment did not change the man. In these circumstances, you will realize that while the great city of New York sorrowed at his passing, the village of Dexter and the people who knew him intimately grieved because of the loss of a personal friend.

Mr. Speaker, as the Representative of the Second Congressional District of Michigan in the Congress, permit me to pay my tribute of love and respect to the life, character, and memory of this good man.

The Retailer's Interest in National Fiscal Policy

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 27 (legislative day of Thursday, June 22), 1939

STATEMENT BY BEARDSLEY RUML

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement under the title "The Retailer's Interest in National Fiscal Policy," by Mr. Beardsley Ruml, treasurer of R. H. Macy & Co., Inc.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The problem of unemployment is the crucial problem before the country today. We know that it is not a political problem. We know that it is not only an American problem. We know that in some countries where unemployment has been largely reduced or has disappeared, there has been an enormous national effort for armament, the most wasteful of all public-works programs. And we do not want to solve our unemployment problem with an armament program.

We know that a proper solution of the unemployment problem will mean vastly greater production. We know that this increase of production must be in consumers' goods, even if it is by way of capital goods in the first instance. We know that a very large proportion of this increased production will pass across the counters of retailers, counters that are already there. On this increased production, distribution costs will be lower and net margins better than they are today.

The arithmetic of the situation is fairly simple, but it is generally ignored. The National Resources Committee estimates that with our present productive capacity and at the present price level, we can turn out about $90,000,000,000 in production annually. It would take a year or two to tune up and open a few bottle necks, but it would not require any "white rabbits" in the shape of discoveries we do not now have.

At the present time national income is bumping along at an annual rate of about $65,000,000,000. Of this $65,000,000,000, between six and ten is being generated by the Federal deficit of $3,000,000,000 a year. Thus the national income, without benefit of Federal deficit, cannot be running at an annual rate greater than $60,000,000,000, and it may be as low as $55,000,000,000. And so there is about $30,000,000,000 a year of additional production that has to be made, distributed, and consumed if we are to have a reasonably full employment with a balanced Federal Budget.

This means simply that the average standard of life in this country could be 50 percent higher than it is today, with no great strain on our manpower or on our physical plant.

Study of these figures will convince you that the magnitude of the problem precludes its solution solely on the basis of private investment in capital goods. Take all the realistic possibilities of annual investment in housing, in utilities, in railroads, in retooling, and assume that all these things could be done simultaneously and every year, and then apply as large a turn-over factor to each dollar so invested as you prudently can. You will find that you have only halfway closed the gap between present realized production and potential production, and with this new investment in capital goods you have raised the ceiling on potential production still higher than it is today.

In observing these plain limitations on what private investments in capital goods can be expected to do, we do not in the slightest degree disparage their very great importance in any program of reemployment. Every appropriate encouragement should be given for such investment. But we must realize that in the end the solution of the unemployment problem must come within a much higher average standard of life—a standard of life that in large measure will be embodied in consumers' goods.

Just as we cannot expect to get an over-all solution to the unemployment problem through private investment in capital goods, neither can we expect a solution exclusively by the application of one or another national fiscal policy. For hundreds of years men have been fascinated by the dream of solving the production problem and the problem of poverty by some variety of monetary scheme. In spite of these efforts and these dreams, wealth still continues to be produced the hard way.

But, although we may deplore excessive and exclusive preoccupation with monetary measures, nevertheless, we cannot ignore the crucial position of national, fiscal, and monetary policy as one element in a recovery program.

Fundamentally, all possible Federal fiscal and monetary policies are variants of one of two opposite policies. These may be designated briefly as (1) the balanced Budget policy and (2) the compensatory fiscal policy.

Strong arguments can be made in behalf of each of these policies; important difficulties stand in the way of adopting either. Let us see what these policies are.

The essence of the balanced Budget policy is, of course, so to manage Federal fiscal operations that, over all, receipts and disbursements balance. The purpose of this policy is to remove or to neutralize the effect of national budgetary operations, as such, on the private economy. If expenditures balance income, the net effect on dollar purchasing power in the hands of the public is presumed to be zero. Under those circumstances, the private market place can function. It becomes possible for supply and demand to determine price as a result of free, open, private competition. It is argued that price so determined is the best method of assuring that desired goods and services are supplied, that initiative is stimulated and rewarded, that prices are fair, that quantities are right, that the correct balance is maintained between savings and consumption, and that all who want to work shall have employment at the then economic wage for the particular skill or service offered.

The essence of the compensatory fiscal policy is very different. It argues that in the absence of demand, the market place cannot function because the factors of production—capital, management,

labor, and agriculture—will not permit prices to fall to the point where full production would be maintained. Accordingly, for the reasonable maintenance of demand, and therefore of production, the intervention of the Federal Government is required from time to time to provide purchasing power in the hands of the public. Conversely, it is possible that, through the private banking system or otherwise, purchasing power might be created in excess of our capacity to produce. Under such circumstances, to avoid a privately induced inflation, the intervention of the Federal Government would be required to provide decrease of purchasing power.

Thus it is clear that in certain respects a compensatory fiscal policy is the exact antithesis of a balanced Budget policy. The balanced Budget policy requires that ideally the Federal Budget should be in balance every year; the compensatory policy requires that ideally the Federal Budget should be related to the activity of private business and therefore should show either a deficit or a surplus of some amount.

It is also clear that between these policies an absolute choice must be made if we are to have any fiscal policy at all. The policies are opposite, and do not permit of any compromise or intermediate position.

There are some important variants of these two policies. One variant of the balanced Budget policy asks that the Budget be balanced, not only on a strictly cash basis of intake and outgo, but that various statutory and other reserves be currently provided out of tax income. Although this is not a true balanced Budget policy, it is in no sense compensatory. It is consistently deflationary and is advantageous from the standpoint of real income to all who command fixed income of various types, such as rents, annuities, interest on bonds, and certain salaries and wages.

One variant of the compensatory policy asks for a Budget that will some day be balanced. It is important to notice that the postponed balance policy is really a compensatory policy since the reason for the postponement is recognition that Federal budgetary intervention is necessary to sustain purchasing power. If the advocates of postponed balance did not so believe they would demand an immediate balance. The National Economy League has shown in detail how a balanced Budget can be achieved year after next. There is no need for further postponement, except on the basis of compensatory policy.

The so-called pump-priming or lending-spending policy is a crude variant of the compensatory policy. It is crude because it applies to only one phase of the compensatory problem, namely, the phase when there is need for expansion. Also, it looks to only one side of the Budget, namely, expenditures. The pump-priming policy is too frequently advocated by interests who have some particular program or specific expenditure at heart and who use fiscal arguments improperly to justify disbursements without the pain of increasing taxes.

A third variant of the compensatory policy calls for a balance of ordinary receipts and ordinary expenditures, and obtaining compensatory effects through the character of taxation and expenditure and through items outside the Budget. Such a formula makes concessions to popular beliefs as to fiscal orthodoxy, but it has the disadvantage of obscuring the true issues involved, and of almost invariably leading to increased expenditure as the sole compensatory method.

The arguments in favor of a balanced Budget policy are of three general kinds—economic, political, and psychological. The economic argument states that any policy other than that of a balanced Budget will disturb the free competitive markets and will prevent supply and demand having their natural effect on prices of goods and services, and therefore on production, distribution, and consumption. The political argument states that any policy other than a balanced Budget policy puts too much power in the hands of the controlling political party and that no Congress can be depended upon to stand up against special pressures for expenditure and for tax reduction. The psychological argument states that confidence in public credit requires a balance of receipts and expenditures. Confidence is a matter of conformity to accepted beliefs, assumptions, and practices. The prevailing beliefs that are relevant to fiscal policy are: First, no individual, corporation, or State can live beyond its income indefinitely; second, debts contracted must be paid, and honor requires that no debt should be contracted unless there is intention and possibility of repayment; third, you can't get something for nothing; fourth, irredeemable paper currency in the end becomes worthless.

It is generally conceded that these beliefs are held by a majority of the population. Accordingly, even though they may be false, or only partly true, or irrelevant as applied to national fiscal policy, nevertheless fiscal policy must conform to them to maintain confidence in public credit, and through confidence in public credit confidence in the soundness and stability of the economic order generally.

There are also exceedingly strong arguments in favor of the adoption of a compensatory fiscal policy. The fundamental arguments for such a policy rest on two separate but related considerations.

First, we have in this country a private, competitive capitalist system. This system is based on the private and voluntary use of debt, credit, and savings by individuals and corporations. The operation of this system involves necessarily from time to time increases and decreases in aggregate purchasing power with no corresponding increase or decrease in potential production. The consequences are distorted price relationships, boom and depression, and persistent underemployment. Such instability is morally and politically destructive. Therefore, for these changes in aggregate purchasing power, arising from the very nature of private capitalism as we know it, the national state must compensate in the management of its fiscal and monetary operations.

Second, the effect of the application of science and technology to production is to increase potential production. The mere creation of this increase in potential production does not of itself insure either (a) that there will be corresponding increase of purchasing power, or (b) if there be such increase of purchasing power that it will be spent on consumption or invested in new plant. Unless and until the increase in potential production results in increased purchasing power and this increased purchasing power is spent on consumption or is invested in new plant, the result will be unemployment, and partially idle plant. Accordingly, to maintain reasonably full employment and full production, the Federal Government must be prepared to provide from time to time necessary additional purchasing power through the management of its fiscal and monetary operations.

In summary, a private, competitive capitalist system with progressive technological improvement, by virtue of its intrinsic nature, requires deliberate operations of a compensatory character affecting purchasing power. The necessary compensatory action is most readily taken with least interference with private enterprise through the management of the Federal Budget, and the adoption of related and consistent monetary policies.

A compensatory policy is not new to American experience. The powers of the Federal Reserve System with respect to open market operations, reserve requirements, and rediscount rates have been established with compensatory action in the monetary field in mind. The extension of this policy to the management of the Budget and of taxation would supplement existing compensatory devices. It is argued that this extension is now made necessary by the violence of recent swings in business activity.

The principle of the compensatory Budget requires an important extension of the common concept of the function of taxation.

The compensatory effect of the Budget is produced, not by the absolute level of income or expenditure, but by the magnitude and method of obtaining the net cash deficit or surplus. This deficit or surplus may be altered either by changes in disbursements or by changes in receipts.

It follows therefore that taxation, in providing revenues to the Government, concurrently gives one method of controlling the size of the deficit or surplus. That is to say, taxation provides a mechanism whereby purchasing and investing power in private hands can be reduced or increased in amounts and in a manner conforming to general public policy.

Similarly, it follows that the expenditures and disbursements of the Federal Government, in providing for the common services, concurrently gives another method of controlling the size of the deficit or surplus. That is to say, expenditures and disbursements provide a mechanism whereby purchasing and investing power in private hands can be increased or decreased in amounts and in a manner conforming to general public policy.

It is important to understand this point of view on taxation since it becomes at once clear that the question of a compensatory fiscal policy is quite separate from the question of how large Federal expenditures ought to be. The magnitude of Federal expenditures should be determined solely by consideration of what are the proper activities of the Federal Government. If we want a compensatory fiscal policy, this can be administered as well by reducing taxation as by increasing expenditure.

The choice of fiscal policy is also independent of questions of efficient expenditure. Under either a balanced Budget policy or a compensatory policy, expenditure should be honest, efficient, and directed toward worth-while objects and objectives.

Many businessmen favor a balanced Budget program, not so much because they want to get a free competitive market in which prices will be determined by supply and demand, but because they feel that a balanced Budget policy will mean lower taxes. Such hopes may turn out to be wholly illusory. A reduction of more than $3,000,000,000 in Federal expenditure would be necessary to warrant a beginning in the reduction of tax dollars received under a balanced Budget policy. Such a reduction of Federal disbursements would have to be achieved partly by stopping some expenditures and partly by turning some activities back to State and local budgets.

The effect therefore of reduction of Federal expenditures will be to reduce purchasing power and increase local taxes, which are primarily taxes on consumption and on real estate. The taxes required by the Federal Government to balance the Budget will be lower in dollars, but the rates will have to be higher since the taxes will apply to a smaller national income. The possibilities of real tax reduction are much better under a compensatory fiscal policy than they are under a balanced Budget policy.

It is my feeling that some day we will come to a compensatory fiscal policy. I think we will come to it because we shall want to have a national program that will be decisive with respect to the elimination of unemployment and the provision of reasonable economic security and stability. Such a program will almost certainly include a compensatory fiscal policy in some acceptable form.

As to the balanced Budget policy, I have grave doubts whether the free competitive market in the form required for a balanced Budget policy to work can in fact be brought about. I do not believe that equity capital, management, labor, or agriculture would make the sacrifices in price structure necessary to make it work. The political arguments favoring a balanced Budget are weighty, but they seem to me to judge democratic institutions at their worst and to ignore practical evidence of what democratic

institutions have actually accomplished. In any case, the political necessity of acting decisively with respect to unemployment will some day transcend all other political considerations.

Regardless of whether we have a balanced budget policy or a compensatory policy, there can be no difference of opinion that either policy must be administered. It is important to realize that proper administration of fiscal and monetary policy in the United States today requires correlation of policy and harmonious action on the part of a number of independent agencies. The Federal Reserve is responsible for determining rediscount rates, reserve requirements, open-market operations, and certain banking regulations. The Treasury is responsible for Federal revenue and for the sale, repurchase, and retirement of Federal securities. The Bureau of the Budget is responsible for the preparation of a plan of Federal expenditure, and can have great influence on the character and timing of what is done. And in addition to these Federal agencies, the States and local governments must be associated in some way in the national fiscal and monetary picture.

The appointment by the President last November of a Fiscal and Monetary Advisory Board was a long step toward achieving correlation of policy and program among the several Federal agencies involved. No matter which policy is adopted, some such board is an indispensable instrument if we are to have effective administration and broad public understanding of the fiscal policies under which we are living and the reasons why they have been adopted.

Finally, to come back to the beginning, the main thing is to get full production and full employment. Insofar as fiscal and monetary policy can contribute to these ends, it should be so determined. The time is rapidly coming when a truly decisive program will be called for, and the nature of that program will be greatly affected by the choice of fiscal policy, balanced budget, or compensatory. As businessmen we must be alert to the implications for business of one policy or the other in the broader program of obtaining full employment and full production.

Supply of Intermediate Credit to Small Businesses

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, June 27 (legislative day of Thursday, June 22), 1939

ARTICLE BY DAVID LAWRENCE

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an article by David Lawrence, published in the Buffalo Evening News for June 19, 1939, entitled "Bankers Should Study Mead-Allen Bill."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Buffalo Evening News of June 19, 1939]

BANKERS SHOULD STUDY MEAD-ALLEN BILL

(By David Lawrence)

WASHINGTON, June 19.—Although the National Industrial Conference Board, supposedly a statistical and not a political institution, did not intend its latest news release as support for the Mead-Allen bill, which is designed to supply intermediate credit to small businesses, the text of the anouncement lends considerable encouragement to the proposed legislation.

The title of the release is "No Need for New Credit Agencies Shown by Survey," and then the results of a questionnaire are given, revealing that 1,601 out of 1,755 firms, or 95 percent, said they had no bank-credit problems. When the question directed to them is read, this is not surprising, for the query was, "Do you now find, or have you recently found, any difficulty in obtaining from your bank the credit accommodation required for legitimate business purposes?"

A fairer way of stating the question would have been: "Do you ever think of a commercial bank as a place to ask for legitimate mortgage credit or long-term capital credit?" And the answer would again have been about 95 percent "no" and about 5 percent "yes." For there are some businesses, of course, which lately have been led to believe that long-term loans are being made at the commercial banks, partly because the Government agencies have permitted such loans to be made and partly because Jesse H. Jones, head of the Reconstruction Finance Corporation, has been urging such loans for the last several years every time he has been making public speeches.

The best evidence of the attitude of businesses toward the limited operations of commercial banks comes from the National Industrial Conference Board's own news release, which discusses the disappointing experience of some 154 firms in seeking credit:

"Many of the concerns reporting refusal or restriction were in the construction industries, which were in a depressed condition throughout most of the 5-year period. It was also found that nearly half of the concerns reporting refusal or restriction did not require bank credit in its ordinary or short-term uses, but for longer periods and 'without reference to any given business transactions as sources of funds for repayment.'

"General working capital was sought in 101 cases, and 'many of these requests, if granted, would have involved semifixed capital loans repayable over a period of from 2 to 5 years, and in some instances over a longer period.'

"In 117 cases, or 73 percent of the total, unsecured paper was offered as collateral; real estate or chattel mortgage collateral was offered by only 11 concerns or 11 percent."

In the above is the crux of the whole intermediate credit problem. Surveys made by Government departments and the Federal Reserve Board show that money is needed to finance construction of plants and additions. Money is needed for periods ranging from 3 to 7 years or even in some cases 10 years. America's commercial banks have never given this form of capital credit and are not accustomed to it, and should not be asked to make long-term loans without having some bolstering factor like insurance set up through a Government agency to protect them in the experiment.

That is precisely what the Mead-Allen bill is designed to do, and although some of the features are objectionable as, for instance, a fixed interest rate or limiting the lending to banks instead of including financing companies, there is no doubt a satisfactory measure can be worked out which will aid the commercial banks to earn money on their idle deposits.

The argument that the R. F. C. and Federal Reserve Board already have the power but are not making intermediate credit loans disappears when the restrictive features imposed by law are examined. It is really to modify existing law that the new legislation is proposed.

Instead of fighting the Mead-Allen bill, the banks might well be here helping to frame an intermediate credit measure which would be of incalculable aid in bringing economic recovery to the country and jobs to the unemployed.

But, unhappily, the banking world is so apprehensive about possibility of Government agencies competing directly with them that they fail to see how important it is to have Government agencies empowered instead to stimulate the private banking business. Fear of hypothetical political manipulation is never a sound reason for refusal to cooperate in preventing such a contingency from arising. And if the bankers continue to fight such simple measures of help as the Mead-Allen bill, it will give the inner circle of New Dealers, who, by the way, want to go further than anything in the Mead-Allen bill by establishing capital banks with Government control, the very ammunition they want for 1940. What better answer to Republican criticism, reason the New Deal strategists, than to say recovery has been prevented, unemployment continues, the Budget is unbalanced, all because the private banking interests of the Nation refuse to release idle money even when the Government offers to insure as much as 90 percent of the possible loss. It will be a hard argument to overcome on the stump.

The Alien Bills

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 27 (legislative day of Thursday, June 22), 1939

RADIO ADDRESS BY HON. RCBERT R. REYNOLDS, OF NORTH CAROLINA, JUNE 18, 1939

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD an address which I delivered on Sunday, June 18, 1939, from the auditorium of the Interior Department Building, Washington, D. C., on the subject the Alien Bills, at which time I participated in the American Forum of the Air over the coast-to-coast network of the Mutual Broadcasting Co.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The problem of immigration has always been a vital issue in America and is far more vital today than ever in our history. Immigration is a personal question affecting the life and activity of every citizen. Immigration is tremendously important to our Nation at this time when our whole economic system is being readjusted to meet modern conditions and modern needs.

The purpose of this forum is to discuss immigration. I appreciate the opportunity to participate in that side of the question favorable to a more rigid immigration policy. I shall attempt to deal with facts. It is time that the immigration problem be stripped of emotionalism and prejudice. Only the facts can lead

to an intelligent solution of any question. Now, what are the facts? Since 1820, 38,000,000 aliens have entered the United States legally as immigrants. We do not know how many millions have entered illegally. Most of these people who have come here have made glorious contributions to America. They deserve honor and credit.

However, the time has come when the tradition that the United States is an asylum for the oppressed of the world must be changed. Our house is full. We must now give first thought to our own citizens, both native-born and naturalized. We must find jobs and opportunities for those who have a rightful claim to the benefits and blessings of American citizenship.

Now, suppose we look back for a moment. When land was free and our country was not so well populated America welcomed strangers. Economic necessities created a demand for their services. Our arms were open to the sons and daughters of the world. They came here. They joined the westward trek. Each decade saw millions of foreign-born reaping the opportunities of a growing country. Then came the dawn of the twentieth century. Changes were necessary. Our free lands were gone. Profits from extensive agriculture declined. During the World War we found that surplus labor from farms could fill the places in industry formerly filled by immigrants. Organized labor became stronger and insisted on limits to immigration.

Meanwhile aggressive groups of European origin carried on subversive agitation during the World War. Many people feared the unity of the country was threatened. Then, too, the source of immigration had shifted from northwestern Europe to southeastern Europe. These facts, together with the vast increase in immigration and the thought that disorganization of whole nations might increase immigration, brought demands for the further restriction of immigration. This resulted in immigration being placed on a quota basis, and the number of immigrant aliens thereafter admitted from Europe annually was reduced from about 1,000,000 a year to approximately 300,000 (quota and nonquota). In addition, there are hundreds of thousands of aliens coming in as visitors, many of whom illegally lose themselves in our population.

In a discussion of the immigration problem, a study under the title of "Recent Social Trends" says:

"The discussion of immigration divides itself into several periods. The first period was from 1900 to the passage of the law of 1907. Selection but not restriction was advocated. This end was to be secured by literacy and physical tests, by better enforcement of existing laws, by increasing the head tax, and by examination in Europe. As for the immigrants already here, interest centered upon the necessity for their better distribution in order to prevent the congestion of foreigners in the slums of large cities. Purely descriptive studies of various racial groups were popular.

"The second period, from 1907 to the beginning of the war in 1914, marked a drift in sentiment toward restriction by means of the literacy test. The undesirability of certain unassimilable elements was beginning to be mentioned. Within the United States the protection of immigrants by private and governmental agencies was given important consideration.

"The third, or war period, extending from 1914 to 1918, included the first real restriction measure, the literacy test of 1917. At home all attention was focused upon the Americanization of aliens in order to present a unified front to the enemy.

"The fourth period, from 1918 to 1924, saw the final realization of a restriction policy in the quota law of 1921 and the even more drastic law of 1924."

In the fifth period, from 1924 to the present time, the quota law has developed many problems, one of the most important of which was solved by the passage of the National Origins Act. The deportation of criminals and undesirables has also developed a great problem. Deportation of undesirables, registration of aliens, and additional restrictions of immigration are now the three vital issues.

Now we come to the present. We have not yet been able to adjust our economic system to the demands of our people. The Federal Government is supporting between three and four million on work-relief projects. Billions of dollars are being spent in "pump priming" to give jobs to others. Many millions are unemployed. More millions have only part-time jobs.

Despite existing restrictions placed on the flow of aliens, our immigration laws are filled with loopholes.

Countless thousands are coming in illegally. We show maudlin sympathy for undesirable aliens who have flouted our laws and our institutions. We have no adequate check on aliens who come in on temporary permits. We permit alien groups to organize and undermine our institutions and complicate our own domestic problems. We are now confronted with a most serious situation to our country and our people.

In an effort to meet the conditions I have outlined, I have introduced a number of bills. It is needless to cover these measures in detail. Instead, I will mention only their broad objectives:

First. I favor any and all steps to keep America out of war.

Second. I advocate the registration of all aliens who have not declared their intention to become American citizens.

Third. I urge that all immigration be stopped until we solve our own pressing domestic problems.

Fourth. I seek the deportation of all criminal and undesirable aliens, those who by acts of their own have forfeited the right to live in this country.

Fifth, I am opposed to all foreign isms and un-American groups which enjoy the fruits of America and at the same time they seek to undermine our Government.

There are some who differ with me because I am opposed to allowing admission to the United States of 20,000 refugee children from Germany. I would oppose this measure just as strongly if the refugee children came from Sweden, Iceland, Finland, France, or England. My opposition is not due to lack of sympathy for these refugees. I wish that America could offer them refuge. I feel sympathy for them. Yet if allowed to come to the United States in a few years they will be in competition with 20,000 American children in a search for employment which we do not have to offer now to our own.

If we were on the way to giving jobs to the 12,000,000 now unemployed, with reason to expect that 10 years from now they would have jobs, I would be entirely sympathetic to helping youngsters from abroad. I would much prefer to see these children coming in and growing up in the American way than to continue the coddling of criminal aliens who by all reason and law should now be on the high seas headed east.

Obviously, within the brief time I share on this program, I cannot hope to cover adequately the whole immigration problem. I have tried to picture the conditions we have faced and face today. In addition, I have cited the things I believe necessary to meet these conditions.

I am glad to know that as you are listening to this program you will hear those who hold opposite views. You will also hear arguments in support of my position. This position will save America for Americans.

Trees Versus Drought and Dust

EXTENSION OF REMARKS

OF

HON. LYNN J. FRAZIER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 27 (legislative day of Thursday, June 22), 1939

ARTICLE BY HON. GEORGE W. NORRIS, OF NEBRASKA

Mr. FRAZIER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the Sunday Star of Washington, D. C., on June 25, entitled "Trees Versus Drought and Dust," the article being written by the senior Senator from Nebraska [Mr. NORRIS].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TREES VERSUS DROUGHT AND DUST—WINDBREAKS OF FORESTRY SERVICE PROTECT NATION'S "BREAD BASKET"

(By Hon. GEORGE W. NORRIS, Senator from Nebraska)

In spite of the skepticism which greeted the first large-scale planting of tree windbreaks in the Great Plains, the trees-for-the-prairies idea already has thoroughly demonstrated its soundness and value.

For the past 5 years—that is, since March 1935—the Forest Service of the Department of Agriculture has cooperated with prairie farmers in planting protective strips of trees at right angles to prevailing winds on the wheat, corn, and cotton farms of the Dakotas, Nebraska, Oklahoma, and northern Texas. The work was initiated under Executive order of the President. Congress provided covering legislation in the Norris-Doxey Co-operative Farm Forestry Act of 1937. The work has been financed wholly from relief funds and labor has been certified from W. P. A. rolls. On the floor of the Senate I have called this a wonderful work, vitally important to the future of the Nation. I call it so again. Let me set down, briefly, the story.

The record shows that up to now the prairie States forestry project has cooperated with farmers in setting out 11,000 miles of field windbreaks on over 20,000 farms in "The Heart of America," in the "Bread Basket of the Nation." In these miles of windbreaks there have been planted nearly 127,000,000 trees, some of which in only four growing seasons already have attained the surprising height of 35 feet. As these trees now planted grow in height they will beneficially affect about 3,000,000 acres of adjacent farm land. The cost to the Federal Government so far for its share of the cooperative effort has been only about $8,250,000.

I know from personal experience among the farms and farmers of Nebraska what these trees mean for the preservation—in truth, the salvation of that country—and its continuance as the granary of America.

ONLY ONE-TENTH OF NEED

But what has been done is not a tenth of what remains to be done. There are in the prairie States around 180,000 more farms on which there is critical need for this sort of planting and, I believe, before long it must be carried on. On these 180,000 farms, the soil, the rainfall and climatic factors make it possible to grow trees with our present knowledge and experience. There are some 300,000 additional farms which would be improved through the

establishment of tree windbreaks, but where the problem of tree growing is much more difficult, if not impossible. We should, however, as sound Americans looking toward the long future of our country and our children, not only provide for a Federal program to cooperatively protect these 180,000 farms, but we should study the problem presented by these other areas to determine the feasibility of developing techniques by which trees may later be established on at least a part of those 300,000 additional farms.

The prairie States present a paradox. Their soil is some of the best this side of Egypt. But from earliest times the region has been scourged with winds and years of drought. In this soil there lies a paradise—but we must conquer the winds before we can profit from it. And the last 5 years have proved that field windbreaks are an important part of the answer. They checkmate the winds on adjacent lands. They help preserve the crops and the soil. And they make prairie farms better places on which to live.

The recent Dust Bowl drought, which we all remember, was a great catastrophe; it was, however, simply an intensification of what the winds do to the treeless plains, in some degree, year in, year out. Laden with soil scooped from dry, dusty land, they make the shingles creep and shiver on the roof, they scour paint from the fenders of automobiles until they shine like mirrors. They darken and obscure the sun at midday. They blow seeds out of the ground; they suck up moisture so that crops dry up and wither on the stalk; the kernels of wheat do not fill. They blow the soil like snow against fences, houses, or other obstacles; in extreme instances they bury them. They carry soil for miles, dropping it like rain on cities and other lands; there is evidence that in the drought years soil from the plains was blown far into the Atlantic. In the same way they sweep the snow from the fields, so that it cannot melt and restore moisture evenly to the lands—moisture which crops need and must have in order to grow.

The windbreaks check the force of the winds so that they cannot so easily scoop and swirl the soil into the clouds; so that they cannot whisk the snow from the fields into waste-land gullies or into road ditches. In this way they help preserve the moisture in the soil so that crops can grow. In other words, they insure for the crop a greater quantity of snow and moisture, and as every plains dweller knows, an ample blanket of snow, evenly distributed, always has meant a good crop. Likewise, the windbreaks prevent the hot west and southwest winds of summer from sucking up the moisture so rapidly from crops growing beside them. The Forest Service tells me that, in general, a mile of windbreak—that is, about 14 acres of trees—will protect crops upon about 20 times that area, or 280 acres.

DROUGHT PINES TO FARM

No single instance makes this more clear, I think, than the story of J. J. Lydick, who lives near Blair, in Nebraska. The story begins about 1910, in the days when it was generally believed that trees could not be grown in the prairie country, when deeply religious men said that God never intended trees should grow upon those plains. Mr. Lydick was not well, the doctors told him that if he wanted to live a normal span, he should go to pine tree country. But he had his farm, and he was in love with a beautiful girl, and he did not want to go. In his dilemma, he decided that since he could not go to the pines, he would bring the pines to his farm. He planted belts of trees across his quarter section of land. Today, many of those trees are well over 40 feet tall, about their feet are others, as in a small forest. And Mr. Lydick is a healthy man.

But the point of the story is this: In every one of the years of the great drought, the man of whom I speak raised a crop upon his farm. He raised a crop on both sides of his tree strips in a year that was one of the driest the West ever knew, when hardly a single green thing was produced elsewhere in that part of the State of Nebraska.

That is why the farmers of the plains States want field windbreaks on their farms. The Forest Service has long waiting lists of applicants for Government cooperation in planting trees. Today, on farms where tree strips were planted in 1935 and 1936, there are trees up to 35 feet tall, trees now protecting crops and soil and benefiting the social fabric of life on the Great Plains, the welfare of which is so important and so vital to the welfare of this Nation. You can ride casually through any part of the country where the tree planters have been—and where the new trees have had 2 or 3 years in which to grow—and farmers will show you what tree windbreaks are doing. These new tree strips are still young, but older belts planted years ago by farsighted farmers show what they will do when they have reached their full stature. Here from the edge of a field windbreak stretches a fine level field planted with rye. For 200 or 300 feet the rye is breast high and healthy, and beyond the sphere of influence of the windbreak it is stunted and dry and dying. On many farms you may see comparative conditions—two fields, same soil, same crop, same cultivation, same climate, same owner—one protected by trees and one unprotected. Within the area protected by the trees will be good crops; on the adjoining field will be parched and withered stalks. Nor is that all. For the first time, in many sections, fruit trees and strawberries are growing today under the protection of windbreaks, while game, song, and insectivorous birds are nesting and increasing. Watermelons can again be grown in some places where it had not been possible to produce them because of excessive soil blowing. And housewives and little children picnic—now—in these saving groves.

ONLY ONE SOURCE OF OPPOSITION

Very close to my heart and to my hopes for the country are the trees planted in the plains. I have watched them grow year by year. In all that time I have found only one source of opposition, other than that based on ignorance of the true situation, to continuance of this prairie tree planting program. That opposition comes, I understand, from some nurserymen who have trees to sell. I understand that opposition; I understand that we all have to live. But I think it is shortsighted opposition. In the first place, the present plan for providing windbreaks is cooperative and of minimum cost to the farmer. He provides the land and fence material and agrees to cultivate the trees. The Forest Service furnishes the trees, plants them and advises on how to get best results with them through the years. And I believe—indeed, I know—that very few farmers of the plains could afford, especially with the debt burden from the drought, to put in windbreaks on a regular commercial basis, paying for trees, the labor, and so on. In other words, there is only a limited regular commercial market for forest tree nursery products in the plains area. In the second place, let tree strips be started throughout that country and there will be a market for trees, from the private nurseries such as never existed before. The plains already are becoming tree conscious; they will be ever more grateful to, and desirous of, trees. And this feeling cannot but lead them to plant more and more ornamental trees and shrubs about their homes, to plant fruit trees and bushes in the lee of their windbreaks.

PERMANENT PROGRAM SEEN

We need, then, a permanent Federal tree-planting program as a bridge to a richer and better plains country. We need it as an insurance of our national grain food supply. I believe the nurserymen will see such a program as a bridge to a bigger market and better business than they have ever had.

One thing more. I am a resident of a prairie State, and it may be that in all this I have seemed to speak only as a plainsman. But aside from the food question, this is a national problem which already has burdened other communities from coast to coast. When the drought drove thousands of farmers from the Great Plains, where did they go? They went to other farm communities seeking jobs; they went to the cities; thousands of them went to California. Thousands of them migrated with their families to the Northwest States of Washington and Oregon. They added to the relief rolls everywhere. More rainfall on the plains last year and the year before, and the increased planting of field windbreaks, have brought better prospects to the prairie States farming communities. I understand some of the people who were driven out have begun migrating back. But let me ask you this: When they are back, and the next dry years fall upon the plains, are they to be driven forth again, these hard-working, sound people, to become homeless wanderers in our streets? A permanent Federal program of tree windbreak planting and other measures of sound land use will go far toward the stabilization of farming and home life in this vitally important agricultural region.

Address of the Postmaster General

EXTENSION OF REMARKS

OF

HON. CAROLINE O'DAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

ADDRESS BY HON. JAMES A. FARLEY, JUNE 15, 1939

Mrs. O'DAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley at the regional conference of Democratic Women of the Northeastern States, at New York City, N. Y., Thursday evening, June 15, 1939:

Ladies and gentlemen, the first essential for a good cause is an army of loyal soldiers. This is just as true in politics as it is on the battlefield, and for the past several years we Democrats have been very fortunate in this respect. Tonight it is my privilege to address one of the finest and most loyal corps in the Democratic army.

In paying this tribute to the women leaders of the party, I am not indulging in idle flattery. On the contrary, the tribute is well deserved. The women of America are now exercising a profound and wholesome influence on the course of public events and this influence may be traced in large measure to the fact that you are soundly organized and wisely led. For those old-fashioned individuals who may entertain lingering doubts about the effectiveness of women in politics, the record of recent elections provides a convincing answer.

This feminine influence has not been confined to the ballot box alone. The administration at Washington has proceeded on the theory that if the Government ignores the views and purposes of the homemakers, who now possess the franchise, it is ignoring perhaps the most vital factor in twentieth century public life. Our party was the first to recognize this new factor in politics and the first to do something about it in a sensible way. We have taken women into equal partnership in the party councils, given them responsible executive and administrative positions, and lis-

tened to their advice on questions of policy and legislation. The results have been more than worth while.

What is it that women are chiefly interested in? They are concerned first of all with the primary things that make life worth living. They want good schools for their children, decent housing for the whole family, nourishing food, and adequate medical care. They want the best safeguard against financial insecurity in this age of high-pressure industrialism that a just government can provide. These are the bare essentials.

You will note that the objectives sought by women voters are precisely the objectives of the Roosevelt administration. The fact that they coincide is something more than mere accident. A gradual change in the stream of political thinking has taken place since national suffrage for women became a reality about 20 years ago, and this new trend will not be reversed in our lifetime. The compelling need for the adoption of humane principles in government has bitten deeply into the hearts and minds of the American people. I venture to predict that the political battles of the future will not be waged on the issue of uprooting gains already made but rather on the best means of extending and preserving what this administration has accomplished.

The first purpose of this meeting tonight is to make certain that we continue to move forward along the lines laid down by the Commander in Chief. The price of progress is eternal watchfulness. A good cause is never won without a great struggle, and because the foe is moving to the attack with renewed vigor, then we must be ready to meet them with all the resources at our command. The Democratic Party has never yet turned tail when the enemy challenged, and it never will.

Those of you assembled here represent the most populous area in the United States. The Northeastern States which you represent will hold a place of strategic importance in the Presidential election of 1940. Frankly, we have our eyes set on this important sector in the political battle front and the electoral vote of these States may well depend upon the measure of your activities between now and the time when the ballots are counted. The size and enthusiasm of this meeting indicate that you are ready for the test.

A few short months ago those who had the temerity to suggest that next year would see the election of another Democratic President were branded as incurable optimists. Our worthy friends and foemen, the Republicans, were living in joyful anticipation of their coming triumph—a rather dangerous habit which brought them to grief about 3 years ago. The press with few exceptions reflected this note of Republican optimism. Mistaking the wish for the fact, they professed to see a growing wave of popular dissatisfaction against the administration in power in Washington.

Now they are not so sure. The curve of Republican optimism has taken a decided slump in recent weeks, and those who were loudest in their claims of victory are now finding their confidence giving way to doubts and misgivings. This change of attitude is not imaginary. It has been pointed out in the dispatches of experienced newspaper observers who are distressed at the weakness and blunderings of the minority party. It has been emphasized by the outspoken comments of Republican leaders who have the sense to recognize facts when they see them.

Former Secretary of State Henry L. Stimson was the first to warn his party colleagues that they were making a tragic error in seeking to convert the peace efforts of President Roosevelt into a trumped-up political issue. Former Gov. Alfred M. Landon, the party standard-bearer in 1936, gave them excellent advice to the same effect.

A Republican leader here in New York State, Mr. Kenneth F. Simpson, summed up in striking fashion the glaring weakness of the Republican Party in trying to wrap the blanket of prejudice around the splendid reforms and accomplishments of the Roosevelt administration. In a speech to a party gathering, he was quoted as saying:

"We will win only if we deserve to win. We will not deserve to win if we just sit around waiting for the tide to turn, hoping that the pendulum will swing in our direction. We must accept as sound and valid many of the major principles of social reform that recently have been established. Our fight is not with these principles. Their translation from theory to fact was long overdue.

"Such major principles of social reform as collective bargaining, social security, the regulation of securities and exchanges, unemployment insurance, and relief, are principles, among others, which we must preserve. My only regret is that they were not all enacted soberly and sanely by the Republican Party many years ago as they were by the Conservative Party in England."

The foregoing summary may have been unwelcome advice to those opponents of the administration who were content to sit down and wait for the tide, but it constitutes an extremely accurate picture of the current political scene. The fact is that the Republican Party, during the 10-year period of social change just ending, has done nothing but sit back and predict disaster without lifting a finger to speed the enactment of badly needed social reforms. Instead of constructive help, it has offered nothing but blind obstruction. Instead of adopting a positive program, it has relied on empty words and predictions of disaster that simply won't occur.

As election time draws closer the so-called spokesmen of the Republican Party are becoming dimly aware that the American people want something more than a cipher in positions of public trust. The electorate is tired of the same old scarecrows—tired of hearing that President Roosevelt wants war because he works for peace, tired of hearing that President Roosevelt is undermining American institutions because he believes in social justice for the masses.

After several years out of power the Grand Old Party is approaching another national election in the same state of futility which brought about its original defeat. It has failed to develop a single leader who has captured the imagination of the public, and it has nothing to offer in the way of a program. Those leaders who attempt to speak for the party are in hopeless disagreement. Only recently one eminent Republican suggested that the next gentleman to enter the White House should pledge himself in advance to serve one term only. There was a faint hint that he himself would willingly make the sacrifice if duly called. The idea got nowhere, but again it served to show that the jaunty Republican confidence of a short while back is fast disappearing.

There are two errors commonly made by those who specialize in the delicate business of forecasting political happenings. The first is that in 1940 the Republicans will be far less united than they think, and the second is that the Democrats will be far better united than they think. The gulf that exists between the die-hard Hooverites and those who favor a diluted New Deal as the only means of returning to power is far wider and deeper than many people suppose. If the Grand Old Party nominates a candidate who endorses the basic reforms of the Roosevelt administration, it will be a public confession of error, the meaning of which will not escape the electorate. And if the Hooverites nominate their men and pin the black flag of reaction to the party masthead, the issue will be joined by the Democratic Party in just the same manner that it was in 1936, and the outcome will be every bit as satisfactory.

You may gather from these remarks that I look to the future with confidence. That is true, and I want you also to be confident without for a moment diminishing your zeal or your efforts. False issues have a habit of disappearing as campaign time approaches and fake propaganda loses its effectiveness. The Roosevelt administration has carried the United States through a trying period of world history in splendid fashion, and upon this record the campaign will be waged.

We have more than a year in which to lay the groundwork and fashion the foundations for victory. Most of you here are veterans at the art of political campaigning. You know that it requires devotion to detail, long hours of steady toil, study, and patience, and, above all, good teamwork. You know that friction and misunderstandings cut down efficiency and bring about disunion. The demands are heavy and harsh on those who do their work well, but the joy of victory is ample compensation.

During the past 6 years the electorate has come to learn the fundamental difference between the two major political parties. Faced by a crisis of appalling magnitude, the leaders of the Democratic Party moved forward with courage and vision to bring order from economic chaos, to restore industry and agriculture, and above all, to revive the faith of the people in the validity of popular government. Issues were met and not dodged; old wrongs and abuses were outlawed, not ignored.

The Republican leaders chose the opposite course. They waited for something to turn up; they waited for the tide to turn. Their spokesmen in Congress preached undying love for economy while secretly flirting with the most costly pension scheme ever proposed in that body. Instead of formulating a platform and a program, their campaign managers have been sweeping the horizon with rose-colored glasses in a frantic search for a dark-horse candidate.

The American people are not easily misled. The Democratic Party has given the Nation the finest program of constructive reform in its history. We propose to wage the coming campaign on the record, and on this record we shall win the Presidential election of 1940.

Townsend Plan

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

Mr. WOODRUFF of Michigan. Mr. Speaker, heretofore I have discussed the unbearable burdens of taxation which would be thrust upon the shoulders of our people if anything even remotely resembling the Townsend plan were attempted. To undertake anything of the kind would bring to our people generally a degree of suffering and misery such as we have not as yet seen. Neither the Townsend plan nor any other plan which contemplates paying everybody, regardless of need, an amount which would keep the individual in luxury, can ever be made to operate successfully for the reason that our people, our poor people especially, simply cannot bear up under the measure of additional taxes that would be placed upon them by such a law.

The lecturers, the organizers, the men who make their living from such organizations preach the false doctrine that the transactions tax is a revolving tax, and that this tax, unlike all other taxes, will bring comfort and ease and happiness to all our people. They refuse to see the poverty and misery and unhappiness that would follow in the wake of the transaction tax.

The Townsend lecturers seem to have somehow convinced their followers that the so-called revolving tax is something new, something wonderful, something mysterious, something that produces money from some hitherto unknown source, without hurting anybody.

EVERY TAX A REVOLVING TAX

Let us just remember that every tax is a revolving tax. The operation of one tax is no different than the operation of all other taxes. First, the money from which the tax is paid must be earned by someone. The tax collector goes into operation, reaches his hand into the taxpayer's pocket and brings forth what even now amounts to more than 23 percent of every dollar of the workingman and the farmer. From the collector's hand the tax revolves into the various governmental treasuries from whence, in turn, it revolves on around the circle, paying the expense of government, which expense includes that of old-age pensions. Following this the cycle starts again. Money is earned and those who produce are again taxed, and the revolving is again repeated. This goes on and on, and in the case of the Townsend plan, money would constantly be taken from those who earn it—and who would spend it if they were permitted to do so—and given to those who do not earn it. The only difference between the proposed tax under the Townsend plan and the present taxes is that the former would be paid once a month instead of once a year, and would be in addition to the taxes we now pay, regardless of statements to the contrary.

INCREASED PURCHASING POWER A MYTH

Purchasing power cannot be increased by taking money from the one who earns it and giving it to another to spend. It is the same money; it has not increased in volume or value through this process of changing hands. As a matter of fact, the administrative expense entailed—and it would be a tremendous expense as one can realize—is taken from the taxes raised, and there would be a reduced purchasing power passed on to the beneficiaries of the plan. It is true that the purchasing power of those to whom the money is given is increased. On the other hand, this is more than offset by the reduction of the purchasing power of those from whom it has been taken.

We govern wisely only when we profit by the teachings of history. All human experience teaches us that the results of high taxes are the exact opposite from what the Townsend leaders have led their followers to believe. It teaches us that instead of increasing employment and production it works in the exact reverse. Business, instead of expanding, dries up; men lose jobs instead of gaining them.

OPPOSITION OF BIG BUSINESS

I hold no brief for big business; but if the statement of the Townsend leaders is true, and that big business is fighting the plan because of purely selfish reasons, how do they reconcile their claims that the plan itself would immediately create excellent business conditions, in view of the fact that everyone knows that big business makes big money only when business is going at top speed and our people are employed at good wages? If the Townsend plan could be made to work as its leaders claim it would work, the big-business men of the Nation would, of course, be among the most enthusiastic leaders of the movement.

TAXES NOW AND AFTER

The national gross income of 1938 was $63,993,000,000 according to the latest figures from official sources. In 1938 our people were taxed $14,811,000,000. This included township, county, city, State, and Federal taxes. This presents a very simple problem in arithmetic, and discloses that more than 23 percent of this national income went for taxes. The Townsend people have claimed, and do now, I believe, that the 2-percent transactions tax—gross-income tax or any other name they choose to call it—would produce between twenty-four and twenty-eight billions of dollars a year. Certainly it would have to produce the latter amount if all those past 60 years of age were to receive the $200 per month. Yet if we add only the minimum of these two figures to the billions we already pay, our taxes would amount to 60.5 percent of the national income. That means that 60½ percent of the income of the average man or woman would be taken for taxes alone, leaving to the worker, the farmer, and all those of small incomes only 39½ cents out of every dollar with which to provide food, clothing, shelter, and all other necessities and comforts for themselves and their families. Just how could our people stand up under that tax burden, every penny of which would be paid through an increased cost of the things we buy. Just what effect would all this have on the workers, the farmers, and those with small fixed incomes? It would destroy them, of course.

In order to see a little more clearly just what the Townsend plan would mean to every individual in every community in the entire United States, what impossible burdens of taxation would be thrust upon every individual, it is only necessary to check the proposed cost of the plan against the population of the country. Based on 8,000,000 pensioners and in order to pay the full $200 per month to each beneficiary, it would require raising by the transaction tax additional taxes each year $19,200,000,000. This is based upon a per capita tax of $147.69. Based upon 10,000,000 pensioners, and there are certainly more than that number of our citizens who could qualify under the proposed plan, it would require raising $24,000,000,000, or $184.62 per capita. Any interested person living in my congressional district can, by consulting the table below, learn for himself just how much money must be raised each year in his county in order to meet the tax imposed upon the people of that county.

Estimated additional annual per capita tax burden necessary to pay maximum pensions of $200 per month regardless of need to 8,000,000 and 10, 000,000 persons on basis of 130,000,000 population

Pensioners	Annual cost	Per capita cost
8,000,000	$19,200,000,000	$147.69
10,000,000	24,000,000,000	184.62

Estimated additional annual tax burden on taxpayers of the Tenth Congressional District of Michigan by counties (on basis of per capita cost and 1930 census)

County	1930 census	Pensioners	
		8,900,000	10,000,000
Alcona	4,989	$736,825.41	$921,069.18
Arenac	8,007	1,182,553.83	1,478,252.34
Bay	69,474	10,260,615.06	12,825,289.88
Clare	7,032	1,038,556.08	1,298,247.84
Crawford	3,097	457,395.93	571,768.14
Gladwin	7,424	1,096,450.56	1,370,618.88
Iosco	7,517	1,110,185.73	1,387,788.54
Isabella	21,126	3,120,098.94	3,900,282.12
Mecosta	15,738	2,324,345.22	2,905,549.56
Midland	19,150	2,828,263.50	3,535,473.00
Ogenaw	6,595	974,015.55	1,217,568.90
Osceola	12,806	1,891,318.14	2,364,243.72
Oscoda	1,728	255,208.32	319,023.36
Roscommon	2,055	303,502.95	379,394.10
Total	186,738	27,579,335.22	34,475,569.56

Estimated annual cost of paying $100 per month pensions regardless of need is one-half of the above estimates—$50 per month is one-fourth of above estimates.

NOTE.—1930 census is latest available showing population by counties. Any increase in population since then would necessarily increase the above estimates.

NO PERSON ESCAPES TAXES

Let no one delude himself into thinking he pays no tax. He pays taxes when he passes money across the counter of the stores in buying the things he desires. Taxes are included in the price of the things we buy. We cannot escape these taxes. We must either pay them or go without the necessities and comforts of life. The manufacturers, the great service organizations, merchants, and so forth, merely act as collection agents for the Government. It is the people who pay the tax and all of it, regardless of the sort of tax it is.

Mr. Speaker, permit me to call as witnesses some well-known gentlemen representing the workers and farmers of our Nation, men whose character, intelligence, and honesty and information will not be challenged by the most enthusiastic Townsend plan advocates.

THE OPINION OF THE AMERICAN FEDERATION OF LABOR

Mr. William Green, president of the American Federation of Labor, long a student of the incidence of taxation, representing millions of American workingmen, alarmed at what the Townsend plan would do to labor, on May 29, 1939, addressed a letter to the Ways and Means Committee, reiterating the position against the Townsend plan taken by the federation at the hearings on H. R. 2, stating:

We are convinced that to pretend to offer up to a maximum of $200 a month to all old persons, regardless of need, as is done by H. R. 6466, is both dishonest and undesirable. * * * It is undesirable because it taxes wages and gross incomes with practically no regard for ability to pay and because it offers tremendous incentive to integration of producing and marketing units at the expense of small independent business. The independent retailer, the consumer, and the wage earner will be the losers under this program. A gross income tax of a flat percent cannot be other than regressive in effect. It is a thoroughly bad form of taxation. * * * The wage earners spend now nearly every cent of their wages. No increase in national purchasing power can be achieved by taking money from them to give to another part of the population. * * * The American Federation of Labor believes in enlarged social security for the Nation but achieved by reasonable methods. It condemns H. R. 2 and even more, H. R. 6466, as wholly unreasonable devices and as unable to fulfill the implied extravagant promise of large pensions on the basis of which they make their appeal.

Surely William Green and the great organization of workers he represents do not represent Wall Street or the international bankers.

THE OPINION OF THE AMERICAN FARM BUREAU FEDERATION

The next witness I call is Edward A. O'Neal, president of the American Farm Bureau Federation, representing hundreds of thousands of farmers throughout the country, who, coming to the aid of agriculture, in a letter to the committee dated May 29, 1939, said:

It would be fiscal suicide for the Nation to undertake to pay old-age pensions on the scale provided in H. R. 6466. * * * It would work particular hardship upon agriculture.

Every time a commodity is sold, every time it is transported commercially, every time a wage or salary payment is made, every time an income payment is received a tax would be levied on the total gross amount of the sale, wage payment, or income payment, with no deduction for losses, expenses, or costs of any kind.

Certainly the American Farm Bureau Federation cannot be charged with being influenced by anything other than a desire to do the thing that is best for all the people.

THE OPINION OF THE NATIONAL GRANGE

I now call Fred Brenckman, the able Washington representative of the National Grange, of which Mr. L. J. Taber, of Ohio is national master, who, speaking for that organization, in a letter to the Ways and Means Committee also dated May 29, protesting against H. R. 6466 and other Townsend bills, said, in part:

That the Townsend plan would wreck the Government, if placed in operation, cannot be denied by anyone who will think the matter through and who is willing to look facts in the face. Among other things, it violates that sound principle of legislation which should always be kept in mind, namely, the greatest good for the greatest number. Placing our population at 130,000,000, it would tax 120,000,000 people to the point of extinction to give a joy ride to the other 10,000,000 people over 60 years of age.

Can anyone doubt that the National Grange would submit a statement such as this if the proposed plan would be beneficial to our people?

THE OPINION OF DR. JOHN LEE COULTER, ECONOMIST, STATISTICIAN

I now call as a witness Dr. John Lee Coulter, without a doubt one of the best-informed men in the country on matters such as we are now discussing. Dr. Coulter appeared before the committee and discussed these matters at length and subjected himself to the cross-examination of the committee members. I offer the following statement of his qualifications and experience in order that we may know the character of the man he is and the knowledge he brings to bear on this subject:

Born: 1881.

Education: A. B., University of North Dakota, 1904; A. M., University of North Dakota, 1905; Ph. D., University of Wisconsin, 1908; LL. D., University of North Dakota, 1922.

Experience: Instructor, Iowa State College, 1907; instructor, University of Wisconsin, 1907–08; instructor, University of Minnesota, 1908–09; assistant professor, economics, University of Minnesota, 1909–10; special agent, Minnesota Board of Health, 1909–10; expert special agent, United States Census Bureau, 1910–12, in charge of Division of Agriculture, 1912–14; professor, rural economics, Knapp School of Country Life, Nashville, Tenn., 1914–15; dean, West Virginia College of Agriculture, and director of experimental station, 1915–21; president, North Dakota Agricultural and Mechanical College, 1921–29; chief economist and chairman of advisory board, United States Tariff Commission, 1929; member of United States Tariff Commission, 1930–34.

Member: American Statistical Association, American Economic Association, American Political Science Association, American Association Labor Legislation, American Association of Agricultural Colleges and Experiment Stations, Farm Economics Association, National Economic League.

Author: Economic History of Red River Valley of the North, 1910; Cooperation Among Farmers, 1911; Organization Among the Farmers of the United States, 1909; The Wheat Prices, 1923.

OF ESPECIAL INTEREST TO FARMERS

I shall quote only that part of Dr. Coulter's testimony that, while dealing with questions of interest to the people generally, will be of especial interest to farmers, and which will cast additional light on the subject under discussion:

Dr. COULTER. I have followed fairly closely the testimony given by previous witnesses before the committee, and it seemed to me perhaps I could serve the most useful purpose by not rambling over the same field unduly, but, rather, in the beginning at least, concentrate on two or three phases of the subject which it seems to me have not been adequately covered. Then if questions should develop some of the other phases, I would be glad to be of any service possible.

I have particularly before me H. R. 2, which deals especially with the so-called transactions tax, and I should like first at least to develop one or two phases in connection therewith. The preceding witness before you was asked a question concerning the possible repercussions of such a tax program on the people engaged in agriculture versus those not so engaged; and that is one subject which I have spent much time studying. I might say at this point that I did spend some 15 years or more working in agricultural fields, especially supplementary to my farm operations; that is to say, as president of agricultural colleges and various other positions which brought me constantly in contact with agriculture and agricultural situations. And my special interests continue to be related to the relative prosperity of agriculture and the rest of the general society.

My feeling is that the methods proposed in H. R. 2 to raise revenue necessary to put such a program into effect would be a tremendous burden upon agriculture, far out of proportion to the burden on the rest of society; and that the benefits coming to agriculture, if any, would be disproportionately small.

I would like to develop that point just a little. Unless agriculture is able to secure for the products of the soil prices which are reasonably in harmony with other prices, farmers in turn are unable to purchase from the market, and their position is disadvantageous.

The reason for that, fundamentally, is that farmers sell their labor in the form of prices received for goods rather than in the form of wages or salaries. The great majority of other groups receive their compensation in the form of wages or salaries.

And the wages or salaries do not fluctuate daily or seasonally in the same way that prices for commodities do.

This transactions tax begins at the very start to bear down on the prices of commodities. The farmers of the country produce, let us say, $10,000,000,000 worth on the farm. Those commodities, when they move to the city and through the processing establishments, and when they reach the consumer, represent a so-called value of farm products that has doubled or trebled or quadrupled.

Now, the first effect of the transactions taxes, such as those provided for here, would seem to be to add to the cost at each transaction. I realize that there are some who would say that this tax will be absorbed at each point where it is imposed; that it is made very small, 2 percent, with the thought that it will be more or less invisible and that it will be absorbed at that point. Apparently this could not be true.

We know that there are 10,000,000 people in the country over 60 years of age. We know that even if you approach $200 a month, or $2,400 a year, that you would have to raise in revenue during a year something like $25,000,000,000. Twenty-five billion dollars is about one-third of the average national income during the last few years. During the last few years the national income has fallen substantially under, we will say, $75,000,000,000. To raise $25,000,000,000 by a series of relatively small percentage transaction taxes, amounting, before all goods and services come from the producer to the consumer, to $25,000,000,000, or one-third of the national income produced, would seem to mean that the accumulation of these little 2 percents must amount, before it finally gets to the ultimate consumer, to about one-third of the national income, or 33⅓ percent.

To absorb that merely because it comes in small amounts does not seem likely to take place. In fact, no student of this subject that I know of would acknowledge that any such thing were possible.

* * * * * * *

After all, each one added to the other does pile up, and a series of transactions taxes which finally amounted, if it were actually accomplished, to any such figure, would certainly add to the cost at each point.

Not only would it add the 2 percent at each point where imposed, but it would become part of the cost at that point and then the new 2 percent would be imposed on that in turn, so that it would be cumulative and pyramided.

I do not think it necessary to dwell on that length, but I think I speak advisedly when I say that I know of no disinterested student—that is, one interested in an objective analysis, and not one employed to argue a case and prove something—I know of no disinterested student who would say otherwise than that these become cumulatively added together, and pyramided, in that they would be each imposed on the other and be equivalent to the compounding effect.

This would apparently gradually increase costs and in turn prices of commodities. But it would not add to the value or the price of farm products. The prices which the farmer would receive would not be directly affected and certainly not improved in level, but indirectly would be forced constantly lower and lower, as I shall develop in a moment.

Whereas on the other side, the commodities which farmers must buy would cumulatively be priced higher and higher. So that the disadvantage to the agricultural population would become cumulatively greater and greater.

In other words, the so-called disparity between purchasing power and selling position is illustrated in that way.

I said a moment ago that undoubtedly, in my judgment, the prices for farm products would become lower and lower rather than gain at any point. The reason for that is this: As rapidly as prices for the processed commodities advanced—let us take a concrete illustration. We will say that the cotton and the gin and the compressor and the spinner and the weaver and the designer, and the dyer and the finisher and the clothing maker, the wholesaler, the jobber, and the retailer—as rapidly as the prices became higher and higher, the American manufacturer and distributor would find himself exposed to new-found competitions, two or three in number. As his price advanced, imports from Canada or England or other countries would quickly pass over the tariff wall and be offered at lower prices. Thus the American manufacturer would constantly be forced to offer the farmer a lower and a lower and a lower price for the beginning raw material.

The same we will say with hogs. The farmer, the buyer, the packer, the wholesaler, the retailer, and so on—as the price of meat in any moving toward market, adding in price and cost because of transportation, refrigeration, processing, etc., by the time it reached, we will say, the ultimate consumer in New York, it would meet in competition, meat which had been packed without a transaction tax in Poland or in the Argentine or some other place. So the imported product, passing over the present tariff structure, would take the market, leaving our farmers' products on the shelf and forcing our processors constantly to offer the farmer a lower and a lower price for the raw material. And, indeed, since the imported material would displace our own, the farmer, finding his own material accumulating in surplus, would be compelled to take lower and lower prices.

* * * * * * *

Mr. TREADWAY. If these two bills are not to be enacted, do you see any way of accomplishing the purpose that is aimed at, aiding the aged and raising the velocity of the flow of money? Is there any way of accomplishing the purpose other than described in these bills?

Dr. COULTER. Well, I think the first suggestion indicates the idea that there are some five or ten million or more relatively young people unemployed, and the reason they are unemployed is because their elders are holding the jobs, and they are a burden to society.

I cling very strongly to the belief that all or substantially all of those who are now unemployed can and presently surely will be gainfully employed in the normal processes of industrial and agricultural life in America, and when they are employed, as I feel confident they will be, by the normal course of events, aided by wise legislation, perhaps hindered by unwise, nonetheless that there is need for them, that there is in this country an absolute need for them and particularly when we get back to moving in orderly fashion. Therefore it is unnecessary to think in terms of dispossessing any of those who have reached, we will say, 60, merely to make way for somebody younger.

I can't conceive, for instance, under section 2 (d), which defines gainful pursuit, of legislating all of the farm men and women who are 60 years of age out of the garden, out of the pigpen, out of the chicken yard. I can't conceive of that at all; and yet, if a farmer or his wife, 60 years of age, gathers the eggs, he must by affidavit acknowledge that he is ineligible for any benefit under this plan, because then he is employed for himself, or for some other person, whether that other person is one of his sons, or daughter-in-law, or whoever it may be.

I think the first need is for such employment, and when there is such employment in this country ordinary sources of revenue, etc., will adequately provide for a very liberal, or at least a reasonably liberal, provision for those up in years who need it.

Mr. TREADWAY. So you don't feel there is an emergency such as the advocates of these two measures picture?

Dr. COULTER. Well, I think the emergency rather lies in a thoughtful review of the forces which brought about the recent and prolonged depression, and, as rapidly as possible, the solving of those problems and getting our own people back to work, and industry and agriculture moving on all cylinders instead of one, three, or five.

Dr. Coulter is a gentleman who has given his entire life to the improvement of conditions for the American farmer. My purpose in quoting him at length is to disclose to the people generally, and to the farmers more particularly, how devastating it would be to them to attempt to add to the tax burdens of the great mass of people to the extent that is contemplated by the legislation under discussion. If the Ways and Means Committee had searched the world over, no man better informed or with a deeper interest in the welfare of the people generally could have been found. His entire statement, had I the space to quote it, would confirm the testimony of every qualified economist who appeared before the committee.

In addition to those quoted above, many other representatives of workers appeared in opposition to the bill.

There was not a single economist of standing nor an individual representing either farmers or laboring men appearing at the hearing who believed in it or who believed it could work even if tried.

Mr. Speaker, Mr. Arthur L. Johnson, who drafted H. R. 4199, the bill representing the Townsend plan in the last Congress, and who came to Washington with and represented the Townsend organizations here for a long time and who probably knows as much about this plan as anyone, in addition to knowing something about taxes, has analyzed the latest plan. The analysis can be found in the General Welfare News-Advocate dated May 29, 1939. I commend it to every Member of the House. You will find it not only interesting but accurate.

BILL REPORTED

Believing that an open discussion on the floor of the House would contribute to the disillusionment of the members of the Townsend organizations, and believing this question could not be disposed of until this had been done and a vote taken in the House, I, as a member of the Ways and Means Committee, voted to report H. R. 6466 to the House. It was not H. R. 2. We did exactly what Dr. Townsend asked us to do. We reported to the House the bill he wanted reported. The Rules Committee also did as Dr. Townsend requested and reported a closed rule under which no amendments could be offered to the plan. The result was a vote of 97 for and 302 against the bill. I personally know, from my conversations with many of the 97 Members who voted for the plan, that they do not believe in it and voted for it only because they had promised to do so before they knew all the facts.

Mr. Speaker, I believe that the old-age pension law as now administered, the welfare and relief as administered, present a situation which must in the immediate future receive the serious and intelligent consideration of Congress and the country. For the life of me, I cannot understand how many of those now receiving relief or old-age pensions can exist on their utterly inadequate incomes. The only satisfactory solution of the problem is, of course, a return to sensible, sound government, based upon and with a real regard for economic law. It is only through this process that business can revive, that men can go back to work at good wages, that all our people, including the old folks, can again enjoy the blessings which come only from general prosperity.

MISHANDLING OF NATION'S AFFAIRS

Those now mishandling the affairs of this country, seemingly, are deliberately attempting to socialize the entire economic structure. For instance, the Government, while demanding that business function normally, continues to follow a policy which places the Government into competition with private business in an ever-broadening extent, making it increasingly difficult for private business to function normally.

Neither this nor any other country can remain for any length of time half Socialist and half capitalist. We have had a most convincing demonstration of one fact, and that is that tax and borrow, waste and squander as we will, the Government simply cannot supply jobs at good wages for those who need jobs. This can be done only by private capi-

tal. I elect to go along with that type of government which has given to the world a country in which the poor, the very poor, live on a higher standard of living than do the middle class Europeans or Asiatics—the type of government which made of this the greatest land of opportunity for the youngsters of each generation this world has ever known.

ECONOMIC LAW MUST BE OBEYED

There is no question in my mind that the present misery in the country, the plight of our old people particularly, the failure of the country to keep pace in recovery with other nations, is due to the constant violation of economic law by the administration. The penalty for such violation is always swift and sure.

No other nation has gone as far as we in experimenting with such methods as the Roosevelt New Deal recovery measures. It is significant that only France and Belgium followed our lead. It is significant also that of all those I shall now mention, these two nations are exceeded in failure to effect economic recovery only by the United States.

The complete failure of the Roosevelt policies is indicated by the fact that, basing industrial production at 100 in 1929, 16 countries were ahead of the United States in percentage of recovery as of 1938. The percentages of the various countries are as follows: Latvia, 174.5; Japan, 170.8; Finland, 152.5; Sweden, 146.0; Estonia, 145.5; Chile, 136.8; Denmark, 135.0; Norway, 127.2; Germany, 126.2; Poland, 117.3; United Kingdom, 115.7; Italy, 98.6; Canada, 90.0; Netherlands, 89.8; France, 76.9; Belgium, 75.1; and United States, 72.3.

Is it not about time we took stock of our situation with a view of getting back on a sound economic basis? Is it not about time we realized that we cannot bring happiness to our people through economic nostrums; that we cannot borrow and borrow, tax and tax our people, and squander and waste the proceeds, and bring prosperity to the country?

Is it not about time we realized that if we are to again become the great land of opportunity for the present and future generations of youngsters that we begin now to follow the principles of good sound sense? I think it is. So why not apply that test to the Townsend plan at this time?

LET US APPLY THE TEST OF COMMON SENSE

Mr. Speaker, concerning the so-called Townsend bill which was voted down in the House of Representatives by 302 to 97, I want to say that after several years of careful study and observation of the Townsend movement and its rise in this country, I have become convinced that it should no longer be necessary to argue the merits and demerits of the Townsend plan of multiple taxation and the attempted forced circulation of money to provide luxurious security for the elderly citizens, and through this medium bring about recovery from the depression which has beset us for the last 10 years.

There are not two sides to this question so far as every recognized economist is concerned. The verdict of the best economists in the world, including those in the United States, is that the plan simply is impossible and even if passed by the Congress and signed by the President would not and could not work the way it has been represented to the elderly people.

Millions of words of argument and of indisputable proof that the Congress cannot repeal fixed economic law have been written and spoken since the Townsend movement got under way.

THREE HEARINGS BEFORE WAYS AND MEANS COMMITTEE

The Townsend representatives have had every opportunity they could ask for, in three different hearings before the Ways and Means Committee of the House of Representatives, to prove the merits of their plan and they have in each case failed to do so. The fact that the Townsend leaders themselves recognized that they had failed to make their case is to be found in the further fact that each time they came back with a changed bill after having insisted that their original bill was absolutely perfect. Finally in the last bill that was presented, and which finally reached the floor of the House, the two principal leaders themselves could not agree as to what amount of money it would produce for the elderly people, or as to how it would work in operation.

I think it is futile and useless to attempt at this time to review all the overwhelming mass of evidence and testimony from economists, businessmen, educators, farm leaders, labor leaders, and others all to the effect that the whole theory of the Townsend plan of revolving old-age pensions forced by multiple and pyramided taxation into circulation every month is economically and socially impossible of accomplishment, because it simply would not work.

Mr. Speaker, instead of again quoting all of this mass of evidence, I am going to put this proposition to you on a basis of common sense.

As many of the Members know, for the past 15 years I have steadily worked for the highest level of old-age pensions that it is possible for the taxpayers of this country to provide, consistent with sound economic and social government. I have never changed my attitude in that regard. I was working for old-age pensions years before Dr. Townsend was ever heard of and years before this became a political issue at all.

In my own case when I retire from Congress it will be without having accumulated a competence. I am now of an age where I could qualify for a pension under the plan. Is it not clear that a purely selfish interest on my part, that sheer regard for my wife and myself, would dictate that I should support the Townsend plan if it had the slightest chance to operate as it is claimed it would? I have five near relatives who would be eligible for a pension today. I have hundreds of friends who are near and dear to me; I have thousands of other friends whom I would be happy indeed to help if I could, all of whom would be eligible for this pension if it were possible to give it to them.

I am not alone in this position. Every Member of Congress is similarly prompted. Can you not see, as I say, that every dictate, every impulse of enlightened self-support and self-interest would impel me to vote for any old-age pension bill which would lift all of my own relatives and all of my friends as well as every other worthy person in this land of ours from economic worry to a state of comfort, if not luxury, in their declining years?

Let us face this fact together. Does not your own sense of logic convince you that every individual, every economist, every businessman, every educator, every farm leader, every labor leader, every Member of Congress, would be impelled by the same motives which impel me, namely, if it were possible to enact the Townsend plan into law and it would take all of our aged relatives and friends from a state of anxiety and privation and place them in a state of comfort and security, that we would put forth every effort to make it the law at the earliest possible day, even though it might work hardship to some degree on the taxpayers?

Now, keeping these facts in mind, is it not reasonable from any standpoint that if by thus providing for ourselves, our aged relatives, our aged friends, the worthy aged of this and all future generations, we could at the same time rescue this country from the depression it is in, provide reemployment for idle citizens, do away with the necessity for relief, that certainly nobody but a crazy man would refuse to vote for such a plan?

Now, in the light of all of these facts, why is it that the Congress overwhelmingly rejected the plan? Why is it that every economist worthy of the name has insisted again and again that the plan cannot work? Why is it that farm organizations, labor organizations, business associations, all having studied the plan and all of the arguments for it, have consistently declared that it is an impossible scheme which could not work under any circumstances? The reason for that is that it is not possible, because there is no magic, there is no amount of wishful thinking, there is no amount of deep, earnest, sincere desire on the part of all of us to provide that sort of support for our elderly citizens that can make the Townsend plan work.

I realize fully that it will have no effect at this late day to again argue the economic reasons why the plan will not work. I realize further that a very great majority of those who are eager for the adoption of the Townsend plan have never gone into its complicated economic phases and cannot be expected to do so.

ELDERLY PEOPLE HAVE COMMON SENSE

But I believe that the elderly people of this country are possessed of common sense. I do believe their power of reasoning is clear. I refuse to believe, however, that they are convinced that there is a general conspiracy on the part of every individual in the United States, except the elderly people, to prevent them from having security and comfort in their old age. Such an idea is, of course, absurd. A moment's thought will show you that everybody in the ranks of the younger citizens in this and all coming generations will some day become old. They would some day become eligible for such a pension. They would some day be in a position to reap the advantages of any pension plan that could be passed and be made to work.

Therefore it must be obvious to any man or woman who will sit down and read this statement with an open mind that the reason the Congress would not pass the Townsend pyramided tax pension plan is because it is one of the impossibles. It simply cannot work.

I, for one, whatever the political cost may or may not be, do not intend to be a party to persuading the elderly citizens of this country to continue to spend their money and to hope for something that I am utterly convinced it is impossible to attain.

MUST HAVE COMFORT

I do believe that there is a level of old-age assistance high enough to keep our elderly citizens in at least a reasonable degree of comfort that can be established on a sound basis, that will give our old folks money instead of promises, and that can be maintained permanently in the future by the taxpayers. What that level is I do not at this time attempt to say. Whatever the highest level, I do say that I will continue to work energetically for it, either with or without the support of the Townsend people, because I think it is right and just and desirable, and because, while I am thinking of the present elderly people, I am thinking also of all the people who will in the course of years become old.

I trust you will ponder these words carefully and consider them in an unprejudiced state of mind. If you do, I am firmly convinced you will agree with me in the absolute settled conviction, based upon overwhelming proof, that the Townsend plan will not work; that it will not give the aged citizens more than a small fraction of what they have been promised; and that if the Congress passed such a plan tomorrow the taxpayers of the Nation simply could not sustain and support it.

I want you to believe I am earnest and honest and frank in my attitude on this question and that I shall continue to attempt in the future, as I have in the past, to secure for the elderly citizens of this country every dollar of assistance that can be given under a plan that is sound and workable.

W. P. A. and Politics

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

Mr. GEYER of California. Mr. Speaker, the House Committee on the Judiciary has under consideration Senate bill 1871, an act to prevent pernicious political activities. This committee, I am informed, is diligently studying this measure with a view to reporting it later to this body for consideration. As this bill directly and indirectly affects all Government agencies and especially the Works Progress Administration, I desire to call to the attention of the committee an incident which occurred in the State of Rhode Island during the last campaign.

Speaking over the radio in the city of Providence, the capital city of Rhode Island, William H. Vanderbilt, candidate for Governor, according to the Providence Journal of October 27 of last year, informed his listeners that he had recently received $101 in $1 bills from W. P. A. workers as a contribution to my campaign." In glaring headlines this Republican organ stated on this same date:

Vanderbilt hits W. P. A. maneuvers on hurricane job—Charges it laid off 400 men in Newport area, then put in Providence crews.

I am informed, Mr. Speaker, that on this very day, upon reading the statement attributed to Mr. Vanderbilt, the Works Progress administrator in Rhode Island immediately notified candidate Vanderbilt that his statement regarding the transfer of W. P. A. workers was erroneous. On October 31 Mr. Vanderbilt replied to the W. P. A. administrator from his lavish campaign headquarters in Providence and admitted that he had made a mistake and that he had corrected it. The statement he corrected, however, was in regard to the transfer of the W. P. A. workers. He did not refer in his communication to the W. P. A. administrator, to his statement regarding W. P. A. workers contributing to his campaign fund.

Speaking in his home town of Burrillville, R. I., Mr. Austin T. Levy, wealthy mill executive and chairman of the Vanderbilt campaign committee, according to the Providence Journal of November 1, 1938, stated that the contribution made to the Republican State campaign committee by 101 W. P. A. workers, who each contributed $1, as "the most significant contribution in this campaign."

Rhode Island does not have, I am reliably informed, a corrupt practice act and candidates for office are not compelled to file sworn statements as to campaign expenditures. It is then impossible for anyone other than the persons who solicited and handled this huge campaign chest in Rhode Island at the last election, to know just how much money the millionaires of Wall Street contributed to elect one of their group chief executive of that State. Mr. Speaker, I am informed that thousands of the good citizens of the little State of Rhode Island honestly believe that no contribution was made by W. P. A. workers to the campaign of Governor Vanderbilt. The Governor, Mr. Speaker, is reputed to be a multimillionaire and his associates are those who do business on Wall Street and reside on Bellevue Avenue in Newport. This scion of one of America's wealthiest families did not, when he wrote to the P. W. A. administrator in Rhode Island admitting the mistake made in his radio address of October 27, deny that he or his campaign committee had accepted this money as a contribution from those who were toiling to clear away the wreckage of the terrible hurricane which visited New England last September. In view of this I suggest that the committee considering S. 1871 request Governor Vanderbilt, of Rhode Island, to inform it whether or not this reputed campaign contribution was used for his campaign, whether it was given to some charitable institution, or whether it was given back to the W. P. A. workers. I might further suggest to the committee that Mr. Austin T. Levy, chairman of Mr. Vanderbilt's campaign contribution committee; Mr. Pierce Brereton, former chairman of the Republican State Central Committee of Rhode Island; and Mr. Edwin H. Arnold, treasurer of the Republican State Central Committee of Rhode Island, be called before this committee of Congress to testify as to whether or not this money was solicited from W. P. A. workers and also to inform the committee whether or not any contribution was made by W. P. A. workers to Mr. Vanderbilt's campaign or whether or not this was just a publicity move using W. P. A. as the agent to solicit votes.

I know, Mr. Speaker, that the honest citizens of Rhode Island desire to be enlightened on the political activities and maneuvers of those who used the relief agencies in their State for political purposes. I am sure, Mr. Speaker, that this information will guide this committee of the House in drafting legislation barring politicians from using the Works Progress Administration and other relief units for partisan political purposes. The citizens of the State of Rhode Island are entitled to know whether or not the W. P. A. was used in the last campaign as an agent of those who would stoop to gutter politics. I trust, Mr. Speaker, that the House Committee on the Judiciary studying this bill will take my suggestions into consideration.

Mr. Speaker, I call the committee's attention to this incident, because it illustrates the fact that all the politics in relief are not Democratic politics. As much as anybody I deplore this kind of thing. But I do not believe that the Hatch bill is a solution. I do not believe that because political skullduggery exists among Federal employees as among other classes of voters, that the way to end it is to deny to American citizens their traditional right to participate in political campaigns. All the privileges of democracy are abused sometimes and by some people. But we do not cure the abuses by surrendering democracy and substituting for it a dictatorship. I therefore wish to record here my opposition to the Hatch bill in its present form.

Amateur and Organized Athletics

EXTENSION OF REMARKS

OF

HON. JOSEPH A. GAVAGAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

ADDRESS BY HON. JAMES A. FARLEY, JUNE 21, 1939

Mr. GAVAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable James A. Farley at the New York Athletic Club day at the world's fair, Wednesday, June 21, 1939:

Mr. President and fellow members, athletics and sports have always played a large part in American life, although prior to the Civil War they were conducted in a rather haphazard fashion. The stories of colonial and pioneering times are filled with recitals of physical effort. There are tales of Washington's jumping 22 feet and 6 inches in his ordinary shoes on the hard ground, and throwing a silver dollar across the Potomac; of Franklin's famous long-distance swims; of Lincoln's ability as a wrestler displayed on courthouse days; of Andrew Jackson's ability with dueling weapons; and of famous feats of skill, endurance, and speed in the use of the rifle, and in long-distance runs or rides on horseback by frontiersmen, wood runners, and Indian scouts in the formative days of the Nation. But 70 years ago the old order passed and a new one came into being.

Seventy years is a long period of time—nearly half the life of this Nation. Yet some 70 years ago three young men, Father Bill Curtis, Harry C. Buermeyer, and John C. Babcock, veterans of the Civil War, a bare 3 years after the last gun had ceased firing, met in a small parlor on Sixth Avenue near Twenty-eighth Street, and dreamed a dream, the results of which could not be realized by the dreamers. Out of this meeting the entire fabric of present-day amateur and organized athletics was created. They were not only the patron saints of the great amateur field of sport of today, but were the actual founders of our club, the greatest athletic club in the world. Joined by a few ardent spirits, they worked so fervently and so well that they were not only successful in launching our club on its long and successful career, but were largely instrumental in bringing into existence the greatest governing body that amateur sport has ever known, the Amateur Athletic Union, a unit organized within the club walls.

Like all pioneer efforts, the early endeavors of the founders met with many difficulties. They faced a wilderness of indifference and even opposition to their ideas. The country was thinking of things other than sport. The 4 years of Civil War had virtually wiped out or crippled a large part of the red-blooded young manhood of the period, or they were engaged in pushing the country's frontiers westward in the face of Indian perils, and the terrors of death from thirst and starvation. On the far-flung frontiers there was neither opportunity nor desire to indulge in sports or exercise, except such as was necessary for the preservation of one's life. And moreover, the time was not propitious for the furtherance of sports, which flourish in days of prosperity, when people have time to devote to them. The period in question was a time of great economic distress, culminating in the great depression of 1873 to 1879. And yet, immune to all discouragement, the courageous three and their coworkers kept the flame burning so brightly, that they laid the firm foundation of the Nation's present gigantic athletic structure.

In the midst of all the turmoil and strife of the late sixties, our club came into existence and has steered a straight course for over 70 years, guided by the twin stars of amateurism and sportsmanship. Over that long stretch of years, we have fostered 34 competitive sports and a review of our athletic history would present a great panorama of athletically great happenings from the first indoor amateur athletic games ever held in the United States, conducted by the club on November 11, 1868, down to the large international meets of the present. Thousands of championships, individual and team, have been won. And what a galaxy of stars have worn the winged foot—far too numerous to mention—although I would be somewhat remiss, if I failed to mention in passing a few of those who from the standpoint of sheer brilliance and fine service seem to stand out even above their fellow champions.

Father Bill Curtis and Harry Buermeyer, two of the founders, were remarkable all-round athletes, many critics of his day even debating the question whether the latter could defeat the great John L. Sullivan. Prior to the nineties of the last century, Malcolm W. Ford, broad jumper and all-round champion; Hugh H. Baxter, world's pole vault record holder; George R. Gray, the breaker of 28 world's shot-put records in an 8-year stretch, and James S. Mitchell, the first of the procession of giant Irish weight throwers, won many honors for the club. The nineties of the last century was a period in which many of the world's greatest athletes bore the winged foot and in the famous international meet in 1895 against England's best, representing the London Athletic Club, we won every event, club athletes establishing four world's records. A mere recital of the names will bring to many present memories of the performances of a group of champions and record holders, including Bernie Wefers, one of the world's star all-time sprinters; Mike Sweeney, high jumper; Charley Kilpatrick, half-miler; Alvin C. Kraenzlein, remarkable hurdler, broad jumper, and sprinter; John J. Flanagan, earliest and possibly the most scientific of the hammer-throwing 180-footer; Ray C. Ewry, sensational standing jumper, winner of more Olympic titles than any other athlete, 10 in number; and Tommy Conneff, great little miler. In 1906, Paul Pilgrim, the only man in the long history of Olympic meets who ever won a middle-distance double, won the Olympic 400- and 800-meter championships; and in 1908, Matt McGrath, the world's greatest weight thrower, the holder of world's records, the hammer for many years and the 56-pound weight to this day, started his long career as a club representative, winning an Olympic title and national titles galore. After the World War, the famous Pat McDonald, the winner of Olympic titles in both the shot and the weight, as well as many national titles, the holder of the world's record in the shot, and Jackson Scholz, a great sprinter, the winner of the Olympic 200-meter race in 1924, in which he set an Olympic record, appeared as club representatives.

The club's athletic career has not been entirely in the past. As a matter of fact, during the past 8 years, facing the strongest opposition ever encountered, the club has won six national track and field team titles. At no time has the club had greater athletes than the men who contributed so notably to this result. Among the numerous great performers, Olympic and National champions and world's record holders, the most prominent were Percy Beard, hurdler; Leo Sexton, shot putter; George Spitz, high jumper; John Anderson, discus thrower; Gene Venzke, the first man to run an indoor 4.10 mile; Joseph McCluskey, steeplechaser; and Frank Ryan, shot-putter.

Swimming, another club major sport, also has a long competitive career since the holding of the first national championships on September 30, 1877, starting from the float on the Mott Haven grounds. Among the many great swimmers, winners of Olympic and National championships and holders of numerous world's records, the names of Charles M. Daniels, the holder in his day of 20 world's records, 43 American records and 5 Olympic championships, and of Peter Fick, present national champion and co-holder of the world's sprint record, stand out.

There were many other famous competitors in other sports fostered by the club, but time will not permit naming them.

Athletics and the widespread indulgence therein have been a very vital factor in the success of the United States. The colleges and high schools have increased tremendously since the turn of the century and have added a hundredfold to the number of active participants in sport. Today, the civic centers have afforded the youth of the community a far greater opportunity to benefit themselves physically, than ever before. The result has been a physical betterment all around, institutions keeping such records showing that the youth of today are larger and sounder than their forbears of 30 or 40 years ago. The benefits derived from athletics or sports are possibly greater from other standpoints than from the standpoint of mere physical measurement. On the far-flung athletic fields of this widely spread nation, youths from public-school age, through the high schools and through the colleges up to the post-graduate era, are daily learning lessons of how to strive fairly and cleanly; to control their tempers during the course of the competition because the man who loses control of his thoughts and temper places himself at a sad disadvantage; to take the hard knocks on the athletic field which all physical-contact games bring to the participants, without flinching; and despite hard knocks or the turning of the tide against him, or his team, to ever push forward and succeed. Many a contest is won by a last-minute effort when things look darkest. The impulse to win is always strong, but the team games call for a spirit of sportsmanship, of cooperation, and self-sacrifice for the good of the team, which should fit the younger element in our community for the hard game of life that they will have to face after their graduation. If these lessons are well learned in their formative years it will make the growing youth more useful to the country and community at large as a citizen, and in the wide field of competitive endeavor to make a living. The indulgence in sport in this country serves also the older element in the Nation, furnishing them with hobbies which lift their mind from the daily strife of making a living, giving them a safety valve for their emotions, causing them to

relax their nerves and in building up physical energy, enabling them to face again their daily tasks with more vigor, a clearer mind, and the ability to perform them better than they would be able to perform them if no such outlet existed.

There is another picture to the entire wide panorama of sports exemplified in this country—not only does it tone up the physical energies of men so that they can carry on their daily endeavors to greater advantage to themselves and the community at large, but it further fits them for an outstanding duty of citizenship, as in the dark days of 1917–18. Perhaps it is not diplomatic to inject into this gathering the thoughts of war or coming of war, but while everybody of normal mental equipment hates war, and nobody hates it more deeply than the man who has been a participant, nevertheless, any citizen of a broad bent of mind must realize that nations are but the total aggregate of the individuals composing them and that when men will strive and quarrel for their own personal advantage, nations do likewise. A clear statement of fact is the statement that since the dawn of civilization there have been capital wars on this wide earth averaging one for every 14 years. Even our own Nation, which we are prone to call a peace-loving nation, has had a large war for every generation since 1860. In 1860 we had the war which rent the Nation almost in twain; in 1898 we had an extended war which cost many lives; and in 1917 we not only had the greatest war in the history of this Nation, but a war in which we invaded Europe for the first time in our history. If we are not to go in for great armies and navies; if we do not regiment the entire Nation—which God forbid—like other nations at present causing great anxiety in the world, we at least should have the fundamental basis of all armies—a physically fit and better citizenry. There is a proneness in the newspapers of today to emphasize the value of mechanization in warfare and overemphasize such value. However, world-wide tests of the last several years have proven that the individuals composing the armies still are the foundational element in warfare. To the end of furnishing a citizenry well supplied to protect this country in time of need, sports and exercise can play a dominant role. The importance of a wide extension of the doctrine of physical fitness can best be realized when we scan the lessons of our last war. It is sad to relate, but true, that in whole communities physical examiners were compelled to reject almost half of those examined on account of physical ineptitude or defects.

As proven in the last war, the lessons learned on many sport fields fit a man to become an excellent soldier and leader. The famous Duke of Wellington once made a statement to the effect that England's battles were won on its playing fields. If the Duke of Wellington could speak so well of cricket and other kindred sports of England, surely we in this country, with our sports embodying greater physical body contact and hard knocks and calling for quicker thinking and initiative, can expect rare service from the lessons learned on such fields.

We as members of this great club are justly proud of its glorious past and traditions and are strong believers in the tenets laid down by the founders.

We are proud of the record of past loyalty, not only to the club itself but of the club's loyalty to the country, so well evidenced by our service flag containing 939 stars, representing practically every man of military age on the club roster during the troublous days of 1917–18.

With the colleges ceasing to administer to the physical well-being of our youth at a stage where it has barely reached manhood's estate, there is a rare opportunity for clubs of our type not only to fit men physically to face the quickened pace of modern existence but to face emergencies threatening the country itself. This country of ours is in great need of more clubs, big and small, possessing the same objects as the New York Athletic Club, and many members of such clubs willing to carry out such objects.

Debt of Finland to the United States

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

LETTER FROM A CONSTITUENT AND REPLY

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from a constituent in regard to a memorial to Finland for paying her war debt, together with a letter written by me and a bill which I have introduced:

WASHINGTON, June 15.—Uncle Sam's best debtor—tiny Finland—paid up again today. The Treasury received payment of $160,693 in principle and interest on the Finnish debt to the United States, and thus the payments were brought faithfully up to date. Of all the debtor nations of the world which owe the United States about $13,000,000,000, Finland is the only one never failing to pay its regular installments.

Hon. LEO E. ALLEN,

House of Representatives, Washington, D. C.:

In line with the above clipping, we, the following of your constituency, make the following suggestions: That you present a bill in the House appropriating a sum of money for the purpose of erecting a memorial which would express the gratitude of the American people to Finland for their regular and prompt payment of their war debt in the face of the fact that they alone have had the honor to do so.

Harold R. Eaton, Kurt G. Schmidt, A. F. Wingert, N. Miles, R. M. Eaton, A. Allentoff, Earl Bowman, W. G. Warnack, B. L. Peck, Owen P. Miles, Lee D. Hannes, Tom Watson, M. A. Hartman, Fred C. Leigh, A. C. Reeves, Ag. Albert, E. R. Wachtel.

JUNE 23, 1939.

Mr. HAROLD EATON,

Mount Carroll, Ill.

DEAR HAROLD: Receipt is acknowledged of your recent letter signed by many others suggesting that I present a bill in the House making an appropriation for the purpose of erecting a memorial to Finland. Within the next few days I will do so.

I want to thank you all for this valuable suggestion. Without question all Americans feel as you do toward Finland.

Will you kindly convey this information to the other signers.

With all best wishes, I remain,

Very truly yours,

LEO E. ALLEN, M. C.

A bill authorizing the erection of a memorial in the city of Washington, D. C., expressing the gratitude of the American people to the Government and people of Finland

Be it enacted, etc., That there is hereby authorized to be appropriated out of any money in the Treasury not otherwise appropriated, the sum of $100,000 for the erection upon property belonging to the United States in the city of Washington, D. C., of a suitable memorial expressive of the gratitude of the Government of the United States of America and of the American people to the Government and people of Finland for the regular and prompt payment of its debt to the United States Government incurred during the World War, being the only debtor nation to so recognize its just obligation to the United States Government.

The Secretary of State and the Secretary of the Treasury are hereby authorized to select a suitable site and design for the said memorial, and to superintend the construction thereof.

Brig. Gen. Harley Bascom Ferguson

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 21, 1939

Mr. COCHRAN. Mr. Speaker, Brig. Gen. Harley Bascom Ferguson will reach the age of retirement on August 14, and under the law will be automatically separated from active service with the United States Army.

It was 46 years ago that General Ferguson entered West Point as a cadet, and in 1897 was commissioned a second lieutenant in the Corps of Engineers. From that day to this he has served with distinction. His duties have taken him to all parts of the world.

We in the Mississippi Valley who have had an opportunity closely to observe General Ferguson's work since his appointment as president of the Mississippi River Commission and division engineer of the Lower Mississippi Valley Division since June 15, 1932, regret that the day has arrived when he must, under the law, be placed on the retired list.

The Mississippi River has been a problem of the United States engineers ever since the Louisiana Purchase not only from the standpoint of providing navigation but it has been the duty of the engineers to control the flood waters of this great stream.

I do not think there is a man in the House of Representatives who knows more about flood control in the Mississippi Valley than the gentleman from Mississippi, Hon. WILLIAM M. WHITTINGTON, chairman of the Committee on Flood Control. In this statement I am sure every one of my colleagues will agree.

On March 22, 1939, the gentleman from Mississippi [Mr. WHITTINGTON] made a speech at the meeting of the Mississippi Valley Flood Control Association in the city of Washington entitled "The Mississippi River, Father of Waters and of Floods."

While he covered flood control from every angle, his reference to cut-offs was extremely interesting. We all know of the difference of opinion existing between engineers as to the best method of controlling the Mississippi River. That difference of opinion has existed over a period of many years, but, according to the gentleman from Mississippi [Mr. WHITTINGTON] it remained for General Ferguson to solve the problem. I quote from Mr. WHITTINGTON'S speech upon that occasion:

CUT-OFFS

The most significant development in flood control during the past 10 years has been the construction of 13 cut-offs from Calk Neck to Glasscock, including the natural Yucatan cut-off between the mouth of the Arkansas and Red Rivers, under the supervision of the president of the Mississippi River Commission, Gen. Harley B. Ferguson. The distance from Calk to Glasscock, 330.6 miles, has been shortened, as the river flows, by 115.8 miles. The Mississippi River has thus been shortened 115.8 miles. It is believed that no more successful operation of changing the water-carrying capacity of a stream in all human history has been accomplished. It is claimed that a given flood will be reduced from 9 to 12 feet at Arkansas City, 4 to 6 feet at Vicksburg, and 1 to 2 feet at Natchez. The flood of 1937 was the highest of record above the mouth of the Arkansas River, and while a great flood, it was not a major flood south of the mouth of the Arkansas. It is significant that the gage at Natchez was the highest of record. The cut-offs were made possible because of the genius, daring, and courage of the president of the Mississippi River Commission, Gen. Harley B. Ferguson. The wisdom of Congress in providing for the experimental waterways laboratory at Vicksburg has been vindicated.

The construction of cut-offs constitutes a reversal in flood-control engineering and while some engineers maintain that results are speculative, and that only time and a major flood will tell, the engineering profession seems to be coming around to accept the Ferguson cut-offs as sound. They will reduce floods, especially in the vicinity of the cut-offs. It remains to be seen what will happen below the cut-offs. The cut-off theory is against all precedent.

General Ferguson has dared to do where others faltered, and if the cut-offs are successful in the light of major floods, he will go down in history as one of the greatest engineers of all times. The administration of General Ferguson is a complete answer to the charges that the Corps of Engineers of the United States are not original, progressive, and constructive. The very last word in engineering talent is utilized.

In an editorial published in the Banner-Democrat of Louisiana, the writer paid an excellent tribute to General Ferguson's service, saying in part:

General Ferguson didn't invent the cut-off. But he was the first man with the power, authority, to have the courage to use them on the Mississippi River as he did—to stick by them and his corrective dredging in the face of criticism, opposition, sneers, open and covert. Many a general, at 57, with an honorable career behind him, settles down to sign the pay roll and limit his orders to "Carry on." That was when, in 1932, General Ferguson staked his whole life of work, his professional reputation, that he was right when he had little precedent to guide him—and no answer in the back of any textbook.

Maj. Gen. Edward M. Markham, Chief of Engineers, United States Army, who backed General Ferguson to the limit, met him in New Orleans as the flood crest came rolling down. "How does it look to you?" asked this reporter. "Fergie's plan is the boldest, most daring, most original attack ever made on the Mississippi River," said General Markham. "In the 1937 flood it has triumphed over the greatest test it could have met. New Orleans, the whole Mississippi Valley, never was in danger a minute. There needn't have been any flood excitement, even, if tourist engineers and people who don't know what they're talking about had kept their mouths shut."

The New Orleans Times-Picayune devoted considerable space in its editorial column to the service of General Ferguson, and I quote part of that editorial:

The general has stopped high water to such an extent that it is almost impossible for the human mind to calculate what becomes of these floods that for many, many years caused such uneasiness and havoc in this southern river and especially between Arkansas City and Natchez. The great work of the general has rendered unnecessary the construction of the Eudora floodway, and has settled once and for all the controversies about what could be done with the Mississippi River in flood stage.

We regret to see General Ferguson retire, but we commend him and congratulate him, and wish him all of those good things that the golden years of a faithful soldier and citizen will bring to him.

It was only in recent years that the headquarters of the Mississippi River Commission was transferred from my home city, St. Louis, to Vicksburg, Miss. Of course, at that time we protested the transfer of the Commission to Vicksburg, but we realize now that we have benefited as a result. We have benefited by the establishment of the hydraulic laboratory at Vicksburg. It was General Ferguson with the then Chief of Engineers Lytle Brown who convinced Congress that the hydraulic laboratory would solve the problems of navigation and flood control. Outstanding achievements have resulted from the tests made and it was under the personal supervision of General Ferguson that the laboratory was constructed after being authorized by Congress. It not only serves the Mississippi River, but tests are made of other streams throughout the country.

General Ferguson's service alone on the Mississippi River, as president of the Mississippi River Commission, has been of such character that warrants the statement often made that he ranks among those who have been recognized as the great men of the Engineer Corps of our Army. His career, however, since he was commissioned as second lieutenant, Corps of Engineers, in 1898, is replete with outstanding service from beginning to end.

Below will be found a statement of his military service:

Born August 14, 1875, in Waynesville, N. C.

Appointed to United States Military Academy from North Carolina.

Cadet, United States Military Academy, June 15, 1893.

Additional second lieutenant, Corps of Engineers, June 11, 1897.

Second lieutenant, July 5, 1898.

First lieutenant, January 29, 1900.

Captain, April 23, 1904.

Major, February 27, 1911.

Lieutenant colonel, May 15, 1917.

Colonel, Engineers, National Army, August 5, 1917.

Accepted, August 16, 1917.

Brigadier general, United States Army, August 8, 1918.

Accepted, August 26, 1918.

Honorably discharged as brigadier general, United States Army, only, June 15, 1919.

Colonel, July 1, 1920.

Bachelor of Science, United States Military Academy, 1897.

Graduate: Army War College, 1913 and 1921; Staff College, 1905.

Detailed as president of the Mississippi River Commission, with the title of brigadier general, Corps of Engineers, and rank, pay, and allowances of a brigadier general while so serving, from June 15, 1932 (sec. 8, act of Congress approved May 15, 1928).

SERVICE

He was on graduation leave from June 11 to September 30, 1897; on duty in the sixth lighthouse district, Charleston, S. C., to April 11, 1898; temporary duty at Willets Point, N. Y., April 12 to 28, 1898; with Company E, Battalion of Engineers, West Point, N. Y., to April 20, 1898; en route to and at Port Tampa, Fla., to June 6, 1898; on board steamship *Alamo*, Tampa, Fla., to June 14, 1898; en route to Cuba to June 20, 1898. He served in the Santiago campaign, Cuba, War with Spain, participating in battles at Aguadores, July 1, 1898, and San Juan, July 2, 1898.

He was en route to the United States from August 22 to 28, 1898, and at West Point, N. Y., to December 10, 1898. He served with Company B, Battalion of Engineers, at Willets Point, N. Y., from December 10, 1898, to July 5, 1899; en route to the Philippine Islands to (sailed July 13, 1899) August 10, 1899. While in the Philippine Islands he participated in the Philippine Insurrection, being in action at Porac, September 28, 1899; at Angeles in October 1899; Selan, January 7, 1900; and San Diego, January 21, 1900.

He was in command of a detachment of Company B, Engineers, with the Ninth Infantry, en route to China with the China Relief Expedition, June 27 to July 9, 1900; and in China, to July 19, 1900; Chief Engineer Officer, China Relief Expedition, July 20, 1900, to May 20, 1901; en route to

Manila, P. I., to (sailed May 27, 1901) June 5, 1901. He participated in the battles at Peitsang August 5, 1900; Yangtsun, August 6, 1900; and Pekin, August 14 and 15, 1900.

He served with Company B, First Battalion Engineers, in the Philippine Islands, from June 5 to September 29, 1901; en route to the United States (New York City) to December 1, 1901; on duty in The Adjutant General's Office, Washington, D. C., from December 4, 1901, to June 15, 1903; on leave to August 15, 1903; on duty in the Department of Civil and Military Engineering, United States Military Academy, West Point, N. Y., from August 20, 1903, to May 25, 1904; on leave to August 31, 1904; student, Army Staff College, Fort Leavenworth, Kans., from September 1, 1904, to July 9, 1905; on leave to August 20, 1905; assistant instructor, Infantry and Cavalry School, Fort Leavenworth, Kans., to July 3, 1907; on duty under officer in charge of engineer works, Montgomery, Ala., to October 1, 1907; in charge of defensive works at Pensacola, Fla., and river and harbor improvements in the Montgomery, Ala., engineering district, to (attending *Maine* Board meeting, Washington, D. C., Aug. 29, 1910) September 4, 1910; in charge of raising the battleship *Maine*, Habana, Cuba (sailed from the United States, Sept. 4, 1910) to August 10, 1912; en route to the United States to August 12, 1912; student, Army War College, Washington, D. C., to June 14, 1913; district engineer, Milwaukee, Wis., July 1, 1913 to (temporarily department engineer, central department, Chicago, Ill., Aug. 13, 1913, to Mar. 31, 1914) March 12, 1917; district engineer, New London, Conn., March 13 to June 15, 1917; and department engineer, northeastern department, Boston, Mass., to August 25, 1917.

He was assigned to the One Hundred and Fifth Engineers, Thirtieth Division, August 22, 1917, and was in command of that regiment at Camp Sevier, S. C., to—on detached service with the Sixty-fifth Engineers, Washington, D. C., January 4 to March 20, 1918—May 18, 1918; en route to France, via England, to June 10, 1918; acting corps engineer, Second Army Corps, American Expeditionary Forces, June 10 to October 3, 1918 (participating in Somme offensive, Aug. 8 to Oct. 3, 1918; en route to join the Second Army and awaiting assignment as Army engineer, to October 8, 1918; en route to the United States (sailed Oct. 16, 1918), to October 24, 1918; awaiting orders at Newport News, Va., to November 11, 1918; commanding port of embarkation, Newport News, Va., to May 29, 1919; on duty at port of embarkation, Newport News, Va., to—temporarily commanding, June 10–12, 1919—July 28, 1919; district engineer, Pittsburgh, Pa., to August 6, 1920; student, Army War College, Washington, D. C., to June 1, 1921; on duty in the office of the Assistant Secretary of War, Washington, D. C., as Director of Procurement and Director, Army Industrial College, to January 16, 1928; division engineer, Gulf division, New Orleans, La., from January 18 to May 24, 1928; division engineer, central division, Cincinnati, Ohio, to October 26, 1929; division engineer, South Atlantic division, Norfolk, Va., to June 12, 1932.

He has been president of the Mississippi River Commission and division engineer of the lower Mississippi Valley division, since June 15, 1932.

He was commended highly by Capt. T. H. Rees, Corps of Engineers, for zeal, good judgment, and untiring energy displayed in execution of the work in the Santiago campaign.

He was commended by Capt. W. L. Sibert, Corps of Engineers, for repair of washout on railroad near Tarlac, P. I., November 11–20, 1899; also for reconstructing the railroad north of Angeles, P. I.; by Col. J. H. Smith, Seventeenth Infantry, for road repairs in connection with the operations in Pampanga Province, P. I., in November 1899; by Brig. Gen. T. Schwan, for energy shown during expedition to Cavite January 4 to February 8, 1900; by Brig. Gen. J. H. Wilson, for services on expedition in vicinity of Hun-Ho River, China, September 17–18, 1900. He was recommended for brevet captain, United States Army, for gallant conduct in action at Yangtsun, August 6, and Peking, China, August 14 and 15, 1900.

He was also commended by the Honorable J. M. Wainwright, The Assistant Secretary of War, in 1923, for the development of an adequate plan for the assurance of matériel and industrial organizations essential to wartime needs.

He was awarded the Distinguished Service Medal, with the following citation:

For exceptionally meritorious and destinguished services. As chief engineer of the Second Army Corps and later of the Second Army, he demonstrated high professional attainments and marked initiative. Through his foresight and skill in directing important technical operations he was a notable factor in the successes of the combat troops, rendering invaluable services to the American Expeditionary Forces.

We hear a great deal concerning industrial preparedness. Two years after the Great War it was recognized that in order successfully to prosecute a war industrial preparedness was essential. As I have indicated in his record, it was General Ferguson who was responsible for the development of the plan which has been in operation for over 15 years. The War Department, as a result, knows today what every outstanding industrial establishment in the United States could do in time of emergency.

I wish to express the hope that some day General Ferguson will prepare a book outlining his experiences of over 40 years with the United States Corps of Engineers.

It is my understanding that a movement is on foot to grant some recognition to this distinguished engineer. Congress would do well to recognize his faithful service. Such recognition is undoubtedly deserved.

A Splendid Member of Congress

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 23, 1939

Mr. LUDLOW. Mr. Speaker, according to my way of thinking, there is no more valuable Member of Congress in either branch than the gentlewoman from New York, the distinguished Member at Large from her State, Hon. CAROLINE O'DAY.

To her I pay my humble tribute of respect for her forthrightness, for her courage, for her great humanitarianism.

The underprivileged of America have no stauncher defender than Mrs. O'DAY. Her heart beats in rhythm with the heartbeats of the common people. I have been surprised to observe how often the periphery of her very active life touches the poor and unfortunate, always in a helpful and inspiring way. The great masses of our people who earn their living by the sweat of their brows have no better friend than Mrs. O'DAY. Her record as a Member of this body is a record of steadfastness in every cause that tends to lift her fellow beings to higher and happier levels of living. All of us recall, from our recollections of the debates on this floor, how often and how devotedly she has pleaded the cause of those who needed a friend. If there is one trait of her character I admire more than another it is that when she makes up her mind that a course of action is right and just, no power on earth could swerve her from her allegiance to that cause.

The State of New York made a fine contribution to the public service of the Nation when it sent Mrs. O'DAY to Congress. And I hope that she may be kept here many years to continue her loving and efficient service for the common people of America.

She is a devoted champion of democracy—the democracy of Jefferson, at whose table is always spread a feast of love, and whosoever will may come. She would build up the democratic processes and minimize the possibility of war by giving the people who have to suffer and die and bear

the unspeakable burdens and griefs of war the right to vote on participation in foreign wars, and the war referendum resolution I have introduced has no more sincere and earnest champion than Mrs. O'DAY. Recently she appeared before the Senate Judiciary Subcommittee and made a very impressive statement in support of this proposal. I esteem it an honor to submit her statement for printing in the RECORD, where I hope it will be read by millions of our fellow citizens.

Her statement was as follows:

When in January of last year the Ludlow amendment was brought out of the Rules Committee by petition, terrific opposition was brought to bear from many sources. As a result, many who signed the petition believing in its rightness, found it expedient to withdraw their names and their support, and they voted against its consideration by the House. No vote was allowed on the amendment itself.

Gentlemen, that amendment can never be put to death. It will come before Congress again and again, as long as there are men and women in the world who see the monstrous injustice of sending our young manhood across the seas to perish in foreign wars without first hearing from them whether or not they believe the cause justifies the sacrifice they will be called upon to make.

We have learned from bitter experience that democracy cannot be preserved to the world though we sacrificed hundreds of thousands of our youth in the effort to do so.

It is an admirable thing to protect American property in foreign lands, but not to the point of slaughter for its security.

It is an admirable thing to rescue the suffering and persecuted minorities from countries who seek to annihilate them, and we are justified in doing so by every measure short of war.

This determination to keep our armies here at home does not mean that the United States have lost their courage. It does mean that they have lost their illusions as to war. The people of Europe have lived through the most terrible war in history and we have seen the misery that resulted to victor and vanquished alike. We see the horrors that war has inflicted upon China and Spain, the ruthless murder of defenseless men, women, and children; yet if our country was attacked or invaded, every man and woman who loves it would rush to its defense.

But why should our men be sent overseas to fight for countries not their own and for causes that have their roots in ancient quarrels in which the United States were never involved?

The Ludlow amendment gives the people of these United States the right to say by their votes, except in the case of attack or invasion, whether or not their Army shall be sent.

It gives the man in the street, who later becomes the man at the front, the right to choose between possible death in foreign lands and a life spent in the upbuilding of his own beloved country.

It gives this greatest democracy of the world the opportunity to take up the challenge flung to it by certain dictator nations.

When this Ludlow amendment is passed we will have proved to the world that America really lives democracy; that it is a living, vital way of life which makes for peace, contentment, and a loyal, free citizenry.

Mr. Chairman, though this amendment may not pass this year, though it may not pass next year, though I may not live to see it pass, successive generations of mothers will keep this amendment alive. It will be brought to Congress again and again until finally it is passed, and I hope it will be during my lifetime.

Frances E. Willard Memorial Stamp

EXTENSION OF REMARKS

OF

HON. U. S. GUYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

RESOLUTION OF THE KANSAS YOUTH TEMPERANCE COUNCIL

Mr. GUYER of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted at the annual convention of the Kansas Youth Temperance Council on June 20, 1939:

And that whereas it has been the policy of the Post Office Department to issue stamps commemorating citizens of outstanding achievements; and whereas the year 1939 marks the one hundredth anniversary of the birth of Frances E. Willard, educator, stateswoman, and temperance reformer; and whereas the anniversary of her birth is being observed by educational, humanitarian, and philanthropic organizations both here and abroad: Be it

Resolved, That the Kansas Youth Temperance Council Federation ask a Willard commemorative stamp be issued during this centenary year; and be it further

Resolved, That copies of this resolution be forwarded to the Postmaster General and to our United States Congressmen in Washington, D. C.

"Surplus" Distribution—Review of Discussion of Farm Prices and Money Supply With the Bureau of Agricultural Economics

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

Mr. CRAWFORD. Mr. Speaker, public charity or relief, in distributing a so-called surplus of the things idle men and women need but paradoxically cannot earn and buy for themselves, certainly was not planned, when the New Deal began its war against depression, to run on into a third term of doling and boondoggling.

Now, however, the so-called temporary emergency powers granted by a panicky Congress are being woven into a bureaucracy quite as futile as it is permanent in its costly failure to prime the pump of private enterprise and put men and machines to work again. Why?

Has New Deal thinking concluded that the efficiencies and mechanisms of modern science are creating all this unemployment even while the machines themselves are largely idle? The gentleman from California [Mr. VOORHIS] has asserted that "everyone can see that never again will all the available workers of the Nation be needed by our industries." But who is so blind that they cannot see Germany, with quite as many modern efficiencies as we have, yet short of labor, while we find ourselves sucked into a whirlpool of costly public doles and boondoggling by the failure of private enterprise, which in turn cannot be revived seemingly because of excessive public spending. This is what is commonly called "a pretty kettle of fish"; in short, a dilemma. We seem caught in a vicious circle of circumstances from which there is no escape. But is a spirit of defeatism the American way out? Shall we adopt the counsels of despair and turn away from liberty and democracy?

PERMANENT DOLES?

Democracy, Mr. Speaker, can only justify itself by its works. It can only be a means, not an end. Surely no military threat from dictators can be so critically dangerous to the institutions of liberty as are chronic, involuntary unemployment and Government doles. Both our President and Germany's dictator have pointed this out, the one in deep concern and the other in derision. As long as such a situation continues dictators can justify anything they choose to do in rescuing the world from its sorry idleness, even though that rescue be as fleeting and as illusory in the long run as the methods of inflation with which it is being accomplished.

Despite this obvious peril to liberty in permanent doles, we are deliberately transforming our supposedly temporary relief activities into a part of the permanent business structure. Subsidies in the guise of scrip, ostensibly restricted in use, are now being experimentally inaugurated. The existing system for handling surplus commodities in relief has been, indeed, a clumsy makeshift. But the cure for these anomalous expedients is worse than their disease. The need for making this relief permanent in form with scrip subsidies for regular trade channels, as against the possibility of escape by entirely abandoning such an emergency function of government, is alarming, indeed, particularly when we are assured by the Secretary of Agriculture that only (?) "if this plan (sic) is fully successful, it means that the day is not far distant when all of the people of the United States will be adequately nourished."

What are the underlying reasons for continued need for doles? Why the continuing paradox of needless poverty in the midst of plenty? Is it true, as so commonly alleged with an air of authority, that agricultural abundance, because of its alleged effect on farm prices, is the cause of this anomalous poverty? Is the Government's duty comprised in assuming direct responsibility for unemployment and farm relief while it shifts the blame for farm price disparity to a mythical venality on the part of big business in profiteering through alleged monopoly as the cause of unemployment and depression?

FALSE PREMISES

To me all this has seemed an utterly false premise. Farm surpluses and industrial monopoly effects are results, not causes, of the conditions that bring on disparity as between farm and industrial prices. Nor is there official, expert sanction for the current theory to the contrary under which domestic production and marketing control laws have been enacted. I believe I can present conclusive evidence in support of this statement in the form of opinion and information afforded me, very generously during the past several months, by the Bureau of Agricultural Economics in conferences and correspondence dealing with the problem of farm surpluses and their relation to price levels.

In a letter dated July 2 of last year, the acting chief of the Bureau has this to say of the relation between domestic production per capita and the average price of grain crops since 1910:

It is evident from this graph (of prices and production) that the relationship between production per capita and prices is not very close. There are several reasons for this. The most important is that the general price level is very important in affecting grain prices, and in some years changes in this factor much more than offset changes in supplies.

The Bureau also noted the partial effect of world markets. To this I replied under date of January 4, 1939, as follows:

With you, I recognize the limitations of purely domestic considerations in the grain market, and let me say that I am interested to note that the policy of domestic production control does not take these facts into consideration. Am I correct in assuming that the Department has not heretofore attempted to establish what relation may have existed between production and price in this field?

Further, I said:

Since it is parity of price levels which has been and is interesting the Government so much (thus its investigation of monopoly effects) as the goal of its restrictive policy, I am especially interested to note your statement that the "general price level is very imporant in affecting grain prices." In this connection, may I respectfully call your attention to a recent volume on The Theory of Prices, by Dr. Marget, of the University of Minnesota. In chapter XVII of this scholarly treatise the "plurality of price levels" is discussed, and it is noted that the weight of opinion holds that the purchasing power of money is not to be interpreted as being expressed by any general price level index. Prices which are not involved in the means of production (i. e., in capital goods the value of which is set by capitalizing their productive capacity at the rate of interest) seem to be preferred by many authorities.

As a member of the Banking and Currency Committee of the House as well as through personal investments in a farming and ranching enterprise along with heavy manufacturing, I have taken an interest in this relationship and have noted especially the recent resolutions of the Farm Bureau Federation at its convention in New Orleans favoring a limited index of raw materials as a monetary measurement; also, that Hawtrey, Goodraain, and others are supporting this selection of the more sensitive indices as the true reflection of the purchasing power of money, thus abandoning the retail standard because it is in effect an accumulation of costs that represent a general index and so does not disclose money conditions.

I have heretofore had prepared by the Federal Reserve Board an index graph of money supply and income per capita and I am returning a copy of your chart with these figures plotted on it. Referring to the "equation of exchange" (MV equals PT) and assuming T to be a minor variable much as grain production is, I call your attention to the remarkable correlation between these major movements of grain prices with which price disparities and the business cycle are associated, and the movement of money incomes. Allowing for the factor (V) of speculative shifts in the velocity of money, we may fairly conclude, it would seem, that we are confronted with a monetary and not with a surplus-production problem. Were the quantity of money prevented from expanding and contracting as it is seen to do in closely following speculative shifts in prices, so as to prevent the gyrations in money income that are obviously associated with the business cycle and changes in the value of money (as reflected, say, in the trend of a moving annual average of grain prices), is it now pretty certain that the difficulty of price disparities would be eliminated and with it the need for the futilities of regimented price-fixing and restriction on real income and consumption that are being attempted?

Replying on January 19, the Bureau stated:

The Department has studied the relationship between grain production and prices. The Outlook Reports, issued by the Bureau of Agricultural Economics for many years, have contained frequent references to these relationships as they have developed currently. The Bureau has not published the results of more formal studies dealing with this subject, mainly because the available data do not cover a sufficient number of years to warrant definite statements of exact quantitative relationships. Each year, as new data become available, we are enabled to test the validity of previous analyses, and hope to be able to publish something soon. * * *

In our letter of July 2 the importance of the general price level in relation to the movement of grain prices was noted. Prices of the different grains are affected differently by changes in the price level, due to a number of factors which can hardly be discussed in a letter. It is hoped that you have not received the impression that the Department of Agriculture has at any time taken the position that movements of the general price level are not important in affecting changes in the price of individual farm products. No doubt you have seen departmental publications in which the importance of this factor has been stressed. On the other hand, neither economic theory nor analysis of the facts would support any conclusions that changes in the general price level represent the only important influence in affecting prices of agricultural commodities, or that prices of individual commodities would reach a satisfactory level and become stabilized if the general price level were raised and stabilized. Variations in economic conditions are the result of combinations of factors too complex to be explained or dealt with in terms of only one variable. It seems quite evidently not "certain that the difficulty of price disparities would be eliminated" if it were possible to stabilize the price level, although such disparities would be greatly reduced.

In short, the Department has been and is fully cognizant of the desirability of a stable general price level, and would look with favor upon any practicable means of attaining such an objective, a result which would be highly beneficial to farmers. Differences of opinion may exist with respect to proposed methods for attaining that desirable objective, and with respect to detailed questions arising in connection with the general problem, such as the manner in which the so-called general price level may be measured statistically. These latter problems are in many respects not within the purview of the Department's activities.

PRODUCTION CONTROL UNWARRANTED

Under date of February 11, I replied:

Thank you very much for your letter of January 19, with data enclosed. I greatly appreciate this aid. * * *

I note, indeed, that the Department has not felt warranted as yet in publishing material disclosing the statistical relation between domestic grain production and prices. Does the administration nevertheless feel warranted in having advanced a program of domestic-production control involving heavy expense and taxation on the unsupported theory that price parity can thus be attained?

I trust you may have patience if I reiterate what I evidently did not make clear in * * * my letter of January 4. By citing other than departmental authorities, I attempted to indicate my belief that the Department is not warranted in its idea, now restated, I believe, at least in substance, if I understand you, in your letter of January 19, that the general price level affects grain prices. On the contrary, it is certainly changes in farm (especially grain) prices that affect the general price level; and there seems to be good authority for the opinion that the general price level neither affects particular prices nor has any other economic significance.

There is assuredly nothing that I can see in my letter of January 4 which warrants your suggestion that I have contended that a stable general index of prices would assure "that the difficulty of price disparities would be eliminated." On the contrary, I specifically avoided any such contention and suggested rather that gyrations in money income are in fact closely associated with those large fluctuations in the grain price index that produce the disastrous disparities which your Department in its domestic production-control policy obviously, and in my opinion speciously, associates rather with the size of grain supplies. I seek to find upon what authority, logic, or experience the Department takes this position. Will you please enlighten me specifically in this regard?

I would like to suggest that we take the available figures for a weighted, moving annual index of grain prices, employing the average for the whole period since 1910 as the base figure (100), and plot the result alongside a similarly based presentation of a per capita domestic production rate, a per capita money supply (excluding time deposits), and a per capita money income; for it seems to me that this will facilitate a more intelligent approach to discussion of these problems of price conditions from both the monetary and commodity angle. I would suggest that conclusions which are unreasonable on an a priori basis may be definitely excluded by statistical lack of correlation while those which seem reasonable may be supported by some statistical evidence of correlation.

I trust that these basic, a priori considerations in price theory do not lie outside the purview of a department of our Government which is sponsoring legislative action in control of prices as much as is the Department of Agriculture. So very much attention is now being devoted to this subject that I feel this discussion to be very germane. I do hope you will reason further with me. Would you let me have your thoughts on what department of the Government, if not the Department of Agriculture, "these latter problems lie," referred to on page 3 of your January 19 letter?

Dr. Tolley then replied:

This will acknowledge your letter of February 11.

It is difficult to discuss such complicated matters within the confines of a letter. Indeed, many thinkers have set forth their ideas on these subjects in voluminous books, which nevertheless have failed to clarify completely their positions with respect to such knotty problems. There is little wonder then that we may occasionally misinterpret the intent or implications of statements made in relatively brief correspondence.

Some of our difficulties presumably arise because of different interpretations placed upon the term "general price level." For example, we would quite agree with your statement that changes in farm prices affect the general price level. The latter merely reflect changes in the component elements which the term is interpreted to include; hence changes in the general price level do not cause but merely reflect changes in the prices of individual commodities. Economists, however, frequently use the term "general price level" merely to designate conveniently those monetary and other forces which bring about concurrent similar directional changes in the prices of a large number of commodities. For example, it might be said that wheat rose in price in 1933 partly because of a rise in the general price level, although what is actually meant is that wheat rose in price parity because of the influence of dollar devaluation and other factors which similarly affected the prices of many other products. No doubt economists have used the term "general price level" very loosely, particularly with respect to its cause-and-effect relationship with other economic phenomena. It is much easier to try to adapt our terminology to the usual custom rather than to invent new modes of expression leading to needless theoretical disagreements.

It seems quite evident that much of our apparent differences of opinion with respect to certain problems merely reflect these differences in terminology and interpretation. We would not be inclined, as you seem to think, to disagree in any essential way with the suggestion of your letter "that gyrations in money income are in fact closely associated with those large fluctuations on the grain-price index that produce the disastrous disparities * * *." Certainly changes in monetary and business conditions, affecting money income, have been closely associated with the important general movements of prices of grains and many other commodities, particularly raw materials, which have been closely linked with the development of disparities between prices of different groups of commodities. Since wheat is ordinarily sold on a world market, however, the changes referred to frequently are world-wide rather than strictly domestic in character. This whole question is rather thoroughly examined in a publication of the Food Research Institute, Leland Stanford University, Palo Alto, Calif., entitled "Monetary Influences on Post-War Wheat Prices."

With reference to the question raised in the last paragraph of your letter, may I point out that other Government agencies are charged with responsibility for statistical computations designed to measure general economic conditions, such as money income and the so-called general price level. The Bureau of Labor Statistics issues index numbers of wholesale prices. The Federal Reserve Bank of New York City prepares a series of index numbers designed to represent a broader measure of changes in general prices than the index numbers published by the Bureau of Labor Statistics. The Department of Commerce, the Board of Governors of the Federal Reserve System, and the Treasury Department are, perhaps, more directly concerned than is this Department with the measurement of such items as money income, and with various proposed measures designed to stabilize commodity prices through the manipulation and stabilization of monetary conditions. The Department of Agriculture, of course, is essentially but still indirectly concerned with these matters, which, for the sake of efficient governmental organization, Congress has apportioned for direct action to those departments directly concerned.

We have been glad, however, to go into these matters with you and Mr. Potter, and hope that such information as we have provided has been of use to you.

MONETARY CONTROL NECESSARY

To this on April 3, we replied at some length, as follows:

Your willingness to discuss these pressing problems candidly despite the existing confusion resulting from the use of terms "very loosely" by "economists" is to be highly commended. I have come to realize only too well, in studying these things over with some help from Mr. Potter, that it is hardly possible to fully clarify these confusions in the necessary brevity of correspondence. My hope is, however, to nullify the widespread impression that there is official, expert sanction for the theory that agricultural surpluses are causes rather than effects of desparate price conditions. It seems clear, indeed, from these letters that it is agreed:

1. That there is little reason for belief that Government control of domestic production or marketing can bring parity to crop prices.

2. That there is reason to believe that monetary controls could restore and maintain parity since disparities are admittedly produced by fluctuations in money income per capita.

May I observe that it does seem to me the Department of Agriculture has leaned backward in a seeming effort to avoid interpreting low farm prices as the result of money conditions. If it is within the purview of the Bureau of Labor Statistics to discover, as it does in Bulletin 656 (pp. 23–24), that the general price-level index which it prepares (partly with figures obtained from your Bureau) is not a monetary index, then why should it not fall within the purview of the Bureau of Agricultural Economics to discover whether or not the crop-price index which it gathers is, and to what extent it is, and why, a monetary index? How, indeed, does it happen to fall within the province of the B. A. E. to take the position, in this correspondence, that the "general price level," contrary to the opinion of the B. L. S. which issues the index, is a monetary index which can be used (as evidenced by your definition of the expression in your last letter, closing with the remark about devaluation and the price of wheat in 1933) in correcting agricultural indexes for monetary changes?

Is not the Bureau skating on thin ice in a field in which it is presumably engaged in advanced research, in thus employing, on the ground that the misuse of terms involved is a "usual custom," a price analysis which the B. L. S. has rejected? Is it not this very "custom" that has led to so many "needless theoretical disagreements"? Is it, indeed, a needless disagreement to point out that devaluation or other monetary measures affecting farm prices has not "similarly affected the prices of many other products," but on the contrary, always affects prices dissimilarly? How can you make your position here (on the first page of your letter) agree with the admission in the next paragraph that it is disparity, and not similarity, that is the significant result of monetary changes?

I am moved, indeed, to contrast your emphatic agreement as to the relation of changes in money income to agricultural disparities, stated and then restated in your last letter to me, with your comment to Representative Lord, of the House Agricultural Committee, on the chart submitted to him under date of March 21, that "The chart shows no close relationship between prices of grains and money supply, but there is a general tendency for major movements of prices to vary with the supply of money over a long period of time. However, the association between these items may reflect the influence of other factors operating in common on each of these series rather than the dependence of one on the other."

I quite agree with that last sentence. No proper interpretation of statistics can ever trace cause and effect. But please note the difference between this and my contention that "conclusions which are unreasonable on an a priori basis may be definitely excluded by statistical lack of correlation, while those which seem reasonable may be supported by some statistical evidence of correlation."

It may readily be granted that it is not for the B. A. E. to decide what should be done to correct the money conditions which affect farm prices. But surely the Bureau charged with gathering and studying those prices can hardly have been authorized to adopt an incorrect analysis in order to avoid studying those correlations existing between monetary factors and farm prices which might bear on such measures as domestic production control as a parity price policy.

Let me ask you, does not what may seem mere quibbling over terms in these economic analyses, often uncover serious confusions which conceal specious interpretations of cause and effect? As Hogben notes in the epilogue to his Mathematics for the Million, we cannot reason from statistical relations or mathematical equations without considering the natural order. Does the egg lay the hen, or the hen the egg? Is it just quibbling to suggest that such a slip in logic is involved in your expression (quite conventional, indeed): "Certainly changes in monetary and business conditions, affecting money income * * *."

It is certainly not self-evident that money income is not itself a monetary condition, nor is it clear that the glittering generality business conditions is the goose that lays the golden egg of money income. On the contrary it is obvious, as you have now conceded, that money income determines not the mean level of all prices but, more significantly, their relations; and that these relations—parities—are the key to business conditions.

The doctrine that industry and labor could, if they only would, so administer prices in depression as to prevent the monetary cycle, and so the depression, from developing, seems to me to have gotten cause and effect inverted quite as has the idea that a pegged parity in farm prices can produce money income and so maintain prosperity and full employment. Are not matters made worse, not better—farm surpluses and industrial monopoly increased by policies based on such theory? It seems to me highly mischievous for the administration to permit its financial authorities—I refer to Governor Davis, of the Federal Reserve Board—to appear before farm groups and attempt to shoulder the blame for these monetary effects off onto organized labor and industrial monopoly as an alibi for our fiscal incompetency. It is farm prices, not industrial prices, that get out of step in the monetary cycle and require a monetary change to get them back to parity in such a way as to get industry to going again.

Under date of April 22, Dr. Tolley offered a brief summary of the Bureau's position:

Your very interesting letter of April 3 has been received. In response, and in view of your wide knowledge of economic research,

I feel that I can sum up my view with utmost simplicity, omitting the many refinements and qualifications which you will understand are always implied.

In evaluating the movements of commodity prices and price relationships, this Bureau always has given recognition to forces primarily of monetary origin, especially those grounded in war conditions or in outright governmental financial controls. Beginning back with our contribution to the report of the joint congressional committee investigating the causes of the agricultural depression in 1931, all of our price analysis in its broadest aspects has taken account of monetary elements involved.

On the other hand, however, a great body of research in the price field—studies made not only here but in many other institutions—universally has supported the general conclusion that the supply of an agricultural commodity, in ordinary times and under reasonably free market conditions, is a fundamental price-making element.

Perhaps the question more or less sums down to one of relative emphasis. The conclusions by which this Department's programs have been guided have not ignored monetary nor other price-making influences, but they have placed emphasis especially upon the supply factor because that is the approach which seemed most promising under the circumstances, and most appropriate to the Department's efforts. On the other hand, the Department repeatedly has taken the position that the agricultural problem could not be completely solved by dealing only with adjustments in supplies, and that action designed to improve demand also is highly desirable.

This problem of what makes prices, both absolutely and in relation one to the other, is, of course, an old, old problem. One is reminded of this, for example, by reading the discussion in the House of Commons following the Napoleonic wars. In all probability there will be differing schools of thought on this subject long after our time.

In conclusion, let me say that I am glad to have had this further and very able expression of your views. I particularly appreciate the courteous and objective plane upon which you have advanced what is, and probably must remain, a highly controversial subject.

To this statement I take exception only as to its untenable suggestion that this problem "must remain a highly controversial subject" merely because the new and old deals of history have thus far failed to solve it. I beg to suggest a little red-blooded, American determination to solve it. To that end I am offering this correspondence for the RECORD.

It seems to me the most extreme and dangerous sophistry, most disastrous to clear thinking and rational social behavior, to charge all proposals for money reform with being utopian panaceas and the work of "crackpots." Most of such proposals have an invaluable element of truth in them. None of them pretend that any money sytsem can avert physical catastrophes. Even a proper money-price system can operate normally only with normal, rational people in a normal environment.

The reformer, however, does recognize what his captious critic, laboring under the illusions arising of old in coinage standards, fails to recognize, namely, that the existing money system can be and is a cause of social catastrophe—of needless poverty—by operating irregularly in cycles of rising and falling prices. It is these characteristic difficulties attached to such a system of financially forced saving and investment, having the effect of "wage slavery," that are at bottom responsible for the doctrine of class struggle and the dictatorship of the proletariat that has corrupted "collective bargaining" into collective coercion.

A society operated on an irrational philosophy of scarcity as the basis of all economic values is certain to fall into groups attempting to enforce scarcity on each other, each in its own field. Out of this must come the tragic transformation of collective bargaining into collective bludgeoning, characterized by unemployment through destroying freedom to work and produce competitively. Camouflaged by group balloting and ostensibly representative government, dictatorship results. This is a step, difficult if not impossible to retrace, which has to a dangerous extent already happened here. History indicates such an arbitrary economy, no matter how altruistically conceived by its organizers either in the field of capital or of labor, never works for long without violent results.

Is it too late to save this Nation from such irrationality, by intelligent monetary reform?

Labor's Stake in the Florida Canal and a Letter From Hon. William Green, President, the American Federation of Labor

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

Mr. BOYKIN. Mr. Speaker, I desire to read to the House a letter which the Honorable William Green, president of the American Federation of Labor, recently directed to all Members of the United States Senate:

DEAR SIR: The United States Senate has before it for consideration S. 1100, a bill for the completion of the construction of the Atlantic-Gulf Ship Canal across Florida.

All evidence submitted to both Houses of Congress by the President of the United States and the War and Navy Departments declare that the building of the canal is a commercial and military necessity. According to the evidence, the project would safeguard, develop, and economize the commerce between the Mississippi Valley and Gulf States, on the one hand, and the States along the Atlantic seaboard on the other, and serve as an important element in national defense by safeguarding the transportation of water-borne troops, munitions, and supplies in time of war.

Furthermore, and very important, this project will come at a time when millions of workers are praying for employment. Because of this fact the executive council of the American Federation of Labor respectfully requests you as a Member of the United States Senate to give every support to the bill authorizing the completion of the canal.

Yours very truly,

WM. GREEN,
President, American Federation of Labor.

The President of the United States, the Secretary of Commerce, and the Secretary of War have formally transmitted to Congress recommendations that the Federal Government proceed with the completion of the Atlantic-Gulf Ship Canal, commonly called the Florida canal. This project was surveyed under President Coolidge and President Hoover and begun in 1935 under President Roosevelt as an example of the utilization of great Federal construction projects of a permanent character to relieve unemployment. The canal has been endorsed by the Governors of 36 States and by a large number of the Members of Congress. It has received the unqualified backing of such national organizations as the Mississippi Valley Association and the National Rivers and Harbors Congress.

This great enterprise has been and is being bitterly opposed by the management of the railroads, the great oil companies, and that portion of the press which reflects the views of these interests. This opposition has become so active as to seriously threaten the completion of the project, the far-reaching benefits of which to the average citizen throughout the United States are probably greater than those of any public work ever before undertaken by the Federal Government. Under the old and threadbare pretense of economy the politicians and the great corporate interests are making a determined effort to cloud the issue and defeat the interests of the general public.

The Florida canal is simply a short-cut for ships from the Gulf of Mexico to the Atlantic Ocean across the peninsula of Florida, for the purpose of shortening by many hundreds of miles the distance between the farming, cattle-raising, mining, and lumbering sections of the Mississippi Valley and the West, on the one hand, and the industrial sections of the East, on the other. This new trade route will open new markets, stimulate trade and industry, and generally reduce the cost of living in such vital commodities as bread, meat, clothing, shoes, building materials, and gasoline. The following is quoted from the report of the Chief of Engineers of the United States Army transmitted to Congress by the Secretary of War:

157. Population: The general area in the United States tributary to the canal—that is, the area where transportation costs on certain commodities to and from markets within and without the country should be reduced by the improvement—had a population in 1930 of 90,800,100, or about 74 percent of that of the Nation. Included in the area are 76 of the 100 largest cities of the country.

158. The total population included 76 percent of the total urban and 70 percent of the total rural population. Of those gainfully occupied in the United States, the following worked in the area tributary to the canal:

Percent of total employed in the United States

All persons gainfully employed	78
Agriculture	80
Forestry and fishing	62
Extraction of minerals	71
Manufacturing and mechanical industries	84
Transportation and communications	82
Trade	76
Public Service	76
Professional service	76
Domestic and personal service	76

159. Resources: Included in the tributary area are the majority of the Nation's total resources—finances, agriculture, forests, fisheries, minerals, and manufactures.

160. Finances: The Rand-McNally Bankers' Directory for 1935 shows the total banking resources concentrated in the area in December of that year to have been about $54,100,000,000, or 84 percent of the national total.

161. Agriculture: The area includes most of the great wheat, corn, livestock, and cotton belts, which are the mainstay of the money crops of the Nation. The total number of farms in the United States in 1935 was 6,811,999, comprising a total acreage of 1,057,954,000. Of these totals, 70 and 73 percent, respectively, were in the tributary area. The gross income of this area from crops and livestock in 1934 was $4,800,000,000, or 72 percent of the country's total.

162. Forests: The timber resources of the area in 1931 reached 53 percent of the national total. Those of the South are becoming more important yearly and large industrial concerns depending on forest products are migrating to the Gulf States annually.

163. Minerals: The area includes most of the great mining and manufacturing centers of the country. Minerals production within the area of 1923 amounted to $1,930,000,000, or 82 percent of the total for the United States. Noteworthy among the minerals is crude oil, which is vital to the pursuit of commerce and essential in modern warfare. A large percentage of our oil reserves are directly tributary to the canal.

164. Manufactures are always an index of prospective traffic, requiring, as they do, the movement of both raw materials and fabricated articles. Within the area under consideration there exist manufacturing industries of practically every description, the total output in 1933 having a value of $22,400,000,000, or 73 percent of the total for the United States.

165. Wholesale and retail trade: This is customarily considered a reliable index for appraising the demand for foreign and domestic shipments. The volume in the area tributary to the ship canal under consideration amounted to 81 percent of the total for the Nation.

The Secretary of Commerce has reported to the United States Senate as follows:

In recommending this project to Congress, the Chief of Engineers has placed its construction cost at $197,921,000, with annual charges for interest (at 3½ percent), maintenance, operation, and depreciation at $8,641,000. On the basis of the potential 1937 use and benefits of the project, there would thus be a net annual surplus of $6,293,000. It appears reasonably certain that this annual surplus will be substantially greater by the time the canal can be completed, and that it will continue to increase thereafter.

The magnitude of these savings undoubtedly justify its cost and emphasize the desirability of its construction.

In spite of these official reports and in spite of the numerous thorough investigations of all phases of the project by the departments of the Federal Government in both Republican and Democratic administrations, the railroads and oil companies continue to do everything in their power to defeat this enterprise. They continue to harp on the old and now thoroughly discredited arguments—first, that the oil companies say that, even if the canal is built, their ships will not use it; and, second, that the canal will damage the underground water supply of Florida. The complete refutation of these arguments by the Government experts is contained in the report of the Chief of Engineers to Congress—House Document No. 194, Seventy-fifth Congress, first session—and need not be gone into here.

At the request of the President, a bill for completing the project has been introduced in the House of Representatives (H. R. 3223) by the gentleman from Texas, Representative J. J. MANSFIELD, chairman of the Committee on Rivers and Harbors; the bill has been reported out by the committee with a recommendation that it be passed and is now pending before the House (Rept. No. 509).

It is high time that labor took account of the threat to its own welfare which the opposition to this project constitutes. Only a casual examination is necessary to show that those who are opposing the Florida canal are those who have usually opposed labor in the past. This fact alone should be sufficient to show where the interests of labor lie in this matter. However, above and beyond this negative consideration, there are positive, immediate, and definite advantages to labor in the construction of the canal which warrant its militant support.

A program for the construction of appropriate, useful, and permanent public works by the Federal Government as a means of relieving unemployment and stimulating industry, rather than temporary relief projects which tend to undermine wage levels, is a vital consideration for labor. Victory for the Florida canal project at the present time may well mark the turning point of Federal policy in the direction desired.

The plans of the War Department for the construction of the canal provide for initiation of the work immediately upon appropriations by Congress. All plans are completed for resumption of operation where they were left off in 1936. A 6-year construction program is proposed. Estimates and plans are based on labor at prevailing wage scales, not under W. P. A. regulations.

Of the total cost of $197,921,000 yet to be expended, the following approximate division may be made:

Clearing	$1,392,000
Dry excavation work	17,500,000
Dredge construction	18,000,000
Dredging work	130,000,000
Hydroelecric construction	5,824,000
Bridge construction	17,748,000
Ferry construction	178,000
Construction of aids to navigation	1,282,000
Mooring construction	162,000
Revetment construction	2,067,000
Highway construction	524,000
Shop and housing construction	2,417,000
Sanitary construction	827,000
Total	197,921,000

Information furnished by the office of the Chief of Engineers indicates that the skilled labor which will be represented on the canal work will include the following—this is a partial list:

Boilermakers, electricians, machinists, blacksmiths, teamsters, stationary engineers, crane operators, bricklayers, plasterers, plumbers, pipe fitters, tile setters, roofers, stonemasons, dragline operators, bridge carpenters, house carpenters, tool makers, molders, painters, firemen, mechanics, riggers, iron workers, sheet-metal workers, coppersmiths, dredge engineers, welders, shovel operators, cement workers, quarrymen, printers, barbers, locomotive engineers, motormen, truck drivers, signalmen, sawyers, cabinetmakers, millwrights, auto mechanics, calkers, boatwrights, linemen, hod carriers, glaziers, tractor operators, lever men.

The above represents labor which will be directly at work at the site of construction. The indirect labor required in the industrial plants of the North and the East, as well as in the mills of the West, has such a general spread that the effects of this project are Nation-wide.

At this point I desire to quote a letter from President Franklin D. Roosevelt to the chairman of the Rivers and Harbors Committee, under date of January 16, 1939, in which he states:

It has long been my belief that a Florida ship canal will be built one of these days, and that the building of it is justified today by commercial and military needs.

Also I quote from the report of the Committee on Rivers and Harbors of the House, which has reported out favorably H. R. 3223, providing for the construction of this project:

The policy of the construction by the Federal Government of river and harbor projects and improvements for navigation in

general, when these are found to be in the public interest and to be economically justifiable, will always form a basic element in any sound fiscal policy, and that this view is supported by the expressed legislative judgments of the Congress throughout our history. The authorization of the Atlantic-Gulf Ship Canal is governed by that policy. The work, already well begun, will necessarily require a number of years. Your committee recommends that its completion be now authorized.

In conclusion, it may be said that the opposition is not well founded; that the project is of unusual merit; that its economic justification is beyond question; that its benefits will increase with time and will accrue to a larger portion of our country and its population than those of almost any other Federal public work; and that its construction is needful and in the public interest.

The value of this project in naval defense has been urged by the Navy Department, and in this connection I quote a letter from the Assistant Secretary of the Navy, under date of March 9, 1939, in which he states:

It is the opinion of the Navy Department that by shortening the distance and providing an additional route for seagoing vessels between the Atlantic Ocean and the Gulf of Mexico the Atlantic-Gulf Ship Canal would be of definite value during war in the shipment of necessary material for both military and commercial use, as well as for the passage of naval vessels if sufficient draft is provided.

This enterprise is not only a great project conceived in the interests of labor and the public welfare generally, but it represents to an outstanding degree one of the fundamental policies of labor as regards Government works. Those who oppose it oppose directly the best interests and the considered policies of organized labor. Labor's stake in the Florida canal is too great to permit its being trifled with by politicians and selfish interests. Those in high office who would defeat great public undertakings of this kind have little studied their country's needs and little understand the aspirations of our people.

French Reciprocal Trade Agreement

EXTENSION OF REMARKS

OF

HON. HARRY SANDAGER

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

PRESS RELEASE OF THE RHODE ISLAND TEXTILE ASSOCIATION

Mr. SANDAGER. Mr. Speaker, I desire to extend my own remarks and include therein a press release of the Rhode Island Textile Association which further explains the havoc the French reciprocal trade agreement has created in the lace industry in Rhode Island, where the workers are receiving approximately four times and more a week than that paid to similar employees in France. The release is as follows:

According to C. B. J. Molitor, of the North American Lace Co., Philadelphia, which owns and operates the New England Lace Co. in Pawtucket, a brass dobbin winder in an American lace plant received $21.20, while in a French plant an operative received $5.40 a week for doing the same work. Twist hands (weavers) in the United States receive $55 a week, and in France the same type of employees draw $18 for a week's pay.

These comparative wage figures and others as startling are emphasized by Molitor in a letter to the Honorable Cordell Hull, Secretary of State, copy of which was sent to the Rhode Island Textile Association for the purpose of enlisting the Rhode Islanders in a cooperative campaign against this particular phase of reciprocal-trade treaties.

Molitor informs the Rhode Island association that French plants are enjoying prosperity and that their exports to the United States, due to the advantages that accrue under the terms of the American-French trade treaty, have increased amazingly since the adoption of the treaty in 1934.

In Rhode Island, where 60 percent of the American-made lace originates, the plants are practically flat, and as late as October 1938 a survey of 26 American mills showed employment at 34 percent of that in 1935. In the meantime imports from France of levers silk laces (other than veils and veilings; duty reduced) increased from 10,938 pounds in 1935 to 247,623 pounds in 1938, an increase of 2,149 percent. In the first 3 months of 1939, 110,195 pounds of these laces have been imported, as against 61,665 pounds for the same period in 1938, which would indicate that importations in 1939 would be nearly double the startling figures for 1938.

In levers silk veils and veilings (duty reduced) importations rose from 5,402 pounds in 1935 to 72,674 pounds in 1938, an increase of 1,245 percent.

Imports of levers cotton laces of 12 points or finer (duty reduced) in the first 3 months of 1939 amounted to 262,519 pounds, as against 96,528 pounds in 1938.

Imports of levers rayon veils and veilings in March 1939 amounted to 9,569 pounds, as against 3,730 pounds in 1937 and 4,049 pounds in 1938.

Commenting on the enormous increase in exports, La Phare de Calais, French newspaper, on January 28, 1939, stated under a three-column headline, which read "110,000,000 francs in lace manufactured in 1938, of which nine-tenths were exported to the United States—forty-five million in wages paid," that "the lace industry, which is one of the principal national industries, has already had for a certain time—that is, since the operation of the Franco-American treaty—a revival which cannot help but accentuate itself and indicates a continued success.

"One can assert that the revival in our industry was brought about by the Franco-American Treaty, which became effective May 6, 1936.

"From what precedes, one can prophesy happy prospects for 1939, lace being everywhere in fashion and prices permit meeting foreign competition.

"Let us rejoice with all our hearts for this revival of a wonderful industry for the benefit of the creators, its workers, and for the benefit of the entire Calais industry."

In the concluding paragraphs of his letter to Secretary Hull, Mr. Molitor included tables of wages paid in the United States and France for similar occupations, which showed that American workers received four or five times as much pay as their French competitors. The list of wages follows:

	United States	France
Workers (weekly wage):		
Brass bobbin winder	$21.20	$5.40
Spoolers	15.20	4.05
Warpers	30.00	5.94
Bobbin pressers	23.50	5.40
Menders	20.00	3.68
Sample girls	20.00	3.95
Card punchers	30.00	7.23
Machinist	35.00	9.20
Dyers (formula)	50.00	11.18
Twist hands (weavers)	55.00	18.00

Mr. Molitor, in closing his letter, stated that "thousands of American lace workers can go back to work tomorrow if our State Department would but correct a very inequitable situation. Let's put them back to work, Mr. Secretary!"

To this letter and a second letter of June 6, Mr. Molitor has had, as yet, no reply from Secretary of State Hull.

"Pay-as-You-Goism"

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

ARTICLE BY ELISABETH MAY CRAIG

Mr. OLIVER. Mr. Speaker, more and more columnists are coming to recognize the inevitable conflict that impends between the pay-as-you-go principle of old-age assistance as advocated by the Republican national platform of 1936, and by the Townsend Clubs of this country, and the present New Deal program which may properly be labeled the system of "borrow until you bust."

It is a pleasure to call the attention of the Congress and the country to one of the most incisive and intelligent interpretations of this issue as presented in the Portland Press Herald on June 24, 1939, by Elisabeth May Craig, one of the most capable columnists in the country:

[From the Portland Press-Herald of June 24, 1939]

INSIDE IN WASHINGTON

(By Elisabeth May Craig)

WASHINGTON, JUNE 23.—There is considerable dissatisfaction in the Senate with the revised social-security legislation passed by the

House. The administration has been laboring for years with this legislation; it set up an advisory committee of the best minds of the country, from all walks of life, and the conclusions of this committee were sent by the President to the House Ways and Means Committee. The committee had one of the most extensive hearings ever held (except on tariff). Yet there is dissatisfaction even within the administration, as to the revised bill.

First place, the bill halts between two principles. It started off with the principles of old-age insurance. This was to be supported by contributions from employer and employee. The flaw in this is that the great majority of the needy aged had nothing to contribute. So, old-age assistance was devised. This is jointly contributed by Federal and State Governments. Obviously, this was a departure from the contributory principles. There was still a vast field of needy aged where the contributory principle would not work. There were the agricultural workers, the domestics, the married women, and other casual workers. These were not covered by the contributory plan, yet they are the most needy in that they never have a chance to work and lay up very much for themselves.

So, in the revision the administration departed again from the contributory principle and proposed what are purely benefits. Also, it took away some of the money which would be contributed from the workers and their employers to pay over to those who do not contribute. This is the final blow to a defense of the contributory principle, since it is evidently unfair to claim that a system is insurance, if those who contribute have their returns given over to those who do not.

If it is admitted that all must be taken care of, out of the contributions of all, then the admission of one of the twin principles of Townsendism is made. That is, a flat old-age pension, paid out of common funds. And that is what the Republican platform of 1936 proposed. A pension to needy aged, paid for out of a tax widely distributed. This is the common ground that explains the liaison between Townsend and the Republican Party.

The Republicans do not entirely take the other twin principle of Townsendism, namely, that a sum larger than is needed for comfort, be paid to the old people, in order to spread purchasing power. There is no genetic relationship between these two principles. Dr. Townsend wants to help the old people and he wants to spread purchasing power. So he picked the old people as the ones to get the money, which they must spend in the month they get it, and must give up all lucrative employment. One of these principles is humanitarian, the other is economic.

A stumbling block in the way of the Townsend-Republican plan for a flat old-age pension, federally paid, is that the Supreme Court has said that tax money cannot be segregated for a specific purpose. The money collected for old-age insurance has gone into the Treasury and is being spent, with other tax money. The Treasury has a bookkeeping arrangement about putting I O U's into a box, for the old-age money, but that causes a lot of criticism. Also, the administration itself came to see the disadvantage of piling up a huge reserve from collections, and the revised bill will call only for a safe reserve. This is a compromise with the Republican demand for a pay-as-you-go system.

Dr. Townsend has come around to thinking that the best way to handle his proposal is through an amendment to the Constitution to permit segregation of money from a special tax for old-age pensions. This will take time and will probably be hot as the 1940 campaign gets underway. Also, probably, the issue of the administration hodgepodge for social security, versus the Republican Federal pension, will probably be clear.

The Anti-Third-Term Mythology

EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

ARTICLE FROM THE AMERICAN RELIEFER

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the American Reliefer:

[From The American Reliefer]

THE ANTI-THIRD-TERM MYTHOLOGY

(By O. M. Thomason, Willernie, Minn.)

I am not impressed by the anti-third-term pontifications being indulged in by worshippers at the shrine of Tradition.

The doctrine of only two terms for a President is a fiction and has no basis in law or common sense. Its invocation at this time springs from hopeful wishing and not from a desire to sustain a noble precedent.

And the fact that the same people who now see disaster in a third term for Mr. Roosevelt saw the same thing in a second term for him, should cause us to reflect.

Frankly (at least for the moment) I am for a third term for Mr. Roosevelt. Here are a few of my reasons.

At the present moment, I repeat, there's no man in sight as well qualified for the job as he is. I refer particularly to his humanitarianism—his devotion to human welfare—his constant strivings to put human rights (to buy time to think) above dollars and cents—even above a balanced Budget.

The human budget must never be sacrificed for the dollars-and-cents budget; the "claws" of the "economizers" have already betrayed what we may expect if they get in power. I shudder at the thought of what might today be our condition if Roosevelt had yielded to the clamor for a balanced Budget.

My mind goes back to 1931 and 1932. I drove through several States—Iowa, Nebraska, Colorado, New Mexico, Kansas, Oklahoma, Texas, Louisiana, Arkansas, and Missouri. Everywhere roads were flanked with people—hitch-hikers, mostly young men—some of them discouraged, and some at the point of desperation. And there were also old men—60 and over like myself—grey, gaunt, footsore. Also there were women—mothers and children.

In 1933 and 1934 I covered practically the same route again. The endless line of wayfarers had been swept from the highways—or at least they found welcome and shelter and good food and clean beds and shower baths and kind words at the transient camps. I know what I'm talking about. I partook of that hospitality—shared it unabashed—and thanked God for Franklin D. Roosevelt.

I remember distinctly the last 3 years under Mr. Hoover—the Hoovervilles, the apple peddlers, the bread lines, the flop houses, the pinching fingers of cold charity—all of which were born of Harding stability, nurtured under Coolidge prosperity, and had come to fruition under the great engineer.

I recall even now the cry of the auctioneer at farm auction foreclosure sales—cries answered by 1-cent bids by angry, desperate farmers. "Mobs," they were called, displayed ropes at such sales—sheriffs were hemmed in their offices—the orders of judges flouted with contempt.

And above the din could be heard the crash of banks. Private yachts were provisioned and anchored along the eastern seaboard ready to carry wealthy owners to safety on foreign shores. Planes were poised for quick get-aways to South America.

The flames of disorder were eating their way along the fuse. "Wise" men were stupefied. It was the calm before—

Then on March 4, 1933, Franklin D. Roosevelt took the oath of office. On March 5 things began to happen.

Frightened Senators and Representatives were handed some emergency measures—and told to pass them—which they did—the only sensible things some of them have done during many years in office—and for which some have not ceased to flagellate themselves to this day.

Within 10 days the clouds began to lift. Trembling bankers cautiously opened their doors, whispering to the people that "Uncle Sam is behind us."

Then began the trek of business chieftains—railroad magnates, industrial leaders, bank officials (including Hell-and-Maria Dawes)—to Washington. They went on bended knees and with outstretched and empty hands; they came away with heads up and bags filled.

A chorus of praise and thanksgiving rose from every newspaper in the land. Every stuffed shirt from Main Street to Wall Street extolled the New Deal experiments. Toasts were drunk to the "blue eagle." Gen. Hugh Johnson soared and roared—now he scratches and screams.

No regular dog bites the hand that feeds it. But within a year the snapping and snarling began. By the end of 4 years the whole pack, with gleaming teeth and fiery eyes, were leaping at Roosevelt's throat. This in face of the fact that he had flung the banner of hope to the breeze—that he had said, "No person shall go hungry—farmers must have a moratorium."

But a dog may bay the moon; that's his privilege.

Of course mistakes were made, but they were mistakes of the head, not of the heart. True, also, there were apparent wastes—what those who put dollars above decency call extravagance, but there have been no Albert B. Falls, no Teapot Domes.

Technology had shouldered its huge bulk into our midst and pushing millions of men upon the scrap heap. But human sympathy was at the helm. President Roosevelt gathered those discarded men and women into groups and set them to work. And even if some of the work did not possess an immediate monetary value, it did have a social value—preserved human values, human self-respect, and inspired human hope. Bridges, highways, schoolhouses, courthouses, post offices were built, repaired, and enlarged. Tens of thousands of young men were scattered throughout our forests, which had been ravished by greed, restoring it for future generations.

He put brains and muscles and skill to work salvaging our dust-swept plains, reclaiming eroded south lands, harnessing waterpower, supplying cheap power to millions.

Mr. Roosevelt has striven not only to save investments but—and most important of all—to catch and hold and direct into right channels human values, human character, and self-respect.

And yet during the past 4 or 5 years all the forces of reaction, all the combined powers of selfishness, all the hate and poison of the Nation, have been directed to one end—to discredit and bring to naught and put an end to the public career of Franklin D. Roosevelt. Writers have dipped their pens in vitriol, cartoonists have uncorked their vials of ridicule, and even "whisperers" have sought by cowardly lies to break down and destroy the faith the people have in Mr. Roosevelt.

Daily they trot out new hopes. I look over the parade and tremble at the thought what will happen if Roosevelt is succeeded by a "Cactus Jack" Garner, Texas banker; or backward-looking Vandenberg, or bitter-ender Taft, a superreactionary Byrd, or an ambitious Dewey.

Then I offer a fervent prayer.

Any of those men will be acceptable to Wall Street, to the A. M. A., to the U. S. C. of C., to 95 percent of the newspapers, to 100 percent of big business and 75 percent of little business, and even not a few of the misled aged who have been poisoned by their leaders.

And behind all this, lurking in the background, is the menace of nazi-ism, dictatorship, concentration camps, firing squads. Waiting around the corner is the rule of the mailed fist, the destruction of democracy, the assassination of personal freedom, national slavery, and the destruction of religious liberty.

My conclusion is that every person who cherishes our democracy above the iron heel must fight to hold the right to speak his mind. The course of battle lies ahead. Democracy, with all its faults, is more to be desired than the rule of money changers who defile the temple of civilization.

Rome was not built in a day. When an old house falls down it's no small job to remove the rubbish.

Your Task as a Citizen

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

ADDRESS BY HON. J. EDGAR HOOVER JUNE 21, 1939

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by J. Edgar Hoover, Director, Federal Bureau of Investigation, United States Department of Justice, before the national convention, United States Junior Chamber of Commerce, Tulsa, Okla., June 21, 1939:

My pleasure in being able to be with you is matched only by my hopes for the future of the Junior Chamber of Commerce. I have followed your programs closely over a period of years and taken pride in your achievements. In the practicality of your activities you are building on firm foundations. May your civic programs gather momentum and roll forward to help in the building of a better America.

Your small groups, banded together some 20 years ago in St. Louis, soon would have withered had they not built their future upon a platform of worth-while programs and crusading civic spirit. As a result you today have 600 junior chambers of commerce in a like number of communities, all working, I know, toward a worth-while goal.

An organization is only as good as its friends and supporters, thus I am indeed proud of the fact that when you embark upon a civic program you can count on the support of not only 110,000 members, but of millions of good citizens who know you, admire you, and trust you. Of course, obstacles will beset you but adversity is the real test of virile manhood.

We of the Federal Bureau of Investigation have likewise faced adversity. The development of our Bureau, like the growth of the Junior Chamber of Commerce, has been over a hard road. Its achievements stand as a tribute to youth. The average age today of the men of the Federal Bureau of Investigation is scarcely 34. Its development in reality has been a ceaseless conflict between corruption, inefficiency, and the deadly forces of the underworld on one hand and the forces of decency and truth on the other.

I recall vividly the tribulations with which we were confronted 15 years ago this summer. Attorney General Harlan Fiske Stone, now a Justice of the United States Supreme Court, as fearless a foe of corruption and inefficiency as our present Attorney General, Hon. Frank Murphy, was determined to rebuild the Nation's law office on the firm foundations of honesty and integrity. He agreed with me that political influence should not dictate appointments or promotions. Overnight, the Federal Bureau of Investigation was removed from the political arena where it had been kicked about like a football, the pawn of pull, prejudice, and patronage. Today only merit counts in an F. B. I. appointment; no man can enter without it.

In 1924 only 30 percent of the men had legal or accounting training. The others included some persons who had police records, and at least one man who had been tried for murder. Others had been declared physically unfit and disqualified for duty by other law-enforcement agencies and had sought refuge in the Bureau. All that was changed, and drastically. Today, to be eligible for appointment as a special agent, the applicant must be between 23 and 35 years of age, a graduate of a recognized law school, and a member of the bar, with at least 2 years of legal or business experience, or he must be a graduate of a recognized accounting school, with 3 years of commercial accounting or auditing experience. These men, after appointment, attend a 16-week training school, where they are diligently trained in all forms of scientific deduction, detection, and apprehension. They are imbued with the principle that no case is ever closed until the wrongdoer is brought to justice. They are taught to get the facts, thereby freeing the innocent and convicting the guilty; our ever-present watchword is "Fidelity, bravery, integrity."

Since 1932, when the Federal kidnaping law was passed by Congress, authorizing the F. B. I. to act in such cases, all but two of the 156 cases reported to us have been completely solved and the wrongdoers—crooked lawyers, gang doctors, money changers, finger men, fixers, and harborers of criminals—have been brought to justice. Sooner or later the heartless body snatchers and killers in the two remaining cases will be brought to justice.

Already in the case involving the abduction and murder of the little Levine boy at New Rochelle, N. Y., more than 8,000 persons have been interviewed, 450 automobiles checked, some 500 premises inspected, 560 anonymous and crank letters investigated, and over 500 scientific laboratory examinations have been made. In the case of the little Mattson boy in Tacoma, Wash., over 20,000 persons have been investigated, more than enough suspects to populate a small city. And still the search goes on.

There is no mystery to good law enforcement. It merely applies to crime detection the same principles of efficiency necessary in any high-geared business. Plus this is the fact that the F. B. I. is distinctly a "we" organization—everyone has his part in its trials or triumphs. Without cohesion everywhere the Bureau could not function with the success we enjoy.

Of course, I am proud of the record of the Bureau. For instance, in the past 15 years the Federal Bureau of Investigation has cost the taxpayers less than $50,000,000, and returned to those taxpayers of the Nation a profit of more than $190,000,000—and this even includes those early days when we were rebuilding the Bureau. I hope that our services to society in the apprehension and conviction of over 43,000 notorious criminals during the past 10-year period, are achievements beyond the capabilities of financial measurement.

In doing this the F. B. I. has paid heavily in effort and even in life itself; 12 of our men have died in the line of duty, others have injured their health by overwork and overexposure, and have joined their fellows where the rattle of machine-gun fire is unknown. Nor has the sacrifice ceased there. The long hours of vigil and the sorrow bravely faced by the women who stand behind the men of the F. B. I. is an inspiration to the living and a monument to their sacrifice. Today seven of the widows are a part of our organization because they wanted to take their husbands' places and carry on for them. We are proud of them; we are proud of our record—of honest, law-abiding citizens and cooperative law-enforcing officers who have aided us in times of great stress. We would be even more proud if this record could be rivaled by local law enforcement in every town and hamlet of every State in the Union. Government is not some far-away, visualistic thing. You are government, and you can get what you want at home as easily as you can get it at Washington if you'll only square your shoulders and fight for it.

Certainly this applies to the widespread wave of lawlessness that has so long engulfed our social order. It is unnecessary, and it could be conquered as quickly as have the kidnaper and the bank robber, whose activities have declined over 80 percent in the past 7 years, if everybody insisted that this be done. Our crime bill is bigger than our entire national tax bill. Think that over. And meanwhile remember that nations have crumbled because of internal disasters rooted in lawlessness. True freedom lies in true justice to all people and in all things. This comes not from superimposed regulation; it springs from good conscience, honesty, and integrity. It is the Golden Rule translated into action. It is the exemplification of the Ten Commandments and the embodiment of religious teachings. Justice insures the integrity of the Nation. I hope the day will never dawn when your America and mine sinks to the debauched level of vicious subversions. I long for the day when every man, woman, and child will be impelled by the force of conscience to abide by the spirit of the law, rather than be driven to abide by the letter of the law imposed to correct abuses that would not exist if justice prevailed.

It is high time that we give more thought and energy to crime-preventive measures; to curing the cause of lawlessness rather than to be forever combating it, once it runs rampant. The emergency situations must always receive first consideration and it is for this reason that we of the F. B. I. have placed so much stress on detection and apprehension which, together with certainty of trial and punishment, constitute the time-proven deterrents to crime. But an even greater result can be achieved by damming the flow of crime at its source.

In this regard, a definite portion of every civic organization's program should be devoted to a study of crime conditions and the methods used in combating them. What, for instance, do you know about law enforcement in your town? What has happened to the big cases which were in the newspaper headlines a few months ago? Were they vigorously prosecuted, or were the felons allowed delay after delay while witnesses disappeared, and the final court-room scene became a mere mockery of the law? Were juries tampered with, witnesses intimidated, perjury suborned? Did the criminal in a heinous crime or hundred-thousand-dollar swindle get off easier than some wayward youth who stole a car

or burglarized a store while hungry? Are the operators of vice dens who commission high-school students to solicit for them excused by the paying of a mere fine which amounts to a license to traffic in human flesh? Can criminals "cop a plea"—plead guilty to a lesser offense and get by with a short sentence? Do sentences imposed by the courts mean what they say? Are convicted criminals afforded greater opportunities and pleasures in prison than out? Can a traffic ticket be fixed? Do public officials who receive a pitiable salary live like millionaires?

Such questions are not hypothetical. For the past 15 years every day has brought reports to my desk of just such cases. Few communities in the land are wholly free of abuse of the very laws enacted to protect society. But there is an answer. In America the majority still elects public officials, and if the majority demands it they can oust corruption overnight.

Just as the price of liberty is eternal vigilance, the freedom of your community from the forces of crime that strike somewhere in the Nation every 22 seconds carries a sales ticket—to be bought by civic alertness, decency, energy, and self-sacrifice, not only for self-preservation but for the welfare of coming generations.

Are there slot machines in drug stores and restaurants in your town? Does gambling thrive? Are there bookmaking joints on every corner? Who controls the numbers racket? Is vice kept at an irreducible minimum or does it contaminate most sections of the city? Does white slavery exist? Are the newstands cluttered with salacious and perversive printed matter? Remember that the habits of youth govern the actions of the man. No public enemy ever won a place in the headlines overnight. Trace their histories as I have and you will find their criminal careers began long before in surroundings that insulted civic decency.

Those who engage in widespread vice activities and rackets could not long survive without their ally—the political renegade. No community in the land is contaminated by rackets and corruption to any great extent without the assistance of local interests, which hold law enforcement in restraint. Your law-enforcement officers are your representatives. They are not persons with unlimited power; they must obey those under whom they hold office. If they are bent beneath the domination of the criminal-alined politician, ruthless rackets and vice are inevitable. The law-enforcement officials of our Nation, for the most part, are honest and anxious to do a good job. Regardless of their personal honesty, however, they are frequently powerless to act. You, and only you, can take the handcuffs off their wrists and place them where they belong, upon the racketeers and criminals.

It behooves every citizen and every group such as yours to constantly scrutinize the qualifications and the background of candidates for public office in order that the crook may be unmasked and the self-sacrificing, honest man in public service may be given every possible assistance. Here party lines cannot exist. Public service should beckon and attract young men of character and ability. A career of honest public service is as sacred as the ministry and should demand the same stalwart principles. Thus, honest citizens everywhere should aid the man who would dedicate his talents to public welfare. Only when two men are equal in character, ability, and honesty are party lines, as we know them, justified.

Many outstanding community leaders have told me that they would not seek public office because of the muckraking and foul, unfair, besmirching tactics adopted by those affiliated with venal politics. This is indeed tragic. The Nation very frankly is being cheated at the polls when its citizens tolerate and cheer such tactics. It will only be by the courageous outlawing of the mudslinger and rabble rouser that public offices, when contaminated, can be cleansed. More and more the Nation and all of its political subdivisions need career men in politics; men who regard their community above their own personal desires. I hope indeed that some of the young men of this organization will some day see their way clear to make their contributions through public service. The Nation is in great need of the pioneering and patriotic spirit which has helped to make this organization a great and respected one.

Let us appraise further, your duties as a good citizen. What do you know about the judiciary in your community? Is it a fountain head of justice, or is it controlled by entrenched interests? For if the robes of justice are not clean, then society and mankind are not secure. America has been fortunate indeed in the high character of its judges, and those honest, God-fearing men would be the first to urge eternal vigilance that the bench may be incorruptible. And your prosecutors, do they seek justice for society and the accused as well? Or do they safeguard the interest of the accused by grand jury whitewashing, or improperly prepared cases?

Has there ever been a prison break in your community? Was this break investigated by an impartial authority? Have you ever looked into the coddling of prisoners—the free and easy way they circulate in so many so-called penal institutions? Or is the institution operated so that its inmates will really be rehabilitated and reformed, through fair, humane, constructive, yet stern discipline?

When did you last visit your police department and observe its equipment? Have you inquired as to whether your local department has a police training school? Has one of its officers attended the F. B. I. National Police Academy, which is maintained for them free of charge? And did the officer have to mortgage his home, as some of them have, to pay his railroad fare to Washington and defray his living expenses while attending the academy? And upon his return was he afforded the necessary cooperation and assistance in starting a training school, or was he relegated to a beat by professionally jealous superiors or overly anxious venal politicians?

American law enforcement is to be commended because of its sincere efforts in recent years, to improve conditions and protect our citizens. When you criticize your police force, remember that you and other citizens like you constitute the real power behind your police and public officials. Beyond that, you possess the power of recall if they are not efficient.

Fifteen years ago, the Fingerprint Division of the F. B. I. was organized in response to a vital need. Rapid means of transportation had made crime a swift-moving, dangerously elusive problem. Older methods of identification were faulty. Thus the Identification Division of the F. B. I. came into existence; and the machinelike precision of modern business methods applied to its organization. Today, it is possible in less than 3 minutes to search a set of fingerprints and identify the impressions on the card if the individual has previously been fingerprinted, despite the fact that there are nearly 11,000,000 sets of fingerprint records on file.

Recognizing the value of a positive means of identification, law-abiding citizens began to clamor for the benefits which were given the criminal. Thus in 1933 our civil identification section was inaugurated. There the fingerprints of over 1,300,000 honest, law-abiding citizens are placed, wholly divorced from the criminal files, forever insuring their identity. You of the Junior Chamber of Commerce have long been allied with this project, which is designed to serve law-abiding citizens. The time is rapidly approaching when every honest citizen will want to have his fingerprints on file. Yet there are those who claim fingerprinting is a violation of civil liberties. Drivers' licenses are required in many States—I have never heard them denounced as a violation of civil liberties. That is silly. Fingerprinting is liberty insurance—except for those who desire to conceal the fact that they are enemies of society.

I firmly believe that the public interest would best be served by requiring all persons in public office, or occupying positions of public trust, to be fingerprinted. This would surely put trusting, law-abiding citizens on their guard and might have prevented, for instance, the $241,000 bank fraud perpetrated some time ago by the vice president of a bank, who had previously been convicted for fraud.

As an experiment, the Travelers Aid Society in Richmond, Va., recently arranged for the police department to fingerprint all transients seeking assistance. The results were highly revealing. Out of 7,034 persons fingerprinted, 4,345 had previous police records, 2,387 were for minor charges, while 1,958 were for serious charges. Among these were eight fugitives and one individual who had been reported missing.

In New York City the policy was adopted by the W. P. A. administrator of fingerprinting applicants for certain positions of trust and teaching and recreational assignments. Out of 18,594 sets of impressions, 1,555 represented persons with previous police records. Many who were seeking jobs in playgrounds had previously been charged with the commission of sex offenses. One individual was wanted for parole violation and had served a prison term for rape.

Last December a young man was found mortally wounded. He was rushed to the County Hospital in Chicago where he died unidentified. His fingerprints were forwarded to Washington. They were searched through the civil files and identified as having been received several months before from a C. C. C. camp. On the back of the fingerprint card was the young man's home address and the name of the person to notify in case of an emergency.

Likewise the body of an unidentified man was removed from the Connecticut River last fall. His fingerprints were taken at the morgue and then sent to Washington. A search revealed he had been arrested on five occasions. Again complete identifying data as to his home and relatives were made available in order that this 70-year-old man could be given a decent burial. Had he never been arrested or had the foresight to have had his fingerprints recorded he would have been buried, unnamed, in a potter's field.

The mutilated body of an unidentified man was found beside the railroad tracks near Union, S. C. Again we made identification. This person had been previously fingerprinted in Richmond, Va., when he sought aid from the Travelers Aid Society and the complete details of his home and family were soon made available to the authorities in South Carolina.

At least 192,000 persons were reported missing last year and more than 16,000 have not been located. Over 9,500 unidentified bodies were removed to morgues last year. Some 1,600 cases of amnesia attacks were reported to authorities last year. Think of the sorrow and suffering that could have been alleviated had these unfortunate persons only had the foresight to have had their fingerprints recorded. It has only been a few years since we went to the morgues and solicited the cooperation of authorities in fingerprinting unidentified deceased persons. At times we encountered opposition but today even that has given way to a sincere desire to cooperate in the public's interest. Thus your civil identification committee can well feel gratified by the service they have already rendered in many communities.

America needs your patriotic zeal and your services in a crusade to insure her destiny on the chartered sea of democracy. As never before in our national history, the country summons her men of character and action. Once and for all we must eradicate from American thought and life those sinister forces which are alien to justice and which are the allies of lawlessness. The fight will require sacrifices, but they are necessary if we are to preserve our homes and our traditions. Remember that from dawn this morning until dawn tomorrow morning 3,928 major crimes will have

been committed, including 33 homicides, 814 burglaries, 162 robberies, 2,258 larcenies, 22 rapes, 515 auto thefts, and 122 aggravated assaults. The criminal forces of America will have extorted and collected their daily tax of over $41,000,000 for the invisible empire of lawlessness that exists within our midst. Why cannot that money be turned into the flow of commerce and the veins of progress, instead of falling constantly into the grimy, blood-soiled paws of the underworld?

I sincerely hope that each of the 110,000 members of the Junior Chamber of Commerce will resolve to dedicate himself here and now to ceaseless activity and relentless warfare against the forces that threaten the peace, security, and well-being of our beloved America. There is great need that you enlist. There is greater need that you do not falter in purpose, nor cease to battle for the cleanliness, the happiness, and the welfare of the kind of an America which we all so greatly desire.

Federal Pensions

EXTENSION OF REMARKS

OF

HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

Mr. POAGE. Mr. Speaker, I have today introduced a bill, H. R. 6997, to create a Federal pension system for all citizens over 65 and for all adult cripples, including the blind. The bill provides a direct Federal pension of $30 per month for all such citizens who have resided in the United States for 21 years and who are not inmates of publicly supported institutions or recipients of public funds amounting to as much as $30 per month. There are no property qualifications whatever, and no investigation of the applicant's financial or family condition will be required.

The bill expressly repeals all of the present provisions of the social-security law relating to old-age insurance as well as old-age assistance, and it, in express terms repeals title 8 of the Social Security Act which levies taxes on both employer and employee, which under the present law will soon reach a billion and one-half dollars per year. However, the present provisions for unemployment compensation, maternal and child welfare, and the Public Health Service are undisturbed. The bill will probably involve a total gross outlay of around $3,000,000,000 per year.

We are now collecting approximately $514,000,000 per year from a 1-percent tax on employers and employees for the maintenance of the old-age-insurance system. Under existing law, this tax will gradually increase to 3 percent, and it must so increase in order to meet the actuarial requirements of this insurance. With no increase in employment this involves an annual permanent tax in excess of $1,543,000,000. Last year the Federal Government expended in excess of $124,500,000 on grants to States for old-age assistance. The States spent something more than this amount. The Federal Government, in addition spent approximately $16,000,000 in the administration of this work. This year the normal processes of liberalization of State laws will increase these expenditures by at least 25 percent, giving a total expenditure at the present time of approximately $312,000,000 for old-age assistance. Thus, our present system of old-age assistance and old-age insurance involves a tax burden of approximately $1,855,000,000 per year. This amount makes no provision for our adult cripples or for our blind, and leaves a large percentage of our needy people without any assistance, and many more with inadequate assistance.

The bill I have introduced will carry a $30 per month income to the 6,633,805 people in the United States—1930 census—over 65 years of age. This will require $2,388,000,000, or approximately $533,000,000 more than the present cost of our old-age assistance and old-age insurance. There is no census figures on the number of adult cripples or the number of blind in this country, but their combined total can hardly exceed 1,000,000, and the total cost of extending this program to these needy citizens would, therefore, be approximately $360,000,000, making the total cost of this program of aid to the aged and incapacitated come to something considerably less than a billion dollars in excess of our present program.

I have long recognized the gravity of this problem and the inadequacy of our present program. The so-called pension problem, which in its final analysis is a problem of security, has become one of major proportions not only in my own State of Texas but all over the United States. There is an insistent demand for old-age pensions. The plans proposed are varied, running all the way from an actuarially sound retirement fund built up from enforced contributions to the visionary promises of the Townsend plan.

While the House of Representatives has recently revised and proportedly liberalized the social security set-up, it has not extended its provisions to the masses of our people. If we are to rest our old-age security program on anything like the insurance provisions of our present Social Security Act, it is going to be necessary to extend the present program to all groups of our people; it now reaches less than one-half of our citizens. Such an extension involves us in many baffling difficulties of procedure and technique.

For instance, how is it possible for the sandy-land farmer or the itinerant laborer to make contributions sufficient to provide any kind of retirement fund for his own old age? Certainly, a universal application of the present social-security program would involve material additional tax burdens over and above the present burdens of the pay-roll tax. On the other hand, the adoption of the Townsend plan or any of its kindred proposals would, of course, involve a complete change in our economic system with unpredictable results flowing from the multiplied taxation and practically unlimited inflation that these plans carry. However, it seems to me that to deny that America must meet the problem of old-age security is to ignore the most evident signs of the times and to refuse to recognize the obvious duty of the Government in a period of progressively restricted economic opportunities. If this problem could be solved by the Federal Government it would relieve the States of a vexatious and dangerous question as well as of a burdensome load of taxation. I have no desire or intention to appeal to the uninformed with a promise of "something for nothing." For a long time I have joined with many of my fellow citizens in questioning the wisdom of making payments, regardless of need, to all persons who have attained a given age. I have, however, been forced to the reluctant conclusion that this is possibly the only way whereby we may escape the evident evils of the social-worker investigation system, against which there has been directed so much just criticism. I have also been one of those who have long clung to the idea that it was cheaper to administer government locally than from Washington. My experience here in Washington has but confirmed that conviction, but it has also forceably impressed me with the realization that the South and West have long suffered under an economic system in which we have enjoyed a position little better than that of provinces.

Broadly speaking, the wealth produced by our farms and natural resources flows to the financial centers. I know of no way to reverse this flow of money and wealth except through governmental action. My own State is the greatest producer of natural resources in this Nation, but neither Texas nor any other of the great natural resource producing States, with the possible exception of Louisiana, has been able to free itself from the control of the exploiters of these resources sufficiently to levy an adequate tax on the products of their mines and wells. As a result the wealth produced by the oil, gas, sulfur, coal, iron, copper, and silver of the West has flowed and continued to flow to the metropolitan centers of the East, where it can only be reached by a Federal income tax. The collection of any other tax by any one of the several States, whether it be a transaction, sales, ad valorem, or income tax, and its distribution in the form of a pension to the aged and disabled of that State would neither add to nor take from the total wealth of the State, but the collection of any of the present forms of Federal taxes would

fall most heavily upon the centers of wealth, income, and property. All of these centers are in the North and East, and as the per capita wealth and income there is vastly higher than in the South and West, the payment of a pension by the Federal Government from funds secured through ordinary Federal taxation would inevitably tend to reverse the economic processes that concentrate wealth in financial centers. For this reason it seems to me to be especially advantageous to the people of the raw-material States to adopt a pension system supported in whole by Federal money as compared with our present system of State-matching for old-age assistance, and of course, if the pension should be made universal for all above 65 it would eliminate the necessity for the present burdensome pay-roll taxes which the Federal Government now levies for the support of the social security old-age annuities.

Nor can the value of the removal of this question from the field of local control be overestimated. For 4 years business and industry in my home State of Texas has had no idea from year to year just what taxes it would be called upon to bear in connection with the old-age assistance program. But the suffering occasioned by this uncertainty of business has been small as compared to the ever-present fear that has gripped the heart of every needy elder citizen of our State as he or she has wondered from month to month just what cut might be made in the meager check on which so many of our people have of necessity relied for their livelihood. The plan I have introduced is exceedingly simple. It raises no question requiring investigation at the hands of a social worker trained in an eastern university. It involves no question of charity nor any discretion as to individual need. There are no involvements as to how, when, or where the sums received as pension may be spent. I have purposely omitted any provisions for a new tax system, first, because of the amount of new money required would not necessitate the establishment of a new tax system, but, more important, because, as I have explained before, I feel that the payment of such a pension from revenues derived from ordinary Federal taxes would be peculiarly beneficial to the South and West. I have sought to offer a pension plan that will provide security for the old and for that great forgotten group of physically afflicted, who, no matter what their age, suffer a handicap comparable to that of older citizens. I have sought to make the amount large enough to make the promised security real and at the same time small enough to bring it within the realm of practicability that it might actually be paid. I cannot but feel that the actual gift of a loaf of bread is better than the unfulfilled promise of a dozen cakes.

I had prepared legislation along this line with the idea of introducing it much earlier in this session of Congress, but the Legislature of Texas has been in session, and up until a few days ago has been troubled with a very wide difference of opinion as to just what action should be taken in regard to the pension problem and the question of revenue. I have felt that so long as no decision was reached in my own State legislature the introduction of any measure of this type in the Congress might have tended to influence the action of that body. I had no wish to so influence its action. I therefore withheld all action until the legislature adjourned. However, it has now adjourned, and it seems evident to me that the need for pension legislation in Texas is still one of primary importance. I am sure that it is also a pressing need in other sections of the United States. This House of Representatives has now acted upon the amendments to the Social Security Act, which many of us had hoped would give security to a really substantial group of our aged citizens. No tangible liberalization of benefit to the citizens of the poorer States has been provided, however. I am, therefore, forced to the conclusion that it is my duty, as well as my right, at this time to introduce legislation which will give real security to the aged and afflicted of this Nation.

Mr. Speaker, at this point I desire to insert in the RECORD the entire bill to which I have referred. The bill is short, and I feel that it need only be read to be understood.

A bill to create a pension system for adult cripples and for aged citizens, and for other purposes

Be it enacted, etc.,

SECTION 1. That every citizen who shall furnish satisfactory proof to the authority hereinafter designated (1) that he has been a citizen of the United States of America and has resided therein for at least 21 consecutive years immediately prior to the date of his application; and (2) that he is not the inmate of any publicly supported institution, and that he is not the recipient of any annuity, pension, retirement, or payment of any kind paid from public funds, amounting to as much as $30 per month; and (3) that he is either (a) more than 65 years of age, or (b) is permanently and totally disabled from engaging in gainful work by reason of impairment of mind or body (including loss of sight), shall, so long as such condition continues, receive a pension from the United States of America of $30 per month.

SEC. 2. The purpose of this act is to provide a living income for all adult cripples (including blind persons) and all persons over 65 who are bona fide citizens of the United States of America by birth or by naturalization and who have resided herein for not less than 21 years, and who are not receiving support from public funds. No payment herein provided shall be in any manner dependent or conditioned on any action or contribution on the part of any State.

SEC. 3. No person who may be otherwise qualified shall be denied the benefit of this act because of property owned or by reason of other income, unless received from public funds. "Public funds" as used in this act shall not include any funds created or accumulated where assessments, contributions, or payments thereto by individuals, firms, and private corporations provided as much as 50 percent of such funds. No person shall be required to take a pauper's oath or submit to any investigation of his relatives' financial condition in order to enjoy the benefits of a pension under the provisions of this act.

SEC. 4. The provisions of this act shall be administered by the Social Security Board.

SEC. 5. From and after the passage of this act, no further collection of taxes shall be made under the terms of title VIII of the present Social Security Act, and all further obligations under titles I, II, VII, and VIII are hereby expressly terminated, except that all obligations which have heretofore accrued thereunder shall be fulfilled by the Social Security Board, and in order to provide funds for the fulfillment of existing obligations, all funds now in the Treasury of the United States for the fulfillment of such obligations shall be and they are hereby made available to the Social Security Board for such purposes. All old-age benefit reserves shall be and they are hereafter returnable to the parties from whom collected in the proportion that each collection bears to the total of such fund, after deducting all payments made to date and the sums necessary to pay such compensation and annuity obligations as may have heretofore matured.

SEC. 6. There is hereby authorized to be appropriated for each fiscal year hereafter a sum sufficient to carry out the purposes of section 1 of this act.

SEC. 7. All acts and parts of acts in conflict with any of the terms of this act are hereby repealed and set aside to the extent of such conflict.

The Neutrality Bill

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

ADDRESS BY HON. JOHN O'CONNOR, JUNE 26, 1939

Mr. FISH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of former Representative John O'Connor, as chairman of the meeting of Patriotic Societies at Carnegie Hall on June 26, 1939, in protest against the Bloom neutrality bill:

Ladies and gentlemen, to those responsible for inviting me to preside as chairman at this great patriotic rally, I desire to express my appreciation of the honor.

Like the ideal—but rarely obtainable presiding officer—I shall endeavor to leave the speechmaking to the distinguished statesmen who will address you this evening.

Briefly, may I say, however, that to this meeting have been invited only patriotic American citizens representing every element of race, creed, and color. If any others are here, they have penetrated this hall in disguise. For instance, if Mr. Fritz Kuhn or Mr. Earl Browder, or any supporters of any "ism" are present, they are here as uninvited guests and will hear nothing here that accords with their foreign ideologies.

This meeting will be devoted to no "pro" or "anti" discussion of any kind, except "pro" Americanism.

The need for such gatherings is paramount today when a deliberate attempt is being made to involve us in another foreign war—not to benefit the only surviving democracy, the United States, but to "pull the chestnuts out of the fire" for certain alleged "democracies" of the old world.

Someone has said that the only place where they are talking "war" is at 1600 Pennsylvania Avenue, Washington, D. C., and that is attributed to the Anglophile complex predominant there. In fact, it is stated in that city, as an indisputable fact, that the charming King and Queen who recently visited our country did so reluctantly and against the firm advice of their own British Foreign Office and our own State Department—that insistence upon their visit emanated from our Chief Executive, with the predicted reactions in other countries with whom we are still "supposed" to be on friendly terms.

Our foreign policy will be discussed here tonight—that is, what should be our foreign policy will be argued to you by those most familiar with our traditions and our national interests. Unfortunately, at the moment, we have no foreign policy, unless it be closely closeted in the breasts of those who refuse to disclose it and at the same time beat the tom-toms.

This is the time and this is the hour for the American people to declare, in no mistaken terms, the "foreign policy" of these United States, to be carried out by their duly-elected representatives in the Senate and the House of Representatives of the United States, and by no others.

Ladies and gentlemen, to that solemn purpose we here dedicate ourselves.

Let Us Cancel That Third Term, Too

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

Mr. BENDER. Mr. Speaker, a source of great wonderment and frequent bewilderment is the ever-present ingenuity of our new dealers. The fair-minded must be always willing to give the devil his due; and in the interest of absolute impartiality we must concede to the White House and its cohorts an amazing ability to find specious reasons for every one of its manifold activities. Is there some project which the boys regard as "smart politics"? You may be sure that one of them will discover some highly plausible reason to justify its establishment. Is there some proposal afoot which may garner—and we do not mean Jack—a few votes for the well-greased machine of the Democratic national government? Leave it to the bright young men to find the technique which will make it palatable to the American public.

Today the lads and lassies who swarmed out of the Nation's eastern law schools of Columbia, Harvard, and Yale to take over the task of running the United States of America are deeply concerned over one major difficulty. Their jobs seem to be expiring before their very noses. As each day of the calendar ticks its relentless way off the yearbooks, they find themselves faced with the sad and dismal prospect of 1940. Each of them is haunted by the specter of unemployment; by the fear that there may be no work available when the Government job "folds up." There is only one prospect which offers them hope of retaining their posts—the reelection of their patron and benefactor, Franklin D. Roosevelt. A third term for him is a third term for them.

But the problem remains seemingly insuperable. The people of the United States have established many unwritten constitutional doctrines in the course of their history. None is stronger than the tradition that no man may be elected to the Presidency for three terms. Embedded in this time-worn and never-broken principle is the basic belief of our American system, the conviction that ours must be a "government not of men but of laws." No man must grow until he is mightier in his person than the laws of the land. No man, no matter who he may be, may supersede in his person the confidence which we place in the law and its interpretation.

Yes, indeed, the canniest students of the American political scene among the shining lights of the New Deal recognize the strength of this unwritten prohibition against the third-term President. Yet when personal interest rides the horse of destiny, even the strongest barrier must be leaped.

And so it is with no surprise that the Nation reads in its morning journals an amazing bit of political sleight-of-hand. "A third term for President Roosevelt," they cry. "Who speaks of a third term? In 1940 Franklin Delano Roosevelt will be running for what is really no more than a second term. For his first term was canceled by the Supreme Court."

Here is sophistry worthy of the most celebrated casuists. Here is a bit of reasoning incredible to all save those who recognize the endless ingenuity of our Socratic philosophers who dwell within the shadow of the White House. Let the logicians take heed of their laurels. We have developed a new generation of thinkers who may properly dedicate their lives to making the worse appear the better reason.

For less than this the fathers of ancient Athens summoned the bearded Socrates before them and gently placed the painless hemlock in his hands. What shall we do with our beardless youngsters who seek to presume upon the Nation's patience with self-seeking justification of their own ambitions?

They have suggested it themselves. President Roosevelt's first term, they tell us, has been canceled by the courts. Let us follow their example. The Nation must make it clear that we, the people, shall cancel a third term.

Jobs—But the President's Political Ally Prevents Men Working at Them

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

Mr. HOFFMAN. Mr. Speaker, we are all aware of the contribution of $470,000 made by John L. Lewis and his United Mine Workers to the New Deal campaign fund. We all recall John's words to the President, when he said:

> It ill behooves one who has supped at labor's table and who has been sheltered in labor's house to curse with equal fervor and fine impartiality both labor and its adversaries when they become locked in a deadly embrace.

Many of us remember that, during the recent strike of the soft-coal miners, the administration came to the aid of Lewis and his United Mine Workers and so secured a closed shop in many of the mines.

There is a very definite purpose to be served by a closed shop and the check-off system. It is not at all surprising that, in view of the almost half-million-dollar contribution made by the Mine Workers toward the President's reelection, he should now pay that political debt by helping Lewis to levy tribute upon all those who would work in the soft-coal mines.

The administration is just showing us another version of the old "squeeze play." Franklin helps John put the screws on the United Mine Workers for initiation fees and so much monthly dues. In turn, John contributes a part of it to Franklin's campaign fund. A nice little racket, if you can make it work, and apparently they can.

Down in Harlan County, Ky., the jobs are ready and waiting. Listen to this statement of W. J. Cunningham,

president of the Harlan County Coal Operators Association. I quote:

A union contract would have been signed by the Harlan County Coal Operators Association at the recent New York negotiations except for the union's insistence on a closed-shop provision, W. J. Cunningham, president of the association and its representative in the New York meeting, disclosed today.

"No disagreement exists between this association and the United Mine Workers of America on any clause of the proposed contract except the closed-shop provision," Cunningham said.

"The final draft of a contract, as proposed as the result of the New York meeting, was essentially the same as our old contract with the union except for two provisions. One of these would recognize the United Mine Workers of America as the exclusive bargaining agent for the men. That clause was a new one. It was not contained in our old contract, which ran from last September 1 until April 1 of this year. It would have been a substantial improvement in the old contract from the union's viewpoint. On behalf of the Harlan association I accepted it.

"The other proposed new provision would have required every one of our mining employees, except those working in supervisory capacities, to become members of the union as a condition of their employment. I did not and could not accept such a provision because it would have put the operators in the position of compelling our men to join the union. Such an action on our part, if we undertook to do such a thing, would quite possibly be a violation of the National Labor Relations Act. Whether illegal or not, it certainly would be contrary to the principle of self-determination for the men in matters concerning employment. That principle has been accepted by the Harlan County Coal Operators Association.

"We are not opposing the union for those men who desire to be members of it. Neither are we fostering the union and seeking to impose it on any men who do not desire to be members of it.

"No demand existed within Harlan County, so far as we know, to convert our former contractual relationship with the United Mine Workers of America into a closed-shop proposition. The operators and the union worked together for 7 months, under the old contract, without any indication that it was unsatisfactory to either of the parties.

"The demand for a closed shop did not come from union members in Harlan County but from their leaders in New York.

"Many of our men apparently are not members of the union. I believe that possibly 65 to 75 percent of all the miners in Harlan County were not members of the union at the time of the New York meeting. Some mines had a higher proportion of union men, of course, and some had less.

"A closed-shop contract, under these circumstances, would have one of two possible consequences. Either it would compel the employers to discharge experienced and valuable employees or it would compel those employees to join the union in order to retain their employment. I believe that either of these two courses would be illegal, and I know that either of them would be un-American and unfair.

"There is no other point of disagreement between the union and the Harlan Association, so far as I know. The present condition in Harlan County is not the result of any desire by the operators to avoid a contractual agreement with the union. We offered in New York to continue a contract with the union and to make this agreement more advantageous to the union than the former contract.

"There is no disagreement between the operators and the union, or between the operators and any of the men, about rates of pay or about any other question whatever—except the one question of an open or closed shop.

"In order that there may not be any misunderstanding whatever about this issue, I would like to give you the language of the closed-shop clause in the final draft of a proposed contract as drafted at the New York meeting:

" 'It is agreed that as a condition of employment, all employees shall be members of the United Mine Workers of America, except in those exempted classifications of employment as provided in this contract.'

"We regard that language as an absolute closed-shop proposal.

"Although we rejected this clause, we left the New York meeting in agreement with the union on all other questions and ready and willing to sign a contract with them, embodying all the other matters on which we were in agreement. As to the one question on which we did not agree, we are willing to meet with them further whenever the union may desire.

"I do not desire to engage in any public controversy, and have given this interview only in order that the position of the Harlan County Coal Operators Association may be known by the public."

Here are the jobs. Here are the men. But because of coercion, intimidation, and violence they dare not go to work and, in the meantime, the Government is feeding not only the strikers but those who are kept from work by the strikers—a fine situation—the result of a sweet political racket, which, if it was carried on by individuals outside of the protection of the Federal Government, would land them in the penitentiary.

W. P. A.

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

LETTER AND MEMORANDUM ON TESTIMONY OF ALLEN W. STEPHENS AND PETER L. HEIN

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and memorandum:

UNITED STATES WORKS PROGRESS ADMINISTRATION,
FOR THE CITY OF NEW YORK,
New York, N. Y., June 26, 1939.

Hon. VITO MARCANTONIO,
House of Representatives,
House Office Building, Washington, D. C.

DEAR MR. MARCANTONIO: In accordance with your request, I am attaching a copy of my memorandum on the testimony of Messrs. Stephens and Hein.

Sincerely yours,

BREHON SOMERVELL,
Administrator.

MEMORANDUM ON TESTIMONY OF MESSRS. ALLEN W. STEPHENS AND PETER L. HEIN

The general testimony and statistical data submitted by Messrs. Stephens and Hein as to the conduct of construction work by the W. P. A. are favorable. The design, quality, and supervision of the work, the use and care of equipment, are rated from satisfactory to excellent. There is one notable and outstanding exception to the general tenor of the findings. This exception is in the matter of the cost of the work. On this point their testimony is based on a wholly misleading comparison of the cost of doing work by contract and by the W. P. A. Any comparison of the methods of doing work which are used by the W. P. A. with those generally in vogue is beside the point; for if money were available to the city to do the work in the ordinary way, there would be no need for the W. P. A.

It seems desirable at the outset to point out a number of reasons which militate against the W. P. A. ever doing work for the same cost as a private contractor:

1. W. P. A. work must be carried on in fair or foul weather at times when a contractor, if possessed of good sense, would do no work at all.

2. W. P. A. must work its skilled employees only a few hours per month. This causes a number of shifts to do one man's work, with corresponding loss in production.

3. W. P. A. must keep the cost per man at a minimum, thus directly affecting the amount of equipment which can be used and correspondingly the output per worker.

4. W. P. A. and its sponsors have been able to plan only a few months in advance owing to the method in which appropriations have been made. This has caused a great deal of confusion not present on contract work. Funds for material and equipment have never been plentiful.

5. W. P. A. cannot select the persons of greatest ability to carry out jobs, but must use those available.

There are less important reasons which it is not necessary to mention here which, with those given, should limit the over-all efficiency of W. P. A. operations under the best of conditions to about 80 percent of what those in charge of the W. P. A. could reach under other circumstances. Nevertheless, W. P. A. has and is doing some work at less than contract cost for similar projects.

Of course a larger sample than 9 out of over 30,000 jobs should be used to give anything like an adequate figure as to the effectiveness of W. P. A. It is not necessary, however, to go further than the data submitted by Messrs. Hein and Stephens to show how erroneous and misleading are their conclusions. The methods used by these men in arriving at these conclusions are not consistent, complete, correct, nor conclusive. Their statements are contradictory among themselves and not in accord with the facts. One or two are so far wrong that it is only fair to suppose that the transcript is in error.

The methods are not consistent. In certain cases the effectiveness of W. P. A. work is gaged by a comparison of the total costs of W. P. A. work and allegedly similar contract work (fair building); in others a comparison is made of labor costs alone (school buildings); in the same case the statement is made that labor and materials on these same jobs cost two and one-half times contract costs. In neither case do the figures given correspond with actualities but are based on assumptions made by Messrs. Stephens and Hein, and in neither case are the total costs given by them such as to give the relationship stated.

The methods are not complete. They fail to furnish a true comparison of items under consideration. In the case of the fair building a comparison is made on a cubic foot, not a square foot, basis; a sufficient picture of the two buildings, Federal and W. P. A., is not given to make an intelligent comparison. Final costs are projected on a straight-line basis from present costs with little or no consideration to modifying factors which affect progress of work in its later stages. In their report on residential streets in Queens, for example, they "estimate" the labor cost to complete the work at $106,000. The work was completed on May 10, at an actual labor cost of $40,592, instead of $106,000. Though these men were informed of special conditions on this project which would prevent "estimating" as they did, they show figures for total labor cost over two and a half times as much as actual costs. The "examiners" have omitted other items, such as ratio of equipment on W. P. A. and contract jobs, bad weather, lack of similarity in projects on which comparison is made which make their conclusions undependable.

The methods are incorrect. The percentage of completion is taken at an earlier date than the percentage of encumbrances, thus throwing the results out of balance. No allowance is made for the difference between encumbrances and actual expenditures, no consideration is given to the fact that encumbrances for materials are necessarily high at the beginning of the work.

The observations on the effectiveness of the work can therefore be considered as in no wise conclusive. On the contrary the conclusions of the "examiners" are not to be relied on. With a different utilization of materials and equipment it is impossible to judge the efficiency of work by a comparison of labor costs alone, even with correct figures which were not furnished to the committee by the examiners in this case. It is possible, and in many cases such results have been secured, to have double the labor cost on a project and to do the entire work on that project for a total smaller sum than would be the case for another with half the labor cost. Unless such matters are given consideration, Members of Congress will receive an entirely incorrect evaluation of W. P. A. work from their examiners.

Even with the incorrect figures furnished the committee by the examiners, if a modicum of regard is given to consistency, the over-all picture of the effectiveness of W. P. A. work in New York City reflects a condition which is not too far from satisfactory if the five conditions under which the work must be done are taken into account.

The findings as to the efficiency of the nine projects as stated by Messrs. Stephens and Hein are as follows:

Q-H-(BP)-60, Queensboro Bridge Plaza: "Better than assumed."
Q-S-7, trunk sewer: 82 percent.
Q-ED-4, P. S. 64: 38.2 percent.
Q-H-(BP)-5, cinder highways: 50 percent.
Q-PW-(PO)-12, police station: 35 percent.
Q-P-32, World's Fair exhibit building: 46 percent.
Q-PW-5, Queensboro Bridge: "Very efficient."
B-ED-3, P. S. 27: 40 percent.
North Beach Airport: "Materially less than in estimate."

In the case of the Queensboro Bridge Plaza work, since the efficiency is found to be better than assumed, it could be regarded as 100 percent. For the same reason, North Beach could be considered as 100 percent efficient. However, if the efficiency of these two projects and the Queensboro Bridge project be given a value as done by Shephens and Hein on other projects in the above list, by dividing the estimated labor cost by the probable actual labor cost based on a straight-line relationship between actual labor cost and percentage of completion, the efficiency for the Queensboro Bridge Plaza work becomes 77,011/62,000 or 124 percent. The Queensboro Bridge work showed a labor cost of $346,066 and 95 percent completion, or $364,000 for full completion. Hence the efficiency would be 376,193/364,000, or 103 percent. By the same method, the efficiency of the North Beach Airport project would be found to be 19,965,632/17,400,000, or 115 percent. If these numerical values be substituted in the above table, the average efficiency of the nine projects is found to be 70 percent. This is the figure secured by using Mr. Stephens' figures, not those believed to be correct by WPA-NYC.

As stated in Mr. Stephens' testimony, the cost of the paving of Queensboro Bridge by W. P. A. was $2.72 per square foot. The contract cost of paving Manhattan Bridge, as taken from the January 1939 issue of Construction Methods, was $3.91 per square foot; but the city furnished cement and other specific items on this work to a value of $1.79 per square foot, making the total cost of the work for fair comparison with the cost of the Queensboro Bridge work $5.70 per square foot, indicating an efficiency of 209 percent on the W. P. A. project. If this figure were used in the above tabulation instead of 103 percent, as the examiners did in considering contract costs in computing the efficiency of several projects in the above table, the over-all efficiency of the projects would be 82 percent.

This result is secured by using the figures of the examiners which for the reasons stated are incorrect.

An examination of their "statistical reports" is appropriate at this point to determine the extent of their errors and assumptions so that some figure may be obtained which seems to fit more nearly the actual conditions.

WORK PROJECT Q-H-(BP)-60, QUEENSBORO BRIDGE PLAZA, HIGHWAY IMPROVEMENTS AND LANDSCAPING, PAGE 305

The statistical report on this project is wholly favorable and no questions were raised by the examiners with respect to the work. Mr. Stephens and Mr. Hein found that the efficiency of labor was proving better than was assumed; and, as stated above, an efficiency of 124 percent is indicated, using their method of determining efficiency based on labor costs. A more accurate method would be to use total costs. The original estimate of the total cost of doing the work was $129,821 and the present estimated total cost is $117,929, which indicates an efficiency of 110 percent.

WORK PROJECT Q-S-7, TRUNK SEWER, NINETEENTH AVENUE AND THIRTY-SECOND STREET, QUEENS, PAGE 307

The examiners made a straight-line estimate of the total labor cost for completing the work despite the fact that the job was carried on during the winter, when conditions were extremely difficult. Also, the labor encumbrances to April 20 have been considered erroneously in the calculations as the expenditures to April 12, the date to which the physical percentage of completion was computed. The present estimate of the total cost of the work for which there is good reason to believe the entire work will be done, is $572,110 as compared with the original estimated total cost of $624,650. Based on the correct figures, therefore, the efficiency of this project is 109 percent.

WORK PROJECT Q-ED-4, PUBLIC SCHOOL NO. 64, QUEENS, PAGE 310

Messrs. Stephens and Hein determined the efficiency on this project by taking 90 percent of a straight-line estimate as the future labor cost, and by dividing their estimate of labor for the complete project into their estimate of the probable labor cost if the work were done by contract. In figuring the total labor cost, they used the labor encumbrances to April 21 and the percentage of completion as of April 12, the date to which the physical percentage of completion was computed, thus introducing an error.

It was assumed by the examiners that the total cost of the building under private contract would be $441,000 based upon a table of comparative costs of similar buildings actually constructed by contract (Exhibit C, p. 313). Of the schools listed, the five which did not have pile foundations or rock excavation and are thus comparable with P. S. 64, and their total costs, taken from the table, are as follows:

P. S. 108, Bronx	$441,989
P. S. 104, Queens	435,781
P. S. 55, Queens	445,508
P. S. 213, Brooklyn	416,765
P. S. 15, Queens	419,454

The average estimate of the board of education and the averages of the high bids, average bids, and low bids on these five buildings are as follows:

Board of education's estimate	$479,480
High bid	504,646
Average bid	467,464
Low bid (contract price)	432,065

The examiners estimated that the total cost of constructing Public School No. 64 by contract would be $441,000. This is $26,000 less than the average bids on five similar jobs. Moreover, it is not proper to compare W. P. A. labor costs with 40 percent of $441,000 to determine the efficiency of the project, because the actual labor costs to the contractors on the above jobs are not given, and the actual labor costs may have been considerably higher than 40 percent of the contract prices.

Assuming that the cost of the W. P. A. building will run as high as the figure given by the W. P. A.-New York City on April 28, in which there was a reasonable allowance for contingencies, there would be the following relationship to bids submitted by contractors:

W. P. A. efficiency:	*Percent*
High, 504646/672560	75.0
Average, 467464/672560	69.5
Low, 432065/672560	64.3

WORK PROJECT Q-H-(BP)-5, RESIDENTIAL HIGHWAY CONSTRUCTION, QUEENS, PAGE 313

Messrs. Stephens and Hein were informed (p. 315) that it was originally intended to operate the major portion of the 80 work sites simultaneously, to use approximately $15,000 worth of equipment, and that these measures were found to be impossible during the early stages of the work because of a shortage of equipment and insufficient supervision. As of April 12, no equipment had been used except a small amount to a value of $652.50. Up to that date, work had been done largely by hand, and consequently the assumption of straight-line labor cost made by Messrs. Stephens and Hein is a serious error. It illustrates the nature, and to a degree the extent, of the error introduced in all their calculations by the use of this method.

Equipment was made available shortly after the date of the report in accordance with the plan of operations contemplated at the time the original estimate was made, which made it possible to complete the entire work on May 10, 1939, for a total labor expenditure of $40,592 instead of the $106,000 estimated by the investigators. The efficiency, based on the final labor cost for the project, as compared to the estimated labor cost, is therefore 131

percent instead of the 50 percent estimated by the examiners. Another measure of efficiency is the relationship of the original over-all estimate of $118,562 by the actual over-all cost of $69,331. This gives 171 percent.

WORK PROJECT Q–PW–(PO)–12, POLICE STATION AT NINETY-FOURTH STREET AND FORTY-THIRD AVENUE, ELMHURST, PAGE 315

The efficiency on this project was determined by the same method as on Public School No. 64. In this case, however, there is no means of checking the assumption made with respect to the cost of constructing the building by contract because exhibit C, as mentioned on page 316, does not appear in the record. Again, the computations of labor cost have used the actual encumbrances as of April 20 as if they were the expenditure on April 12, the date to which the physical percentage of completion was computed.

Based on the rough estimate given by Mr. Stephens in his testimony on page 502, a similar building could be erected by contract for $201,300. Though no factual data are available to support his statement, the relationship between his figure and the estimated cost of $275,666 (which includes an addition to the original estimate by reason of changes in construction) gives an efficiency of 73 percent and not 35 percent as given by Messrs. Stephens and Hein based on an erroneous assumption as to the future.

WORK PROJECT Q–P–32, WORKS PROGRESS ADMINISTRATION EXHIBIT BUILDING, NEW YORK WORLD'S FAIR, PAGE 318

The calculations as to the efficiency with which the work has been done on this project are far from representing the actual situation. This has been one of the fastest moving jobs at the fair, and no apologies need be offered by anyone for the way in which the work has been conducted. It is true that there have been changes in design, and these have increased the cost somewhat. They would have increased contract costs.

There is no just comparison between the cost per cubic foot of this building and the same cost of the Federal building at the fair. The Federal building has a great deal of loft space which is provided for decorative purposes; the W. P. A. building is compact and has little waste space. The area of the enclosed or usable floor space in the Federal building is 83,438 square feet. The total cost of this building was $941,000, giving a square foot cost of $11.30. Though final figures are not yet available and there is some question as to the parallel in the allocation of costs between building and exhibits in the Federal and W. P. A. buildings, the cost of the latter should not run over about $590,000. This, with an enclosed floor space of 44,770, give a cost per square foot of about $13. Thus the disparity between costs even without regard to design is not great. The W. P. A. building, instead of being of cheaper construction than the Federal building, is at least as good, if not better, construction. A greater proportion of the W. P. A. building is devoted to the auditorium, where the provision for the stage is much more elaborate than in the Federal building. Other differences, such as concrete instead of wooden floor, are noteworthy.

On page 335, Mr. Stephens avoided giving the cost of the W. P. A. building on a square-foot basis, stating that the W. P. A. building "is on a cubic-foot contract." This is, of course, not so. The cost per cubic foot of the buildings at the World's Fair has run from 15 cents to 75 cents, according to the chief engineer of the fair. The W. P. A. costs, even on a cubic-foot basis, which is not a reliable unit of measure in this case, are therefore about the average cost for the buildings in the fair. Checks on a number of individual buildings indicate that the W. P. A. costs are not out of line with the costs of others, particularly those which were started late and built with the same speed that the W. P. A. building was built. As far as the actual execution of the work is concerned, this building can be considered 100 percent efficient—certainly not less than 90 percent. The building has cost what it should have cost. It cannot be compared with another building differing greatly in design.

WORK PROJECT Q–PW–5, REPAVING UPPER ROADWAY OF BRIDGE AND MANHATTAN APPROACH, QUEENSBORO BRIDGE, PAGE 321

As stated above, the efficiency of this work computed on the basis of labor costs in the manner used by Mr. Stephens and Mr. Hein on other projects would be 103 percent; or by comparing its cost with that of the contract work on the Manhattan Bridge, 209 percent. The examiners made no determination as to the efficiency on this project, as they did where the comparison was unfavorable to the W. P. A. The efficiency of the work is 110 percent, if obtained by dividing the original total estimate of $589,397 by the present total estimated cost of $535,033.

WORK PROJECT B–ED–3, PUBLIC SCHOOL NO. 27, BROOKLYN, PAGE 324

The statistical record shows that the efficiency of this project was determined in exactly the same manner as for Public School No. 64.

Of the schools listed in the table on page 313, the contract costs on the two with pile foundations, which are comparable with this school, are as follows:

P. S. 119, Bronx	$468,421
P. S. 254, Brooklyn	483,449

The average estimate of the board of education, and the averages of the high bids, average bids, and low bids when the contracts were let for these two buildings, are as follows:

Board of education's estimate	$490,000
High bid	565,122
Average bid	507,274
Low bid (contract price)	475,935

The estimate of the examiners that this school could have been built by contract for $441,000 is too low in view of actual contract costs on the above two similar jobs. There is the same objection to assuming 40 percent of $441,000 as the probable cost of labor on a contract for this work as stated in the discussion on Public School No. 64. Compared with the W. P. A. estimate of April 28 the following results:

W. P. A. efficiency:	*Percent*
High, 565122/668472	84.8
Average, 507274/668472	75.9
Low, 475935/668472	71.4

NORTH BEACH AIRPORT, PAGE 328

The magnitude of this project and the variety of construction activities at the site are not readily appreciated except by visiting the work. Briefly, the project consists of filling a water area; constructing large hangars and various other buildings; grading, seeding, and landscaping; constructing runways, taxiways, and apron; and installing water mains, sewers, and utilities. Because of the large amount of work other than the building trades, employment has been given to large numbers of common laborers. As shown in the table on page 331, there were 7,003 unskilled employees assigned to the project on April 19, 1939.

The statistical data submitted by the examiners show that the sponsor's contribution to this project is $15,389,038, and the estimated Federal cost is $23,667,908. Thus, the sponsor's contribution is 39.4 percent. This does not represent the entire expenditure by the sponsor, for the city has acquired land at a cost of $2,778,271, which may not be considered a contribution to the project under W. P. A. regulations. Therefore, the sponsor will spend a total of $18,167,309 on the project.

As stated previously in this memorandum, the efficiency of the project is 115 percent based on the method of computing labor costs to completion of the work by direct proportion to the labor costs as of April 10, when the work was 66½ percent physically complete.

Comparisons as to costs at North Beach, using the methods employed by the "examiners" reveal results which should be placed before the committee. The volume of the buildings at North Beach in cubic-feet totals 35,755,164, which is about the same as for the Empire State Building and twice that of the Chrysler Building. Costs at North Beach according to estimates are about 50 cents a cubic foot. This is less than given by Messrs. Stephens and Hein for the contract school buildings and police station, 55 cents and 58 cents. The cost of the Empire State Building is understood to have been about $40,000,000 for 37,000,000 cubic feet, or about $1 per cubic foot; and that of the Chrysler Building about $12,000,000 for 14,000,000 cubic feet, or 86 cents per cubic foot. Of course the design is greatly different in the case of the buildings under consideration, though the materials are the same. Following the examiners' method in the case of the W. P. A. and Federal buildings at the fair, W. P. A.'s efficiency at North Beach must be phenomenal.

Carried out under pressure during bad weather the results, of course, did not reach the peak that such a comparison would indicate. In the first place, the work could not have been done satisfactorily by contract as plans were not available when the work began and have kept only a little ahead of the field work.

Considering all factors, the work has cost about what it should have cost. Actually it is about 60 percent efficient if judged on the basis of what could have been done if it had been possible to attack the work deliberately and with completed plans prior to the undertaking.

Using more consistent, complete, and correct figures, a table similar to the one given earlier in this memorandum shows the following:

W. P. A. efficiency:	*Percent*
Q–H–(BP)–60, Queensboro Bridge Plaza	110
Q–S–7, trunk sewer	109
Q–ED–4, P. S. No. 64	69
Q–H–(BP)–5, cinder highways	171
Q–PW–(PO)–12, police station	73
Q–P–32, exhibit building	90
Q–PW–5, Queensboro Bridge	209
B–ED–3, P. S. No. 27	76
North Beach Airport	80
Average	109

This table, prepared according to the general method of the "examiners," but without the errors and inconsistencies in their figures, shows the W. P. A. in New York City to be a superefficient contractor. The W. P. A. in New York City would feel that it had done a superhuman job if it could have confidence in the methods used in arriving at this result. It suffers under no such illusion. It knows the methods to be inexact, and that such glowing results are in error. With the data available no exact numerical statement of value can be made with respect to efficiency. The best estimate, based on a general survey of W. P. A. projects, is that costs are in the neighborhood of 25 percent more than could be secured by ordinary methods. With the constant progress now being made this should be reduced to not over 20 percent by the end of the year. If a long-range program is adopted with some of the difficulties listed which are now imposed by legislation removed, this margin can be still further reduced.

America's Destiny

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

ADDRESS BY HON. ROBERT A. GRANT, OF INDIANA, ON JUNE 12, 1939

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me on June 12, 1939, before the South Bend Elks Lodge, No. 235, of South Bend, Ind.:

It is both a pleasure and an honor to address you my brother Elks on this unusual occasion of the initiation of the Fred L. Dennis class, and especially on this happy event of the presentation to our brother Dennis of a life membership in our order.

It is a pleasure because of the warm glow of fellowship which is in the atmosphere of any meeting of the Elks. It is an honor because of the high standards and ideals of benevolence, patriotism, and good will for which our order stands.

This is a time, my brothers, when the whole world is in turmoil and confusion. We have watched with grave alarm the growth and development of those frictions and those hatreds and those greeds which have for a long time kept Europe on the very brink of another general war. We have seen with deep concern and regret the growth in our own country of sectional jealousies, class hatreds and strifes, and a tendency to the breaking up of our people into three stratas or groups, the great body of them clinging steadfastly to the ideals of constitutional government and the liberties achieved in the trials and the sacrifices and the blood of our forefathers, while minorities are trying to poison the well springs of freedom in this country by a propaganda for communism on the one hand, and on the other hand by the propaganda for fascism.

In all of this confusion and turmoil and hardship and depression and uncertainty and fear the Benevolent and Protective Order of Elks stands in this country a strong rock, a living force, a beacon of inspiration and encouragement, to those who believe in the American form of government, who believe in the American way, who believe in those ideals written into the Declaration of Independence and embedded in the organic law of our land, the Constitution.

I say to you, my fellow Elks, that few of us realize the opportunity which is offered for our fraternity to help to preserve those ideals and those liberties which make life dear, and few of us realize what an influence our order has been in helping thus far to sustain and to strengthen those liberties and those ideals.

This is a time that tries men's souls. This is a time when our faith in our ideals of life is being tested to the uttermost. This is a time when those who are willing to put temporary security above liberty are apt to be led astray. This is a time, my fellow Elks, more than any time we have known in America, when we must reach out the strong hand of fellowship and assistance to the brother and the sister whose hold on faith in the ideals of the American way of government and of life is weakening, whose footsteps along the pathway that our fathers hewed out for us are faltering.

It means much in this time that the name of our beloved order is the Benevolent and Protective Order of Elks. We try to live up to those words which are a part of our name in the truest sense of their meaning. The Elks are benevolent. They are charitable, not merely in a material sense; it has been said that the bread of charity is bitter, that is not true of that charity which is one of the basic tenets of our order, one of the foundation stones of its being, and one of the principle reasons for its existence. To us the name of our order implies something higher than mere giving of material things. It recognizes that divine spark with which man has been endowed by his Creator. It signifies respect for the rights of others, tolerance of their views, cooperation in a spirit of brotherhood for the welfare and advancement of mankind.

Elks are protective not merely of their own rights and interests; they are equally protective of the rights and interests of their fellow men. To them the words "in the name of our order" mean more than mere lofty platitudes; they are more than merely an intellectual philosophy or an empty creed; they are to be specifically and actively applied to everyday living.

No influence in this broad land of ours could be finer than that which is brought to bear upon daily life by the Elks who live up to the title of our order.

The Elks are famous for their charity, for their generosity to the poor, especially at Thanksgiving and Christmas, and with a special care for the children. They are noted for the aid they give to the widows and orphans of departed fellow members. What a beautiful thing it is.

This feeling of fraternity and good will is one of the outstanding qualities of our order. As it extends no less to those brothers who have departed this life, so does it extend to all of our brothers who for any reason are absent from us. There is no more beautiful rite in any association of men than our ceremony when the hour hand of the clock stands at 11 of drinking a toast to our absent brothers. It is a beautiful symbol of the spirit of communion which exists among us.

It is not strange but very natural that those among whom such comradeship exists should care for the dear ones of departed members and that this spirit should extend not only to the families of your brothers in your order but to the needy among your fellow men.

I am proud to be an Elk, because the Elks have made private charity a manifestation of man's humanity to man. They have made of it one medium for the active expression of their fellowship and good will toward all men, and, therefore, an active force for good. It is a demonstration of their deep sense of social responsibility.

The great secret of the charity of the Elks lies in the fact that their charity does not consist merely in giving alms. We know that "we give little when we give of our possessions. It is when we give of ourselves that we truly give." We do give of ourselves as Elks with genuine unselfishness. The Elks' ideal of charity is not merely to minister to man's body alone, but to his spirit as well. That ideal is to help him to help himself, to put his feet back on the road to independence and success in his own right, thus restoring his confidence, his hope, and his faith in himself and in his fellow man. They have given of their strength, have the Elks, not that they might support, but that they might strengthen others; for they know that the highest form of charity is to:

"Anticipate charity by preventing poverty; assist the reduced fellow man either by a considerable gift or a sum of money, or by teaching him a trade, or by putting him in the way of business, so that he may earn an honest livelihood and not be forced to the dreadful alternative of holding out his hand for charity. This is the highest step, and the summit of charity's golden ladder." That summit from which men may vision the highest and the most noble potentialities of God's universe.

Men with such a sense of their social duties feel no less their great civic responsibility. The Elks have always been intensely patriotic. They have always stood for the highest ideals of citizenship. They have always been an active force, as I said a moment ago, in preserving the true spirit of Americanism, in holding aloft the light of the ideals of democracy in a representative republic. They have fought, they are fighting, and they will continue to fight the insidious propaganda of those who would substitute the dark and evil doctrines of communism or fascism or any other type of "ism" which is utterly foreign to the American conception of man and of government.

The Elks have always been stanch defenders of the liberties guaranteed in the Bill of Rights. Because they are a national organization they have been an active force in seeking to eliminate those sectional and class hatreds which disturb and threaten our Nation today, and to promote national harmony and unity so essential to our peace and prosperity.

We, as Elks, as well as men, realize that war is wholly destructive of all that man has struggled through the centuries to build. We, as Elks, know that the blessings of peace are the first requisite of prosperity and progress for the human race. We have, therefore, always sought to promote the tolerance, the good will, and the cooperation among men which alone can bring peace and progress both in our own country and abroad. In this the Elks have followed the teachings of the founding fathers, of Washington and Jefferson and Lincoln, who warned the Republic that it must keep out of entangling foreign alliances and the conflicts of the Old World.

We know, my brothers, that democracy cannot be enforced, because freedom itself cannot be enforced upon the peoples of the world. Love of liberty, the will to achieve it, and the determination to keep it alive must come from within. But we can as a nation stand out as a shining example to the rest of the world of what a people may attain under the blessings of constitutional government.

The greatest world service that America can render is to demonstrate to the world, as the most powerful argument and inducement for the ideals of peace and democracy, the happiness and prosperity of a free people under a free government. But to do this we know that we must first make democracy work at home. We must prove our ability to meet new problems as they arise without abandoning the ideals for which America has always stood.

Today, as never before, I say to you, America needs a rededication to those ideals and virtues for which our people have always been famous. It is a sad fact, but true, that today democracy is on the defensive all over the world. False alien philosophies are preaching the supremacy of the state and the subordination of the individual, and as a result have overthrown representative government in country after country while they seek by insidious propaganda to spread their ideologies ever further.

There is desperate need that we inspect our foundations; that we reaffirm our faith in those principles for which we stand and in those ideals in which we believe. We must guard them zealously from all encroachment, from within as well as from without, if they are to be preserved. Above all, we must beware of those who sow the seeds of hatred, discontent, and dissension.

Hatred cannot bring peace. It cannot bring progress. Hatred can lead only to war. It can lead only to strife. It wastes men's

strength in struggles which can avail them nothing. It takes from us the energies that otherwise could and would be spent in the constructive, creative path of building a better world for ourselves.

It is tragically true, my brother Elks, that of recent years we have all too much yielded ourselves at home to the spread of foreign doctrines. We have done so because they have been aroused through the fires of class hatred. The "have-nots" have been pitted against the "haves." Employees have been alined against employers. The farmer has been set against the industrialist and vice versa. The consumer has been arrayed against the producer. Ironically, those who have fanned the fires of hatred, suspicion, and distrust, those who have sought to gain personal or political power in so doing have done so in the name of liberty and the people.

Bitter epithets have been hurled, epithets which could serve only to engender hate, to arouse jealousy, to promote dissension. We are tending toward government by propaganda.

There should be no room in the hearts of men for any hatred save that of hatred itself, of intolerance, jealousy, and prejudice. These are man's basest passions, which for centuries he has struggled to overcome. These are the base passions which the Elks in following their ideals seek to overcome. It is a sad fact of the human race that there have always been those willing to arouse these passions in the name of a holy crusade to gain a following, those who would sow the seeds of dissension in their lust for power. It has been well said that he who would rule his fellow man first sets brothers at variance with each other.

The spread of hatred—class, racial, and religious—in America has been inaugurated by those who would destroy our form of government in order that they might find in the ensuing chaos an opportunity to satisfy their own lust for power. Those who incite these dissensions work in the dark. They mask their purposes under high-sounding slogans and innocent-looking organizations. Fascists warn of a Communist revolution; Communists warn constantly of a Fascist menace.

Nor has this commotion of unrest, this fostering of hatred, this arousing of suspicion and distrust, been confined to our domestic situation. It has been injected into our relations with other nations. Many of those who have hurled epithets at home have hurled them across the seas as well. Indeed, so frequently have men in high public office made inflammatory speeches that other nations have been led to class us among their enemies.

Epithets, accusations, threats are not the language of peace. Such is not the way to promote international understanding and cooperation. Such is not a part of a good-neighbor policy in the family of nations. Such a policy can but aggravate the sores of hatred and distrust and suspicion from which the world is already suffering.

We cannot condone the persecutions of race, religion, and creed which have taken place in many parts of the world. But, by the same token, we must not arouse the similar passions of hatred, bigotry, and intolerance which have made these persecutions possible in a world which we have believed was civilized. In the name of peace, we must shudder at the inhuman bombing of men, women, and children; but by the same token, we must not ourselves engage in bombing men, women, and children. Nor must we add fuel to the flames of those hatreds and suspicions which are dividing the Old World into two armed camps.

Mark you well, my brothers, this is not to say that America cannot exert a powerful influence for world peace. But it cannot be that peace by force which the Roman Empire knew for so long because there was none who dared attack her. Rather, it must be a peace based on those ideals which make for peace—tolerance, cooperation, and understanding. It must be a peace achieved through the instruments of peace—the conference table—such agencies as the Kellog-Briand Pact, and the Hague tribunal. It is our duty to throw the full weight of our influence behind a movement for the achievement of international law and order. But such means do not include economic sanctions and embargoes invoked against one side as in favor of the other. Economic warfare can be just as desperate and disastrous, it can arouse the people of a nation to just as desperate deeds as any war with arms and munitions. Such a policy inevitably leads to war, just as surely as night follows day.

Make no mistake, my brothers, America does not want war. America wants no part in the armed conflicts of the Old World, where warfare, suspicion, racial clashes have been the way of life for more than a thousand years.

Despite all of the propaganda to the contrary, despite all of the calculated alarms which you see spread in the press today, America still possesses her splendid geographic isolation. Her manhood is the most virile in the world. Her resources are the greatest in the world. Her wealth is the greatest in the world. Should it be that any nation or any combination of nations were ever foolish enough to attack our shores, then every man and woman and child capable of contributing one ounce of energy to the cause of defense would rise to protect our shores from the invader. But I say to you that that day is far distant if ever it may come at all.

It must be clear to us as thinking men that we can work for peace only by constantly seeking to overcome those things which lead to strife—injustice, intolerance, misunderstanding. To match hate for hate, prejudice for prejudice, suspicion for suspicion, aggression for aggression, will not and cannot heal the world's ills. Only in proportion as we eliminate these will the threat of war disappear.

With over 10,000,000 unemployed; with business stagnant; with millions on the farms as well as on the relief rolls subsisting largely on subsidies from the Federal Government, subsidies financed by oppressive taxes, by continuing borrowing and mounting debt, to be paid not only by us but by our children and our children's children; with no real solution in sight to our many pressing problems, is it not only common sense that we first set our own house in order before attempting to settle the affairs of Europe? Must we not take the beam from our own eye first?

We can do this only if we have the courage and the vision and the will to overcome the dissension, the distrust, and the enmities which have diverted our thought from our true goal, and have so wasted our strength during the last few years. We can do so only if we can recapture the spirit of national unity; only if we can join hands, not as groups, not as classes, but as Americans engaged in the common purpose—the welfare and advancement of a great nation with an even greater destiny. To do this we must have faith in that destiny. We must realize that it can be achieved only through the loyalty, the devotion, the courage, and the strength of a united people, dedicated to a common goal, and inspired by a common ideal.

We must realize the absolute interdependence of all our people. Capital is not the enemy of labor. The employer and the employee are partners—each owes it to himself and to the Nation to cooperate with the other for mutual benefit and for the good of all the people. The interests of the farmer and of the industrialist are not opposed; rather each is the complement of the other, each producing to serve the needs of the other. Therefore, the welfare of each must depend upon the welfare of the other.

By the same token the North is not the enemy of the South, nor the East of the West, nor, indeed, is any part of our country the enemy of any other section of the country. That is but another way of saying that one group of our people is the natural enemy of another group of our people. On the contrary, ours is a country so vast and so varied that each section of the land has its own industries which it is best suited to develop, by which its people may both prosper and contribute to the people and to the welfare of the Nation as a whole. We have not reached the peak of development in any one section of this country.

We are singularly blessed among the nations of the world. We have infinite variety of climate. We have vast tracts of undeveloped land. We possess all the necessary natural resources. And, despite the many problems that confront us, we are the freest and richest people in the world.

We have reached our estate not because of government concentrated in Washington but because of government concentrated in the States and other political subdivisions and resting, in the last analysis, in the people themselves. We have reached our estate not because of any ruler or of any political oligarchy telling us when to sow and when to reap but because of the energy and the ambition and the confidence of our people individually in themselves.

There has been no mysterious change which has caused our people to lose their energy or their ability to govern themselves, to maintain themselves, and to work out their own destiny each in his own way.

Those problems that confront us today, those struggles which seem to have come upon us are the result of that great madness which we called the World War, in which millions of men were slain, in which rivers of blood flowed uselessly, in which billions of dollars' worth of property was destroyed—to settle nothing.

Who is to gainsay the destiny that must be ours if we have but the courage and the vision to attain it? But if we are to realize this destiny, if we are to achieve that unity as a people necessary to reach our goal, we must first bring about in this Nation a rebirth of that spirit of mutual tolerance, respect, good will, and cooperation for which our great order of Elks stands. That is the task that confronts us along with every other great organization in this Nation.

We must have a rededication to the spirit of representative government, the only government of free men.

Here is a stirring challenge to us as a people. We as Elks can play an important part in a revival of this spirit in America. We can help to reawaken this spirit in our fellow men, because we and our leaders have always upheld these ideals in communities all over the Nation.

I now want to pay a tribute to a man who has for these many years been an energetic and forceful leader in our order. His leadership and his years of devoted service to the cause of the Elks and the ideals for which they stand are recognized tonight as he receives a life membership in our organization.

Fred L. Dennis ought tonight to be a man proud of his achievement. To merit the confidence and the admiration and the love of his fellow Elks is an ambition worthy of any man. To achieve that ambition and to have it expressed in a life membership in our order is something of which any man should be proud for the rest of his life. I congratulate you, Brother Dennis, as I congratulate the Benevolent and Protective Order of Elks because of the presence in the ranks of yourself and men like you.

The Elks do not lack fine leadership. This is so because their ideals are of the highest and represent the best in American tradition. Under these ideals they must go forward. Under these ideals the American people must go forward, for they are the basis of free government. They are the roots of prosperity and progress for the human race. Let us then here tonight rededicate ourselves to the task of carrying forward our ideals that we may not fail to achieve the destiny which is America's birthright and serve mankind.

Federal Receipts and Expenditures

EXTENSION OF REMARKS

OF

HON. GEORGE P. DARROW

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

STATEMENT BY LAWRENCE RICHEY, SECRETARY TO FORMER PRESIDENT HOOVER

Mr. DARROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement and a brief statistical table showing the comparison of the Federal receipts and expenditures under 4 years of President Hoover and the last 4 years of President Roosevelt:

JUNE 16, 1939.

Mr. Richey today issued the following statement:

The relationship between the Federal Budget and Government expenditures under the Hoover and Roosevelt administrations has been so confused that it seems timely to make available to writers upon this subject a full comparison for future reference.

The attached statistical memorandum has been previously published elsewhere and the facts checked by competent authorities. These have become of great present interest in view of the statement officially made that the running expenses of regular departments is less now than before 1932.

The following table of comparison of the Federal receipts and expenditures under 4 years of President Hoover and the last 4 years of President Roosevelt is an amplification of the recent tables issued to the country by President Roosevelt in his Budget message of January 1939.

It has been necessary to expand President Roosevelt's tables to cover 1939 and 1940 and to correct some unimportant errors. Of more importance, however, the years of the Roosevelt administration exclude certain items of expenditures which were always included in the Hoover accounts. The Hoover method showed all money taken in on one side and all outlays and obligations on the other. These special items comprise mainly certain trust accounts, District of Columbia expenditures (except Federal contribution), and the retirement of the public debt. Corresponding adjustments are made in the income accounts. The tables have been prepared to show income and expenditures under both the Hoover basis of accounting and the Roosevelt basis.

The recoverable loans and capital investments made by the Government are, in the main, recoverable. They do not, therefore, become a burden upon the taxpayer. The taxpayers' burden is irrecoverable expenditure. Moreover, the variability of these loans from year to year confuses comparisons. For these reasons, this item has been shown separately on the tables, so as to arrive clearly at the irrecoverable expenditure. These loans and capital subscriptions are largely the R. F. C., Farm Board, Federal land banks, etc.

The Roosevelt estimates for 1939 and 1940 have been increased by new expenditures undertaken since the Budget message.

The figures are all based upon official reports of the Budget and Treasury.

Summary of comparative revenues and expenditures

[Fiscal years and in millions of dollars]

	Hoover					Roosevelt			
	1929 (¾ Hoover)	1930	1931	1932	1933 (¾ Hoover)	1937	1938	1939 (estimated)	1940 (Budget)
Revenues:									
Income tax	2,331	2,411	1,860	1,057	747	2,158	2,635	2,086	1,903
Miscellaneous internal revenue	609	628	569	504	862	2,187	2,286	2,179	2,339
Social Security						252	604	611	686
Railway pensions							150	109	129
Customs	603	585	378	328	251	486	359	335	440
Miscellaneous receipts	380	421	382	117	224	211	208	200	208
Total	3,923	4,045	3,189	2,006	2,084	5,294	6,242	5,520	5,669
Gross expenditures:									
Hoover basis	3,848	3,994	4,220	5,274	5,307	9,201	8,405	10,376	9,979
Items now excluded in New Deal accounting	650	684	549	572	676	759	779	784	784
Roosevelt basis	3,198	3,310	3,671	4,702	4,631	8,442	7,626	9,592	9,195
Deduct recoverable loans and capital subscriptions	13	176	263	1,140	1,308	150	104	271	120
Total, irrecoverable expenditures (Roosevelt basis)	3,185	3,134	3,408	3,562	3,323	8,292	7,522	9,321	9,075
	Details of expenditures								
Legislative, judicial, executive departments, etc	578	586	631	604	584	689	712	799	865
National defense	656	688	667	664	633	895	980	1,117	1,326
Veterans' allowances	659	646	719	773	749	560	572	540	539
Veterans' bonus service	111	112	224	200	100	568			
Interest, public debt	678	659	612	599	689	866	926	976	1,050
Refunds of receipts	217	152	91	101	70	56	100	66	71
Government employees' retirement fund	20	21	21	21	21	47	73	75	87
War claims, special and supplemental items				49	5	1	98	130	50
Agricultural Adjustment Administration						527	362	703	694
Social Security						448	678	833	928
Railroad retirement fund						6	145	112	127
Total, Roosevelt classification of "ordinary expenses"	2,919	2,864	2,965	3,011	2,851	4,663	4,646	5,351	5,737
Public works and relief	266	270	443	551	472	3,629	2,876	3,970	3,338
Total, irrecoverable expenditures (as above)	3,185	3,134	3,408	3,562	3,323	8,292	7,522	9,321	9,075

CONCLUSIONS FROM THE TABLE

1. The first is the stringent economy of the Hoover administration. The irrecoverable expenditures (that is, omitting recoverable loans and capital subscriptions) of the Hoover 4 fiscal years, 1930 to 1933, inclusive, were $13,427,000,000. Similar Roosevelt expenditures for 4 fiscal years 1937 to 1940, inclusive, actual and budgeted, are $34,210,000,000. This is over 250 percent of the Hoover expenditures.

2. The second conclusion is that the increase in Roosevelt irrecoverable expenditures has taken place in every single branch of government except the veterans. It is not solely due to relief and social measures.

3. The third conclusion is the great expansion of taxation. The taxes and other income collected in the Hoover 4 fiscal years, 1930 to 1933, inclusive, were $11,325,000,000. Similar Roosevelt collections, actual or budgeted, for the 4 years 1937 to 1940, inclusive, are $22,725,000,000. This is 200 percent of the Hoover figure.

4. The fourth conclusion is that the deficit in the Hoover administration was obviously due to fall in taxes, not to increase in expenses. If Mr. Hoover had imposed the same taxes on the country as Mr. Roosevelt has, he would have had a surplus of $9,293,000,000 and would have thus wiped out over half the national debt of that time.

The deficits to be paid by the taxpayer are measured once and for all by the increase of the national debt less the recoverable loans

and capital subscriptions. Taking the dates of the inauguration as the responsible dates (instead of fiscal years), the story is, in millions of dollars:

Hoover:	
National debt Mar. 4, 1929	17,378
National debt Mar. 4, 1933	20,858
Increase	3,480
Deduct recoverable loans	2,459
Hoover deficit payable by taxpayers	1,021
Roosevelt:	
National debt Mar. 4, 1933	20,858
National debt estimated by Mr. Roosevelt at July 1, 1940	44,458
Increase	23,600
Deduct recoverable loans as estimated by Mr. Roosevelt at July 1, 1940	3,339
Roosevelt deficit payable by taxpayers	20,261

Neutrality

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

Mr. CHIPERFIELD. Mr. Speaker, every Member of Congress has had from his constituents in recent months what amounts to a mandate to keep America out of war. The sole purpose of any neutrality legislation should be to carry out, if possible, this mandate.

The people back home have come to identify neutrality legislation as meaning abstention from war, and they therefore believe that the stricter our neutrality legislation the less chance of our becoming involved in war.

But this is only true if the powers granted or the restrictions imposed in a neutrality bill tend to keep us out of war rather than get us into it.

Many also seem to have reached the conclusion that the Congress should, as far as possible, retain its powers to formulate our foreign policy and not delegate them to anyone.

Section 1 of this bill grants the power to the President to find a state of war exists, and by proclamation name the states involved. I would like to have this Congress recognize the fact that it, too, has this power by amending this section so that Congress by concurrent resolution may also find that a state of war exists and name the states involved.

Let me call to your attention that while this would not take from the President one iota of power granted to him or add anything additional to the power that Congress now has, I believe that its insertion would have a very salutary effect, for two reasons:

First. It would serve notice upon any belligerent that the Congress was reserving its right to act if the President should fail to do so; and

Second. Its psychological effect upon our people that Congress was retaining its power to formulate our foreign policy rather than delegating it to one man would help to allay fear of our possible involvement in war.

Section 2 makes it unlawful for a citizen of the United States to travel upon a belligerent vessel. While it may not be of major importance, I believe that this Congress should at least consider whether it would not be better to permit United States citizens to travel on belligerent ships at their own risk rather than make them criminals, subject to a fine of $1,000 or imprisonment for 5 years, or both, as provided by section 12.

Before commenting on section 3 of the bill, I wish to first discuss the section in our present Neutrality Act, embargoing the sale of arms, ammunition, and implements of war to belligerents, which has been omitted from this bill. This is, of course, one of the most controversial issues before us. There are many who earnestly believe that to permit us to sell such articles would make us the arsenal of the world; and by permitting this trade to flourish, it would lead eventually to our participation in war.

Those who believe in the repeal of the arms embargo say that it is not enough for us to attempt to keep out of war ourselves, but that we must also discourage war by strengthening the forces of democracy throughout the world.

They point out this issue cannot be approached academically but must be approached realistically. They claim the effect of the present arms embargo, in the event of a general European war, would favor Germany and Italy, while if it were repealed it would help England and France; that it is necessary to make available arms, ammunition, and implements of war to the democracies in order to preserve the balance of power in Europe, and that this will discourage the so-called aggressor nations from starting a war.

On the other hand, those who favor the embargo features of the present act contend we must be concerned solely with keeping the United States out of war and not be concerned with the effect of this legislation upon other countries; that we cannot afford to be pro-German or Italian or pro-British or French, but our one object should be to confine ourselves to being pro-American.

Each Member must decide for himself which of these policies he desires enacted into law; but it seems to me, no matter whether you favor the shipment of arms, ammunition, and implements of war to belligerents or not, we can all agree that we should not permit United States vessels to transport them to belligerents.

To my mind this is the most dangerous policy we could adopt. To permit United States vessels to carry such dangerous articles is the surest way I know to get us into war. It is absolutely unjustifiable to permit our vessels to carry on such a trade when under international law such traffic is contraband and would permit the seizure and search of our vessels without our Government even having any right to protest.

When the Bloom bill was first introduced before our committee it not only omitted the arms embargo section of the present Neutrality Act but it did not contain any provision prohibiting the transportation by United States vessels of arms, ammunition, and implements of war to belligerents. The only restriction at that time contained in the bill limiting United States shipping was in section 3, creating possible combat areas through which it would be unlawful for our vessels to pass. After the hearings and before this measure was reported on favorably, an amendment was unanimously adopted by the committee, making it unlawful for United States vessels to carry arms, ammunition, and implements of war to belligerents. This provision is found in section 9 of this bill, and I consider this section to be one of the most important in the entire bill.

There will probably be a concerted effort to strike from the bill that part of section 9 that prohibits our vessels from carrying such articles to belligerents because it partially conflicts with the repeal of the arms embargo section that the administration desires omitted from this bill. With the present arms embargo section omitted, then all belligerents would be permitted to come to our shores and buy anything they desired and the effect of retaining section 9 would be only to restrain our own vessels from transporting arms, ammunition, and implements of war to belligerents but would permit them to carry everything else. To me this certainly seems a reasonable restriction that would tend to keep us out of war.

To those of you who might be concerned that our merchant marine might be seriously injured by such a policy, I might say that the evidence before the committee was to the contrary, and any loss to our merchant marine would be infinitesimal compared to our loss if we were involved in war.

Those of you who favored the present arms embargo 2 years ago, when only 13 voted against it, but who conscientiously believe that because of changed world conditions it should be repealed, I earnestly urge that you at least prohibit United States vessels from carrying arms, ammunition, and implements of war to any belligerent nation. And to those of you who believe we should retain our present arms embargo, if you are not successful in having such a provision placed in this bill, I then urge you also to make a strenuous effort to at least retain this part of section 9 that makes it unlawful for our vessels to carry on such a trade. One of the chief causes of our entry into the World War was the fact that American vessels were permitted to transport such articles of war to belligerents. I am sure that none of us want to see such a catastrophe happen again for the same, identical reason.

If we do put such a restriction on our vessels, then the need of section 3, creating combat areas, to a large extent is done away with. The purpose of section 3, of course, is to prevent our citizens and ships from entering dangerous areas, but if our ships are not permitted to carry arms, ammunition, and implements of war, then the danger of their being sunk or seized when passing through such areas would be materially decreased.

If section 3 is stricken from the bill, as many believe it will be, then it becomes all the more important that we retain section 9, for without section 3 or 9, nowhere in this bill is there any restraint on the character of the shipment that American vessels may transport to belligerents.

If the arms embargo section of the present Neutrality Act is not retained and section 9 should be stricken, then there is absolutely nothing in this bill that would prevent United States vessels from carrying arms to belligerents unless the President creates a combat area that completely shuts off every port of such nations. There is nothing mandatory in this section that requires him to do so. Under the conditions of modern warfare, with submarines and airplanes and their wide range of attack, it would be almost impossible for any person to define a combat area. So sweeping are the powers granted in this section, it is entirely possible that the President could virtually declare a blockade and create a combat area that would prohibit our vessels from reaching any port of one or more belligerents, and at the same time give full access to United States vessels carrying arms to the other side. Nowhere is there any guaranty that belligerents will be given equal treatment.

This section grants to the President the power to be as unneutral as he desires and to penalize one belligerent and favor another. Such acts as I have just referred to might well be construed as unfriendly acts that might more readily lead us into war than keep us out.

From my viewpoint section 3 is the most dangerous section of this bill, and I believe the unrestricted powers delegated to the President in this section should not be granted.

Section 4 (a) provides that it shall be unlawful for any person of the United States to purchase, sell, exchange bonds or securities or other obligations of the government of any State named in such proclamation. I thoroughly approve of such a provision as it will tend to prevent financial entanglements with nations involved in war. However, I desire to call to your attention the exception that is provided in this section, namely, that the President may except from the operation of this section "ordinary commercial credits and short-time obligations." An examination of the testimony of the State Department officials, appearing on page 30 of the 1936 neutrality hearings, discloses that a very broad definition is given to ordinary commercial transactions and the effect of this exception would be to nullify to a great extent the other provisions of this section.

Section 4 (d) does not prohibit American vessels from carrying cargoes to belligerents if the title to such cargo is in the name of the belligerent before leaving our shores and the seller retains no interest in it. It therefore is clear that neither cash nor carry is provided for by this section.

May I explain this statement by a simple illustration. If I go into a store, buy some groceries, pay cash for them, and carry them home with me I have completed a cash-and-carry transaction. On the other hand, if I go to a store, buy some groceries, receive a receipt for them from the grocer stating title has passed to me and he has no right, title, or interest in them, receiving ordinary commercial credit without my paying for them, and I leave the store without taking the groceries with me, then I have done all that section 4 provides. Section 4 does not require that I take these groceries with me but allows the grocer or anyone else to deliver them. It would not require me to pay cash, but allows me to have the benefit of ordinary commercial credit.

As I have just pointed out, section 4 (d) does not prevent American ships from transporting arms, ammunition, and implements of war to belligerents, but by retaining section 9 the loophole in section 4 (d) is corrected so far as arms, ammunition, and implements of war are concerned, as our vessels could not carry on such a trade.

Section 5, with reference to making it unlawful to solicit and collect funds in the United States in behalf of belligerent nations, I believe is a good section and would tend to keep us out of war.

Section 7, with reference to American ports as base of supply can only be justified if we were to retain the arms embargo, and if we repeal this section we have the anomalous situation that American ships could transport arms to a belligerent's shores, but could be prevented from shipping arms to belligerent nations if it was necessary that these arms be delivered and carried to the shore by a tender of a battleship.

I also desire to call attention to the fact that this section would permit the President to require a bond of an owner of a vessel when he suspected that that vessel was to deliver the cargo to any warship, tender, or supply ship of a belligerent nation. He can do that "when the evidence is not deemed sufficient to justify his forbidding of the departure of such a vessel."

I thoroughly approve of section 10, with reference to the National Munitions Control Board. This section would, in my opinion, help to keep us out of war.

I believe this bill, in its present form, which in the name of neutrality and under the guise of preventing provocative acts of American citizens gives the President additional powers to be unneutral, should be defeated. But above everything else we must retain section 9, prohibiting American vessels from carrying arms, ammunition, and implements of war to belligerents.

Low Interest Rates Indicate Fear

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

Mr. THILL. Mr. Speaker, recently the press reported that the Federal Treasury was refunding a note issue bearing 1⅜-percent interest, not due until September, with a 5-year issue paying only three-fourths of 1 percent. The fact that our Government can borrow at a low rate does not spell general confidence.

The market for money would be much stronger and the Government would have to pay a higher interest rate if business were better and private enterprise were expanding. The demand created by borrowing for the great needs of heavy industry, business, transportation, and utilities would certainly stiffen the money market and increase interest rates.

Easy credit is proof of lack of confidence in this administration; of fear on the part of Americans to take business

risks. The unsound experimentation of our New Dealers, the tremendous tax burden, the mounting national debt, the unwillingness of this Government to encourage private enterprise, but instead to stifle it by Government intervention, interference, and control of private industry, have all served to undermine the confidence of the American investor and deter the borrowing of money for business development and expansion.

Farmers' Interests in the Wage-Hour Act

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

RADIO ADDRESS OF HON. HARRY R. SHEPPARD, OF CALIFORNIA, OVER THE RED NETWORK OF THE NATIONAL BROADCASTING CO., WASHINGTON, STATION WRC, JUNE 26, 1939

Mr. SHEPPARD. Mr. Speaker, definite concern in the proposed revision of the Wage and Hour Act has been evidenced by the Members of this Congress. Interest in this act on the part of agriculture throughout the Nation, and particularly in California, justifies an intense study on the part of the Members of this House to see that corrective measures are promptly enacted. Any true friend of agriculture appreciates the fact that our economic conditions is of such a character that agriculture is entitled to every legitimate consideration.

This interest was intensified by a national broadcast of Administrator Elmer F. Andrews on Monday, June 19, 1939, which was inserted in the Appendix of the CONGRESSIONAL RECORD, on page 2776, by the gentleman from Illinois, the Honorable RAYMOND S. MCKEOUGH. I am calling the Members' attention to my reply to Mr. Andrews' broadcast, which is as follows:

Last week at this hour Mr. Elmer F. Andrews, the Administrator of the Wage-Hour Act in the Department of Labor, talked about some of the farmers who are my constituents and about others throughout the country who are my friends.

Tonight, in the interest of fair play, the National Broadcasting Co. is affording me an opportunity to reply in behalf of the several national farmers' organizations.

I regret that Mr. Andrews has made it necessary for me to deal with a number of false statements he made a week ago and to refer to his mishandling of the definition of agricultural labor which is contained in the Wage-Hour Act.

Before I proceed I want it understood that I supported that act when it was passed a year ago. I voted for it in the belief that it would be administered in the manner that Congress intended.

I do not know whether Mr. Andrews has ever visited the farming areas of southern California. His misunderstanding of our problems makes me doubt it. His speech contained so many inaccurate statements with respect to agriculture, both in California and in other parts of the country, that I can explain them only on the theory that all he knows of farming is what he learned as a social worker in New York and as labor commissioner in the same State.

I think he has a lot to learn about agriculture.

First of all, let us get the issues squarely before us. What are they?

During the past few years Congress has enacted several far-reaching laws whose purpose is to protect laboring men against the few employers who have been exploiting industrial labor. Congress sought to eliminate sweatshop poverty in our big industrial areas.

These conditions do not characterize the rural areas of the country. Congress, therefore, specifically exempted agricultural workers from the provisions of these labor acts. Congress provided that the wage and hour standards set up for industrial operations were not to be applied to work on farms nor to work done in preparing farm products for market when the work is done in the area of production. In order to permit some flexibility in dealing with the agricultural problem Congress authorized Administrator Andrews to define the phrase "area of production."

But what did Mr. Andrews do? He cast aside the clear intent of Congress and defined the term "area of production" in such a manner as to destroy the meaning of the term and virtually to seize the power of economic life and death over thousands of rural enterprises.

He has decreed that an enterprise is not located in the area of production if it employs as many as seven people. By definition he has seized control over agricultural enterprises located in towns with as many as 2,500 people, regardless of the nature of the town or the nature of the agricultural enterprise conducted within it. He has seized control over all agricultural enterprises to which any farmer hauls his cattle or grain or fruit as much as 10 miles.

When Mr. Andrews first attempted this bureaucratic seizure of power at least a score of Congressmen went to him and testified at his hearings to tell him that this was not in accordance with the intent of Congress. They told him why the words "area of production" were used in the bill. They told him of the discussions in committees and on the floor. They told him what are the areas of production for various farm products.

But it made no difference to the Administrator that these Congressmen themselves were the makers of the law. He cast their advice aside and defined the term in an unreasonable and arbitrary manner. By his biased approach, by refusing to be open-minded or amenable to congressional opinion and public opinion, he raises the question as to where legislation is to be made, whether by the elected representatives of the people through orderly process on Capitol Hill or by Mr. Andrews, sitting in an office up Pennsylvania Avenue.

Naturally the farmers have protested and have protested vigorously. They are justified in doing so.

Five of the great national farm organizations, American Farm Bureau Federation, the National Grange, the National Cooperative Council, the National Cooperative Milk Producers' Federation, and the Agricultural Producers' Labor Committee came to the Members of the House of Representatives and asked that this situation be straightened out. The Members made many efforts to do so. But Mr. Andrews asked for a bill which would enable him to seize even greater control over agricultural operations. By an overwhelming vote the House refused to give Mr. Andrews what he asked.

There are several bills in Congress which will remedy the situation and which could be passed by large majorities if they could be brought to vote. But so far, by the use of parliamentary devices, a farmers' bill has been prevented from coming to a vote.

This remedial legislation cannot be long delayed, and Mr. Andrews undoubtedly knows the Congress will eventually shear him of some of the powers he has assumed.

Five great farmers' organizations are united in asking for action. However, using one of the favorite tricks of propagandists, Mr. Andrews last week singled out a single man and a single organization for attack. He named the Agricultural Producers' Labor Committee of California. He charged the committee with being a legislative front for another group known as the Associated Farmers, for the State chamber of commerce, for big utility interests, and for employers opposed to organized labor.

This is incorrect.

After investigation I have satisfied myself that there is no connection between the Agricultural Producers' Labor Committee and any of the groups for which Mr. Andrews alleges it to be a front. I personally know 10 out of the 15 officers and directors of that committee, and I know them to be real farmers and to be hard-working men of good repute and of high integrity.

Mr. Andrews singled out one of those men and attacked him by name and charges him with being the lobbyist leader of some sort of subversive campaign to victimize labor. I have personally known the man, Mr. Ivan McDaniel, for at least 15 years as a responsible lawyer of high repute and have every confidence in his integrity.

Apparently the one sin which Mr. Andrews charges against the capable and high-character men who have been duly chosen by farmers to represent their interests is that they have used the only method of democratic representation to bring their views to the attention of Members of Congress. In doing so they have done no more than Mr. Andrews himself has done, for he and his assistants have come to Capitol Hill to argue their views.

I have had numerous conversations with the officers and representatives of the various farm organizations who have come to Washington for the purpose of attempting to get a square deal. At no time has there been any indication of any desire to tread upon the interests of the laboring men. In fact, farmers are themselves laborers. There is no real controversy between agriculture and labor, and there should not be.

But if a Government official in his own self-interest uses his office as the forum from which to issue inflammatory statements and to stimulate class hatred, I shall shudder for the consequences.

The greatest disservice that can be done to the laboring man is to alienate the farmer through unfair treatment at the hands of the pretended friends of labor.

I am thoroughly satisfied that Administrator Andrews would have shown better qualification for the office which he holds if he had approached this problem with an unprejudiced mind and had provided a clear statement of the issues that are involved.

Now just what is it that these farmers ask? Mr. Andrews says that "If they get their way, every employee engaged in packing or canning farm products will be deprived of all security in his old age, of the right to join with his fellow men in unions of his own choosing, and the right to work protected by a floor under wages and a ceiling over hours."

This is pure poppycock. If Mr. Andrews is qualified for the job he holds, then he knows it is poppycock.

What is it these farmers want? They do not want their farms and the operations which must be performed on their products before going to market to be regulated under the same standards

which are set up for urban industrial factories. They do not want their affairs controlled by a bureau which knows nothing of agriculture nor the characteristics of agricultural production and marketing.

The hours and the wages of the farmer and his family are controlled by higher laws than any this Congress can enact. They are the natural laws of the Almighty, who controls the sun and the wind and the rain. They are the economic laws that determine what the consumer will pay and what quantity he will purchase in the market place. Upon those laws depend the seasons and the hours when grain must be brought to the country elevator, when fruit must be brought to the packing shed, when milk must be brought to the creamery and when livestock must be brought to the shipping pens. Upon those laws depend the wages which can be paid in the elevator, the fruit shed, the creamery, and the shipping stations.

When it passed the Wage and Hour Act last year, Congress had no intention of attempting to defy these higher laws, and recognized the need for exempting agriculture, but Mr. Andrews, in his agricultural innocence, acts as though an order over his signature is adequate to stop the sun in the heavens.

The present low prices for farm products and the disparity between the prices farmers receive for the products they raise and the prices the farmers pay for the things they buy makes it impossible for any additional burdens to be imposed upon the farmers without reducing them, as laborers, to a condition of serfdom—a condition so deplored by Mr. Andrews.

Last year the income to our farmers, between six and seven million in number, was somewhere around $7,000,000,000—an average roughly of $1,100 per farm. By income I mean the gross income, comparable with the gross amount that the cash register rings up in a grocery store. It is not profit. From the gross must be deducted the taxes and interest on 100 acres or so of land, the cost of maintaining buildings and fences, the cost of seeds, of fertilizer, of farm machinery, of breeding stock, of delivery to market, of tractor fuel, and of horse flesh. Only a paltry few hundred is left over. Let Mr. Andrews devise a way by which the farmer can work a 40-hour week and get 40 cents for every hour and then Mr. Andrews will have a better right to ask the farmer to pay his production and marketing labor 40 cents per hour and confine his labor to a 40-hour week.

Congress designed the Wage and Hour Act to deal with industrial problems. It cannot be applied to agricultural problems; any attempt to do so will break down its operation and endanger the act as a whole. The surest way to give aid and comfort to the enemies of the Wage and Hour Act would be for Mr. Andrews to continue to attempt to apply it to agriculture as he has in the past. In closing I want to advise Mr. Andrews that it is time we stopped giving lip service to the farmers of this Nation and applied some practical application for their benefit.

A Revival of the American Spirit

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

RADIO ADDRESS BY HON. ALBERT E. AUSTIN, OF CONNECTICUT, JUNE 24, 1939

Mr. MARTIN of Massachusetts. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address by Hon. ALBERT E. AUSTIN, of Connecticut, on June 24, 1939:

I wonder how much longer it will take for our people to realize that mechanical methods alone will not suffice to bring us as a nation out of the depths into which we descended and from which we do not seem able finally and surely to emerge. Reference is made to the various agencies established, to the jungle of alphabetical panaceas, to the curtailed crops, to fertile fields plowed under, to the waste of a nation's resources, to pump priming, destructive taxation, unbalanced budgets, and the wholly untenable theory of spending our way to prosperity. Our people are bewildered, they stagnate in the presence of possibility, they are drifting aimlessly, dedicated to no common faith and inspired by no common vision. The only thing seemingly common to all is the knowledge that millions are still unemployed and the belief that millions henceforth must be resigned to relief as a premanent level of life.

Is there no other way? Is there no other light in the darkness? I believe there is, and that the solution lies in a revival of the American spirit. If every citizen will cease to look to Washington in his moment of stress and strain and individually assume the responsibility of self-improvement, of self-advancement, of self-preservation I believe the turning point then may be reached and from that instant we begin again to be a happy, a contented, a prosperous people with eyes raised high to greet a new day. This is the American way, this is the American creed, this is the American spirit.

It is nothing new. It is the product of three centuries of our life on this continent. It began at the bleak and barren Plymouth Rock; it was nurtured in the privation and suffering of untracked forests; it grew on the westward march through the wilderness to push our frontiers even farther on; it matured in our struggle for independence; it came to the flower of manhood in the bitter years that led to the welding of a people into the greatest and most powerful nation on the face of the globe. Invisible and intangible, it defies the definition of historian, of economist, of philosopher; but it guides the life of every real American, whether the roots of his family tree are indigenous or recently transplanted from foreign soil. It is not now gone from us. It has been forgotten, but only for the moment in the confusion of our bewilderment.

Our present attitude toward government is a departure. Our forefathers realized that our form of government affords the greatest opportunity to the individual, the greatest field to his ambition, the most untrammeled road to high places. They also realized that the Government was their creation, made by them and for them and not they for it. Certain powers were delegated in order that their inalienable rights might be the better preserved and protected. They did not establish a government to rule, but to serve. In return they accepted the responsibility of self-government. Today this concept is in danger, for Washington is reaching out, seeking for itself a domination never intended. On the other hand, we are beginning to look there for control and security. We are on the way to a desire for paternalism—a theory that the world in general and our Government in particular owes each one of us a living whether or not we individually strive. Some believe that the more abundant life resides in the Capital City and an enforced distribution must be made, even if such requires the taking from those who have and giving to those who have not. None of this is the American spirit.

How can there be an incentive to thrift in this era of profligate spending? Once it prevailed that thrift was cultivated as a cardinal virtue, a guaranty of comfort and happiness during productive years, and a security in old age. Our ancestors knew that they must work for what they got whether bare necessities or the luxuries of life. They must produce if they would enjoy. Of course it was hard, of course it meant going without, of course it meant often toil in the early morning, toil in the midday sun, and toil even in the hours of night. Of course the wage was small, of course it was inadequate, but of course it came from a dignified labor and from the work of one's own hands. It was the result of employment in which men rejoiced whether in the fields, the factory, on the land, or on the sea. Today some of us seek not to create for ourselves, but to use the Government to exploit the labor and the accumulation of others. Why not be carefree, for we must be supported and our old age will be provided for. This again is not the American spirit.

Once our citizens thought a theory of government antagonistic to our established constitutional form would be a treasonable one. They lived for what they created and they died for it, gladly and willingly. They saw in it liberty and independence, freedom of thought and of speech, recognition of a God above whom each could worship as he pleased and when he pleased. They saw therein mutual respect and tolerance, voluntary cooperation without bitterness and strife or jealousy and distrust. Firm in their beliefs they went fearlessly forward. Today we face an invasion of subversive ideas emanating from distorted minds or from some other source equally unwelcome. These would undo what has been done through the years; they would uproot established concepts; they would substitute violence and sudden death for the peaceful pursuits of every day; they would ruin and destroy. Whether they socialize or whether they communize, individuals would be regimented into masses, and a State would control with an arbitrary power over life, a power usurped by the terror of fire and sword. This is not the American spirit.

Simply because we have paused for a while on our march to an ultimate goal there is no reason to despair. If other methods recently applied have not succeeded in a renewal of our journey, there is no reason to be discouraged. Those men of another generation did not cry quits when the battle was going against them. They tightened their belts, they hunched their shoulders, they set their faces in grim determination, and they bored in. They had inherited ideals of civic and individual action, and they were ready to sacrifice to preserve them. They did not seek the easy road even though the siren voices of sob sisters enticed them. That is the American spirit. They refused to forsake their rugged individuality and be regimented as forgotten men. They scorned public aid whether it appeared as Presidential bounty, Federal loans, or political plunder, for they had sufficient faith in their country and themselves to trust to personal effort even though for a time it might furnish only a bare subsistence. In the face of impending disaster they did not lose their initiative but plugged doggedly on. In hard times they planned for harder; in plenty they stored for famine; in depression they worked for prosperity. This is the American spirit.

Have we lost it? With the then millions of population now tripled; with billions of wealth at our disposal; with other nations about us on the upward trend; with the proudest position in the world; with nature's bounteous gifts to us still untouched; with a people united and merged, what have we to dread and why must we surrender to fear? That is not the American spirit.

Pioneers with mind and body, they strode over mountains and across plains, through forests, and on open spaces always seeking unknown lands. Pioneers all of us with our capital and the skill of our hands, why not onward undaunted and unafraid into the unknown of a prosperous day?

We must rededicate ourselves; we must renew our courage; we must rediscover our strength and our power; we must uphold our faith; we must recapture our vision of America's destiny. This is a revival of the American spirit.

The Banker in a Changing Economy

EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, June 26 (legislative day of Thursday, June 22), 1939

ADDRESS BY LEO T. CROWLEY

Mr. BROWN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered on June 21, 1939, by Hon. Leo T. Crowley, Chairman of the Federal Deposit Insurance Corporation, at Detroit, Mich., before the annual convention of the Michigan Bankers' Association, on the subject of The Banker in a Changing Economy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the Michigan Bankers Association, and guests, I have looked forward to this, my first opportunity to meet with the Michigan Bankers Association. To one with my interest in the history, the present well-being, and the future prospects of our banking system, Michigan furnishes an inexhaustible field of study. The State had more than its share of banking troubles during the years immediately following 1929. It is to the eternal credit of the bankers and those who governed the State that they had the courage to recognize those troubles, the vision to realize that far-reaching economic changes were occurring which drastically affected the banks, and the foresight to declare a banking moratorium in order that weak situations could be corrected and adjustments made to adapt the banks to a changed economy.

The process of rehabilitation that was begun during your moratorium gained momentum when President Roosevelt reopened the banks following the Nation-wide bank holiday. The Michigan program was so well planned and so vigorously executed that banks in the State today present, on the whole, a picture of soundness equal to that found in any other State. Continuing improvement in management and the capable supervision over State institutions that is exercised by Mr. McCauley and his department justify our belief that this satisfactory condition will long continue.

There is nothing we can do to rewrite the pages of history; only in isolated cases can we hope materially to improve the present condition of Michigan banks. However, we can look to the future and attempt to plan for what that future may hold for American banking—we can apply the lessons of the past to what exists today, attempt to anticipate trends that will influence what exists today, and strive to perpetuate and to improve further the desirable aspects of the system's present condition.

ECONOMIC CHANGES HAVE AFFECTED BANK EARNINGS

I spoke earlier of changes that have been occurring throughout our economy that materially affected the business of banking. Inasmuch as adequate earnings are essential to permit banks to attract capital, to meet operating expenses, and to absorb losses, we naturally look with particular concern upon developments that have affected the profitability of banking enterprises.

Recognition of changes affecting profitability and admission of their permanent nature has been belated, principally because they occurred for the most part during a period of intense economic strain. Wholesale charge-offs and lower rates of income on earning assets are natural byproducts of periods of depression. Bankers consequently accepted as normal the deficits of the early thirties and settled back to wait for return of the "normal" demand for credit and for a rise in money rates to the old, profitable levels that had characterized the twenties. But while they waited, the supply of bank credit increased manyfold, while the demand teetered comfortably back and forth at the level it found in 1933 and 1934. Money rates, influenced by the abundance of credit, and by Government financing operations have shown no indication of rising from their depression lows.

To this fundamental banking problem the best practical and theoretical minds in the profession have given extensive consideration. I have no doubt that the advice and counsel that these men have been able to give has helped materially to spread an understanding of the immediate seriousness of the problem. All too infrequently, however, have the counselors given sufficient attention to the fact that this is a constantly changing economy—that it is not sufficient to meet changes with makeshift measures as they occur.

If the banking system is to serve its intended function as a smoothly running part of our economic machine, its policies must be formulated on a long-range basis, its adjustments to changing conditions within the economy made on a gradual, overlapping schedule, and its condition and practices kept such that it can function properly throughout any stage of the business cycle. I do not pretend to have in a nutshell any pat answer to all aspects of the banker's dilemma; I should like, however, to review some factors that are extremely pertinent to that dilemma and that must be considered in arriving at its solution. The nature of our banking structure is probably the logical starting point.

GOVERNMENT RECOGNIZED NEED FOR PROFITS

The quasi-public nature of the banking business—its close relationship to the well-being or ills of our economic life—has long been recognized. For years both the creation of banks and their operations have been supervised by government in the public interest. The objectives of this supervision have been the same throughout these years; maintenance of a banking system adequate to serve our economy's credit needs, yet not too highly competitive; and supervision of the operations of banks in order to assure that credit extensions were made with due consideration for the fundamental right of bank creditors to safety for their funds. It is a matter of history, though not a unique one, that efforts to attain these socially desirable objectives have not been uniformly successful. Yet the trend is definitely toward more satisfactory fulfillment of the supervisory function. Supervision, like the banking business itself, has profited from bitter experience, and we have good cause to hope that competent management and courageous supervision jointly can prevent any major break-down of the system in the future and at the same time can fulfill their joint responsibility to the banking public.

It is significant that those who have been charged with administration of the public privilege of bank chartering recognize the indispensability of profits for successful bank operation. The merits of each application for a new bank charter are weighed primarily of course upon the convenience and needs of the community it is proposed to serve and upon the degree to which existing institutions are fulfilling their obligation to meet thrift and credit needs of the community. Yet in every case great weight is given to the effect of a new bank upon the business of institutions already in existence in the affected trade area. The banking system's record is studded with cases where the existence of too many banks within a given area led to cutthroat competitive practices, to inefficient management, and ultimately to failures that involved sizable losses to bank depositors.

A natural effect of this control has been creation in many cases of local monopolies upon the thrift and credit facilities of a community. It was certainly not the intention of the legislative and administrative bodies that created these facilities to permit an uncontrolled expansion of monopolistic powers, otherwise we would today have a few large banks with many branches, rather than our present system of independent units. A free credit structure has always been considered indispensable to this free Nation. Every effort by bankers to limit the freedom of the credit structure by tightening loan policies or by charging exorbitant interest has hurt the banking system.

And so the banker in this country, though he enjoys the benefits of restricted competition granted by governments which recognize the necessity of adequate earnings, cannot in his quest for new sources of income resort to usury or to similar abuses of his protected position. That way out is permanently barred not only by statutory prohibition but by the considerable degree of competition that still exists among our many units banks.

Further, the force of public opinion insists that new sources of earnings must be honest, conservative, competitive, and devoid of undue danger of loss to the bank and to depositors.

POTENTIAL SOURCES OF BANK PROFITS

In pursuing his search for profits the banker would do well, I believe, to apply to his problem the standards and the ingenuity he expects from his customers in other lines of business. In a general way, at least, the operations of banks closely resemble the operations of other businesses; the stock in trade is different, of course, but operating problems are much the same as those that confront the average businessman and the means to their solution differ only in degree from those that we expect merchants and manufacturers to adopt.

The day is past when it can reasonably be thought undignified for a banker to solicit business. His shelves are full to overflowing of his stock in trade. Today's is definitely a buyer's market for the commodity he handles. First in any banker's program for increasing profits must come a comprehensive plan of advertising and of building goodwill, in order to search out potential buyers and acquaint them with the advantages of his commodity and his services. That banker is remiss indeed who fails to take this first and most indispensable step in fulfilling his responsibility to his community and to his stockholders.

As step number two, I commend the general tendency of the banking profession to analyze internal operations with a view toward stopping the losses banks long have suffered from general operations, particularly those of a service nature. The installation of a fair schedule of service charges, sufficient to reimburse a

bank for services rendered, is a step that every bank should take, and one that customers cannot properly object to. Recent years have seen another innovation, sponsored by Federal legislation, which has materially benefited most banks. I refer to prohibition of payment of interest on demand deposits. Many banks have also been able, through analysis of their internal operating systems and substitution of modern accounting and operating systems, to pare operating expenses considerably.

There are still many localities and many banks in which these devices have not been fully utilized. On the other hand, instances have come to my attention in which the devices have been applied to the point of abuse. There are extremes beyond which interest rates should not be lowered nor service charges raised. Because of the abundance of funds in their institutions bankers are inclined to be complacent today about withdrawals of savings and time deposits. There may well come a day, comparable to those of not so many years ago, when bankers would be willing to bid high for the funds they now let be withdrawn rather than pay a reasonable percentage for their use. Goodwill is a priceless banking asset. Its retention is well worth some small outlay in times like these in order to insure that it shall be ours when we move into a seller's market.

Having canvassed thoroughly the demand for traditional types of bank credit, and having put services on a stop-loss basis and general operations on as efficient and economical a basis as possible, the banker's next step is the search for new types of acceptable credit extension. Insured mortgage financing, the financing of receivables, installment paper, personal loans—all present profitable fields for the credit merchant. But they also present specialized risk problems that require expert handling, and their novelty to most banks calls for extremely careful preliminary ventures into these fields. Term loans to businesses have been discussed during recent months as though they presented a new and a unique bank credit problem. Such is far from the case. The same considerations should govern extension of term loans as govern seasonal financing of inventories. Credit record and financial standing of the borrower, soundness of underlying collateral, and proper provisions for payment of interest and repayment of principal all must be weighed. Length of maturity is only of secondary importance.

Significantly, all the steps I have enumerated as essential to a successful search for profits call for a generous endowment and a free use of the qualities of ingenuity and judgment as well as for application to the field of banking of those aggressive, promotional techniques that have so long been necessary in other businesses. The day is definitely past when the butcher, the baker, or the candlestick maker could open a bank and set back to watch it run itself. Banks these days take a heap of runnin', and only the most capable and the most aggressive bankers can hope to see their institutions survive the combined pressure of competition, an enlightened public, Government supervision, and relentless economic forces.

STANDARDS OF ASSET SELECTION AND MANAGEMENT MUST BE KEPT HIGH

Changes in the make-up of a bank's earning assets and the search for new sources of earnings must not be allowed to lead to lower standards of asset selection or of asset management. In whatever types of debt a banker chooses to invest, he must be certain that represented values actually exist at the time of selection, and he must manage his assets in such a way as to insure that shrinkage in the value of underlying collateral shall be kept at a minimum during the life of the debt.

Few bankers would consciously choose a bad asset for the portfolio of their institutions. As a whole, the profession exercises honestly its best judgment in weighing the merits of individual assets. Yet with respect to broad principles of asset management, there exists a marked confusion of thought. This confusion arises, I believe, not so much from fundamental differences in approach to the problem as from a lack of understanding of the several ways in which asset values can change to the detriment of a bank.

VOLUME OF BANK LOSSES

Our concern with asset values stems, of course, from a desire to keep at a minimum the losses which banks, bank depositors, and bank stockholders are called upon to bear. During the past 75 years losses borne by the banking system have amounted to $14,000,000,000, or approximately 1 percent per annum, of the deposits in operating banks. Of these losses, $5,000,000,000 have been in suspended banks—half borne by depositors and half by stockholders—and $9,000,000,000 have been written off in operating banks. If a stable, profitable operation of our banks is a desirable objective, then certainly the causes, the characteristics, and the effects of losses on bank assets should be more generally understood by bankers.

Note that the ratio of net earnings per $100 of total assets for all insured banks in 1934 was 74 cents. By 1937, it stood at $1.22; a range during the 4 years of 48 cents. The rate of net profits before dividends per $100 of total assets for all insured banks was minus $1.86 in 1934. By 1937, it had risen to plus 59 cents; a range during the period of $2.45, or more than five times the change in the net earnings ratio. Net losses and depreciation in bank assets are the sole factors determining the difference between the net earnings and net profits before dividends figures.

NATURE OF BANK LOSSES

It is our belief that bank managers and supervisory authorities can do much to narrow the vast difference in range between the net earning and net profits ratios. In other words, to stabilize the operations of our banks. Losses and depreciation in bank assets are of three types: First, there are catastrophe losses resulting from the destruction of values by the elements; second, there are the losses which result from forced liquidation to meet the panic or emergency demands of depositors; finally, there are the losses and depreciation which must be expected as a normal byproduct of the business of credit extension. Any program for stabilization of the banking system must anticipate losses of all three types.

It is generally beyond human ability to foretell and prepare for the destructive consequences of fire, wind, flood, or drought. This much the enlightened banker can do to cheat catastrophe of its toll—he can maintain a capital account adequate to absorb comfortably all losses of this sort that reasonably can be expected to materialize in his institution; he can insist on the use of sound and tested methods of protection and replenishment with respect to the security underlying his earning assets; he can diversify his assets so that local catastrophes will not completely destroy his institution.

Losses resulting from forced liquidation to meet the panic or emergency demands of depositors have been the most devastating and the most inexcusable type that bankers and bank creditors have had to bear. If a bank asset is fundamentally sound, proceeds of its liquidation should not have to depend upon day-to-day market prices that are influenced by so many factors other than intrinsic value.

It is encouraging, however, to review how much progress bankers and government have been able to make in limiting losses of this sort. Bankers have, for the most part, become "quality conscious" and avoid assets that are subject to wide market fluctuations. They now require amortization or sinking-fund provisions to insure retirement of assets at maturity. They space asset maturities and diversify risks in order to lessen the chance for concentrated deterioration. Government has practically eliminated panic demands through inauguration of Federal deposit insurance and 5 years of successful operation by the F. D. I. C. Broadened borrowing powers have been provided so that banks may meet legitimate emergency demands of their depositors which may exceed immediately available cash and the proceeds of maturing assets. Examiners now appraise bank assets on a basis of fundamental soundness and quality, rather than merely on market quotations or length of maturity.

Bankers' treatment of losses and depreciation that normally result from the business of credit extension is a phenomenon of our banking history. Properly handled, these claims upon net earnings are the equivalent of operating expenses. As an example, I can point to the inclusion of regular and reasonable depreciation upon banking house, furniture, and fixtures among operating expenses in the F. D. I. C. earnings report form. It is argued by many bankers and accountants that provisions for normal losses in bank-earning assets should likewise be considered an operating expense. We do know that, disregarded, these claims have ruined thousands of banks.

Provision for losses and depreciation of this type is simple and indispensable. It involves recognition of the following facts:

(1) The income received on earning assets is not all intended as wages on the funds invested. It is partly a premium against risk assumed by making the loan or investment. Differences in the coupon rate and the yield on obligations of various borrowers in times like these do not occur because funds are worth more to one borrower than to another. They exist, rather, because of differences among borrowers as to credit standing, net worth, and earning power—factors affecting the risk a lender assumes when he trades his cash for a promise to pay at some future date.

(2) The loss record of various types of assets can be determined with a reasonable degree of accuracy. A bank's own records and the banker's knowledge of business trends in his own community make development of loss ratios for loans comparatively easy. Information concerning the behavior of securities is not so readily available, but sample studies of the records of securities of various kinds have been made, and there is currently in process an exhaustive study of the behavior of investment securities during the last 20 years.

(3) And, finally, that part of income on earning assets which is meant to be a premium against risk assumed should be used exclusively to absorb losses resulting from realization of risk. Prompt acknowledgment and elimination of known losses and the establishment of valuation reserves to care for losses that will arise as a byproduct of routine banking business are essential principles of good bank management.

PREVENTION OF LOSSES A JOINT RESPONSIBILITY

The chain of responsibility, then, seems roughly to run like this: It is the banker's duty to exercise care and judgment in the selection of his earning assets, to absorb currently, either through charge-off or through valuation reserves, the losses and depreciation that experience indicates to be the bank's normal expectancy, and to maintain capital cushions adequate to absorb catastrophe losses to which his bank may be subject; it is the responsibility of government to supervise the operations of banks effectively so that public confidence will be maintained and panic will not again force liquidation at sacrifice prices and to provide adequate rediscount facilities to permit banks to meet true emergency demands of their depositors without having to liquidate in what may be depressed markets. Our experience during the abrupt business decline of late 1937 and early 1938 indicates that our efforts toward stabilization are properly conceived. Not a single insured bank was forced to close during those months because of unusual withdrawal de-

mands or because of other factors usually associated with a business decline. In fact, I do not know of a single insured bank that was pressed for cash during the entire period. Public confidence in our banks is general, and deservedly so, I believe. Let us not doubt, however, that this confidence will continue only so long as the public can be sure of sound, well-run banks and of consistent, courageous supervision.

Having discoursed at length concerning the assets bankers do acquire I should like briefly to discuss the assets bankers reject and the manner of their rejection.

BANKERS NOT ALWAYS FRANK WITH CUSTOMERS

Hardly a day passes now without a solemn pronouncement by some Member of our national or State legislatures to the effect that business is being hamstrung and our credit structure wrung dry by the ruthless attitude of bank examiners with respect to bank loans. Case after case is cited where a banker has told an applicant for credit that he would like very much to extend the loan, but that the bank examiner had expressly forbidden his making that particular type of loan. Now this technique of easing out undesirable loan applicants is undoubtedly the line of least resistance for bankers, but it is evidently being used so often that its folly has come to be overlooked, and it is treated with the seriousness of gospel truth that frequent repetition lends to so many legends.

It is not merely to encourage a more honest handling of the necessary refusals by bankers, and not merely to clear the record that I propose to state the true case, though these are worthy objectives. My principal motive is to urge the right of an applicant to the real reason that his application is refused. Correct and constructive exposition by a banker of the particular factors that determine his decision with respect to applications that are declined can often help an applicant to set his affairs in order so that a new application can be accepted, to the mutual advantage of both borrower and bank.

SUPERVISOR DOES NOT MAKE BANK LOANS

At any rate, these are the facts. The bank supervisor is not and should not be the bank manager. It is in no sense the supervisor's responsibility to decide whether a bank shall make or shall decline a certain loan. The supervisor is not empowered to commend because certain loans are made or to spank because others are refused. His function is simply to take the bank as he finds it as of the date of examination, to appraise the assets the bank then holds, and to report trends and violations of law. Legal provisions do limit the extent to which banks may extend special types of credit. But with respect to the other credit extensions, the supervisor can never make categorical prohibitions and can make specific criticisms only after the extension has been granted.

The lending function is solely the privilege and duty of the officers and directors of each bank. The directors determine general credit policies and employ to administer the policies officers who presumably are chosen and paid on the basis of their knowledge of credits, their ability to judge risks, and their knowledge of the bank's trade area and the assets the bank possesses. Every time a banker blames on the supervisor his refusal of a loan application he indicts and disavows the very powers of judgment and decision which are supposed to fit him for the job he holds. It is true that supervisors influence in a general way the loan policies of each bank, but the banker, if he knows his business, knows whether the examiner's criticisms and suggestions are justified and retains responsibility for decision on the merits of each loan application. I ask only that you be as honest with your customers as you are with yourselves.

I speak in this vein not because I believe the banking system is failing to perform its intended function as a supplier of credit; I am one of the few who believe that most banks exhaustively consider every application for credit that comes to them and grant deserving applications. My remarks are intended to urge that the banking system should by now be near enough full grown to stand on its own feet and to stop running for the apron strings of supervision when any of its decisions is criticized. I am not unmindful that supervisors, too, have a definite responsibility in connection with the formulation of general loan policies. We will try always to meet that responsibility in the best interests of the public and the banks, and I at least will not use the banker as a shield for whatever distasteful decisions I must make.

MANY IMPROVEMENTS IN BANKING RECENTLY

Consequences of the transition that has occurred in the banking business during the past 5 years have not all been disturbing. Some of them, in fact, represent distinct advances in the sciences of banking and bank supervision. It can conservatively be said, I believe, that the banks of the country, as a whole, have developed during this period an asset position that gives them a splendid foundation of strength and soundness. Some improvement in the steadily dwindling ratio of capital to assets for all banks would still be desirable, but with this exception banks generally are in very sound condition. These years have likewise seen improvements in banking legislation, and improvements in bank supervision that are notable advances. Statutes have been adapted to modern conditions and codified not only by the Federal Legislature, but by many of the State legislatures as well, notably the excellent job done in your own State of Michigan. There has evolved since creation of the Federal Deposit Insurance Corporation a unity of supervisory purpose, a standardization of supervisory practice, and a spirit of cooperative consideration and action between Federal and State authorities that was unheard of before 1934.

LET FUTURE SEE MORE IMPROVEMENT—NOT RETROGRESSION

It is essential that we do all in our power to preserve these hard-won gains, to insure that the trend during years to come will be one of continued improvement and not one of retrogression. Bankers must guard against deterioration in their institutions; bankers and supervisors together must oppose any effort to obtain relaxation of banking laws or of supervisory standards. Demand for such relaxation almost invariably occurs as a byproduct of the natural let-down that follows periods of strain such as that through which we just have been passing. Alertness in the interest of the whole banking system and of the public is necessary to combat them.

F. D. I. C. OPERATING POLICIES

We, who administer the insurance corporation, have tried from its beginning to meet our responsibilities with a minimum of disturbance to the banks and to the preexisting supervisory structure. We have asked for only one substantial revision of our original law; we have issued a minimum of regulations. We have worked cooperatively with other supervising agencies, both Federal and State, to evolve programs of examination that would be grounded on a common basis and that would involve as little disturbance as possible to the routine of banks. On one point only have we been insistent—that the Corporation must have the right to protect itself through free access to the institutions it insures. Our insistence is not grounded on any belief that the Corporation should be the only agency empowered to examine and supervise insured banks; it does not mean that we think a good job of examination and supervision is not being done under the existing set-up. It follows simply from our firm conviction that no insurer should be asked to assume risks that he cannot control and that access to insured institutions is an indispensable instrument of control over the risks that the Federal Deposit Insurance Corporation has assumed.

We of the Corporation take pride in having established frankness—full and complete frankness concerning our own condition and operations and the condition and operations of the banking system—as the dominant tone in our public and professional contacts. In our annual reports we try to give to the President and to Congress a full and accurate picture of developments in our fields of interest. In our semiannual reports to insured banks we disclose and explain completely our current condition, our operating results, our problems, and our policies.

I am convinced that the general and sincere confidence depositors have today in our banks is due largely to the policy of frankness the Corporation has pursued. We propose to continue that policy, because we believe that depositors are entitled to the truth about our banks and that in view of the losses they have had to suffer in the past depositors are at least entitled to honest information that will let them shift for themselves if concern for the safety of their funds ever again is justified.

Maintenance of public confidence must, of course, be the cornerstone upon which we build for a permanently sound banking system. So long as there is confidence, there will be no panic; so long as there is no panic, forced liquidation will be unnecessary and there will be no repetition of the needless wave of failure and loss that we had so recently. If the banks can keep themselves clean, and if the Corporation is able to continue its present policy of moving immediately to correct difficult situations that result from local catastrophes or from specialized conditions, then and only then need we have no fear that confidence will wane; then and only then can we hope to see losses to depositors banished to the musty list of things that used to be; then and only then will be attained that millennium for which we all have hoped and worked and prayed; then and only then can we call ours a job well done.

Strict Neutrality Must Be Maintained

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 28 (legislative day of Thursday, June 22), 1939

DECLARATION BY THE AMERICAN INDEPENDENCE ASSOCIATION

Mr. REYNOLDS. Mr. President, I ask unanimous consent to insert in the RECORD a declaration by a group of American citizens of Akron, Ohio, insisting that we keep out of war, that we maintain strict neutrality, and that we do not meddle in the affairs of other nations. The declaration was prepared by the American Independence Association, the officers of which are named at the conclusion of the declaration.

There being no objection, the declaration was ordered to be printed in the RECORD, as follows:

In view of the dangerous world situation and of the very important responsibilities of members of our National Government therein, we as citizens of the Republic here endeavor to make plain to you our minds:

1. We emphatically protest any action taken, undercover or aboveboard, by our President or Members of Congress, or under consideration by them, which violates or alters the historic policy of neutrality which was initiated for our country by Washington and only violated during the last World War.

2. As a companion piece of policy to that of neutrality, the Monroe Doctrine must not be abandoned or perverted. On the contrary, it must be reasserted by the Senate that on the one hand the United States does not intervene in affairs of Europe or Asia and, on the other, we will not tolerate interference by foreign nations in affairs of the American continent.

3. We remind you that these twin policies are essential to the full and free independence of our representative republic, an independence in no way restricted by foreign alliances, entanglements, or unneutral actions. For if the United States engages in such relationships and adventures entailing obligations of our belligerent action upon some future occasion, our form of government and society must of necessity change to one consistent with imperialism—much greater military and naval establishments, a more powerful central government, a constant readiness to carry out our part in world-power politics—all of which inevitably greatly reduce the liberties and immunities of free citizens.

4. Naturally we want peace; but if we are driven to accept war we want a united people and we think that that can be guaranteed always if our international relationships are nonpolitical, confined to affairs involving the fundamentals of our just rights and our independent existence.

5. We want those powers granted through our Constitution to President and Congress, relating to the conduct of our foreign relations and war, to be respected according to the oath of office by every member of our National Government, and we expect no evasion to be practiced, in the sanctimonious name of peace and morality, for the purpose of circumventing constitutional restrictions of those powers.

6. We remind you that whatever influence for peace and justice as among nations may rest with the United States depends upon our consistent and courageous neutrality in foreign disputes. Taking sides before and during one of these disputes destroys any good offices we might have performed as a neutral.

7. We condemn as presumptuous, dangerous, and unneutral any official meddling or provocation in their nations' affairs, which condemnation applies as well to criticism by men in public office of forms of government or society in other countries. It is time, too, that we, a people of diverse origin, again take a stand against the basing of our foreign relations upon religious or racial bias, or upon advice from foreigners or alien-minded boarders in our house.

We claim that it is no more absurd to label as "fascism" every defense of American individualism against socialism and communism than to label as "nazi-ism" every defense of traditional American neutrality and independence.

8. We confidently assert that very seldom can a nation be intelligently or accurately labeled as "aggressor," particularly by Americans, since the background of an incident or belligerency abroad is nearly always of long standing, cumulative, and involved—the popularly accused "aggressor" in fact being the victim of aggression by the so-called peace-loving nation. We, therefore, doubt the practicality of the well-meant Kellogg Pact, as well as the consistency of its place in a policy of true neutrality.

9. We deny that there are any "actions short of war but stronger and more effective than mere words" which America as a neutral can take without assuming the status, responsibilities, and consequences of a belligerent. A nation is either in it or out of it. What kind of mind can think that a country can be a neutral and a belligerent at one and the same time?

10. We suggest it be remembered that the United States may well be at some time a belligerent, other nations neutrals, and that any false measures we as a neutral practice now against or for others will naturally be employed by them toward us then.

11. We object to our country's being used, through "understandings" or otherwise, as a make-weight in the European age-old struggle for boundaries and balance of power. We object to our fleets being used as a part of a world fleet made up of the fleets of the colonial empires, our own interests and safety being subordinated to the interests of others. Such struggles, or the defense of the British, French, or other empires, are none of our business.

12. We demand a national policy of self-defense only, and condemn one of offensive imperialism. Our interest is national independence and the rightful interests of our citizens everywhere, no more nor less than we offer the nationals of other countries.

13. We protest the granting of new and un-American discretionary powers to any President in the matter of deciding what constitutes contraband of war, or in the matter of when embargoes are to be imposed or withdrawn and against whom. Congress, in the light of international law, precedent, and practice can name a list of contraband. Congress can and should determine the question of embargoes, although we doubt that their imposition would either keep us out of more wars, keep us neutral, or result in justices between the belligerents. More important, we do not think our commerce should be thus deliberately destroyed by ourselves through fear and cowardice, nor, besides, that the fate of our commerce should fall into the hands of the President simply because a war breaks out abroad.

14. We think weak and cowardly the fatalistic, defeatist idea that this Nation could not keep out of any great war. Strange that this propagandized idea never occurred to Americans when the Nation was small and weak. Are we become so degenerate as to admit that the destiny of our Nation is out of our reasoned control, now that we have become great and strong? Our forefathers did have courage, a self-respecting, masculine patriotism; they did have a decent regard for the kind of estate which was to be left to their children and their children's children.

15. We realize, of course, that our great economic depression is the direct result of our participation in the World War. It is an insult to anybody's intelligence to be told that this economic collapse is the fruit of capitalism. For once we are in complete agreement with Communists and their fellow travelers in being convinced that our engagement in another war at this time will certainly destroy what is left of our American institutions. These disciples of the gospel of "St." Marx work night and day to drag us in.

16. Being mature in mind, we also know that that World War did not cease in 1918 but has continued to date economically and politically in Europe; that the Treaty of Versailles was not a treaty of peace but only a military truce, the provisions of which have been administered by the League of Nations; that the present eruption in Europe is the inevitable consequence of that oppressive, vindictive treaty applied by the peace-loving victors upon the vanquished, a consequence freely predicted 20 years ago by opposing American Senators during the debate upon ratification of it.

17. It is our contention that if the people of the United States wish the economic recovery of the world, including ourselves, we should realize it cannot be accomplished through a policy of collective economic suppression of any great nation—Germany or any other.

18. We are continually told that a policy of neutrality is useless, since it did not keep us out of the World War; but we are aware that the record shows America got into that war, not as an honest neutral trying to defend American shipping and commerce—the freedom of the seas—but by pretending to be neutral, while demanding not only that ordinary belligerent merchantmen be not taken by their enemy but also that armed belligerent merchantmen be treated as peaceful ships. Such was the credulity and subserviency of our national authority before the threats of British imperialism.

19. So today we hereby make known to those chosen to act for us in the National Government of this representative Federal Republic that we want no more evasion or other shameful behavior toward patronizing or bullying foreign peoples; that we do expect insistent maintenance of the vital interests of a free, independent United States through traditional American methods.

20. To these ends our strong conviction is for positive action at this session of Congress. Therefore, we strongly urge that before adjournment Congress make a clear and vigorous declaratory statement for the purpose of convincing foreign peoples and our own that this is in fact a self-governing nation, rather than the personal domain of the Chief Executive; so, too, for preventing foreign governments from being misled into warfare with others in the belief that they have our certain partnership.

21. Further and finally, we strongly recommend and urge the immediate submission by the Senate and the House of Representatives of a resolution to amend the Constitution by State conventions to be convened at the earliest date, in order to restore it to its original and traditional meaning relative to use of troops—a meaning that was destroyed in 1917 by the Selective Service Act. Specifically, we want the original power granted by the people to the Federal Government over conscription to be restated as limited to "execute the laws of the Union, suppress insurrection, and repel invasions," and in addition to plainly deny the power of conscription for military service outside the territorial limits of the United States.

Our study convinces us that this action in 1917 was a defiant usurpation of power by our Central Government, not only destructive of our individual immunities and liberties, but also extremely dangerous, as placing too much freedom of action into the hands of any administration in its dealings with other nations. The sovereign people have never had the opportunity to approve or disapprove that violent transfer of power from themseles to their government. Such an amendment will limit foreign military service to volunteers, will let remain in the hands of the men at home the power to bring to a stop some disastrous foreign adventure, restrain imperial or personal ambitions of any President or group, and greatly tend to confine our national foreign policies to traditional defensive ones wherein we mind our own business.

Walkup, president; Summit County Council, Army-Navy Union, Robert Thompson, commander; German-American Civic Association, Robert L. Soergel, secretary; Veterans of Foreign Wars, Joseph Wein Post, No. 288, W. W. Mathis, commander; Summit Veterans Association, Emerson C. Wolf, chairman; Summit County Horticulturist Society, W. H. Kline, president.

Economic Relations with the Philippines

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Wednesday, June 28 (legislative day of Thursday, June 22), 1939

STATEMENT BY SAMUEL F. GACHES

Mr. GIBSON. Mr. President, after the Spanish-American War many Americans returned to the Philippine Islands, where they have made their homes. In this group is Samuel Gaches, who has become one of the leading businessmen of the Philippine group, and as a Philippine-American businessman has worked unceasingly for a better understanding between the Filipinos and the Americans of the continent.

I ask unanimous consent that there may be printed in the RECORD a statement from Mr. Gaches setting forth his views and the views of the group served by him.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The Philippines are America's seventh overseas customer. As such, we Americans of the Philippines believe, as do our Filipino neighbors who buy the goods, that our commerce deserves the close attention of your National Foreign Trade Council. It is a commerce that we know to be well-nigh ideal. If you measured it in terms of labor employed, you would find it in third or fourth place instead of seventh. That is because all the goods in it are fully manufactured: Not wheat, but flour; not cotton bales, but cotton textiles; not steel, but steel products. I am not stating a conjecture, I am quoting your own trade commissioner at Manila, Mr. Paul P. Steintorf.

"The Philippines," says Trade Commissioner Steintorf, "is the one market where American goods may be sold freely, with no quotas, no import duties, and no exchange or other financial restrictions." To which I add, You never heard of a "blocked credit" in the Philippines. We, out there, don't know what it means. We're dumb that way. We couldn't get it in a year at college, even under Dr. Irving Fisher at Yale. We still think that what we buy we have to pay for, with money. When we sell you anything in the Philippines, it is a tropical commodity. It isn't a commodity dollar. We also ship you gold from our mines, and may ship you $50,000,000 worth of it this very year.

The great business you have with us is a cash business. It is a natural complementary trade. It is noncompetitive. And it grows. Its recessions are immaterial. In 1929 it was 1.6 percent of all your exports, in 1937 it rose to 2.8 percent, and this year it will be 3.8 percent. What other market has treated you so well in the past 10 years? Has any other country more than doubled its purchases from you for cash? Let us get down to tons, away from percentages. Among 25 tons of goods you send overseas to all your markets this year, 1 ton will come to the Philippines, if an average value for the total tonnage is struck.

For 33 of your leading manufactured products the Philippines are either your first or your second customer overseas. That means right now, this very year. But we are forging ahead with you, and buying more all the time.

Year after year, as last year, you sell us flour, taking the crop from 200,000 acres of northern wheatlands. In textiles and thread you sell us the cotton from 134,000 acres of southern cottonfields. Last year you sold us more than $32,000,000 worth of your surplus farm products, fully manufactured. Ten years hence, if you keep watch of how things go at Washington, and make them go your way, and the American farmer's way, and American labor's way, for you are all in this trade together, you will sell us 50 percent more goods than you do now.

This trade does not cost you a cent.

It does not cost the United States a cent.

It does not cost the American people a cent.

You get it all without extending one credit or buying a single bond. When you occasionally do buy our bonds we pay them off with interest—usually before they are due. You never heard of anything else. The Philippine budget is perennially in balance. The islands taught America the budget system. They were first under the flag to install that system and demonstrate its merits. They taught it to America. She didn't learn the lesson very well. She's fallen behind with her home work.

If any country needs the overseas trade she already has, and would be foolhardy to let a dollar of it go, that country is the United States. If we hear correctly, you are bogged down, all over the country. Capital is stagnated, labor idle by millions. Why? Because you're not trading enough. We offer you the means to more trade.

The Philippines have practically no public debt. Before your goods leave America you have the cash in hand for them. If you give credit of 30 or 60 days with sight drafts, your bills are paid without discount. The whole business is as quick as the flash of a cable, the winging of a radiogram.

This has been going on through 40 years, since the treaty with Spain at Paris in 1899. During that time, you have sold the Philippines $1,600,000,000 worth of American goods. Last year alone, you sold the Philippines $90,000,000 worth of machinery, automobiles, cotton textiles, wheat flour, tobacco, and miscellaneous items. Mr. Steintorf, your trade commissioner at Manila, says that for variety the trade has no equal among all your overseas customers. We merchants at Manila know this to be true.

Yet you don't sell the Philippines a dollar's worth of goods that Filipinos are not anxious to buy. You manufacture; they farm. There is no aspect of force to the trade either way. It's not dollar diplomacy; it's plain business. In the same time, 40 years, America has bought quantities of Philippine exports, farm products of the tropics for your factories; but again, not a dollar's worth that she did not need, and many products America buys from the Philippines are on her free list.

Please get this straight.

America always has bought these Philippine products. She didn't begin in 1899. Before she got the islands from Spain in 1899, she was lucky to sell them as much as a million dollars' worth of goods a year. It is now that America has the Philippines that the trade is large, that it is a cash trade, that it is a balanced trade, and that it is a growing trade.

This trade is not even seasonal. It runs on the year round. And it runs under the laws of Congress, remember that. This Philippine trade is not only large but completely in your political possession. Congress is consistently guided by high motives toward the Philippines, as, under such peculiar responsibility, it ought to be, but Congress is in full control. You ought to keep as close watch there as a fireman does on his boiler gage; for the thing is politics, and you know politics can explode.

The facts of Philippine-American trade are as vital to labor as they are to capital and management, because we buy your goods fully manufactured, and we buy the greatest variety.

This trade, summing $90,000,000 and $100,000,000 a year, has so many admirable aspects that it is hard to choose for illustration. Run down an official list of American exports in 1936 and you find the Philippines the American customer No. 1 for cigarettes, galvanized sheets, wheat flour, milk, explosives, sewing machines, toilet preparations, educational textbooks, soaps, sardines, paints, cigar leaf, beers and ales, steel bars, internal-combustion engines, candles, welded pipe, cocoa, sausages, and even plug tobacco. For 13 other major American manufactured products the Philippines were your customer No. 2.

Note that 40 years ago the Philippines were a poor country with less than 7,000,000 people in 49 Provinces without roads and with unimproved ports. Today they are a prosperous country with fine highway systems, using 53,000 automobiles and trucks, with modern ports that help sell your goods at competitive prices with foreign goods; and your goods go there free and the foreign goods pay import duties.

But this is but the beginning of that story.

The birth growth of Filipinos is little short of 2 percent a year. This guarantees market growth. You are selling not merely in a good market, but in one that expands all the time, sometimes for many reasons, always by reason of a growing population.

Nothing else is so fundamental as this.

But more. The Philippines never have a war, never have an uprising. America keeps a small garrison there, a card in the hole for tight squeezes with her Far-Eastern problems or her national defense; but in all this, the Philippines, as such, are not an element. Pestilence is gone, and war never decimates the population.

In 60 years, less than 3 generations, the Philippine indicated population will be 64,000,000, from natural growth alone.

When therefore you get down to cases with us and arrange to keep your Philippine market, you are really keeping something.

You homeside Americans ought to look ahead to the approaching day when the Philippines will be as productive per capita as Hawaii is. If then you have kept this trade we ask you to keep, by not allowing Congress to sell the islands down the river, that trade alone—that Philippine trade alone—will approximate, in billions of dollars a year, the whole of your overseas trade today.

No one can conceive of how generously the Filipinos will increase their buying of shiploads of American manufactured products of all sorts, engaging the maximum of American labor, once two political points are fixed. First, that the islands' autonomy is permanent. Second, that American sovereignty over the islands is permanent. That will load from your seaboards for Manila, not a few ships a week, but several a day. The commerce now, and you have more than 85 percent of it, uses the services of more than 1,400 ships a year.

Another thing. The Philippines make agreements readily with the United States, and then live up to them. This is the national make-up. An American long in the islands was once asked about his neighbors, the Filipinos. The American's answer was, "I have my first Filipino to see who will say 'No' to a friend or 'Yes' to an enemy, and that suits me."

Now, we in Manila think you will find that statement broadly applicable, not merely in the Philippines, but throughout the Far

East. Mr. Chamberlain and his umbrella will fare, when he gets trying, much better west of the international date line than he has been faring in central Europe. That ought to be better for him, and for us all—all who take pride in democracy that spells with the small "d." Of course, some of you still like the big "D" no doubt, just as a child here and there likes spinach.

Every partisan to his taste, but the business of the Philippines is not a partisan matter and never has been. Toward the Philippines both your great national parties have had the same view—always the welfare of the Philippines, until very recently, when Congress was grossly misled and misinformed. Then came the "boner," which we of Manila think is directly up to you homeside Americans to correct.

Congress has put Philippine sugar under a quota. To this the islands have agreed willingly. You will never find them welshing on the bargain. Though all your goods go to their market without quotas, they accept this quota.

But why think, as someone in Congress has thought, about taking this quota of sugar away from the Philippines and letting Cuba have it? Cuba has one now.

Who will say that America will find as much trade in Cuba, where 4,000,000 people live, as she finds in the Philippines, where four times 4,000,000 people live?

All the Filipinos ask of you, after staying with you through thick and thin—this to the extent of an army that could be a million men at your call when needed—is a square deal. In the perilous position of your overseas trade today and for years past, you will agree, I think, that any people that buy ninety to one hundred million dollars' worth of your goods a year for cash deserve a square deal at your hands.

The trade field of the ships, American and foreign, that haul your manufactured products to Manila, is not the Philippines alone. It is Japan, China, Hong Kong, and the Philippines. It is the Far East. The Cuban field, too, is not Cuba alone. It is the West Indies as a whole, Central America, and Mexico. Now sum up your trade in these two fields for 1938—right down to date with your fondest hopes and Congress' highest expectations. The Philippine trade field wins by $134,597,658 in 1 year only.

The total you sold last year in this Philippine trade field was $399,112,216. The total you sold in the Cuban field was $264,514,558. I have just given you the huge difference in favor of the Philippine field, more than $134,000,000.

Now we are all businessmen, talking business. It is, of course, our chief preoccupation as a great industrial country. I am quite sure that not one man who hears me sees the slightest justice in depriving the Philippines of a pound of their sugar quota in your market, unless it encroaches on domestic production. I will show that you gain, along with the Philippines, in accepting this sugar in your market.

Two facts impress me deeply. One, that Spain's commerce with the Philippines was by way of Mexico until her political tie with Mexico was broken. Then it disappeared. The other fact tied up with this is the current hegemony of the Americas. The Philippines belong there. They fit into that picture. Their commerce is eastward, with the Americas; and, of course, chiefly, with the United States. Not the Iberian peninsula, but the American continent, has been the basic influence on them. Long ago, missionaries guided the Manila galleons to the California coast with signal fires on mountain tops.

This commercial nexus runs back into the sixteenth century.

Trade between the Philippines and the United States is natural. Artifice is the only force that will destroy it. The Philippines send American tropical products—hemp, copra, sugar. These they must sell. These America must buy. America has manufactured products. It is most natural for the Philippines to buy them. The climates contrast sharply; the two types of products in the trade are opposites—one complements the other. That is why America keeps many Philippine products on her tariff-free list. She herself does not grow them; nor do the Philippines make your goods

If they begin making some textiles, they will use your cotton. If they make some flour of their own, it will be from your wheat, and along with wheat they will use other farm stuffs. Their climate forbids cotton and wheat.

You can't find another large country to match that. Brazil's coffee may come closest to it, but, remember, Brazil does grow cotton.

To feel how natural this large Philippine trade is, imagine a ship, American or foreign, loading along your two great seaboards with manufactures for Japan, China, and Hong Kong, and the Philippines. The ship uses both your seaboards—your Gulf ports, too. You've got mighty little trade like that. Once more you can see how varied the Philippine demand is.

This ship reaches Manila last, Japan first, then China. In the Philippines, empty, the ship fills up with raw tropical products, some for Europe, more for the United States.

The Philippines are the turn-around point, the natural one. They always have been. The American clippers in their heyday, when they dominated the seven seas, when they brought the wares of the world from Europe, Australia, the United States, and the Levant to Canton, Macao, and Hongkong, turned to the Philippines for sugar, copra, manila hemp, and tobacco for their homeward voyages.

The Philippines are the key to your whole far eastern market, a market taking $400,000,000 worth of your manufactured products a year, and often more. You have this market because you have the Philippines.

If ships taking your goods to the Far East could not go to the Philippines and be sure of homeward cargoes, they would up your freight rates. In China and Japan your goods could not sell so readily, your far eastern business would run down, and you would look for the reason, and it would be the rates.

Then you would remember that you had permitted Congress to levy against Philippine products that America requires, and even to give up the Philippines altogether. And it would be too late.

There is an accepted hour when the lamps of the wise should be trimmed and filled. Only the foolish sleep through it, and they are refused the feast.

But let the Philippines go for 5 minutes and a great eastern shipping and industrial nation will pounce upon your abandoned vantage ground. Using Philippine resources, it will penetrate even your American markets easily, while taking eastern markets away from you like candy from children.

That is why you foreign traders ought to see to it that Congress leave the Philippines their sugar quota, and leave it to them free. It is the basis of your Philippine market. It is a basis of your freight charges in the Pacific littoral: costs of getting goods to Japan, to China, to the Philippines, and to near-by countries.

This Philippine sugar has been ignorantly attacked in America—and not as fully defended by foreign traders and American labor as it should have been—because it would pay $18,000,000 duty if it came from Cuba.

This is purblindness, nothing less. To hear it in Congress, the lawmaking body of a great business nation, is scandal.

That $18,000,000 is not Philippine sugar's benefit alone. It is yours. No one will deny it. You ought to stand up and fight for it as such. It belongs to you absolutely, you bankers, you manufacturers, you traders, you exporters, you workmen who by millions are busy making good American products, and idle by millions when these products cannot be sold.

In the Philippines you trade goods for that eighteen million a year. But it serves you twice. You take it for goods, that's one use. You make it lower the freight charges of ships that move your goods to the Far East, and that's the second use—even more profitable than the first. You can't reach the Far East effectively without moderate freight charges—without, that is, this sugar—because ships won't have haulage enough to accommodate you. Soy beans are out already; rubber yields to the chemist; Java sugar is both Dutch and dutiable—can't get to America at all.

Your sole reliance practically for steamship rates low enough to get your goods to the Far East is reduced to this Philippine sugar. It does it, and because it does it we in Manila claim it is up to you to wage the fight for it.

If ships outward bound with your half billion of goods for the Far East can find anywhere else out that way for the homeward trip 1,000,000 tons of cargo, the age of miracles is still with us. They can't find it. It isn't there. But you have to have it, just the same, and it's this sugar. It is indispensable to your whole Pacific commerce, and even helps you, not inconsiderably, at Hawaii. Besides that, what but this very sugar will keep an American fleet of merchant ships on the Pacific to service the naval fleet at the hour of military need?

That last is not a commercial desideratum, but it is factual just the same.

Our case for the Philippines is aboveboard. We conceal nothing. There is nothing against us to conceal. Is not frequency of sailings vital to the getting of any market and the holding of it? How do you come by such frequent sailings to the Far East? Through this sugar; that's all the way you have. You can't leave your 3 and 4 tons at Japan, your one-half ton for China, and your 1 ton or more at Manila, unless this sugar is waiting for the empty ship, to load it back to New York or San Francisco. Here you have a commerce benefiting all your coasts, all of them, and your inland States. Even shoes by thousands of pairs a month from St. Louis and Nashville. It is all based on this sugar, which Congress is asked to cut off. Will you stand by and do nothing about it?

I think that unfair to yourselves. It is surely quite as unfair to the large American community in the Philippines, and 200,000 Chinese there, and other foreigners, and many Filipinos getting into the game, all buying and selling your goods.

And $18,000,000. Eighteen paltry million dollars. They say to Congress that Philippine sugar should pay the United States Treasury $18,000,000.

If Congress does that, the Philippines will be forced to tax what you send them. Such an act of Congress would mean separation of the two countries. That would mean destruction of the trade. You have a tobacco trade there, mainly popular-price cigarettes of Virginia tobacco. That trade is $8,000,000 a year. It is rapidly growing. Existing duties, if paid, would be more than $40,000,000 a year. That would wipe out important American incomes in the islands; it would wipe out large Filipino pay rolls.

It would wipe out also fleets of delivery trucks, American cars all, that distribute these cigarettes and tobaccos from one end of the Philippines to the other. These cars start out from Manila by dozens every week.

You over here have a sugar industry, but the little one-sixth of your sugar market that you allot to the Philippines does not compete with your homegrown sugar. The Philippines have a tobacco industry and the tobacco products they buy from you do compete with this industry very sharply. Yet they are willing, as

fair play, to solve their tobacco problems in some other way and let your tobacco products go duty free to their market.

So there you have it—American tobacco against Philippine sugar; the tobacco in a growing market; the sugar stabilized under a quota. Add a little flour, that you need badly to sell, and you have a standoff. It is all to your advantage. It will so continue if you make Congress keep duties off of Philippine products and keep American sovereignty over the Philippines.

Now, if you harbor the thought that the Philippines cost America anything, cast it forth. They pay their own way, plan their own economy, and because they value their place in the American scene, their public policy is beneficial to you. New roads and bridges widen your markets, new ports handle your shipments quickly and cheaply. Wages go higher, the standard of living increases, and again more of your goods are bought.

America has, of course, spent some money in the Philippines. Congress made one appropriation 37 years ago. It was $3,000,000. There has never been another direct appropriation. Certain excise taxes have been refunded.

Some other money has been spent in the Philippines, since the Army has a department there, and the Navy some stations. America has also built a strong fortress at Corregidor. It is a part of America's national defense. There are such works on America's coasts at home. However, none of them is charged to the State surrounding it.

Because Corregidor is in the Philippines, some men who will not concern themselves with the real welfare of the United States insist on charging the expense to America's sovereignty over the Philippines. A parallel would be to charge Massachusetts with Boston's coast defenses; or New York with the coast works there, or California with the works at San Francisco. In this way, someone has falsely added up a sum of $700,000,000 against the Philippines. They have got it into print somewhere. They have even brought it to the mild attention of Congress.

This is the type of sniping that your business in the Philippines is subject to. Cranks, unscrupulous or uninformed, or both, blurt out anything and get the homeside public to swallow it whole. They seize advantage of the fact that these are days of fear. They "scarecrow" the public's credulity.

Let us analyze this $700,000,000 statement. It covers 40 years. Divide by 40, your result is seventeen and one-half million a year. In that 40 years the average American population has been well above 110,000,000. Divide again, mentally. The whole false figure comes to no more than 15 cents a year per capita. Peanuts!

You get back 80 to 90 cents a year, per capita, and in some years, almost a dollar. Tomorrow this will be a dollar and a half. As soon as fear is broken down, it will leap to $2 a year per capita—against an outlay that is not even 15 cents!

I guess, roughly of course, that anyone can lay out 15 cents on the sure thing of getting back not less than 90 cents. I would not classify it as expense, either. I don't think the income-tax boys would pass it as expense. It looks net to me.

But tomorrow's two-spot in this expanding Philippine business depends, of course, on your keeping the islands. When you give them up, they will be Japan's. They will be Japan's right away, too, if you give them up—rounding out her empire to outbuild you in armaments and outbid you in markets.

It has also been said, even in Congress, that sometimes America buys more from the Philippines than she sells, therefore the trade is unfavorable. I hope no person accepts this fallacy. No one buys anything he does not need. What America buys in the Philippines she needs, and the price suits her; just as the Filipinos buy from America what they need and no more. Congress also hears sometimes that all that America buys in the Philippines she could buy somewhere else. That is doubtfully true, since there is manila hemp, but it is wholly false that America could buy somewhere else what she gets from the Philippines on as good terms.

A dollar's worth of products from the Philippines rarely costs America as much as 15 cents in cash. Manufactures cover the rest of the dollar. Last year America had the better of it. She gave nothing but manufactured products for all her Philippine supplies, and the islands even paid her a little balance of cash. Because the Philippines are building an army that will be a unit of American national defense while the islands remain associated with the United States, they are likely to be buying consistently, for some years to come, a little more from America than America needs from them.

I say at the end, as I said at the outset, America's trade with the Philippines is all but ideal. It is a classic study. It is innocent of aftermaths; you have no sickening sense of defaulted bonds when you scan the figures, nor of any other international short-changing.

But you can lose this trade like the drop of a hat by letting the Philippines go. You can save it all, and add much to it, by letting Congress know the islands must be kept. And you will find Filipinos are with you. Franco's treatment of Spain, Hitler's seizures of Austria and Czechoslovakia, Italy's conquest of Ethiopia and appropriation of Albania, and Japan's conquest of China have all taught Filipinos of all ranks that they must not separate from the United States.

Nevertheless, a law doing that very thing takes effect in 1946. In 1941 free trade will stop and devastating little duties will commence sniping at your Philippine market. Stand up and fight! Bring Congress up to date; tell its Members to leave existing good relations with the Philippines alone. Why not a small committee from your organization, just a small, articulate committee to go over this law with the congressional committees and amend it with a few slight changes, to save your market and America's national honor, if not her national security.

In March this spring President Eugene P. Thomas, of the National Foreign Trade Council, went to Senate committee hearings at Washington with some council members and talked most sensibly about this whole proposition. This, until equivocations are all conquered, should be kept up.

Out in Manila we can't do that. We don't vote! We just pay taxes! But you here can do it. There are fine men on both the Philippine committees in Congress, House and Senate. The case is reasonable, as I have shown. Those men will listen to reason, if the man who reasons also votes.

America's business destiny rests on her overseas trade. This requires that you look to your interests there. The solution of your domestic-business problems lies in exports and imports. This means that it lies in part, and in very large part, too, in the Far East. Out there, through influence of the Philippines, populations begin reaching for the material benefits of our American democracy. And America's sole foothold in the Far East is the Philippines.

Gentlemen, keep that foothold! Keep the Philippines!

The Invisible Mortgage on Every County in Ohio

EXTENSION OF REMARKS

OF

HON. DUDLEY A. WHITE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

Mr. WHITE of Ohio. Mr. Speaker, the May 29, 1939, issue of the CONGRESSIONAL RECORD outlines my discussion of the States' share of the national debt. Today I want to try to bring the problem even closer to home, particularly for the people of Ohio, by showing how the national debt falls on each and every one of the counties in the Buckeye State.

There are 25,012,416 acres of land in Ohio outside of cities and incorporated villages. It is listed on the tax duplicate at a value of $1,572,639,715. The value of all real estate inside cities and incorporated villages is $5,279,528,745. The combined total of both is $6,852,168,460.

The local government debt in Ohio is approximately $800,000,000. Ohio's share of the national debt, based upon a population of 6,733,000 is $2,095,460,379.40. The State's share of the national debt is therefore more than two and one-half times greater than local government debt.

Ohio's portion of the national debt alone represents an unseen mortgage on every inch of real estate, amounting to 30 percent of the taxed valuation under this entire heading.

For the country as a whole, the gentleman from Michigan [Mr. ENGEL] has established the following facts:

(1) The national debt has reached a point where it amounts to 28 percent of the assessed valuation of every piece of real and personal property placed upon the assessment roll by the local taxing officials.

(2) The National, State, and local public indebtedness is 43 percent of that same valuation.

(3) The National, State, and local, plus long-term private indebtedness, now equals 98 percent of that assessed valuation.

Here you have the full impact of the proportions of New Deal spending, by which the Nation's purchasing power is being consumed and record unemployment is being continued.

In examining the debt situation today in relation to Ohio, no State, local, or private obligations are included in my comparison, although such items will naturally be counted in the reckoning when it comes to payment. Furthermore, these figures include no part of the gigantic deficit which is piled up again this year.

Every dollar of debt represents more than a dollar of delayed taxation. Despite the tricky device of hidden taxes, no one needs to be told of the tax burden as it stands today, but few people fully realize how they themselves are affected by

the tremendous proportions of delayed taxation that is approaching as a result of unending deficits and growth of the national debt. Some folks may not be concerned because they think the "other fellow" will pay the bill. Government propaganda encourages the delusion. But no citizen of Ohio can cling to that ghost of deception very long when he realizes that the State's share of the national debt represents an "invisible mortgage" amounting to 30 percent of all the real-estate value listed on its tax duplicate. And, remember, this does not include any of the State, local, or private debt which brings the national average up to 98 percent.

There is nothing remote about Government debt, except the control of its growth. Payment hits home. There will be no halt in growth until people on the home end of the line put a strong bridle of aroused opinion on Washington bureaucrats who spend to live—politically—and live to spend.

Let us suppose that you are a farmer with a $10,000 farm, upon which you still owe $3,000. You have worked to all hours of day and night to gradually lift your personal debt. Your family has sacrificed many desires for the same purpose. You have fought to keep State and local obligations from adding too heavily to the burden you are carrying. Then, all of a sudden, you wake up some morning to find that a mortgage you did not know about has been placed on your propertly by the Federal Government amounting to 30 percent of its value, or $3,000 additional. You find it is a bitter pill to swallow. Certainly it is. And that is exactly what New Deal spending and indebtedness are doing to you right now. Every property owner and citizen is in the same boat, varied only by the degree of private obligations. The price is terrific. Prolonged depression and increased unemployment have been the result. It is time to wake up! The spenders must be brought to their senses.

These figures are presented to show how directly and heavily the debt falls upon every citizen of each and every Ohio community.

As unbelievable as it may seem, Meigs County's share of the national debt is 80 percent of the county's real-estate valuation.

For four Ohio counties this "invisible mortgage" represents 70 percent or more of the tax value of their real estate: Gallia 70 percent, Jackson 74 percent, Perry 70 percent, Vinton 70 percent.

Nine more counties range between 50 percent and 70 percent. They are: Adams 68 percent, Athens 64 percent, Guernsey 56 percent, Hocking 54 percent, Lawrence 67 percent, Monroe 55 percent, Morgan 54 percent, Noble 68 percent, Pike 67 percent.

The burden for 48 other counties ranges between 30 and 50 percent. Twenty-six counties are mortgaged by the national debt alone, between 17 percent and 30 percent.

The following table shows the New Deal's "invisible mortgage" as it hits every county in the State:

Counties	Population (latest census)	1938 tax value of real estate	County share of national debt	Percentage of real-estate value
				Percent
Adams	20,381	$9,553,890	$6,342,974.82	66

Unemployment Makes W. P. A. Necessary

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 28, 1939

Mr. D'ALESANDRO. Mr. Speaker, it is generally recognized that the most serious problem which we, the representatives of the American people are confronted with today is unemployment. The district that has seen fit to elect me to represent them in Congress is typical of the many others that are troubled with such conditions. In dealing with unemployment, we are dealing with the problem that has wrought upon millions untold hardships and misery.

Can we remedy this situation in some small way? Yes, my colleagues, by the approval and allocation of additional funds for the continuation of W. P. A. for the coming year. In dealing with W. P. A. we are directly dealing with the welfare of the needy unemployed; we are directly dealing with a remedy that has made available to innumerable families a source of livelihood; we are providing for the care and nour-

ishment of many unfortunate children who are directly affected by this dreaded unemployment situation that has existed now for nearly 10 years.

Let us not assume the attitude of the survival of the fittest. But let us assume the role of the benefactor and the provider.

Are we going to make ourselves responsible for the thousands upon thousands returning to the system of dole? No; but let us meet this horrifying condition by planned and coordinated public-works programs. We cannot permit these unfortunates, who, through no fault of their own, are unemployed, to shift for themselves.

Look at the situation in the light of humanity. Make them not the tools of economy, by which we will continue to spread misery and privation. Unless funds are provided for the continuation of such works, we are failing to provide for the welfare of the people who have placed their trust in us; we are failing to provide for the alleviation in part of such striking conditions.

The upturn in business and employment that was expected in 1939 has not materialized; making it necessary for the Government to continue aiding the needy unemployed, to increase the purchase power, and advance economic recovery by the promotion of useful public works. The funds now available will be exhausted by the end of this fiscal year. It is therefore my duty and your duty to support the appropriation of adequate funds for the continuation of such programs as well be necessary during the coming year to preserve the right to work, and to prevent further suffering on the part of the unemployed.

The Florida Canal and the Mississippi Valley Association

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

STATEMENT OF HON. CLEVELAND NEWTON, GENERAL COUNSEL OF THE MISSISSIPPI VALLEY ASSOCIATION, BEFORE THE HOUSE COMMITTEE ON RIVERS AND HARBORS

Mr. HAVENNER. Mr. Speaker, with a view to generally informing the House of the great interest of the people in the Mississippi Valley in the proposed Florida Ship Canal, I desire to read into the RECORD some extracts from a statement recently made by the Honorable Cleveland Newton, general counsel of the Mississippi Valley Association, as follows:

Mr. Chairman and gentlemen, I am not going into details regarding this canal, because they have already been so ably handled.

I am here as general counsel and as chairman of the executive committee of the Mississippi Valley Asscciation, to speak in favor of this project. The Mississippi Valley Association has endorsed this canal annually for, I think, 9 years.

We are concerned about it because it shortens the route, not only between the Gulf and Atlantic ports but between the Mississippi Valley and the eastern seaboard; and anything that will shorten the route and will reduce the cost of transportation between these two sections is not only useful to the valley but is useful to the whole country.

We have a membership that extends over 24 States in the valley, going as far north as Chicago and the Twin Cities, and up to Yankton and up to Pittsburgh. So you can see that the resolutions passed by this association have a rather comprehensive representation of viewpoint.

We feel that this canal is not only good for commerce, because it does give us a waterway, the first propcsition; that it gives the valley a waterway all the way to New England; and we think that is helpful to the whole country.

At our last convention we took this canal and we took some other channels along the coast and lumped them into one resolution, and I want to read that resolution in conclusion. This is part of the resolution of the Mississippi Valley Association passed at its annual convention in St. Louis last November:

RESOLUTION ADOPTED BY THE ANNUAL CONVENTION OF THE MISSISSIPPI VALLEY ASSOCIATION AT ST. LOUIS, NOVEMBER 22, 1938

After reaffirming its support of a number of important projects, including the Florida canal, the association adopted the following resolution:

"We commend to the attention of the President and the Congress the value to the national defense of our system of inland waterways and coastal channels. The security in time of war of the water-borne commerce of the Mississippi Valley via the Gulf of Mexico, with the Atlantic seaboard is of deepest concern to the Nation. We, therefore, urge the completion of all channels for this commerce, which are recommended by the Chief of Engineers and designated by the Secretary of War as having important strategic value."

The chief project covered by the resolution is, of course, the Florida canal; it being the greatest of all channels for the Gulf-Atlantic ocean-borne commerce and, having been recommended by the Chief of Engineers, designated by the Secretary of War as having important strategic value.

I think the Florida canal is one of the steps in our national low-cost service, and not only for commerce, but as a matter of national defense. We have never created one of these projects that I know anything about where the commerce did not tremendously exceed the estimate.

I think one of the most distressing conditions in this country, and one of the most dismal forebodings for the future, is the fact that 57 percent of the population of this country has now concentrated within 50 miles of the deep-water rim of the country, and it is going stronger in that direction. Why is that so? Simply because industry goes where it can get cost of transportation that will let it reach the market, and where industry takes the pay roll, population follows.

That, Mr. Chairman and gentlemen, is the position of the Mississippi Valley Association.

The Meaning of Civil Liberty

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, June 28 (legislative day of Thursday, June 22), 1939

ADDRESS BY HON. FRANK MURPHY, JUNE 21, 1939

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered on June 21, 1939, by Hon. Frank Murphy, Attorney General of the United States, at the commencement exercises of John Marshall College, Jersey City, N. J. The subject of the address is, "The Meaning of Civil Liberty."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

For the past few years you have been devoting yourselves to the study of the law. You have been concerned with the rules of legal procedure and with the many and important details of the law of contracts, torts, and property.

Today I am not going to talk with you about the minute details of pleading or of substantive law, but about the fundamental liberties of the individual as they are embodied in the most precious heritage of the American lawyer, the Bill of Rights. For all the rules of law which you have learned have little value if they do not govern a society where the individual is free to exercise those rights indispensable to the maintenance of human dignity.

One hundred and fifty-one years ago today, a group of American citizens, meeting in the colonial community of Concord, N. H., voted by 57 to 47 to ratify the Federal Constitution which had been written at Philadelphia 1 year before.

We do not formally celebrate the day, but it was an event of tremendous significance. It meant that the required majority of nine States had ratified, and that the Constitution was in full legal effect. It meant that the American people had cast their lot together under the guidance of a document that Gladstone once described as the most remarkable political work produced by the human intellect in modern times.

That document—our Federal Constitution—is remarkable in many ways. But there is one thing, above all, that makes it remarkable—one quality on which all the others depend—and that is the singular emphasis it places on personal liberty.

In the very first sentence we read that the American people established the Constitution to secure, among other things, "the blessings of liberty" to themselves and their posterity. And the history books tell us that they were so very concerned about their

liberties that many of the States refused flatly to ratify the Constitution unless they were assured that a bill of rights would be added. When that assurance was given, they ratified, but not before.

Oviously, the Bill of Rights was not an accident. It was not the product of a whim or a passing fancy. The people were in deadly earnest about it. They had shed blood and suffered hardship to gain liberty, and they were determined to give it the best protection they could devise.

And so, when it came to the job of framing the Bill of Rights, they did not mince words. They did not hedge it around with restrictions or weaken it with qualifications and conditions. They said in plain English:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble and to petition the Government for redress of grievances."

In virtually every one of the 48 State Constitutions we find the same bold guaranties of civil and religious liberty, expressed in the same blunt language. The Constitution of New Jersey, for example, declares with beautiful simplicity, "No law shall be passed to restrain or abridge the liberty of speech or of the press."

Just a few days ago the Supreme Court declared that the Federal courts would protect the fundamental rights of the individual from encroachment not only on the part of the Federal Government but on the part of the State and local governments as well. In his opinion Mr. Justice Stone reminded us again how much the Bill of Rights means to our democracy. "No more grave and important issue," he said, "can be brought to this Court than that of freedom of speech and assembly."

Why is this so? Why this remarkable emphasis on freedom of speech and assembly and religion?

Because the wise men who wrote the Federal Bill of Rights and the New Jersey Bill of Rights were doing more than stating legal prohibitions on the legislature. They were expressing a philoscphy of human living. They were defining the spirit of a free and sovereign people. They were putting into words the meaning of democracy itself.

They were determined to put an end in this country to the kind of government that tells the individual he may not speak as he pleases; that tells the newspapers what they may or may not print; that denies the citizen the right to practice whatever religion his conscience chooses; and that, in general, treats the individual as the servant of an all-powerful state.

They were so bent on ending that kind of government that they started a revolution and never gave it up until their objective was won.

We could destroy all their work if we wanted to do it. We could uproot this whole democratic structure overnight simply by going back to the ancient notion that government knows what is best for the people and that the people must not question the wisdom of what the Government does for them or to them or with them.

But if we did that, we would be striking a heavier blow at civilization than it has ever suffered in the history of mankind.

What, after all, is civilization? Is it our great skyscrapers and our long bridges? Is it our huge factories and marvelous automobiles? Is it the radio and the airplane and all the rest of the wonderful inventions that make life easier and smoother and faster?

Those things are part of it, course—an important part of it. But they aren't all of it.

The heart of civilization, the thing that gives it a soul, is exactly that spirit of freedom that runs all through our Bill of Rights. It is the idea that the individual has a natural right to be free up to that point where he injures the interests of the people as a whole.

Take that idea away from our Government, or build a government without it, and you have a government that is something less than civilized.

It may seem that I have constructed a straw man so that I might have the satisfaction of pushing it down. It may seem pointless to talk about the Bill of Rights when obviously the overwhelming majority of our people believe the Bill of Rights is a good thing and want it kept in our Constitution.

I wish that the problem were as simple as that, but it isn't.

It is one thing to believe in civil liberty and another thing to practice it in all the daily relationships of man to man. And I am afraid the facts are that some of us have been for civil liberty in theory but not very careful about practicing it in our daily lives.

Some of us, under the tension of political and economic conflicts, have let ourselves forget that civil liberty is not just for those whom we agree with, but also for those whose ideas are hateful to us. We have forgotten that civil liberty is not just a problem for the Federal and State Governments, but something that must be protected first of all by every individual citizen. The Federal Government, for example, cannot effectively protect the civil liberty of the individual unless public-spirited citizens in every community have the courage to come forward and cooperate with the Federal Government in seeing that the rights of the humblest and most unpopular minority are scrupulously protected.

Because some of us have at times forgotten these things, we have condoned infractions of the Bill of Rights that Thomas Jefferson and Patrick Henry and Benjamin Franklin would never have condoned.

What is the evidence? It comes to us in the Department of Justice every day in a steady stream. Every day the newly created Civil Liberties Unit reads the tragic story in letters and telegrams from all parts of the country.

We hear of municipal officials aiding in the provocation of race conflict, even though government in a democracy is intended to be for all and not just some of the people.

We hear of arbitrary ordinances and arbitrary police action that deny workmen the right of peaceful picketing, even though our courts have recognized that peaceful picketing is a just and proper right of working people.

We hear of local authorities and private citizens manhandling union organizers, even though the Supreme Court long ago recognized that it is proper and desirable for labor to unite in organizations.

We hear of groups arbitrarily denied the right to distribute literature, even though the Bill of Rights leaves no doubt that freedom of speech and of the press are fundamental to our political system.

But there is no need to go to the Department of Justice for proof. The citizen who looks carefully can see it all around him, near at hand. He can see it in the type of mind that believes labor or industry, as the case may be, ought to be punished for its sins by terrorism and coercion; in that distorted mentality that blames the Jew for all our troubles; and in the discrimination practiced against those who happened to be born with a darker skin than most people possess.

What are these tendencies and practices, after all, but forms of intolerance? And what is there more completely opposed to the Bill of Rights and to all our American traditions than intolerance? It is the most un-American, unconstitutional, un-Christian, and undemocratic thing in our life today.

There is no room for intolerance in the America that our fathers planned. It belongs in those other countries where freedom has been all but forgotten and where human slavery is the common lot. It belongs in those other lands where men hardly dare to whisper their thoughts, and where they hold their meetings by stealth under cover of the night. It belongs in those places on earth where fine literature and art and music have been destroyed and where the schools spread propaganda for those in power.

Intolerance has no place here, and those who embrace it are following not the fathers but someone else. They are not following Jefferson, for it was he who sponsored the Bill of Rights. They are not following Benjamin Franklin, for it was Franklin who deliberately wrote into the Declaration of Independence the phrase "one people." Such individuals forget that America became great because it was created and has remained spiritually one people.

Go down in the subway of the great metropolis, walk the crowded streets and the market places, stand near the factory gates at closing time, and what do you see? Not Englishmen or Italians alone, or gentiles or Jews alone, or white people or black alone, or conservatives or progressives alone. You see the children of every race and every nation and every creed under the sun. You see America and America's future.

If you are disheartened by what you see, if these people of other races and national origins seem alien to you, then America's future and your own will not be happy. But if you see them all as being of the stock that built this great Nation from a wilderness, if you look at them as fellow servants of democracy, then our future is bright and full of hope.

America is not 100-percent puritan or 100-percent cavalier. America is an amalgamation of men and women of different kin with a common passion for liberty and tolerance. And with them all rests the future of American democracy.

In many ways the period we live in is like the period that followed the Civil War. There has been no Gettysburg or Bull Run, but, in the manner of war, the depression has inflicted wounds and brought hardship to many. Today, as in 1865, the Nation faces a tremendous job of reconstruction.

We need to place the economic system in such order that men may have the chance to work and to earn a living wage. We need to find ways to bring health and decent shelter to those who lack them. We must take care that the aged are adequately insured against want and the worker against unemployment.

We must protect the quality of Government service by weeding out the incompetent, and protect its integrity by eliminating those who violate their public trust. We must cut the alliances between politics and corruption wherever they exist.

Just as it was with Lincoln in 1865, we need "to bind up the Nation's wounds"; to care for those who have borne the modern battle; "to do all which may achieve and cherish a just and lasting peace."

And now, as never before, we need to do our work, as Lincoln advised, "with malice toward none, with charity for all." We need to do it with tolerance for those with whom we disagree; with compassion for those who are less fortunate than we; with sympathy and understanding for those who speak a different tongue or whose background is in a different land. We need to do it with a constant understanding that the things we have in common are far bigger and more important than any difference that may seem to keep us apart.

It is in such a spirit, and such a spirit alone, that peace is won, justice achieved, and the sons of men made free.

Dare We Break the Vicious Circle of Fighting Evil With Evil?

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 28 (legislative day of Thursday, June 22), 1939

SERMON BY DR. HARRY EMERSON FOSDICK

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a sermon delivered by Dr. Harry Emerson Fosdick on February 19, 1939, at the Riverside Church, New York City, the text being Dare We Break the Vicious Circle of Fighting Evil With Evil?

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

For some of us it is easier to believe in the Christian theology than in the Christian ethic. A generation ago many were saying: We cannot believe your Christian ideas of God, but the ethical principles of Jesus are the hope of the world.

Today, however, it is the ethical principles of Jesus that are difficult.

By the Christian ethic I mean no mere ordinary, humane decency, loving those who love us, but rather the radical, sometimes incredible, demands of Jesus that we love our enemies, that if smitten on one cheek we turn the other also, or if compelled to go 1 mile we go 2 instead that we do good to those who hate us and pray for those who despitefully use us and persecute us. There is the rub today.

The reason for this is the extraordinary vividness with which a powerful temptation assails us all, the temptation to resist evil with evil. When on the western prairies a conflagration starts, men fight fire with fire, burning a swath across which the advancing flames cannot leap. What is thus well done in the physical world we are continually tempted to do in the moral world. We fight evil with evil.

WE COPY THOSE WE HATE

In war, if one side uses poison gas, the other side may at first be horrified, but in the end we all succumb. It takes poison gas to fight poison gas. If one side uses conscription, which is of the essence of dictatorship, the other side, being a democracy, at first is shocked, but in the end copies the technique of the enemy. It takes conscription to fight conscription.

In personal relationships we are habitually tempted to meet bad temper with bad temper, resentment with resentment, sometimes chicanery with chicanery, and in all this we are morally sustained because we think we are resisting evil—as, indeed, we are, but with evil.

At that crucial point Jesus parts company with us. It is there that His revolutionary ethic begins.

Listen to Him: "How can Satan cast out Satan?" Hidden away in the third chapter of Mark's Gospel that searching question stands, summing up, I think, the essential meaning of Jesus' way of life. "How can Satan cast out Satan?" How can evil be the cure of evil? How can two wrongs make a right?

No question could be more pertinent to our modern world, where today violence rises on every side, ill will is rampant, aggressive iniquities must be resisted by good men, and the temptation to fight evil with evil is almost irresistible.

Nevertheless, the question of Jesus haunts the Christian conscience and in quiet moments of insight reveals a strange, uncanny common sense—How can Satan cast out Satan?

ANSWERING EVIL BY MORE EVIL

In the first place, how can the vicious circle of evil answered by more evil, answered by more evil, answered by more evil still, ever be broken unless, somewhere, someone refuses to go on with it?

Watch this vicious cycle of wrong answering wrong. Iniquity rises, demanding that we fight back. So, following the pattern of the natural ethic, against which Jesus took his revolutionary stand, we fight bitterness with bitterness, hatred with hatred, violence with violence, evil growing in a mounting crescendo as wrong answers wrong.

This process is afoot everywhere, from international relationships, where they bomb our cities and kill our women and children, and so we bomb their cities and kill them, to personal relationships, where we say, "He has been unjust—I will show him, I will pay the devil in his own coin."

In this regard how like we human beings are to dogs. For one dog barks and the other barks back and the first barks more loudly and the second becomes more noisy still, in a mounting crescendo of hostility. So one man excused his terrier to the exasperated owner of another. "After all," he said, "the dog is only human."

THE TRAGEDY OF NAME-CALLING

From the time, as children, we fell into angry name-calling, each trying to lay his tongue to some more stinging epithet, we all have faced this elemental problem, and now that, more mature, we are more dignified, our resentment taking a colder form but remaining still resentment quite unredeemed, who does not know that vicious circle of bitterness answered by bitterness, answered by bitterness again? It is the tragedy of the world.

Shakespeare dramatized this in Romeo and Juliet, which, far from being a drama of romantic love alone, is first of all a play about a feud—the house of Capulet against the house of Montague. The first and last words of the play concern the feud, one house against the other, hating each other, meeting violence with violence, evil growing by what it feeds upon and two wrongs never coming out right. Remember Mercutio, slain in the duel and in the insight of his dying moment crying, "A plague o' both your houses."

"GIVE ME THY HAND"

In the theater one sees people go out before the final scene as though, the love poetry being over, they thought the play was done. Shakespeare would have disliked that. It is the final scene, the climax of the play that he was driving at, where Capulet and Montague stand ashamed and penitent, their long and bitter feud stopped in midcourse by a love that broke the vicious circle of its hate. In that final moment of the play, when a Christian might kneel as before the mystery of the cross, Capulet says, "O brother Montague, give me thy hand."

So Shakespeare after his own fashion dramatized what the Christian ethic would say, that the world's feud can never end and the vicious circle of wrong answering wrong come to a close until, somewhere, somebody refuses to go on with it. Jesus meant this by his homely saying that if a man is smitten on one cheek he should not smite back, starting thus an endless chain of retaliation.

Let him try a new technique. Better, he would say, that one adventure on a revolutionary ethic and, if two blows must be given, take both rather than give one. Let him see if he cannot thus break the endless sequence of fighting evil with evil, whereby we always become the evil that we fight.

This, of course, is what the pacifists at their best are driving at with reference to war. The most shameful aspect of our present international situation, I think, is the way we ape the enemies we hate.

ARE WE "YES MEN" TO DICTATORSHIPS?

The dictatorships say war, so we say war. They build vast armaments, so we build vast armaments. Step by step, day by day, we become their "yes men." They say dictatorial control of the nation for the sake of war's efficiency. So in Washington we propose bills that provide on the day of war's declaration that the Nation shall conscript life, property, labor, conscience.

The dictatorships say, Let the War Department determine the foreign policy. So we, too, against the tradition of our people and the very words of our Constitution, say the same thing, and in Washington—witness the proposition for the fortification of Guam—not so much the civilian representatives of the people as the Army and the Navy begin to initiate, and so ultimately to predetermine, our foreign policy.

WE FIGHT EVIL WITH EVIL AND BECOME THE EVIL THAT WE FIGHT

What apes we are. We copy those we hate. We fight evil with evil and become the evil that we fight. We will conquer them, we say, and so first of all we let them make us in their image.

All this we do, thinking Jesus to be a visionary idealist. He is not. His ethic shows a more realistic insight into what is going on in this modern world than does our boasted hardheadedness.

Despite their governments, the people of all the nations in their hearts and homes want peace. Somewhere, sometime, millions of men and women must stand up and cry, We're through; we will not go on forever with war causing more war, causing more war, causing more war still.

If someone says, But we may be compelled to go to war. I ask only that the meaning of that be realistically faced. For in the war you say America is compelled to enter, every cruelty that human beings, implemented with unprecedented instruments, can inflict on human beings will be inflicted. In that terrific wrestling bout no holds will be barred. The word "sacred" will be dropped from the human vocabulary, and neither child nor woman, home, church, school, honor, nor plighted faith will be respected.

NO ONE CAN REALLY WIN A WAR

If we are the apes of our enemies in peacetime, in wartime we will be apes indeed. Every cruelty they devise we will match. Every devastation they inflict on human beings we will equal. In the end no barbarity will be beneath us.

The boys we bore in travail and reared in love in our homes, schools, and churches will become the yes men of the enemies we fight, in every dastardly deed they do. They will be compelled to.

And when it is over, in a world where all agree that no one can really win a war, with civilization, it may be, wrecked, with a thousand new problems raised for every one solved and countless hatreds engendered for every one satisfied, I can think of only one factor that still will stand quite unimpaired: namely, the strange

man of Galilee whom many call a visionary idealist still asking with infinite sorrow, "How can Satan cast out Satan?"

Let us take a further step and note that whether or not this principle of Jesus that evil is not to be fought with evil appeals to us, depends primarily on what it is that most of all we want. Do we really want to cast out Satan? Do we most of all desire to get rid of the evil of the world? Multitudes of people want something else altogether—their own prestige, personal or national, their gain and profit, their vengeance even, or their private conquest. Of course, to such Jesus' ethic is preposterous.

THE SUPREME AIM OF JESUS

We cannot see His meaning truly any more than we can see the windows of a gothic cathedral until we go inside, and from within His life understand what most of all He wanted. Above all else He wanted to rid the world of its evil. Whatever it cost, whether it brought Him to the cross or no, somehow to rid the world of its evil was His passionate desire. If that is what a man wants, then evil is not an instrument to use.

It is only in the light of this supreme aim and motive of Jesus that one can see His ethical principles as reasonable. If one wants most of all to cast out Satan, then an alliance with Satan is no means to that end.

THE FOLLY OF VINDICTIVENESS

Translate this into personal life, and its truth is clear. A man does a wrong to us; what do we want? It may be that our first impetuous desire turns to vindictiveness—an eye for an eye and a tooth for a tooth.

So one man I know of had an enemy. For years financially he laid for him until he got him, sold him out, lock, stock, and barrel, house and furniture, and, with a satisfaction which only the vindictive know, cried, "My God! but that's conquering!" If a man wants that, then Jesus' ethic is preposterous.

When, however, a man did Jesus a wrong, Jesus felt concern for the man. There are different ways in which one can intimate the presence of need and none more unmistakable than to be unfair, unjust, ungenerous. When a man does a wrong it is as though he flew unwittingly a flag of distress and uttered a cry for help.

Evil-doing may be variously interpreted. It may cry to us, revenge! It may say, ignore me! It may say, S O S; there is a need to be met, a deep want in this man's life, an evil that by good will, perchance, you may help to cure.

So, when the Samaritan villagers used Jesus despitefully, He was sorry for the villagers. When Judas betrayed him, He was heartbroken because He could not help Judas. It was the wrongheartedness itself He wanted to get rid of, the unkindness and bitterness He wished to banish from the earth. When one takes the measure of this supreme motive, Jesus' ethic becomes not preposterous but inevitable. Satan cannot cast out Satan.

RISK AND SACRIFICE ARE NECESSARY

If someone says that this ethic is risky, that it is bound to cost sacrifice and when used on some people is sure to fail, I answer, Of course it is. During the last blizzard, we are told, a woman living on a branch of the Ohio saw a poor dog drifting on the ice-floes and, touched with pity, ran to the stream, with difficulty launched her boat, fought for 2 hours before she reached the dog and brought him safely back. Then he bit her and she died of rabies.

There are human curs like that. Of all men in history, do you think Jesus did not know it? But he would say, I think, Take it any way you will, human life is risky; you cannot avoid risk in life, and the salvation of the world depends on men and women who will take this risk, to face ill-will with good-will, to try to break the vicious circle of evil's sequence, where wrong answers wrong, and when two blows must be given to take both rather than give one.

A MINISTRY OF GOOD WILL

If we say, In certain personal relationships this ethic can be made to work and it was only of these individual relationships that Jesus was thinking, I suspect that shows how little we know about Jesus' world. He was not tucked off in a forgotten corner of the earth. He lived on one of the major highways of the Roman Empire. Every breath of news, I suspect, from the Thames to the Euphrates soon or late came to Nazareth.

He lived in a violent generation when force ruled the world and might made right as terribly as it does today. He lived in a nation seething with violent revolt. He dealt not only with Saduccees, compromising with Rome; not only with Pharisees, waiting for their supernatural Messiah to come from heaven and redeem them; but with zealots, fiery militant, revolutionary rebels crying out for bloodshed to make right their heinous wrongs.

This public situation, so dreadfully like ours, Jesus had in mind when He turned His back on revenge and bloodshed and based His ministry on undiscourageable good will.

It was this public situation He faced in the temptation at the beginning of His ministry, when the devil, as it were, showed Him all the kingdoms of the earth and said, "All these things will I give Thee, if Thou wilt fall down and worship me."

How perennial a temptation that is. How terribly it assails us all today. To join forces with the devil to beat the devil, to fight evil with evil—ah, Christ, how did You resist the pressure of it in Your time and how in a world like this do You expect us to follow You?

SATAN CANNOT CAST OUT SATAN

Yet when in calmer moments one faces the facts, one wonders if He is not right. Satan cannot cast out Satan. All history is a running commentary on that. The means determine the end. Everlastingly that is true—the means determine the end. We of all generations should understand that.

Did we not fight a war to make the world safe for democracy? We were resisting evil. We prided ourselves on that. We were morally indignant against a real wrong and sacrificially devoted to a holy cause. We would make the world safe for democracy. Conscription to make the world safe for democracy. Poison gas, bombing of open cities, blockades that starved millions, to make the world safe for democracy. Dictatorial control of the whole Nation's life—even of what we ate and wore—the very suspension of the Bill of Rights, to make the world safe for democracy. And in the end a treaty, the only kind of treaty modern war can issue in vengeful, selfish, cruel—to make the world safe for democracy.

THE SANEST REALIST OF US ALL

So we woke up to find the world less safe for democracy than it had been in generations. We discovered that war, being essentially totalitarian and dictatorial, cannot defend democracy, but that the means determine the end. Ah, Christ, You are not a visionary idealist; You are the sanest realist of us all. Satan cannot cast out Satan.

Let us take a further step and note the positive power of this ethic when it is put to work. For it is not weak, as the average man thinks, but very strong. Of all ridiculous Beatitudes, some would say, the most incredible is the one where Jesus sums this ethic up and the faith on which it is built: "Blessed are the meek, for they shall inherit the earth." What nonsense, says the average man.

Yet would you stake your credit upon the opposite? Blessed are the Hitlers for they shall inherit the earth. Would you? Grant him every temporary victory you think possible. Would you say that in the long run he will inherit the earth? I know no intelligent person who thinks that. All history rises up against that.

EMPIRES BUILT ON FORCE FADE AWAY

Like children's sand houses built upon the shore, age after age the tides of destiny have risen and wiped out the empires built on force. Of all contrasts in history none could be more disproportionate than that between the Roman Empire on one side and Calvary's cross upon the other. Yet the Roman Empire has fallen and many another empire since, like children's blocks toppling in a row, but still that cross stands and haunts the conscience of the world.

So I think Jesus sat many a day upon the hills above Nazareth and looked across the plain of Esdraelon, stretching mile after mile before his gaze. There the historic battles of the world had been fought. There the empires of the Euphrates and the Nile had clashed. Age after age violence had met violence and kings and Pharaohs had fallen in futility, and Satan had never cast out Satan yet.

It was from that vision, not first of an ideal but of the facts, that Jesus went out, I think, determined, though he died for it, to introduce into the world a new and revolutionary ethic—meet ill-will with good will, dare to break the vicious circle of evil answering evil, never fight wrong with wrong. Satan canont cast out Satan.

THE PROPER USE OF FORCE

This does not mean that all use of force is satanic. Coercion has its proper place in life, always indicating a pathological condition but capable of salutary use in the interests of the whole community, as, for example, against the insane or the criminal. Even in such realms, however, the Christian ethic has been so far influential that not retaliation but cure and reformation have become the test and aim of intelligent procedure.

Because one believes in municipal police one is not by any logic driven, as some seem to suppose, to believe in war. War is a highly specialized form of force, in its preparations, procedures, and results distinguishable from any other of force's exhibitions. One may believe in the police and think dueling wrong; one may grant the salutary nature of coercion communally applied for the good of all and still think gladiatorial shows are unmitigated and outmoded evil.

WAR IS SATANIC AND ONLY SATAN GAINS

So one may pray and work for an ultimate international community, in which the collective security of all is the aim of all, and the policing of the world is the joint affair of all, and may still see clearly that at the present moment no war will mean that or anything aimed in that direction, but will be the old satanic, retaliatory process, motivated by imperialistic ambitions and waged with sadistic savagery to an end catastrophically evil. War is satanic, and only Satan has anything to gain from it.

However some may doubt the possibility of applying this principle to public affairs, how can one doubt its magisterial power in personal relationships? I would almost venture to say that any special fineness of spirit that anybody here possesses is his because sometime he has lived at the receiving end of this ethical principle.

For there are three kinds of goodness in the world. First, coerced goodness, where some one is good to us because we can require it. That is not impressive. Then there is deserved goodness, where we have been good to some one and now, quid pro quo, so much for so much, he is good to us. That is not deeply impressive. Then there is undeserved goodness, where we have been unworthy, ungenerous, unkind, unjust, and lo, someone comes back at us with good will and friendliness.

From the days at home when our parents so treated us, through all our lives, no force has reached so deep, laid hold so hard,

lifted so powerfully as that. Thank God not everybody has slapped back at us. Thank God some people did go the second mile with us. The salvation of the world depends on the multiplication of people who understand and practice that adventurous ethic.

WHAT SHALL AMERICA DO?

Do not represent me as having said that it is simple to apply this principle to the world's large affairs. It is desperately difficult. No one of us is wise enough to see around the next corner. Only as Americans this seems clear, that we are at the fork of the road and that either we are going to throw the vast influence of this Nation on the side of those constructive forces that make for international good will and conference instead of violence or else we are in for an era dominated by our aping of our enemies.

They make war. We make war. They build vast armaments. We build vast armaments. They use poison gas. We use poison gas. They say, all restrictions off on the most brutal instincts of mankind. We say the same, until once more, fighting evil with evil until we are the evil that we fight, far from conquering our enemies, we let them make us after their own image.

So at long last, at the end of a ruinous era, we shall be facing again the question—which God grant us grace to face now before it is too late—How can Satan cast out Satan?

Roosevelt Held Right, and Big Business Wrong, on Economy Appraisal

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 28 (legislative day of Thursday, June 22), 1939

ARTICLE BY JAY FRANKLIN

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Jay Franklin, published in the Washington Evening Star of May 31, 1939, entitled "Roosevelt Held Right, and Big Business Wrong, on Economy Appraisal."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of May 31, 1939]

ROOSEVELT HELD RIGHT AND BIG BUSINESS WRONG ON ECONOMY APPRAISAL

(By Jay Franklin)

Figures are rapidly rolling into Washington showing the extent to which big business has been "ruined" by the New Deal, and why there is such an overwhelming demand for tax relief on the part of the great corporations. Here, for example, are the "tragic" figures of the economic recovery movement of 1934–37, as reflected in industrial sales. For convenience, the figures are expressed in millions of dollars, so when you read steel sales for 1937 as being $2,847, that means $2,847,000,000.

Industries	Number of firms	Assets		Sales	
		1937	1934	1937	1934
Steel	12	$4,181	$3,957	$2,847	$1,215
Meat	5	825	794	2,179	1,852
Chain stores	10	517	458	782	678
Motors	12	1,525	1,282	2,604	1,348
Cigarettes	6	734	703	938	765
Beet sugar	6	129	122	70	65
Mail order	6	544	396	1,038	616
Oil refiners	20	6,880	6,211	4,122	3,069
Office equipment	10	272	231	224	145
Cement	8	138	166	56	39
Department stores	31	662	625	1,003	823
Containers	11	500	406	455	299

These figures are based on data from W. P. A. projects sponsored by the Securities and Exchange Commission. What is impressive about them is the fact that the 1934 figures represent recovery from the trough of the depression, while the 1937 figures are based on the earnings of the year when it was evident that the New Deal was here, and here to stay. Statistical arpeggios make sweet music to few but certified public accountants, but here are some percentage of gains in sales during 1937, as compared with sales in 1934:

Steel, up 134 percent; meat packers, up 18 percent; chain variety stores, up 15 percent; automobile manufacturers, up 92½ percent; agricultural machinery, up 68½ percent in 1937, as compared to 1935; cigarette sales, up 22½ percent; mail-order houses, sales up 69 percent; oil refiners, up 34 percent; office equipment, up 55 percent; cement sales, up 44½ percent, despite 17-percent shrinkage in assets; containers, other than paper and wood, up 52 percent.

But—I can hear the Tories roar in outrage—1937 was not a representative year." I agree. It was not. It was the year of the great sit-down strikes which "paralyzed" industry, "crippling" the automobile industry so that it only could show a 19-percent increase in assets and only a 92½-percent increase in sales over 1934. It was the year of the Supreme Court fight, when Roosevelt "destroyed confidence" and threatened to "become a dictator" by reorganizing the Federal Government in the interest of efficiency. It was the year when the Supreme Court validated the "ruinous" Labor Relations Act. It was the year when labor warfare broke out between the C. I. O. and the A. F. of L., still further "undermining confidence" and "paralyzing industry." Yet this was the year when our big business firms increased sales by percentages ranging between 7½ percent and 134 percent, and increased assets up to a total of 37½ (mail-order houses).

It seems clear that in the light of these distressing figures no Congress should be so hard-hearted as not to take pity on the wealthy corporations, remove the undistributed-profits tax, and apply economic democracy by taxing the corner grocery at just the same rates as applies to the wealthiest and most powerful industrial enterprise in America. It is equally clear why the big business leaders hate Roosevelt. He was right in his appraisal of political economy and they were wrong.

The 1938 figures are not so good. That was the year when Congress resisted the President—the year when Roosevelt tried to balance the Budget.

The Montgomery County (Ohio) Fish and Game Protective Club

EXTENSION OF REMARKS

OF

HON. HARRY N. ROUTZOHN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 28, 1939

Mr. ROUTZOHN. Mr. Speaker, the Montgomery County Fish and Game Protective Club, of Dayton, Ohio, is one of the first organizations of its kind in America.

On Friday, June 30, it will hold its fifty-third annual outing.

Descriptive of its origin and purposes is the following letter received today:

Long before the days when LaSalle took possession of all the land drained by the Mississippi and its tributaries, the inhabitants thereof had chosen the valleys of the Muskingum, Scioto, and Miami Rivers in Ohio as the best abodes of mankind.

Their forefathers' ancestors, from coast to coast, had designated the land of the Algonquins as the capitol providence of red men, erecting everywhere mighty earthworks and mounds as monuments to glories of the western continent.

Never, since the days when England and France battled for possession of that wide territory which lay west of the Alleghenies and north of the beautiful river, has the Ohio country been otherwise than in the very forefront of American history.

The story of our State is such that it not only challenges and commands the respect and admiration of its citizens, but its record, since its earliest days, stand unsurpassed among the sisterhood of States whose children have wrought well and nobly, not only for their habitation, but for their nation, and the world at large.

By reason of the fertility of its soil and the abundance of its game, the flood tides of immigration brought every nationality and creed into Ohio, here to assist in making the greatest composite of the human race. It is not too much to say that in Ohio we find the real average of intelligence, morality, thrift, and contentment. Blessed by nature, she is particularly fitted to be the nursery of great men and great deeds.

In the year of 1886, a band of the sons of Ohio, in Montgomery County, possessing the attributes of a Daniel Boone, a George Croghan, an Anthony Wayne, or a George Rogers Clark, formed the Montgomery County Fish and Game Protective Club for the purposes of the conservation of game and fish.

It was noted by members of this club, which has stood throughout the years, that during the drought years, when some of the chief breeding grounds dried up, nature itself was taking its toll of wild fowl, which, added to that exacted by the hunter and fisherman, threatened the future of the ducks and geese and other game; something should be done about it, the older birds were being killed, with few young ones replenishing the stock. That way lay the extinction which many species of wildlife earlier suffered.

This club, pioneering in the work, was the means of having introduced in Ohio precautionary measures as quickly as the danger

was evident. These included reduction of hunting seasons and bag limits, along with positive conservation work, and other States quickly copied Ohio's groundwork.

Now a survey and field studies made during the past year show wildlife is on the increase once more—and it is an admitted fact that this organization, the oldest of its kind in the State, has made the greatest contribution to the present hopeful condition.

Because of the age of the club, some of the older members have passed on, but in their passing they have inspired others to take up the burden and carry on and keep this oldest sporting organization in Ohio, alive; each member doing his bit in the much-needed work of preserving some of our heritage for the hunters and fishermen of tomorrow.

PAT SHIELDS,
Assistant Financial Secretary.

Had there been throughout the years of this club's existence country-wide organizations of men devoted to the purposes of protecting and conserving the wildlife of America, we would not, today, be confronted with the expensive and all-important problem of what to do for our game animals, birds, and fish which every lover of wildlife fervently desires to foster and preserve.

Will Rogers

EXTENSION OF REMARKS

OF

HON. JACK NICHOLS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

EXERCISES AT UNVEILING OF STATUE OF WILL ROGERS IN STATUARY HALL

Mr. NICHOLS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following exercises held during the unveiling of the statue of Will Rogers in the rotunda of the Capitol on June 6, 1939:

The following exercises were held attending the unveiling of the statue of Will Rogers in the rotunda of the National Capitol, Washington, D. C., Tuesday afternoon, June 6, 1939, at 2:30 o'clock.

From 2:30 until 3 p. m. a concert was played by the United States Navy Band, Lt. Charles Benter, U. S. N., leader, featuring the following selections: March, Will Rogers, by Arthur Pryor; Oklahoma, I Love You, by Mrs. Opal Williford; Old Faithful, dedicated to Will Rogers; a selection from Stephen Foster Melodies; march, Gate City, in which Dixie was featured.

The assembly was called to order at 3 p. m., by Mr. Walter M. Harrison, Oklahoma City, secretary of the Oklahoma Will Rogers Memorial Commission.

Chairman HARRISON. Ladies and gentlemen, the first number on the program will be the playing of America by the United States Navy Band.

(America, played by the United States Navy Band.)

Chairman HARRISON. The Reverend ZeBarney Thorne Phillips, Chaplain of the United States Senate, will offer an invocation.

Rev. ZeBARNEY THORNE PHILLIPS. I heard a voice from heaven saying unto me: Write from henceforth, blessed are the dead who die in the Lord, even so saith the spirit, for they rest from their labors and their works do follow them.

Let us pray.

In the silence of this moment, our Heavenly Father, a grateful Nation bows its head in loving tribute to the memory of him whose life in duty's path illumed by trust and love, always told in other lives for purity and strength and hope.

We thank Thee for this priceless heritage of splendid Christian manhood, bequeathed to us, his fellowmen, for his unsullied ideals, his devotion to his home and loved ones, his never-failing humor, transfiguring his mature and potent thought, and above all his vibrant personality, weaving its wholesomeness into the warp and woof of myriads of lives. And as we unveil and dedicate this statue in this holy shrine at the Nation's Capital, accept, we beseech Thee, the dedication of our lives unto Thee and to the service of our country, and grant us to live in such a state that we may never be afraid to die, so that living and dying, we may be thine through Jesus Christ, our Lord.

Our blessed dead, too, we trust to Him to keep safe 'til the morning stars sing among the roses, at the resurrection dawn. And so we can leave them with God. Love's arms are His and 'tis His love and thought in us that bids us dare to lay them in His arms and leave them there. Amen.

Chairman HARRISON. Norris Henthorne, editor of the Tulsa World, will tell of the work of the Memorial Commission of which he is chairman. Mr. Henthorne.

Mr. NORRIS G. HENTHORNE. Mr. Chairman, ladies and gentlemen, friends of Will Rogers: Twenty-two years ago today, at this same hour, citizens of Oklahoma came to Washington and gave to the Nation a statue of Sequoyah, native American, Cherokee Indian, and author of the Cherokee alphabet. This morning, citizens of Oklahoma, including members of the old Cherokee Indian Nation, placed a wreath at the base of this statue, thus again honoring that other eminent Oklahoman who has been counted among the great of the Nation by being placed in Statuary Hall.

Today we come again to present a statue of another great citizen whose character and reputation and record long since reached beyond the confines of our State, and who was known throughout the world, wherever the printed word was read or pictures were shown. In presenting this statue of Will Rogers it is with pride of fellow citizenship with such an illustrious son, but in humbleness and in realization of great loss.

This statue can be but a slight mark of the honor and respect with which this great citizen was held in our State. No stone or bronze or word can be the measuring rod of the feeling of our people for the man we are today honoring.

The people of Oklahoma, through their Will Rogers Memorial Commission, have erected another remembrance to do honor to Will Rogers. At Claremore, in the home county of Rogers, named for the family, we have built a memorial museum, in which will be permanently housed the personal belongings of Will Rogers. The memorial is built on property purchased many years ago by him as the location of a future home, and given the State by Mrs. Rogers. From the terraces and galleries of the museum is a view of many miles over the Oklahoma hills, where Rogers as a boy and young man acquired the background of tolerance and fairness and charity that so characterized his life and work.

The ceremony today exemplifies the feeling of all of Oklahoma. We are proud to have the Nation share with us the respect in which he was held by our people. No more suitable words could be used in portraying the feeling of Oklahomans toward Will Rogers than in the words carried in bronze on the door of the memorial in Claremore: "Built by the people of Oklahoma in tribute to Will Rogers, native son and world citizen."

Thank you. [Applause.]

Chairman HARRISON. Leon C. Phillips, Governor of Oklahoma, born in the young State whose destiny he directs with intelligence, efficiency, and integrity, will make the presentation. Governor Phillips. [Applause.]

Hon. LEON C. PHILLIPS. As chief executive of the Commonwealth of Oklahoma, there devolves upon me this pleasing duty of presenting to his country's Statuary Hall the statue of Will Rogers, America's best known and most revered private citizen, our unofficial ambassador of good will to the world.

This privilege indeed is mine but the authority comes from the people of the State of Oklahoma, unanimously voiced by the sixteenth legislature of the State and embodied in its official acts. Their generous appropriation made possible this statue of her best-loved son and kindly friend to rest on this, its pedestal of achievement in the Capitol of the Nation among the likenesses of those other heroic figures who led their people to victory in a great cause or sustained them through their hours of trial.

His is the last statue that will grace this noble Hall, and this great and final recognition is indeed appropriate and fitting for Will Rogers was the archetype of the American people, the plain and kindly spokesman of the inarticulate. A grateful State has built a memorial to him near his birthplace in Claremore, in his native Oklahoma, to be a permanent shrine to all who loved him.

The people have done this. Now they are placing the statue of their beloved son in the Hall of the Immortals. Why have the people of Oklahoma done this? One cannot penetrate the mysteries of life to allocate the causes of personal distinction, but of this we may be certain: Will Rogers was born with the elements of greatness in him. He is one more irrefutable example of the fact to which we as citizens of a democracy unwaveringly adhere, that out of the humblest heritage and the simplest circumstances can come great characters who will revive our faith, enlighten our thinking, and fire our souls to action.

Will Rogers was born on the undulating plains of northeast Oklahoma before they had been opened to settlement. He grew up on the simple frontier. He was the associate of cowboys and Indians, a familiar of the plains people and cowmen and ranchers who had conquered the West. As fame and fortune came, there came also world-wide recognition that in him was something of the universal. He was not one man but all men. He belonged to the world and his untimely death was a shock to all. Somehow, riding the solitary range, sleeping out under the stars, watching the Oklahoma sunsets, he drank in the silence of the prairie. He developed a personality from which the false, the pretentious, the silly, and the ostentatious fell away. He grew to look for the best in humanity, and the best in humanity responded to him. Neither carping criticism nor scorn marked his judgment of his fellows, but only a kindly tolerance edged with illuminating wit.

Men responded to his simplicity and humor, for as he rode the range and round-ups, he had learned the dependence of men upon the elements and upon the fellow men.

Understanding, that priceless gift of all gifts, was his and enabled him to see the virtues of a man, however overlaid with dross. He understood people, and though he analyzed them keenly, his comment was always kindly. He could dispel the gloomiest misgivings with a joke, witty, subtle, and profound.

"I never met a man I didn't like," he said. What a testament to his simplicity and his insight into the tangled skein of man's behavior. Understanding men, he loved them and they loved him.

Will Rogers was a man of tremendous loyalties. He was loyal to his family, his community, his State, and his country. He was proud of the people from whom he had sprung, and seldom has a town been more publicized by a favorite son than his native Claremore. In all the fame and fortune that came to him, he remained the boy from Oolagah, Okla. Privileged to consort with Presidents, the acquaintance of royalty, his love for Oklahoma did not wane, and with pronounced frequency he flew back whenever his pressing affairs permitted, to visit the plain people of his boyhood.

His heart ached when his nation was in trouble and his fellows were in distress. While a bewildered Government was organizing to meet the unprecedented emergency, he toured the Nation at his own expense, making personal appearances and giving the whole proceeds to those of each locality who were in dire need.

His friend was injured and deprived for a year of his only source of livelihood. Will Rogers went on the stage in his stead, not only to insure the continuance of his friend's income but to secure his part for him against the day when he could return.

Personal matters these? Yes. But typical of the man in whom every American saw exemplified the kind of person that he would like to be. Typical also of that belief in individual worth, that tolerance and sympathy that has marked the American character from the days of the colonial frontier when men knew and recognized their interdependence and their weakness before the primitive forces of life. Typical also of the man, whose underlying loyalty to his friends broadened to include humanity as he grew in popularity and acclaim.

Will Rogers loved his fellow man. That is why the old and the young, the rich and the poor, loved him. It characterized his acting. Whether as Dr. Bull or the American Ambassador, or the wise old editor in Life Begins at Forty, he exemplified the principle that the way to greatness was to love one's fellow man. These were but vehicles for the expressions of his maturing wisdom. Will Rogers was never an actor, he was always himself, a plain American who loved his fellow man.

He looked for the best in others and gave to the world the best he had. He earned the love of the Nation. He left the world better than he found it. He reached the hearts of the American people by his own personality, and by his telling wit and wisdom buoyed them to fresh endeavor. To the end he remained a plain man, a lover of simplicity, a devastating opponent of sham. The immortal Kipling might well have had him in mind when the lines of the poem If were penned:

"If you can talk with crowds and keep your virtue,
Or walk with kings nor lose the common touch;
If neither foes nor loving friends can hurt you,
If all men count with you, but none too much;
If you can fill the unforgiving minute
With sixty seconds worth of distance run,
Yours is the earth and everything that's in it,
And which is more, you'll be a man, my son."

When the Great Winnower of human achievement has sifted out the truly great from the chaff of contemporary heroes, when the Great Recorder has penned the record of those whom the Winnower has chosen, the name of Will Rogers, the great American, beloved of his fellows, will be etched in the Book of Fame, imperishable and undimmed. There, writ large 'neath it in letters that gleam with the idealism and reawakened faith he fostered, will be inscribed the qualities that brought him from the obscure village on the frontier plain to the forefront of human love and affection everywhere: Simplicity, understanding, loyalty, and love of his fellow man. It is with this conviction that I commend Oklahoma's—America's—Will Rogers to the timeless ranks of the immortals. [Applause.]

Chairman HARRISON. Among the living none merits participation in this ceremony more than Mrs. Sally McSpadden, the elder sister of the late Will Rogers. She filled as best she could the departed mother's place, she molded Will's early years. She was always Will's devoted love. Sister Sally will unveil the bronze, and I understand that Jo Davidson has not arrived, and failing to see him at this time, I am going to ask Mr. Will Hays, representing the Motion Picture Producers of the United States, to assist Mrs. McSpadden.

(Mr. Henthorne, chairman of the Oklahoma Will Rogers Memorial Commission, received the following telegram from Mr. Jo Davidson, the sculptor, who had been scheduled to assist Mrs. McSpadden in unveiling the statue: "Norris G. Henthorne, chairman, Oklahoma Will Rogers Memorial Commission, the Capitol, Washington, D. C. Regret exceedingly that I am prevented from being present when you have gathered in the Nation's Capitol to do honor to Will Rogers, whose memory as a great human being is cherished by all who still keep the faith, which was his, in the eventual triumph of democracy throughout the world.—Jo. Davidson.")

(Unveiling of statue by Mrs. Sally McSpadden, assisted by Will Hays. Following the unveiling, the United States Navy Band played The Star Spangled Banner.) [Applause.]

Chairman HARRISON. ALBEN W. BARKLEY, Senator from Kentucky and Chairman of the Joint Committee on the Library, will accept the gift for the Government. Senator BARKLEY. [Applause.]

Senator ALBEN W. BARKLEY. Mr. Chairman, Governor Phillips, ladies, and gentlemen, the ceremonies in which we are now participating illustrate in a very special manner the opportunities and the institutions of America. There are 72 statues which have been erected and now occupy places in the Capitol of the United States as a part of our Hall of Fame. Among those 72, 60 were officeholders of one type or another, and only 12 of the 72 represent private citizens of the United States. The statue which we are unveiling today is the twelfth private citizen among those which have been placed in the Capitol by the States which have selected the representatives to honor them in this American Hall of Fame.

It has been in America sometimes the idea that greatness was limited largely to men who hold public station, that the ermine of public office was an indispensable thing to American greatness, and those of us who hold office even for a temporary period sometimes are prone to imagine that we are more powerful and more august, and are to be revered more than those who are not entrusted by their fellow man with official robes; but I have sometimes wondered whether the man who occupies the Governor's chair or the Senator's toga, or the judicial robe, has after all rendered greater service to mankind than the man who walks in the humble ways, sometimes in the valley where the sun never shines upon him.

Will Rogers represents in this Capitol the 12 men or women who never held official position under any State or under the Nation, and as I look upon that wonderful statue which I had the privilege to see in Paris just as Jo Davidson completed it, it seems to me that I am standing in the presence and in the spirit of Will Rogers.

Cowboy, amateur actor, a twirler of the lariat about which he humorously said once, "It was great fun to spin the rope provided your own head isn't in it"; not only actor, but philosopher, for Will Rogers was born an actor, he was born a philosopher, he was a real statesman. There is no statute in the laws of our Nation that bears his name, and yet I dare say that he wove his way into the hearts of more men and women in this Nation than can be said of any man whose name plasters the pages of our statute books with the laws which he has himself sponsored.

Not only was he an intimate and a confidant of Kings and of Presidents and of Governors and of Senators and of Members of the House of Representatives, members of the legislatures, not only was he the friend and the confidant of the rich and the powerful and the mighty, but greater than all of these, he was the friend and the confidant of the humbler men and women, not only of our own country but of the world. But even greater than these, he was the friend of children, and no man was ever a friend of children in this world who was not a good man, a noble man. He gave of his wealth, he gave of his time, he gave of his talents, he gave of his great heart to make America a better place in which to live, and he carried to every nation which he visited, and he visited nearly all the nations in the world, that same spirit of nobility and of comradeship which made those who could not speak his language understand his heart and appreciate his soul.

And so today, Governor Phillips, ladies and gentlemen, I have the honor and the privilege as chairman of the Joint Committee on the Library, to accept this beautiful statue of this great American, not only in the name of the Joint Committee on the Library but in the name of the American Congress, in the name of the American Government, and in the name of the American people, and I accept it in gratitude not to Oklahoma alone; in gratitude not for this beautiful statue which represents Will Rogers but I accept it in gratiude for the noble and immortal life which it represents. I thank you. [Applause.]

Chairman HARRISON. Joe Benton, native Oklahoman, a member of the Metropolitan Grand Opera Co., will sing two numbers, Good Will to Men, by Geoffrey O'Hara, and The Lord's Prayer, by Melant. His accompanist will be Merl Freeland. Mr. Benton. [Applause.]

(Selections by Joseph H. Benton.)

[Applause.]

Chairman HARRISON. Will those of you in the rotunda kindly direct your attention to the west wall, if you please; the photographer there is going to take a panorama picture, and we would like to have you face the camera, if you please.

(Taking of picture.)

Chairman HARRISON. Ladies and gentlemen, an address by Luther Harrison, of Oklahoma City, chief editorial writer of the Daily Oklahoman, will be next. Born in Mississippi of a family that gave much in the Civil War, Luther Harrison received his education the hard way. Since 1907 Harrison has been a factor in Oklahoma life as legislator, educator, and editor. You may not have heard him before, but you will not soon again hear the likes of him. Mr. Harrison. [Applause.]

Mr. LUTHER HARRISON. Sons and daughters of Oklahoma, ladies and gentlemen, the man who undertakes to eulogize Will Rogers in 1939 is subject to a few embarrassing handicaps, for Will has ben eulogized generously and ardently by the most illustrious citizens of our Republic. If I should attempt this

afternoon to add anything to the words of praise which have been spoken of him, I would be guilty of repetition and of plagiarism. Moreover, I have a lurking suspicion that as I stand here to talk for a little while this afternoon, the kindly spirit of Will Rogers is standing just behind the scenes poking fun at the peculiar manner in which I respond to this invitation.

Long years before Statuary Hall became the Nation's Pantheon, it was the scene of splendid but stormy debate. The Commonwealths of the Union in those days sent intellectual giants here. Here came Randolph of Roanoke to teach succeeding Congresses the devastating power that lies in a vocabulary of invective. Here came the American triumvirate, the most popular of popular leaders, the man whose very name of Webster became a synonym of constitutional interpretation; and Calhoun, the Aristotle of the English-speaking race. Here came, too, that Demosthenes from the Natchez Bluffs, who at the age of 23 won from John Marshall the opinion that Sargent Prentiss was the most eloquent man that ever spoke the English language in the entire history of the world.

Here, too, came a former President, then a Representative, who died in a committee room just off this hall, and who literally gave his life in defense of the constitutional right of petition.

And here came an unknown from the valley of Sangamon, the very mention of whose name this afternoon causes every thought to turn to that lonely cabin in the wilderness of Kentucky wherein Nancy Lincoln gave to the world an immortal son.

When Statuary Hall ceased to be a Hall of Representatives it became a hall of fame in which you can see arrayed the effigies of men and women counted greatest by their respective States. But, curiously enough, as I walk around that sacred circle, I see the effigies of a few whose names are little known to the American people. There are a few who were selected as partisans, by partisans, because of partisan service. There are a few, perhaps, who were mere champions of sections and not representative of an entire nation. There are one or two, perhaps, who were merely minority selections and who were not approved by a majority of the people of their States.

In all these years, only one figure has been unveiled in Statuary Hall that had the unanimous approval of the American Republic. I refer to the man from Mount Vernon whose bright sword point gave the Colonies their freedom and whose patient statesmanship fashioned the American Republic. For all these years, George Washington has remained nearly solitary in this hall of fame, because Washington alone was the unanimous choice of all America.

But today, sons and daughters of Oklahoma, Oklahoma presents a companion to George Washington, who is the unanimous choice of the people of the United States. [Applause.] Speakers more gifted than I have attempted this afternoon to explain why this man, who never held an office, became so preeminently great. Perhaps that itself is the explanation—who knows? But if you would understand Will Rogers, you will have to go back 500 years to the southern passes of the Appalachians. For 500 years before the star of Oklahoma burst forth in the firmament—500 years before this preeminent American was born out on the plains of Oklahoma—the Cherokee people, as proud, as brave, as courteous, as dignified as any race that ever walked the earth, were maintaining republican government, which is democratic government, in the fair land of the southern Appalachians.

Behind Will Rogers was 500 years of tradition, memories of Etawah, the Ooslenamia, the Eagle's Nest, known in the Cherokee tongue as Chattanooga, the River of Death, significantly named centuries before it crashed into military fame under the name of Chickamauga.

From that fair land, as fair as any 'neath the stars today, a dispossessed people—unconquered, because of all the races the Indian has never been conquered; the Indian is the only son of man who never was made a slave—dispossessed, expatriated, started down the Trail of Tears to a new harbor in Oklahoma. Across the Tennessee, across the Tallahatchie, across the Mississippi, the Arkansas, the Grand, and the Verdigris, those forefolk of Will Rogers came into a new land, comforting their dying, burying their dead, cheering their living. And that long highway out through the foothills is lined today with the bones of Cherokees who died by the dispossession of an arbitrary government.

Will Rogers was born on the prairie. He was the son of the wildwood. Would you like to understand the secret of his life? He grew up in an environment and among a people where men's lives frequently depended upon the loyalty and comradeship of their friends. For that reason, Will Rogers, Cherokee and Oklahoman, was true and loyal, and the perfect comrade until the day of his death. He was the true democrat also. He stood in the presence of kings, on terms of perfect equality, because he knew that to be an American is to be the equal of a king. Wouldn't you like to hear his comment today—this man who stood foursquare before the crowned heads of Europe—if he could only see and hear the hubbub in the official life of Washington of people trying to find a social knothole through which to peep at a king?

We have needed him—needed him sorely—but his sudden taking off was not without its compensation. He died in the day of his meridian fullness. We, his friends, did not have to mourn the decay of the great American citizen. He went down into no dim twilight, he sank down into no feeble sunset, but he sprang out of life in the bright blaze of meridian fullness. We have needed him. We shall ever need him, because his words of wisdom were a tonic to all of us and they taught us inflated egotists just how small an ant can crawl under the sun of the world.

But all the while destiny was waiting up yonder under the northern lights. The call came. It could not be resisted. Perhaps destiny never is resisted and accompanied by the greatest of the eagles, dear old Wiley Post (another Oklahoman), Will Rogers left his home in the land of the sunset, went away from the sandy shores and the orange groves of mystic California, out beyond the primeval forest that guards the Columbia, out beyond the harbors of Vancouver, out beyond the frozen tundras of Alaska, up to the very verge of the Polar ocean, and there Will Rogers met his destiny. And we who knew him can hardly doubt that when the call came for him to meet his Maker, he entered the presence of his Maker with a stainless heart and with his inimitable, whimsical smile.

We present today the companion of George Washington, the greatest private American citizen, a man of whom there are all too few, a man whose kindly spirit is looking down in sympathy on us this afternoon. So, God accept him and Christ receive you. [Applause.]

Chairman HARRISON. Ladies and gentlemen, will you help us to complete a perfect hour by remaining in order for just a moment, please, while the Chaplain of the Senate says a sentence in benediction.

Reverend PHILLIPS. May the peace of God which passeth all understanding keep your hearts and minds in the knowledge and love of God and of his Son, Jesus Christ our Lord, and may the blessing of God Almighty, the Father, the Son, and the Holy Spirit, be upon you, his dear children, and all who are near and dear unto you, both here and yonder, and remain with them and with you forever. Amen.

(With the playing of Stars and Stripes Forever by the United States Navy Band, the ceremonies were adjourned at 3:55 p. m.)

British Diplomacy in Palestine

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 28, 1939

ADDRESS BY HON. JOHN D. DINGELL, OF MICHIGAN, MAY 21, 1939

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at Shaarey Zedek Synagogue, Detroit, Mich., May 21, 1939, under the auspices of the Detroit Zionist Emergency Committee, consisting of all Zionist organizations in Detroit in cooperation with the Jewish Community Council:

Mr. Chairman and fellow citizens, I have come here today not alone for the purpose of discussing a grave problem, but also as concrete evidence of my sympathy for you and your cause, and if I can to help you in the solution of your problem. Moreover, my appearance here today as a member of a Christian faith is intended by me at least to indicate the interest and the concern of my fellow coreligionists toward you in your hour of trial.

Recent pronouncements by the British Government with regard to the proposed political change in the status of Palestine as enunciated by Mr. Chamberlain have not only shocked the world in general but have caused certain elements within it to recoil because of the violation of a solemn pledge. I, for one, cannot accept Mr. Chamberlain's expressions as indicative of the attitude of the English people any more than I could accept the acts of madness on the part of Hitler and Mussolini as being the reflections of the German and Italian peoples.

From my earliest childhood I have always been taught to believe that Palestine was the ancestral, the historic, and the godgiven land of the Jews; and I was taught, moreover, that it was ordained by God that some day the Jews of the world would return to their homeland. Biblical prophets and sincere and saintly men throughout the ages have prophesied the great homecoming of the Jews back to what in my mind will always be the Holy Land, there to enjoy the peace, happiness, and contentment which for centuries have been denied them by other countries of the world.

Christians and non-Christians, men of fairness throughout the world, rejoiced with you and your oppressed brethren when the great Woodrow Wilson expressed himself in your behalf. The world was thrilled when the Palestinian mandate was drawn. The Balfour declaration clarified and gave additional substance to a practical, though not a new, idea. The expressions of the Congress of the United States convinced the world of our American interest in this belated reestablishment of the Jewish homeland.

Great Britain voluntarily—yes, eagerly—assumed a responsibility in the Near East. Great Britain consulted with the Government of the United States along with other governments, and we have

given our approval, our official assent to the course proposed by His Majesty's Government.

Peaceful settlement and development of the ancient land of the Jews began almost immediately, and as persecutions flared throughout Europe, migrations to the Holy Land were increased, under stress of necessity were speeded up, and that portion of Palestine which was peopled by the incoming immigrant Jew was reclaimed from desolation of the desert and became a productive paradise.

Men and women became prosperous in their newly found freedom. Industries, hospitals, libraries, and homes were built. Agricultural development advanced at an almost unbelievable rate, both as to quality of the products and increased productivity. Palestine was absorbing more and more of the oppressed, of the persecuted, and of brokenhearted Jews who gathered the remnants of their homes, fortunes, and families, and treked back to the promised land, to their historic home.

The advancement of the Jews in the family of nations seemed to be a certainty. Suddenly, however, the world began to hear of brawls, riots, skirmishes, with the inevitable and final British military interference; all of this commotion in the peaceful land inhabited by an unusually peace-loving people. This sudden change was not spontaneous; it was incited. As a matter of fact, we know that it was created by the anti-Semitic dictators in Germany and Italy as retaliation against Britain, and was calculated to embarrass the British Government. A prolonged reign of terror followed in the wake of propaganda, eventually giving Britain no alternative but to interfere with military force.

Only recently the whole civilized world was shocked by disclosures which indicate clearly the duplicity of British diplomacy. The world learned that certain promises distinctly contradictory were made on the one hand to the Jews and on the other hand to the Moslem Arabs. Britain toyed with the destiny of the unfortunate Jew. Britain viewed the entire matter as one of expediency and of self-gain, and as time went on this double dealing of Great Britain was brought to light; and at this juncture Mr. Chamberlain authorized the issuance of the so-called White Paper, which has for its purpose the nullification and destruction of sacred promises voluntarily given to the Jews and accepted by the world as having been given in good faith and subject to being fulfilled.

The aims, the aspirations for the development of Palestine brought about by substantial migrations of the Jews were now placed in complete jeopardy. The moderate quotas permitted to enter Palestine well within the ability of the land to absorb and sustain them, are now to be reduced to a negligible minimum. These quotas intended to save the face of the British Government, condemn the Jews to a permanent status of the minority subject to violent hatreds and oppressions by the Arabs who are to be by agreement and understanding the masters of your people who sought respite from persecution, who sought the opportunity in the homeland to start life anew, to rehabilitate themselves.

As Dr. Goldman stated recently, Britain condoned and encouraged; yes, became a party to the proposed establishment of a territorial Ghetto in the Near East, in the traditional home of the Jews which would be far more confining and oppressive than any heretofore established on the European Continent.

After a stipulated period of years, England insists that Palestine shall become dominated by the Moslem Arab, that the culture, the development, and the peaceful settlement of the homeland shall be stifled by Arabian influence and control, and this with the full approval of His Majesty's Government. It is not too late for England to recalculate the possibilities of the future, reconsider and make such corrections as would permit the peaceful adjustment of the differences between the Jews and the Arabs. I am confident that if the Government of Great Britain in consultation with other interested nations should call together the parties involved, that a permanent solution is not only possible but absolutely certain.

The subjection of the Jews in Palestine can never be a lasting solution of the Jewish-Arab difficulties. The Jews throughout the world will not and should not bow down to it. The nations of the world will not accept it. Bloodshed and the continued reign of terror with the attendant cost of human lives and misery will continue. Britain holds within her hand the possibilities of a just and equitable solution, if she will but deal openly, honestly, and fairly with the Jews and the Arabs.

The people of America interested in a permanent and peaceful solution, being a party to the establishment of Palestine under the mandate look to Britain, as we have a right, to extend her energies to the utmost in reestablishing tranquility in the Holy Land. England cannot afford, under any circumstances, to make of the Jews a pawn in order to gain a temporary military advantage. As a matter of fact, England should know that her own best move for security and the maintenance of peace in the Near East should be predicated upon the establishment and maintenance of an inviolate Jewish Palestine. The loyalty, the devotion, and the gratitude of the Jews will repay England a thousandfold for her steadfastness and moral courage. England has lost her sense of equilibrium. England has been goaded into an action that is against her own best interests. A strong and consistently expanding Jewish Palestine should become the keystone of safety in the arch of the British Empire. I feel that millions of people throughout the world, and particularly in the Western Hemisphere, will sustain that opinion.

It is not my purpose today, my friends, to extend myself in an unduly lengthy discourse, but I do want to say before closing that I believe England can be made to, and will, capitulate. It is not too late for her to redeem her solemn pledges. It is incumbent upon us, however, to assume a militant and aggressive attitude in this matter. It is mandatory that we make known our demands, that we insist upon the scrupulous carrying out of the provisions of the mandate and of the Balfour declarations.

We who are privileged to live in this glorious land of freedom should be the first to offer encouragement to the Jews of Palestine and we should remain steadfast and devoted to the one and only outline which holds promise of permanency and of peace, not only for the Jews but the rest of the world as well. Let us then, Jew and gentile alike, pledge ourselves in accordance with the ancient Jewish psalmist, "If I forget thee, O Jerusalem, may my right hand forget its cunning."

Let me add for the benefit of those who do not understand my position, or my viewpoint, and I hope that there are not many who do not, that I feel strongly on the point that inasmuch as America has been a party to the reestablishment of Palestine, that the Government of the United States must of necessity be consulted in any change, modification, or alteration of the original mandate. We have accepted the mandate and the Balfour declaration as sincere and sound. It is my belief that the fairness of the American people toward the Jews will insist that there can be no change without American assent.

I have dispatched a letter of protest to the Honorable Cordell Hull, Secretary of State, which clearly indicates the position which I have assumed in this matter. For your information, although not at this juncture for publication, I shall read separately the letter in its entirety. I feel that until the Secretary has had an opportunity to reply, that I should in fairness, defer giving publicity to this communication, for it is well known that the American State Department guards jealously its prerogative in matters bearing upon our foreign policy.

HOUSE OF REPRESENTATIVES,
Washington, D. C., May 20, 1939.

Hon. CORDELL HULL,
Secretary of State, Washington, D. C.

MY DEAR MR. SECRETARY: Recent unfavorable developments pertaining to the future of Palestine have aroused great concern generally among the people of the world and in particular have aroused the citizens of the United States.

The issuance of the so-called "White Paper" by the British Government indicates clearly the abandonment of pledges of permanency given the Jews and accepted by the world as guaranties for the maintenance of Palestine as the historic homeland of these unfortunate and persecuted people. This change in attitude is in direct contravention of the mandate and the subsequent Balfour declaration.

I hasten to register my most emphatic protest against any modification or alteration of the mandate to which the Government of the United States has given assent and support. I urge you therefore to make formal representation to His Majesty's Government demanding at the same time the carrying out of the provisions in accordance with the stipulations contained in the document.

There can be no arbitrary emasculation or change without consultation and agreement among the interested nations. Unilateral action on the part of Great Britain in violation of the rights of the Jews should be denounced and proclaimed as invalid.

Being mindful of the fact that you are charged with the responsibility of our foreign policy I, nevertheless, make these suggestions in the hope that you will use your good offices and bring about the fulfillment of the mandate.

I subscribe myself,

Very respectfully yours.

American Jobs for Americans

EXTENSION OF REMARKS
OF
HON. A. LEONARD ALLEN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 28, 1939

RADIO ADDRESS BY ELLIOTT ROOSEVELT, JUNE 20, 1939

Mr. ALLEN of Louisiana. Mr. Speaker, the greatest propaganda campaign that I have witnessed since I was first elected to Congress is going on right now in the effort that is being made to break down our immigration barriers and flood this country with immigrants from Europe. The air is filled with radio programs, cleverly written and prepared and put on by skilled actors, with the view of creating sympathy for Europeans, and thus breaking down our immigration quotas. I warn the American people that a mighty campaign is now under way which, if successful, will overrun this country with people from Europe and deprive American citizens of their jobs. Our first duty is to our own people. With one-third of our people ill-housed, ill-fed, and ill-clad, and with over 12,000,000 unemployed, it should behoove us to set our own

house in order before attempting to increase immigration. Every immigrant admitted to the United States sooner or later comes into direct competition with American labor. In this connection, under leave to extend my remarks, I quote the following pertinent paragraphs from a radio address delivered by Hon. Elliott Roosevelt on June 20, 1939:

Good evening, everyone. I have just come from Ellis Island and I wish in my heart that every American who believes in himself and in the future of this country could visit this strange crumb of land in New York harbor.

I wish this, because—whether you realize it or not—Ellis Island is a buffer between you and your job. It is one of the safeguards of your liberty and a prop to your standard of living.

So when I say visit, I am not thinking of hurried tours for sightseers. I mean here is an arm of government that is important to you personally, and you should understand it, and know how it functions, and why.

One of the chief purposes of Ellis Island is to see that every person admitted to this country has a clean bill of sale. It doesn't want anyone who isn't on the level with the United States. Its function is to exclude and deport undesirable aliens and often when it does this, it saves some working man his job—maybe your job.

They tell me that half the waiters in Jersey City and Hoboken are men who are in this country unlawfully—seamen who have jumped ship and hidden under aliases. There must be many Americans within reach of my voice tonight who are unemployed and who would appreciate a chance to fill a waiter's job. If it is true that alien seamen are employed promiscuously in New Jersey and New York, then the men who hire them—if they do so knowingly—are guilty of un-Americanism and are helping tear down, rather than build up, this country.

Earlier this year a bill was submitted at Albany designed to meet just such an emergency. It called for severe penalties against anyone who knowingly employed aliens who were unlawfully within the United States. This bill didn't get anywhere. It was read once and then filed away—presumably in some pigeonhole. Why? Here was a move that struck at one of the evils of unemployment. It would have saved many an honest, law-abiding, tax-paying American his job. But after being read once and referred to the committee on codes, it has been allowed to languish in a pigeonhole.

Next year, of course, it will be resubmitted, and I hope it meets with a more sympathetic fate than the indifference it found this year.

Now, for fear that some of you may misunderstand the real aims of the immigration authorities at Ellis Island, let me say that checking up on alien waiters is not one of them. Mr. Rudolph Reimer, who is Commissioner of Immigration, does not employ stool pigeons. They haven't time to snoop on individuals who are in this country unlawfully.

But they do have time to ascertain the validity of persons arriving through a regular port of entry. If you live in England or Lapland, and wish to come to America, you must possess a passport and a visa. If you have them, and if they are legitimate, then you have nothing to fear. But if you are a stowaway, or if you sail with papers that aren't legal, then you are in for an interesting experience at Ellis Island—which is about as close to the United States as you are likely to get.

Not long ago a British writer sailed for the United States. Actually, his papers were in order, but while he was at sea his visa was revoked. There were reasons why the authorities wanted him excluded from this country. So when the ship arrived at Ambrose Lighthouse he was taken off and conducted to Ellis Island.

Now, the authorities were not interested in why this man was being detained. No one is ever put on trial at Ellis Island. But they were very much interested in the fact that his visa had been revoked; and that was enough. In a few days he sailed back to Britain without setting foot in this country.

It later developed that here was a man who frequently manifested un-American tendencies. He didn't believe in our form of government. Though he was an alien, he came here for the express purpose of earning money and taking that money out of the country. When Ellis Island blocked him it was saving some American his job—it was building some American's income.

The Taylor Grazing Act

EXTENSION OF REMARKS

OF

HON. EDWARD T. TAYLOR

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 28, 1939

Mr. TAYLOR of Colorado. Mr. Speaker, today marks the fifth anniversary of the Taylor Grazing Act which was approved by President Roosevelt on June 28, 1934 (48 Stat. 1269). Providing for the restoration and development of the public grazing lands and the stabilization of the livestock industry, this act ushered in a new era of national conservation. Unlike the former public-land laws, which endeavored to keep pace with western development by encouraging homes and occupation to meet a rapid growth in our American population, this grazing act inaugurated a new policy on the part of the Federal Government in dealing with its lands.

The Taylor Grazing Act, an act which I am humbly proud to have linked with my name, removed from private settlement the major part of the public domain in order that the natural wealth of the West might be revitalized and the natural resources rescued from imminent chaos. Due to the combination of destructive elements that were eating into the very heart of the western economy, there was a very great need for a program demanding Federal attention to the public lands. This act furnishes that program. This law ought to have been enacted 20 years ago.

For a long time, the public domain was subjected to abuse and overuse as a natural consequence of competition within the livestock industry itself for free range over which nobody exercised control. Many States passed laws—my own State of Colorado was one of them—to mitigate and correct the situation which was reaching such proportions that the very structure of social and economic civilization in the West was seriously threatened. For obvious reasons, these State laws were ineffective. Therefore, the only solution to this big problem of conservation and stabilization was a Federal law that would place the responsibility right in the lap of the Government.

I wish all of you might have the pleasure of seeing, as I have seen, the amazing change that has come over the West as a result of this grazing act. Embodying as it does the basic principles of proper land use and favoring the established livestock operator who has chosen to carve a livelihood on farm, ranch, or homestead in the community, it has brought renewed confidence in the entire social and economic structure of the West. In fostering the welfare of the people who grow stock feed on their thirsty soil and the permanency and value of the natural resources, this law has captured the imagination of men and women in all walks of life.

There are many people in the East and a surprisingly large number even in the West who do not understand the Nation-wide importance of the range livestock industry. The livestock industry produces beef, mutton, wool, leather, mohair, and other marketable products. They enter into the channels of trade and are of interest directly or indirectly to every person in the country. The stockman takes his factory, namely his livestock, to the raw products, the range forage, and there produces the commodities I have mentioned. He then delivers them by rail, by truck, sometimes by boat, to packing houses, wool manufacturing plants, and similar institutions sometimes long distances from the range. The transportation of these products is important to people engaged in transportation. The processing and manufacturing of products and byproducts of the livestock industry is of vital interest to people long distances from the western ranges as a source of work and, therefore, a livelihood. The continuance of essential livestock products, especially beef and mutton, under a system that affords the grower a living and at the same time places them in the hands of the consumer at a price he can afford to pay, is of vital importance to people wherever they are.

This grazing act contemplates the administration of these remaining public lands so that the soil will be protected from erosion and the water, forage, and other resources conserved, while amply providing for use by the public of those natural resources in such a way that they will be of the greatest benefit and help in stabilizing economic conditions. It is intended in this way to promote the welfare of the people not only in the communities affected, but also in

many other communities a long distance from the grazing areas.

The amendment of 1936 authorizes the Secretary of the Interior to establish grazing districts out of the public domain, aggregating not to exceed 142,000,000 acres of vacant, unreserved, unappropriated land in the West, and to permit the grazing of livestock thereon under rules and regulations established by him. Immediately upon assuming office in 1933, Secretary of the Interior Harold L. Ickes was impressed with the prospect of public benefits that would flow from a law restricting the number of cattle and sheep to be grazed on the public domain to a reasonable grazing capacity of that range.

When the Taylor Grazing Act was approved by President Roosevelt on June 28, 1934, Mr. Ickes dispatched representatives of his Department to the West to "take council with the dwellers." That delegation held public meetings at points convenient to the stockmen in each of the 10 principal public-domain States of the West. At these meetings, the provisions and objectives of the act were explained. Discussion from the floor was encouraged and the response was enthusiastic and enlightening. At that time, most of you will recall, the western country was in the midst of one of its severest droughts of record. Boulder Dam was just nearing completion, and the Federal Government was devising all possible means of relieving the farmers and stockmen who were in distress from the drought and economic conditions. Boulder Dam is now a reality. It gathers and holds the waters of the Colorado River and its tributaries. These streams, which have their sources on the western side of the Continental Divide, traverse a large part of the territory that comprises our western grazing grounds. The continued supply of water to be stored behind Boulder Dam and used later at the command of man is dependent upon the continued wise use, management, and preservation of the resources that occupy these public lands. Similarly, the protection of the watersheds of the Rio Grande River affects the stability and efficiency of the Elephant Butte Dam in New Mexico. This same rule applies in a greater or lesser degree to every one of the irrigation projects in the West which has been constructed by the Federal Government. In this connection, there are literally thousands of smaller irrigation projects in private ownership which are likewise affected.

It has been a source of great satisfaction to me to follow the progress of the administration of this act. Secretary Ickes announced that it was a Magna Carta of national conservation, and what has followed has proved the wisdom of that able and dynamic public official. In placing the administration of this act into operation he sought the advice and counsel of the people who have spent their lives developing the industry that this law was designed to help. In shaping his policies he took advantage of the knowledge that these stockmen have gained from bitter experience. With a keen desire to eliminate all destructive elements, but to do things that would prove beneficial to mankind, the men and women primarily affected took hold of the job in characteristic fashion. Soon the contagion of optimism was spreading over a broad front. In fostering this principle of home rule on the range the Secretary of the Interior inaugurated principles of government that were readily understandable by the governed, and they liked it. Therefore, we have today a method of cooperation between the Government and the people that portends a healthy future for the livestock industry and the grass that is so essential to its needs.

Although the Taylor Grazing Act is only 5 years old, it has already taken its place among those movements that have welded America into national unity. This unity, I might say, is strengthened immeasurably by the policy of local autonomy, wherein the stockman is invited to participate in the solution of the problems that constantly confront him in the pursuit of his business. Taking an active part in the program, he has demonstrated time and again the wisdom of this plan. In fact, the local advisory board system for the first time brought a harmony of purpose and a new understanding between the cattle and sheep men who had heretofore been their own worst competitors.

Fifty grazing districts are now organized in the 10 States of Arizona, California, Colorado, Idaho, Montana, New Mexico, Nevada, Oregon, Utah, and Wyoming. The administrative agency for these districts is the Division of Grazing in the Department of the Interior. The Director of Grazing, Mr. Richard H. Rutledge, has had a lifetime of experience in dealing with livestock and range conditions in the West. Under his supervision, a decentralized system of administration has been set in operation, consisting of nine regional offices in the Western States. The regions are subdivided into grazing districts, each district being supervised by a district grazier. The principal administrative work is handled cooperatively by the district grazier and a local advisory board composed of stockmen elected by the users of the range under rules established by the Secretary of the Interior. These advisory board members recommend to the Department of the Interior methods of fair-range practice and others matters that pertain to the internal affairs of the district.

The Division of Grazing is responsible under the act for the proper administration of all the natural resources on 142,000,000 acres of public land in the interest of the public at large. Intermingled with this public-domain land are other lands in State and private ownership aggregating 133,388,162 acres. The use of the private and public lands is interrelated to a greater or lesser degree, and the preservation and improvement of the resources in the entire area depend upon proper use and management of both the Federal and non-Federal lands which in total area amount to about 10 percent of the continental United States. Adequate and fair coordination of all the divergent interests involved naturally requires a broad program of cooperation between the Government and the public.

The issuance of grazing licenses, the collection of grazing fees, and the settlement of occasional appeals or disputes are but the mechanics of administration for the handling of only one phase of the whole endeavor. It is the function that needed the first attention of administration because the livestock industry is the foundation of the western economy and the grazing of stock on the public lands is an essential and vital part of the livestock business. The work of determining those livestock men who are qualified to participate in the use of the range is well under way, and the major over-all phase of administration necessary to successful and effective conservation must now be expanded.

To have a proper concept of the problem that now faces the administration, we must recognize first that the cream of the natural resources of the lands in the West had been settled upon and passed to private ownership, largely during the period between the Civil War and the World War. Likewise, through the natural competition and overcrowding of the range, the natural forage of the public domain was in a depleted state, resulting in reduced carrying capacity for livestock and an added menace to the stability and fertility of the soil and the dependability of the water supplies. While nothing is to be gained by criticism of those who took part in the despoliation of the public lands, we have learned from what has happened what not to do in the future, while accomplishing conservation work contemplated under this act. In keeping with conditions as they exist today, the 5 years of the Taylor Grazing Act administration have witnessed a reversal of attitude toward the future of the western range.

As rapidly as conditions will permit, the work must be extended to a point where it may restore completely the natural resources of this great area for the use and enjoyment of present and future generations. It must deal with many conditions that are of long duration. Since adjustments in nature aided and abetted by controlled grazing and all manner of artificial improvement are at best a slow process, the Division of Grazing has a big job. There is in this work an obligation on the part of the Federal Government not only to repair the damage of the past but also to go ahead and insure

that the vast area of a quarter of a billion acres of land in the West, with its irrigation projects, cities and towns, ranches and farms, and widespread interests of man, be protected, improved, expertly managed, and placed upon a sound and enduring basis.

Taking into consideration the comprehensive land pattern of ownership, the act bearing my name invokes a plan of cooperative activity, the like of which has never before been attempted in government. The Division of Grazing cooperates with State associations of stockmen and agencies and groups interested in wildlife and recreation, with other Federal agencies dealing with scientific and human problems, with railroads in the checkerboard areas, with local businessmen, with land-grant colleges, with communities, and with individuals. Activities range from fighting grasshoppers to fighting fires. The homely principles of local representation are weaving a pattern of land-use management that has a far-reaching effect.

The cooperation with the Civilian Conservation Corps is perhaps the most outstanding of all the cooperative activities in which the Division of Grazing is engaged. In addition to conducting the improvement work program of the C. C. C. organization, the Division of Grazing carries out a training and educational program for 18,000 C. C. C. enrollees. This brings home a feature of national conservation in the interest of the American youth which is immeasurable in its value. The work of the C. C. C. and the local advisory boards under the skillful direction of the Division of Grazing has brought achievements that would have seemed unbelievable 5 years ago.

For the most part, the public-domain grazing lands are arid and sparsely watered. They contain large areas that are natural habitats of various wildlife species. In some grazing districts, due to character and location, grazing districts are the natural reservoirs for winter concentration of game herds that summer on national forest and other high ranges. Other large areas are ideally situated for game animals. Realizing these facts, the Secretary of the Interior, from the very beginning, assured wildlife interests that in the administration of this act the Department of the Interior would cooperate to the fullest extent in the general welfare of a wildlife conservation program that would be consistent with reasonable needs of the livestock industry.

In some areas it is natural for wildlife and domestic livestock to use the ranges most effectively in common. In others, special game reserves and game ranges are necessary for the proper protection of wildlife. Rules and agreements approved by the Secretary provide for both of these conditions. Already, some 10,000,000 acres of public domain within the 50 grazing districts established have been given over to game refuges and game ranges. In cooperation with the Bureau of Biological Survey, with State commissions for fish and game, with local and national sportsmen groups, and with livestock men (who are after all the real conservators of wildlife), the plan for these refuges in game ranges has been devised. The principle behind the designation of any given area for refuge purposes is that the area is suited primarily for feeding, maintaining, and propagating a particular species or a number of species of game animals and birds. Such areas, when set aside as game refuges, are administered exclusively as wildlife areas. On the other hand, certain areas lend themselves most readily to a plan for the use in common by both wildlife and domestic livestock. On that basis, a number of game ranges have been set aside within grazing districts.

Where feasible, such game ranges are set aside for use jointly between wildlife and livestock with the preference to the forage being given to a specified number and species of wildlife. Fourteen wildlife refuges have been established, involving an aggregate area of about 4,000,000 acres of public lands. Four game ranges, totaling about 6,000,000 acres of public lands, have been set up within the boundaries of the grazing districts. The recently established Kofa and Cabeza Prieta Game Range in Arizona Grazing District No. 3 (the last grazing district to be established), involves about two and a half million acres and is being administered in connection with the remainder of the district with a primary purpose of protecting and propagating the vanishing native bighorn and other desert game species.

The Division of Grazing is cooperating with the fish and game commissions and the local sportsmen groups, the National Wildlife Federation, and the Izaak Walton League of America in obtaining reliable estimates of the numbers and species of wildlife that inhabit the several grazing districts. The main purpose of this estimate is to form a foundation for plans that will include provision for wildlife needs and to supply data upon which redistribution and other game-management plans can be developed.

Recently, a count of the antelope inhabiting an area of 5,000,000 acres was made in an aeroplane. The results proved exceptionally satisfactory. A report was submitted recently from all of the grazing regions, indicating a population of wildlife in the grazing districts as follows, 1,495 black bear, 302,070 deer, 6,970 elk, 20 moose, 85,000 antelope, 2,005 mountain sheep, 725 mountain goats, 283 bison, and 500 javelina.

These game animals obviously do not recognize land ownership boundaries, and, consequently, they obtain their feed from all the lands in the districts. The numbers and variety of species, however, indicate that this natural resource, so important in any plan of national conservation, elicits widespread interest in the administration of grazing districts.

If there had been enough grass to satisfy all those who desire to use the range, there would have been no need for the law. Recognizing its importance in the economic structure of the West, in fact of the Nation as a whole, the law makes a strong plea on behalf of the established ranchman for the livestock industry that has been established in the West on a sound and orderly basis. Section 3 of the act authorizes the Secretary of the Interior to issue or cause to be issued permits to graze livestock in grazing districts to citizens of the United States or those who have made the necessary declaration of intention to become such, and, in the issuance of such grazing permits, he shall give preference to those within or near a district who are landowners engaged in the livestock business, occupants, or settlers or owners of water or water rights as may be necessary to permit the proper use of lands, water, or water rights owned, occupied, or leased by them. These permits shall be for a period of not more than 10 years, subject to the preference right of permittees to renewal in the discretion of the Secretary who shall specify from time to time the numbers of stock and the seasons of use.

In order to allocate properly range privileges to those entitled to participate in the use of the range, it was essential to devise an expedient for issuing temporary grazing licenses, pending the time when sufficient data could be accumulated upon which to determine who shall be the permittee and how many livestock he should graze. The relationship of public and private lands in the area was well known in a general way, but specific information, pertaining to the properties of those demanding recognition, was not available. Consequently, it was necessary to obtain a comprehensive inventory of all factors that would guide the administration to proper and equitable adjudication of range privileges. This work is going forward in all of the grazing districts. Selected districts, widely separated in geography and conditions, have been made the object of special study for use in designing an over-all plan of range adjudication, range management, and range improvement compatible with the mandate of the law and with local conditions. The progress of organization of districts and the issuance of grazing licenses is indicated on the table below:

Year	Number of districts	Licenses	Cattle	Horses	Sheep	Goats	Total
1935	34	15,081	1,550,776	141,553	6,739,080	172,481	8,603,890
1936	37	15,067	1,333,985	100,780	5,840,791	158,947	7,434,416
1937	49	18,752	1,612,070	115,090	9,041,771	132,633	10,910,564
1938	50	19,342	1,605,566	108,925	9,221,696	96,455	11,032,642

To be eligible for a regular license, an applicant must own or control property, own livestock, and must have used the range before the act became effective in connection with the property owned or controlled.

Other things being equal, the ranch or farm that is located nearest the public range is given preference to its use. Upon that principle thousands of individual group and community allotments of range have been made, the proper seasons of use determined, and the stocking limited to a safe carrying capacity of the range. Thus, the so-called tramp outfit has been eliminated from the picture. Formerly this type of operator roamed the range at will and creamed the forage by overstocking and unseasonable grazing. Accomplished in an orderly manner, this process has gone far to stabilize the livestock industry. The settler, who is the owner of a few livestock kept for domestic purposes, is amply provided for through the issuance of free-use licenses.

The classification studies of grazing district lands are going forward at a satisfactory pace. Lands must be classified for their grazing capacity and other uses, for determining the proper grazing seasons and improvements needed, and for many other purposes. This classification essentially must go even further than the physical inventory of grazing facilities on the public lands. Private properties, both land and water, upon which these grazing rights are to be based, must be classified in accordance with the provisions of the law and rules and regulations promulgated thereunder.

The range-study program includes the preparation of maps, showing land status, culture features, forage cover, and information on soils, water supplies, erosion conditions, poisonous weeds, rodent infestation, and so forth. This material provides necessary factual data to form a basis for administrative action in the granting of grazing privileges and the management of the public range. These data, when complete, are then assembled on base maps that conform to convenient subdivisions of the respective States. Each base map covers an area of 32 townships. It requires 536 of these base maps to cover the territory of the grazing districts. The standard of field work conducted in a grazing-district survey varies according to the complexity of conditions. Much of the information is obtained through the cooperation of other agencies, but in many instances detailed information of the minutest nature is necessary in order to settle range disputes. In such instances detailed surveys of the ranch properties involved and the public range as well must be made.

In 5 years 10,138 ranch units, belonging to citizens engaged in the livestock business, have been examined and rated for their proportionate share of the range. By placing a limit on the number of stock that will be allowed to use the range and by setting the season of use to harmonize with the growth habits of the vegetation, the administration is effecting a range-ranch relationship that is bringing the land-use picture back into balance. Preliminary carrying-capacity surveys have been made on approximately 40,000,000 acres. Complete status data have been assembled for approximately one-third of the total area of grazing districts.

Prior to the enactment of this Grazing Act, there was no real incentive on the part of the stockmen to spend their own money in constructing works of any great value on the public land. This was natural because under the old order such improvements were liable to be usurped by others. The usual practice was for the stockmen to obtain control of key lands by lease or otherwise which strategically controlled large areas of public grazing lands. These key lands, such as State sections, would be developed superficially with a view to holding the adjacent range from invasion by others. In the absence of Federal control, any water hole if constructed on public lands could never be regarded with full confidence of security by whoever built them.

Section 4 of the act authorizes the Secretary of the Interior to issue permits to construct fences, wells, reservoirs, and other improvements necessary to the care and management of permitted livestock. Already the wisdom of this provision has been demonstrated through the fact that, in the 10 States where grazing licenses have been issued, some 350 permits have been granted to make improvements of major caliber on the public domain at a total cost to the permittees themselves of about $400,000. These include mainly water developments and fencing. This demonstrates that under Federal regulation the qualified user of the range is anxious to cooperate with the Government in spending his own money to improve the range. This is conservation with a healthy complexion.

The Taylor Grazing Act empowers the Secretary of the Interior to accept contributions toward the administration, protection, and improvement of grazing districts. Also, 25 percent of all moneys received under the act, during any fiscal year, shall be made available when appropriated by Congress for the construction, purchase, and maintenance of range improvements. Furthermore, 50 percent of the money received during any fiscal year is paid at the end thereof by the Secretary of the Treasury to the State in which the grazing districts or the lands producing such moneys are situated to be expended as the State legislature of such State may prescribe for the benefit of the county or counties in which the grazing districts or the lands producing such moneys are situated. Through the cooperation of the Department of the Interior and the public-domain States of the West, provision has been made for the Secretary of the Interior to accept donations out of the 50-percent funds for use on specified range improvements on the public domain, these range improvements being recommended by the State officials in cooperation with the local district advisory boards. It is apparent, therefore, that a tremendous force is already under way to obtain restoration of the natural resources through regulated use and a cooperative plan of range improvements. The stockmen pay into the Treasury roughly $1,000,000 annually for grazing privileges. Three-fourths of that money goes right back to the range in the form of thoroughly planned improvements.

During the period of severe drought that was climaxed in 1934, emergency funds were appropriated by the Congress for use in drought-stricken areas. In the territory now covered by grazing districts, the local State organizations directed certain funds that were made available to them toward the development of water on the public domain. In this manner, a skeleton of water developments was distributed over a number of grazing districts. Mindful of the sound policies and principles embodied in the Taylor Grazing Act and the regulations promulgated by the Secretary, the respective State organizations subsequently turned over to the Division of Grazing these improvements for use and maintenance in connection with the grazing program.

Perhaps the most outstanding achievement in the 5 years of public grazing land administration insofar as range development and management is concerned has been the systematic range-improvement program conducted under the supervision of the Division of Grazing through cooperation with the Civilian Conservation Corps. When grazing districts were first organized in 1935, the Division of Grazing was allotted a small quota of C. C. C. camps. Beginning in April of that year with seven C. C. C. camps, the Division of Grazing launched immediately a systematic range-improvement program through these facilities. Later enlarging to 45 camps and recently to 90 camps, the Division of Grazing has participated in a Nation-wide movement of conservation. By selecting the most worthy projects that were proposed by the local people, the program has gone forward with general satisfaction.

In harmonizing the activities of the Civilian Conservation Corps with those of this Grazing Act, the range-improvement activities have featured not only the conservation of the land but also have fostered a vocational and educational program for the benefit of the C. C. C. enrollees.

Flood-control works and similar structures have impounded waters and made them available for useful purposes and have lifted the flood menace that threatened farms, homes, and communities in certain arid sections. Remote areas of the public domain have been opened for practical utilization, resulting in a redistribution of range

use over wide areas. In this way, concentration of stock around valuable water holes has been broken up. Overgrazing in certain areas has been mitigated to a large extent without the necessity of sudden and severe reduction of livestock numbers. Water and feed have become available to large numbers of game animals whose welfare was threatened by the former acute competition for range. Most of all, an element of sane and economic use of range resources has been invoked and made possible by the range improvements that were nonexistent before the enactment of the Taylor Grazing Act. The distribution of the C. C. C. camps in nine grazing regions is made primarily on the basis of public domain acreage and livestock population, having in mind, of course, the areas most urgently in need of repair. The C. C. C. camp, grazing district, and public-land data are shown below:

State	Region	Number of grazing districts	Public-domain acreage in State	Public-domain acreage in districts	Number of camps
Arizona	9	4	13,879,323	7,717,016	5
California-Nevada	3	7	68,679,611	37,505,226	19
Colorado	8	5	8,104,597	7,070,800	8
Idaho	5	4	12,077,498	10,048,585	10
Montana	6	5	6,217,045	5,084,967	5
New Mexico	7	5	13,722,695	11,284,522	10
Oregon	4	7	12,116,695	11,269,281	9
Utah	2	8	25,693,699	21,561,022	15
Wyoming	10	5	15,760,981	11,778,686	9
Total			176,252,644	123,320,105	90

Range improvements are divided into the following classes:

Water developments, consisting of wells, earth reservoirs, and springs; stock trails and driveways; rodent control; range fencing; reseeding and revegetation; corrals; holding traps; erosion-control works; truck trails and minor roads; insect and poisonous-plant eradication; experimental plots.

Among the major conservation accomplishments on the public lands in grazing districts under this program are the following completed projects: Three hundred and fifty-eight spring developments, 143 wells and storage facilities, 780 earth reservoirs, 7,300,000 acres treated for rodent control, 1,950 miles of range fences, 225 corrals, 1,750 miles of stock trails and driveways, 4,900 miles of truck trails, 185 bridges, 245 cattle guards, and 330,000 acres treated for poisonous-plant eradication.

Erosion-control works involve the following: Five thousand six hundred permanent check dams, 4,700 temporary check dams, and 275 other large flood-control structures.

In addition to the completed projects, the Civilian Conservation Corps, under the Division of Grazing, has rendered great assistance to stockmen during severe snowstorms by breaking trails and roads in order to haul feed to stranded stock. Also, the facilities of this organization have been employed on flood-relief work, forest and range fires, destruction of grasshoppers and other insects, and the caring for upland game birds during severe winter weather.

As a result of on-the-job training, thousands of these boys have gained a new outlook on life and, upon completing their enrollment with the camps, have gone back home to take their proper place in society.

In my home State of Colorado there is a piece of choice summer range that nestles above the timber line near the Continental Divide. This territory, covering about 200,000 acres, is known as American Flats. For many years, due to its inaccessibility, it remained untouched by grazing animals, except by game and an occasional prospector's pack burro. When the sheep-raising industry began to push farther and farther into the wilderness in quest of feed, the American Flats stood out like a bonanza, the sheepman's paradise; and it was free range, unregulated. The natural consequences followed. Soon there were two or three head competing for the grass that would carry properly but one head. Not only that, but also the operators, competing among themselves, were forced to employ practices that were wasteful not only to the land but also to livestock itself. Every spring sheep converged on this area from four directions. Five years ago the American Flats were showing conclusive signs of accelerated erosion. Palatable grasses were being replaced by obnoxious weeds. Seventy-five thousand head of sheep, belonging to itinerant operators from Utah, New Mexico, and Colorado, were "fighting it out" on the principle of "first come, first served, and the devil take the hindmost." This was a real range war in the rough. There came a time when the streams began to carry silt from this area. The feed vanished before summer's end. Animals came back to lower elevations, most of them poor and many of them poisoned by sneezeweed that they had been forced to eat.

Today 30,000 head of sheep go to Amercan Flats for summer grazing. They proceed up the rugged trails in an orderly way. Furthermore, instead of crowding, mixing, and otherwise competing for favorite spots, they range on specified allotments that have been designed by the Division of Grazing. These allotments have been worked out by the licensees themselves in cooperation with Federal officials and the local advisory board. Truly this is orderly use that is already paying dividends. I mention this example because the circumstances are so familiar to me. The same thing is happening throughout the one-hundred-and-twenty-odd million acres of Federal range in the 50 grazing districts of the West.

Is There a Democratic Way Out of Unemployment?

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 28, 1939

Mr. VOORHIS of California. Mr. Speaker, I am convinced there is a democratic way out of unemployment.

I believe the key to it lies in measures which will balance the Nation's power to produce with an equivalent flow of buying power in the hands of all groups of people and especially those who have the least buying power today. The whole structure of business and investment must always rest upon a foundation of consumer purchasing power. I know that this increased buying power cannot indefinitely be provided by an unbalanced Budget and large-scale Government borrowing and that other methods must be found. But I also know that deflation is not the answer and is the one method most certain to make matters tragically worse.

The following five measures which, in my opinion, Congress should take now would, I believe, give us a democratic way out of unemployment.

First, simplify and improve our tax laws. We are raising too much revenue by taxes on consumers and on active business—that is, on money that people do spend and invest. We are not raising enough revenue by taxes on individual incomes, inheritances, gifts, and values created by society. And we have not yet devised what may be the most necessary tax of all—namely a special tax on hoarded income—that is, income neither spent nor invested currently. Neither have we finished the job of doing away with the last vestiges of tax exemption both as to salaries of public officials and as to income from public bonds.

A balanced Budget is important, but it is equally important to balance it at a point where there will still be enough revenue for Government to be continually feeding into the purchasing-power stream enough active consumer buying power to make up for that portion of current income which is neither spent nor invested by those who receive it. Unless Government performs this function unemployment will continue. Clearly, therefore, it is important for our taxes to fall where they will be most effective in discouraging hoarding and encouraging investment.

My second measure is the development of the machinery whereby government can act to maintain a general even flow of consumer demand. This must include a national system of pensions to those who have reached the age where industry no longer will hire them plus a complete social-security system of benefits to dependent children, the disabled, and other groups which clearly cannot and ought not to be employed. A portion, at least, of the funds required to support such a system should come from the general government revenues.

Third, we must defend with all our power the principle of work, not doles, for the unemployed. To this end there should be worked out a long-term program of public works, which will be largely a program of governmental investment. We should resolutely determine that no American family which has an employable member shall be without at least one member at work, either in private industry or on this program. As much as possible, the works undertaken should be self-liquidating in whole or in part. This means conservation, power development, slum clearance, and similar things. Insofar as such projects are self-liquidating, they should be financed, not by the sale of bonds but by a direct use of the Nation's credit advanced on the security of the revenues from the projects.

Fourth. Make the now privately owned 12 Federal Reserve banks Government institutions, and use them as they always should have been used, as Government banks of issue. We shall then be in a position to prevent the possibility of either inflation or deflation taking place, and to keep in circulation a volume of money sufficient to transact the business of our Nation, and to maintain a constant and stable buying power in our dollar. Only so can we make possible a continuous rise in prosperity and standards of living without constantly mounting debt. And this measure is of especial importance to the American farmer, the prices for whose crops are so sensitive to monetary influences, and whose present low income is depriving American industry of a market here at home far greater than any foreign market in the world.

Finally, we have a job to do in restoring opportunity for the small-business man in America. For nothing is more certain to lead to increasing governmental regulation than is the growth of private monopoly. Either we must require of monopoly full production at reasonable prices, with fair guaranties against loss, or else, if we would find a democratic way out of unemployment, we must take measures to restore competitive conditions wherever possible, and especially to make credit available to the small man as readily and on as fair terms as to the giant corporations.

The Naming of the State of Colorado and of the Capital City of Denver

EXTENSION OF REMARKS

OF

HON. EDWARD T. TAYLOR

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 28, 1939

Mr. TAYLOR of Colorado. Mr. Speaker, for many years I have felt that it would be appropriate for some Member of the Colorado delegation in either the Senate or the House to insert in the CONGRESSIONAL RECORD a description of the naming of our State and our capital city.

With that thought in view I have obtained some data on those two subjects, which I submit herewith:

THE NAMING OF THE STATE OF COLORADO

The Territories of Kansas, Nebraska, Utah, and New Mexico were created prior to the Territory of Colorado. When the Senate bill (S. 366) providing for the creation of the Territory of Colorado came up for consideration and was passed by the Senate on February 4, 1861, it created the Territory of Colorado from certain portions of those four Territories. It took from the Territory of Kansas all of the western part of that Territory extending from the present eastern boundary of Colorado to the ridge of the main range of the Rocky Mountains, containing 34,740 square miles, nearly one-third of the area of our State. From the Territory of Nebraska, it took a strip about 70 miles wide, extending from the present eastern border of our State to the crest of the Rocky Mountains, containing 15,014 square miles. From the Territory of New Mexico, it took a strip about 50 miles wide, extending to the crest of the Rocky Mountains, containing 15,250 square miles. From the Territory of Utah, it took all that part of the present State of Colorado west of the Continental Divide, containing 38,980 square miles; making the total area of our State 103,984 square miles.

The bill as originally reported by the committee and presented to the Senate designated this region as the Territory of Idaho. In the course of the debate, Senator Wilson of Massachusetts offered an amendment to change the name from Idaho to Colorado, for the reason that the great river of that name had its source within the region that was proposed to be created into a Territory. The amendment was approved, and on February 28, 1861, President Buchanan signed the bill officially naming this region the Territory of Colorado. The Territory was admitted to the Union on August 1, 1876, as the "Centennial State."

With all due respect to the State of Idaho, I feel that every loyal son and daughter of our Centennial State has always been proud of the fact that such an amendment was made and approved, and that we owe a tribute to the memory of Senator Wilson as a debt of gratitude for giving our State that most appropriate name. During the course of the debate, it was said that "Colorado" was the most beautiful name that could be given to any Territory or State. All Coloradoans will forever acquiesce in that sentiment.

By reason of the fact that Senator Wilson had a marvelous public career and was Vice President of the United States when he died, I am inserting the brief biographical sketch of his life and public career as it appears in the Congressional Directory, as follows:

Henry Wilson, a Senator from Massachusetts; born in Farmington, N. H., February 16, 1812; his parents' name was Colbath, and his name was Jeremiah Jones Colbath until he was 17 years of age, when he had it changed by the legislature to Henry Wilson; pursued an academic course; located in Natick, Mass., in 1833, and learned the shoemaker's trade; traveled in the South in 1836; returned and attended the Strafford, N. H., Academy, and academies in Wolfsboro and Concord, N. H., until 1837; taught school in Natick, Mass., and later engaged in the manufacture of shoes; member of the State house of representatives 1841–42; of the State senate 1844, 1845, 1846, 1850, 1851, and 1852, and president of the senate 2 years; delegate to the National Whig Convention in Philadelphia in 1848 and withdrew; delegate to the Free Soil National Convention in Pittsburgh in 1851 and its president; defeated in 1852 as the Free Soil candidate for Congress; delegate to the Constitutional Convention of 1853; defeated as the Free Soil candidate for Governor; elected to the United States Senate by a coalition of Free Soilers, Americans, and Democrats, to fill vacancy caused by the resignation of Edward Everett; three times reelected and served from January 31, 1855, to March 3, 1873, when he resigned; in 1861 he raised, and commanded for a time, the Twenty-second Regiment Massachusetts Volunteers; elected Vice President of the United States in 1872; died in the Capitol in Washington, D. C., November 22, 1875.

THE NAMING OF THE CAPITAL CITY OF DENVER

The House was recently visited by a distinguished former Member, the Honorable Matthew R. Denver, of Wilmington, Ohio. During 4 of the 6 years of his service in this body, I served with him. We lived at the same hotel.

While I always had an admiration for his manly character and ability, I felt especially close to him because our superbly beautiful capital city of Denver was named in honor of his distinguished father, Gen. James W. Denver.

General Denver was Governor of the Territory of Kansas when the little settlement on the bank of Cherry Creek was founded in October 1858, and that afterward became our capital city of Denver. The town was at that time within the Territory of Kansas and General Denver was a very efficient and popular governor. He was also a Member of this body in the Thirty-fourth Congress. He had both a thrilling frontier career and a heroic military service record. I

have always looked upon him as one of the most intensely patriotic and truly great western characters of his generation.

In view of the fact that, in the judgment of all Coloradoans, that little settlement of prospectors has become the most modern, symmetrical, and beautiful city of its size in the world, I feel perfectly warranted in extending some remarks in the RECORD concerning that courageous western character whose name our capital city bears. There are many reasons why Denver is one of the most attractive, outstanding, and beautiful cities in the world. I need mention only one feature which cannot be duplicated by any other city of its size on this planet. No other city of over 300,000 population has as few frame houses in it as the city of Denver. Another reason for the distinction of our capital city is that there are only three large cities in the United States that are named in honor of an individual; namely, the city of Washington, named in honor of our first President; the city of Cleveland, named in honor of Moses Cleveland, a great frontier engineer, who located, surveyed, and platted that city; and the city of Denver, named in honor of General Denver. Neither of those men ever lived in the city that bears his name. But they were three of our greatest pioneer Americans, eminently worthy of all the distinction that posterity is giving them.

I believe that the following sketch I have prepared is substantially accurate:

GENERAL JAMES W. DENVER, 1817–1892—AN APPRECIATION

James William Denver was born near Winchester, Frederick County, Va., October 23, 1817. His grandfather, Patrick Denver, was one of the United Irishmen, in the rebellion of 1798, and in 1799 fled to America to save his life. He and his family arrived in the United States on the day that General Washington was laid to rest.

In 1804 he and his son, Patrick, Jr., located in Frederick County. Patrick, Jr., was first a lieutenant and later a captain in the War of 1812. He married Jane Campbell, of Scotch ancestry, whose family also contained men distinguished for military service. In 1831 Capt. Patrick Denver, Jr., moved his family to Ohio, and in the spring of the following year located at Wilmington, later removing to his farm adjoining the town. James W. was the eldest of 11 children, and his early life consisted largely of the hard labor of the older children on a farm. He attended the common schools until he was 14, when he was forced to give his whole time to the farm work, but continued his studies at home. The hardships endured by him brought on a severe illness when he was 21, and he then studied surveying, and for a while worked with the county surveyor. In the spring of 1841 he went to Missouri, seeking employment in the surveys of public lands in that State, but failing to obtain a contract, he taught school for a year. At the close of the term he returned to Ohio, and took up the study of law in the office of Griffith Foos. He also studied at the Cincinnati Law School, from which he graduated in the spring of 1844. He first opened an office at Xenia, an adjoining county seat to Wilmington, where he also edited the Thomas Jefferson, a Democratic paper in that town. The following year he returned to Missouri, opening a law office at Plattsburg, and later at Platte City. He continued in the practice until April 9, 1847, when, at the age of 30 years, he organized a company for service in the Mexican War, the men averaging 6 feet in height. He was commissioned captain of Company H, in the Twelfth Regiment United States Volunteers, Infantry; placed under the command of General Pierce, afterwards President, he joined General Scott at Pueblo, and took an active part in the battles of Contreras, Cherubusco, Molino del Rey, Chapultepec, and Las Garites, which culminated in the fall of the city of Mexico. During this time he was prostrated for a period by yellow fever, contracted at Vera Cruz.

At the close of the war Captain Denver returned to Platte City, where he continued the practice of his profession for a few years, and also bought and edited the Argus.

In 1850, following the gold discoveries in California, he went overland with a small band of followers to that State, on this occasion he also taking charge of the first overland mail. He and his company of 34 lost the most-traveled route and reached California by the then unknown route of Wyoming and the Snake River. Death overtook 8 members of the company, and Captain Denver read the burial service before the poor victims were laid to rest beneath the trackless sands of the desert. It is highly probable that the sufferings on this journey made such a deep impression on his mind and created such a close sympathy for those similarly situated that it had a major influence on the regrettable event in later years of his duel with Edward Gilbert.

In September he reached Sacramento, going later to Trinity County, where he engaged in trading between Humboldt Bay and the mines. Thus engaged, he was forced to travel over the mountains, enduring the severest hardships and danger with unflinching courage and dauntless energy.

In the fall of 1851, the people elected him one of their Senators in the State legislature. While a member of that body he introduced and secured the passage of a bill empowering married women to control their own estates and businesses—the first bill of the kind passed in this country, and the substance of which has since been adopted by all the States of the Union.

It was in 1852, while the legislature was in session, that word came that thousands of emigrants who attempted to cross the trackless regions between the older settled regions and the Pacific coast were in desperate straits, stranded by heavy snowfalls, hungry and dying in the Sierra Range. Governor Bigler asked the legislature to appropriate $2,500 to organize rescue trains and relief parties to meet this situation.

The money was quickly raised and Governor Bigler designated Captain Denver to have charge of the relief expedition. The Governor personally escorted the party through the capital city. The day after the expedition left the city an article appeared in the Alta California, a newspaper of the opposite political party, founded and edited by Edward Gilbert, a man of Denver's own age. Gilbert had been in trouble with John Nugent, editor of the San Francisco Herald. This first trouble was adjusted without a recourse to arms, and it was reported that Nugent had the best of the adjustment, which embittered Gilbert. Captain Denver, having gone on the relief expedition, did not hear of the Gilbert article for several weeks. The article itself was very sarcastic, and critical of Governor Bigler and the entire scheme of relief, stating that it would be of no avail, of much expense to the State, and was intended only to enhance the political popularity of the Governor. About a month later a card appeared in the Sacramento Democratic State Journal, signed by Denver and 10 other members of the relief train, in which they stated that they "had read with indignation a statement of the Alta California, in which it is made to appear that Governor Bigler had made himself ridiculous," and so forth, and added:

> We are well satisfied that none but a personal enemy could imagine any such thing, and that enemy must be of the smallest possible caliber, who could descend so low as to pervert facts—

And so forth. Gilbert returned to the attack on July 26, reiterating his criticisms of June 26, and adding:

> If any gentlemen attached to the train, or any other friend of the Governor, desires to make issue upon the matter they know where to find us.

Denver replied on July 29 that he would be with the relief train during the summer, and on the first Monday in January next, he expected to be in Vallejo. This called forth a personal letter from Gilbert to Denver, both of whom were former soldiers and experienced men with firearms, in which Gilbert stated that he was the author of both articles, and concluded by saying:

> I find it my duty to demand from you a withdrawal of the offensive and unjust charges and insinuations which you have made.

Denver immediately replied that—

> Not one word of the cards you allude to can be withdrawn by me until the articles calling them forth have been withdrawn by you.

The following further account of the duel is taken from the San Francisco Post, of October 5, 1895. It also appears in The History of the Bench and Bar of California:

The affair had by this time assumed a serious phase. Gilbert sought out his friend, Henry F. Teschemacher, and requested him to tender a challenge to Denver. Teschemacher was a man of the highest standing, afterward being elected mayor of San Francisco. On the receipt of the challenge Denver named Vincent E. Geiger as his second.

At sunrise on Monday, August 2, the duel took place. It was one of the most beautiful midsummer mornings, and as the rays of sunlight filled the sky, nature seemed to awaken everywhere, and soon the world was filled with joyous sounds, which little befitted the tragic scene about to be enacted. The preliminaries were quickly arranged, the distance named being 40 paces. As the principals came upon the field and faced each other, they met for the first time. Both were unflinchingly brave men—Denver willing to make peace or fight to the death, and Gilbert possessed of a stubborn determination that nothing but blood should atone for what had passed.

Denver's second won the word, and the first interchange of shots followed. Both men missed their marks; both stood uninjured. The sun was now well up, and in the full glory of the newborn day the two men stood waiting for the second shot. The word was given, and almost immediately Gilbert fell. General Denver was uninjured. All quickly gathered about Gilbert as he lay apparently unconscious on the ground. General Denver was never molested for the part he took in the unfortunate affair.

The History of the Bench and Bar of California also contains the following history of the duel by an eyewitness, W. A. Cornwell, written in 1880, namely:

The State, learning of the distress of the emigrants, provided means for their relief; and the duty of dispensing it was delegated to the secretary of state (Denver). This was prompt and humane, but it was bitterly criticized and sharply assailed by Gilbert. Denver is clear-headed, sound mind, sensitive, and brave. He retorted, and his retort was terrible. Gilbert, who was a member of Colonel Stevenson's New York regiment, challenged Denver, and the parties went upon the field. The weapons were rifles at short range, and I assert, as a witness, that no man in the tide of all the centuries, ever displayed a more dauntless temper than Denver. He knew that Gilbert was a brave soldier, and that he was reckoned to be a deadly shot. Nevertheless, Denver reserved his fire, and purposely threw away his own. Happily, Denver escaped unhurt. Every effort was then made by the seconds and by mutual friends for peace; Gilbert was informed that his antagonist wished to clasp hands, but Gilbert refused the request in terms which showed his friends that he had determined to kill Denver. The principals returned to their positions.

"Now," said Denver in a tone I shall never forget, "I must defend myself." And at the word Gilbert fell, pierced through the heart.

We have gone into the matter of the duel at length for the reason that while it could not be avoided, yet with the prejudice of the laymen, it probably had a deciding influence when General Denver was prominently advocated for the Presidency in 1876, and in later quadrenniums. Although he was later repeatedly honored by Governors and Presidents, and rendered many valuable services to his country, yet it did result in unjust censure from persons not informed of the particulars, just as General Jackson was criticized under like circumstances. Students of the history of the time realize that Denver had no alternative other than to meet the issue. He threw away his first shot, hoping to satisfy his challenger, and after that pursued the only other course left open to him, the course of self-defense.

He was in reality compelled to fight that duel. No courageous man could do otherwise. He would have been forever branded as a coward if he had refused to fight. While dueling was a terrible custom, it was a sign of the times in California in those days, and no man with courage, self-respect, or hope of any future, could refuse to fight when he was challenged. No man ever questioned General Denver's honor, his courage, or his conscientious devotion to public services.

After the conclusion of the work of the relief expedition he was appointed secretary of state for California, and served as such until November 1855. In the fall of 1854 he was elected to the Thirty-fourth Congress, and took his seat in December. As chairman of the Special Committee on the Pacific Railroad, he had an important part in introducing and framing the legislation, subsequently adopted, providing for the Union Pacific Railroad.

Perhaps his most important work in Congress, that which is the best remembered by his western constituents, is the blow he struck at the scheme of plunder relative to California land claims; and to him and his reports and debates, more than to all other men, are the people of the great West indebted for the magnificent system of law applying to the Pacific States and Mexican territorial acquisitions.

At the close of his congressional term, and at the beginning of President Buchanan's administration in 1857, he was appointed by the President as Commissioner of Indian Affairs. At the time this office was not only of much importance, but was also exceptionally hard to execute. He filled the duties thereof with great success, to so great an extent that after his services as Governor of the Kansas Territory, the President reappointed him to the commissionership.

In December 1857 special duties took him to Kansas. When Governor Stanton was removed from the office of secretary of the Territory, Denver was appointed to that position. He assumed the duties December 21, 1857, and as no Governor had been appointed to fill the vacancy, he became the acting Governor of the Territory. Kansas at that time included one-third of the territory that later became the State of Colorado. On May 12, 1858, the President appointed him Governor.

The most eminent men had been his predecessors as Governors. Among them were Governors Reeder, Woodson, Geary, Robert J. Walker, Wilson Shannon, and Stanton, all of whom had wrought faithfully, but in vain, on the work of pacification, and had either thrown up the task in despair, or had been removed for inefficiency. The legislative bodies of the Territory only served to promote and augment, upon political grounds, the riotous violence and disorders of the country. The army was useless; and it was the constant practice of these insurrectionary bands to warn the Governors themselves, and all well-meaning officials, threatening them with death if they attempted to interfere with them in their lawless acts.

The prospect was unpromising, and might well appall the stoutest heart; but General Denver came promptly and cheerfully upon the field and with the aid of his California experience soon gathered around him the wisest and best people of the Territory. He fully realized the causes and extent of the crimes prevailing, and the different organized bands, or brotherhoods, and their leaders, with the objects by which they professed to be governed.

After proper proclamations, the language of which was not to be mistaken, he moved actively through the Territory, regardless of threats, restoring order, courage, and confidence everywhere, giving to the people the power of concentration, self-reliance, and self-protection. Thus by his steadfast, manly presence, his sound judgment, fearless nature, and cheerful, but determined spirit, in less than 12 months he was able to resign the office and leave the Territory with an established civil government. But with the influences at work on the slavery question, and with the two sections of the country lined up for and against, the national civil strife could not be postponed. A brief résumé of the situation will be of interest.

In June 1857, delegates were elected to a constitutional convention, and the proslavery people framed what was known as the Lecompton constitution. The constitutional convention described slave property to be "before and higher than any constitutional sanction," but provided for a popular vote on the alternative, "the constitution with slavery," or "the constitution without slavery." If the "constitution with no slavery" should be adopted, slavery should cease "except that the right of property in slaves in the Territory should not be interfered with." The free-state men regarded this as including the right of property in offspring of slaves and therefore, as pure fraud. Governor Walker stood firmly against this scheme. But President Buchanan, under southern influence, repudiated his former assurances. He abandoned Governor Walker, who left Kansas, and he dismissed Acting Governor Stanton, for convoking the new free-state legislature. This body promptly ordered a vote

on the third alternative, "against the constitution." The free-state men ignored the alternatives set up by the Lecompton constitution, but participated in the provisional election for the offices under the Lecompton government, capturing all offices, and then, the same day, voted overwhelmingly against the constitution.

Before this time, January 4, 1858, General Denver had been appointed Governor, and the Encyclopedia Britannica says:

Nevertheless, Buchanan, against the urgent counsel of Governor Denver, urged on Congress (February 2) the admission of Kansas, under the Lecompton constitution. He was opposed by Senator Stephen A. Douglass, the leader of the northern democracy; the Senate upheld the President; the House of Representatives voted down his policy; and finally both Houses accepted the English bill, by which Kansas was offered some millions of acres of public lands if she should accept the Lecompton constitution. On August 21, 1858, by a vote of 11,300 to 1,788, Kansas resisted this temptation. The plan of the administration thus effectively miscarried, and its final result was a profound split in the Democratic Party. * * * The struggle in Kansas was of paramount importance in the breaking up of the Whig Party, the first establishment of an uncompromising antislavery party, the sectionalization of the democracy, and the general preparation of the country for the Civil War.

Although General Denver advised against the administration policy in Kansas, he fully retained the confidence of the President, and upon his resignation as Governor, he was reappointed to the office of Commissioner of Indian Affairs. That this is true is shown by the following letter:

WASHINGTON, *March 13, 1859.*

MY DEAR SIR: It is with sincere regret that I accept your resignation as Commissioner of Indian Affairs. Your conduct in that highly responsible office has received my cordial approbation as well as that of the Secretary of the Interior. It will be difficult to supply your place.

But I cannot consent to sever our official connection without expressing my lasting obligation to you for the able, discreet, firm, and successful manner in which you performed your duties as Governor of Kansas under the most difficult and trying circumstances.

Wishing you health, prosperity, and success throughout life, I remain,

Yours very respectfully,

JAMES BUCHANAN.

Hon. J. W. DENVER.

The Washington Union of November 9, 1858, said editorially:

Gov. J. W. Denver, having resigned the executive office of Kansas, much to the regret of the administration, and we doubt not of the whole country, has resumed his position as Commissioner of Indian Affairs.

Of all the persons who have successively filled the governorship of Kansas, Mr. Denver is the first one who has succeeded in giving general satisfaction to the people of the Territory and of the Union at large. He is probably the first Governor, also, who has resigned the office with the regret of the whole country. His administration has been at once firm, decided, and peaceful. The law has been enforced, violence has been subdued, and order thoroughly established. His course has been firm, straightforward, and upright, commanding the respect alike of Kansas and the Union. His conduct has been characterized by good sense and good faith; his measures have been just in themselves, and in accordance with the instructions of the Federal administration, between whom and himself relations of the most perfect harmony and confidence have subsisted throughout. His administration has been as unambitious as it has been successful, and he has won the highest reputation for ability and capacity of all the Governors of Kansas, simply by a quiet, firm, and unostentatious discharge of the duties of his office. We do not recollect that Governor Denver has made a single stump speech during his whole administration. The telegraph has had a few of his formal progresses through the Territory to herald, and no "sensation" bulletins concerning him to retail to professional agitators in the East. The universal sentiment of the country in regard to Governor Denver, we dare say, is one of regret that he was not Governor of Kansas long before, and that he cannot be its Governor while she continues to be a Territory. It will be difficult to fill Governor Denver's place.

When the Territory of Colorado was formed from the Kansas Territory, the town of Denver was selected as the Territorial capital, and with its creation as a State, continued in that capacity.

The settlements which later merged into the town bearing the name of Denver were instituted in 1858–59, while he was Governor of the Kansas Territory, which, as stated, included approximately one-third of what is now the State of Colorado. A number of little settlements had sprung up, populated by miners and Indian traders. It was barely in evidence in 1858. In that year a few log cabins mingled with the smoke-browned tepees of the Indians on the present site of Denver, at the joining place of Cherry Creek and the Platte. This had long been a favorite camping ground of the Arapahoes and other tribes.

Indeed, all the land over which the gold seekers were roaming belonged to the Indians, and settlements were started without titles. It was not until the Indians gave up their rights by treaty, some years after the first towns were started, that the white settlers were secured in actual ownership.

Continuing the story from the Story of Colorado, by Arthur Chapman, we quote:

The Green-Russell party, as it was called, had established a camp, known as Placer Camp, not far above Cherry Creek on the Platte. Another outfit of prospectors, known as the Lawrence party, because most its members were from Lawrence, Kans., joined the Green-Russell party at Placer Camp and laid out a town a mile from there. This town they called Montana City. Fifteen or twenty cabins were built there in the fall of 1858—the first houses in the upper Pikes Peak region. Montana City was a little more than 4 miles from the present State Capitol, and was situated on the east bank of the Platte River.

The Lawrence party, finding that Placer Camp was not going to pay any great amount to those who were searching its sands for gold, laid out a town site on the east bank of Cherry Creek, where the erratic stream joined the Platte. They named this town St. Charles. Two Indian traders named Smith and McGaa were associated with them. After the town site of St. Charles had been laid out, most of those in the Lawrence party went back home, intending to return in the spring.

Other settlers were arriving, and these, with the Russell party, on November 1 organized the town of Auraria on the west bank of Cherry Creek, opposite the St. Charles town site. Auraria grew rapidly, while there was only one cabin, and that unfinished, on the St. Charles site—this building having been put up by the promoters to hold the property.

Soon after Auraria had been organized, a large company of Kansans, known as the men from Leavenworth, arrived on the scene and "jumped" the town site of St. Charles. Denver was the name chosen for the new town which thus supplanted St. Charles. The town was named for Gen. James William Denver, who was then Governor of Kansas Territory, in which the new gold diggings were included.

In the History of Denver, edited by Jerome C. Smiley, appears the following note:

The name of the new city was bestowed in honor of Gov. J. W. Denver, fifth Territorial Governor of Kansas, the organizers and promoters of the new enterprise having been his admirers and partisans, and three of them came here armed with commissions as county officers which bore his signature. For a great city to bear the name of an individual is a rare distinction. Washington, D. C.; Cleveland, Ohio, so called for Gen. Moses Cleveland, of Connecticut; and Denver, are the conspicuous ones in our country named for native Americans. The founders of Denver builded better than they knew, for it is not likely that the visions of their wildest dreams ever pictured anything approaching the reality that is now before us.

Following his resignation as Commissioner of Indian Affairs in 1859, General Denver returned to California and was nominated as Democratic candidate for United States Senator, but was defeated by two votes. He remained there in the practice of his profession until the outbreak of the Civil War, when he enthusiastically espoused the Union case. On August 14, 1861, he was, without any solicitation on his part, appointed by President Lincoln as brigadier general of volunteers. His first duties were to organize the troops of Kansas—a very difficult task, as everything there was in a chaotic condition. After great labor this was done and he was ordered to report to General Rosecrans in West Virginia. He served on a court-martial commission at Clarksburg, and then on a board of examiners at Beverly. Thence he reported to General Halleck at St. Louis and was put in command of the military district of Kansas. In a letter to the Honorable E. M. Stanton, Secretary of War, General Halleck speaks thus of his appointment to the district of Kansas:

In detailing General Denver for the command in Kansas I followed the advice of the officers of General Hunter's staff. They gave it as their opinion that he was best suited for the place, and as I had very little personal acquaintance with him, I felt bound to follow the best advice I could obtain. Subsequent information convinces me that it was good, and that a better selection could not have been made. There are few, if any, enemies in Kansas, and the

qualities most required there are administrative. I think General Denver would preserve peace on the border and enable me to send most of the Kansas troops into the field, where they might be of use. As it now is they are really worse than useless, for they compel me to keep troops from other States on the Missouri border to prevent these Kansas troops from committing murder and robberies.

In a short time he was relieved of this command and ordered to report to General Halleck at Pittsburgh Landing, Tenn. He joined General Halleck in time to take part in the advance on Corinth, and was put in command of the Third Brigade of Sherman's divison, consisting of the Forty-eighth, Fifty-third, Seventieth, and Seventy-second Regiments, Ohio Volunteer Infantry, with position on the extreme right, beside Gen. Morgan L. Smith's brigade, and next that of Gen. John A. Logan's brigade. In this short siege he was noted, as shown in Official Records, volume X, for the firm and steady manner in which he continually carried forward his brigade, generally in advance of the others; so that, through woods, underbrush, and across fields, in the face of the enemy, he arrived inside their deserted works on the morning of the 30th of May, at the very time that General Smith entered down the opened road, being the first of the Union Army to enter Corinth.

On the 16th of the same month, during the advance, being informed that the enemy had entered the woods between his main force and his skirmishers, he ordered forward two companies to reinforce them, and took command in person. He was highly praised by General Sherman for his gallant advance and the able manner in which he handled his men, and their own steady behavior.

Leaving Corinth the army went to Memphis, where he was put in command at Fort Pickering, then being built. Here his command was increased to a division, consisting of three brigades. After various movements of the army, in Tennessee and Mississippi, having had his division increased by the addition of other regiments so that he had under him no less than 30,000 men, he relieved General Logan at La Grange and assumed the command and control of all the railroads in that part of Tennessee. This was the most important and difficult part of his military service. In an enemy's country, and having command over such an extensive field, his duties were very exacting and trying, but such was his executive ability that all moved without a jar or break. Such was his humane and just conduct that the people of those parts to this day remember him with reverence and love. It was a trying duty for him, in April of 1863 while in this command, to sever his connections with the Army, yet the necessities of his private affairs at home were such that he was forced to resign and return to his family.

In 1870, and again in 1886, General Denver accepted nominations as the Democratic candidate for Congress in the Ohio district which included his home town of Wilmington, but was defeated by narrow majorities in districts which, because of post-war feelings, were strongly Republican. In 1876, and again in 1880, he was prominently mentioned for the Democratic nomination for the Presidency, having many strong adherents in all parts of the country.

General Denver was of splendid physique. He was 6 feet 2 inches in height, broad-shouldered, and deep-chested, carrying his 260 pounds with ease. His manners were genial, though dignified, and he was easy of approach, always interested in humanity and its affairs. He was especially kind and friendly to children and to those in trouble, whom he was always ready to assist.

Following his Civil War experiences he was engaged in the practice of law in Washington, D. C., while retaining his home in Wilmington, where his farming and banking affairs were situated.

In 1873 he took an active part in organizing the Veterans of the Mexican War, and continued as President of that organization until his death. It will be of interest to add that a splendid oil-painting portrait adorns the capitol building at Denver and also the quarters of the Kansas Historical Association. At Nebraska City, Nebr., at the "Old Morton Home," there is a "Denver Room," and at the head of the stairs an oil painting, showing General Denver in conference with the Indians. In the town of his youth, Wilmington, now a city, a fine modern hotel, erected as a municipal project, bears his name, with an oil painting prominently displayed in the parlors.

On November 26, 1856, General Denver was married to Miss Louise C. Rombach, of Wilmington, and to this union four children were born, viz, Mrs. Katharine Denver Williams, who for many years was president of the Clinton County Red Cross, active in all public works and charities, who died in 1937, leaving one son, James W. Denver Williams, and two grandsons; Col. J. W. Denver, Jr., who died in 1898, an executive in the Clinton County National Bank, of Wilmington, which was founded in the year 1872 by the Denver-Rombach business interests; Mrs. Mary Louise Lindley, of New York City, who still survives, with two children; and Matthew Rombach Denver, who is, and has been for many years, at the head of the Clinton County National Bank & Trust Co. and the allied manufacturing interests in the city of Wilmington. As indicating the political heritage from his famous father, he has been chairman of his Democratic county executive committee for more than 40 years, and has been delegate to eight Democratic National Conventions, four as representing his congressional district and four as representing the State of Ohio at large. He is a worthy son of a great father. He has also represented his congressional district in Congress for three consecutive terms, the district being strongly Republican, and retiring without defeat. During his service in the House of Representatives he was a member of the powerful Rules Committee. He has also served a term as president of the Ohio Bankers Association. The present head of the family was married October 24, 1900, to Miss Veda Slack, daughter of a prominent Wilmington family, and they have one daughter, Mrs. Virginia Denver Williams, who resides at Portsmouth, Ohio, having three children, a daughter and two sons.

General Denver's career was ended by death August 9, 1892, at Washington, D. C., just as the sunset gun told of the day's decline, and a gentleman at his bedside remarked, "What a fitting time for a soldier to die." His body lies in beautiful Sugar Grove Cemetery, Wilmington, Ohio.

The War Debts

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 28, 1939

EDITORIAL FROM THE NEW YORK ENQUIRER OF JUNE 26, 1939

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial, which appeared in the New York Enquirer on June 26:

[From the New York Enquirer of June 26, 1939]

AMERICAN TAXPAYERS MUST PAY UP WHILE WAR DEBTORS GO FREE

With the exception of a remittance of $160,693 on the part of Finland, our European war debtors have again refused to remit their semiannual payments to the United States taxpayer, which fell due on June 15.

It was small comfort to the American taxpayer, who has to make good every cent of our trans-Atlantic friends' dishonesty, that June 15 was also income-tax day, the day upon which his Government required his paying outrageously tiresome Federal imposts under burdensome penalties.

The indulgent and cooperative attitude of the American taxpayer's Government toward the foreign nations who have ganged up on Uncle Sam and are defrauding him out of $13,000,000,000, is vastly different from its treatment of those who, by taxation, pay the bills of that Government.

Dealing with this discrimination the New York Sun the other day offered an excellent illustration of how it works. This wide-awake and influential American newspaper pointed out that our Government, in May and early June, forwards bills to numerous of its debtors, in order to jog their memories as to sums due on June 15. To one set of debtors it courteously says:

"Excellency, I am requested by the Secretary of the Treasury to transmit to you the attached statement showing the amounts due and payable on June 15, 1933, to June 15, 1939, inclusive, from your Government pursuant to the terms of the debt agreement of June 19, 1923, and the moratorium agreement of June 4, 1932.

"In presenting this notice of amounts due under the agreements signed by your Government, I take the occasion to reiterate that this Government is fully disposed to discuss, through diplomatic channels, any proposals which your Government may desire to put forward in regard to the payment of this indebtedness, and to assure you that such proposals would receive careful consideration with a view to eventual submission to the American Congress."

So much for the foreign nations who by their default have not only swindled the Government that accords them this extraordinary courtesy but have also saddled upon the American taxpayer the task of earning and paying what they have declined to remit. There is no courtesy in our Government's reminder to its taxpayers. Its notice to them exhibits such phrases as these:

"Statement of income tax due for calendar year."

"Demand is now made for the installment due on the date shown hereon."

"This installment must be paid on or before June 15. (See reverse side.)"

"Important notice: The payment required by this notice must be in the collector's office before midnight of June 15. If mailed, this installment payment should be placed in the mails in ample time to reach the collector's office before midnight of June 15. Failure to have payment in the collector's office before such time will cause interest to accrue at 6 percent per annum, and the full amount of the unpaid tax will be due immediately, the taxpayer thereby losing the privilege of making further installment payments."

Uncle Sam's trans-Atlantic welshers are polished swindlers. In their replies to our Government's notification concerning remittances falling due, they take care not to be outdone in courtesy. Here is the general form which their responses assume:

"SIR: In accordance with instructions from the Principal Secretary of State for Foreign Affairs, I have the honor to acknowledge the receipt of your note enclosing a statement of the amounts due from my Government under the provisions of the debt agreement of the 19th of June 1923, and the moratorium agreement of the 15th of June 1932.

"I am directed to express the appreciation of my Government of the assurance that the Government of the United States is full disposed to discuss any proposals which my Government may desire to put forward in regard to the payment of this indebtedness; and in return I am to assure you that my Government will be willing to reopen discussions on the subject whenever circumstances are such as to warrant the hope that a satisfactory result might be reached."

We all know what would happen if the American taxpayer adopted toward this Republic the attitude disclosed by those European nations constituting the anti-American swindlers' bund, directed by England and France, and given every possible encouragement by the American taxpayer's Government.

The nonpayment of these debts is by far one of the most serious issues facing the world today. It has shaken international confidence and good will to the very foundation, and the longer our Government permits it to go on, the worse it will be for us and all others concerned.

When the British sovereigns were here, creating an atmosphere for the exacting of further tribute by John Bull, in American blood and wealth, Representative MARTIN L. SWEENEY, of Ohio, thrilled the Nation by addressing to George VI the following telegram:

"Because London dispatches have characterized your visit to the United States as an official one, I believe that I am acting within the boundaries of propriety in demanding, as a representative of the people in the Congress of the United States, that you publicly state what your Government intends to do about payment of war debt due this Nation in the sum of approximately five and one-half billion dollars. If your Government can continue to spend a few billion dollars each year for armaments, continue to subsidize the construction of supersteamships like the *Queen Mary* and *Queen Elizabeth*, do you not think it is the decent thing to give some consideration to the obligation you owe the United States of America, whose assistance in the last World War made possible the continuation of Your Majesty's Government as a world power?"

The official record reveals that Representative SWEENEY's reading this message was applauded. And small wonder.

Lest there should be any misgivings as to Uncle Sam having rescued John Bull from an imminent and ignominious death, let the testimony of no less an authority than the Marquess of Lothian, who will soon replace Sir Ronald Lindsey as British Ambassador at Washington, be quoted:

"Britain could not have emerged a victor from the World War except for the assistance from the United States before and after her entrance."

In face of all the claims which this Republic has upon the gratitude of England for snatching her from destruction in 1914–18, Germany, the very power from whom we saved her, is receiving at the hands of England preferential treatment as against that accorded us. There is a big lesson for Americans in this recent United Press dispatch from London:

"The question of Britain paying the war debt to the United States was raised in the House of Commons today, without reaction from the Government.

"Leslie Hore-Belisha, War Secretary, revealed that Britain is continuing to pay royalties on the Bren gun of Czechoslovakia, adopted by the British Army, despite the German annexation of Czechoslovakia.

"A member asked whether Hore-Belisha is aware that 'we are increasing the financial strength of Germany by continuing these payments.'

"'Maybe so,' Hore-Belisha replied, 'but it is not customary for this country to repudiate payments which have been legally contracted.'

"'What about America?' cried an unidentified member.

"There was no reply."

When statesmen of the patriotism, forthrightness, and discernment of MARTIN L. SWEENEY are placed in charge of our Government, the American taxpayer will be treated as an American and this Republic will cease to be the world's laughing stock.

The New Deal Is Sinking

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 28, 1939

Mr. THILL. Mr. Speaker, slowly, surely, inexorably the New Deal is sinking into oblivion. Eight long years of political experimentation have been foisted upon an unsuspecting people. Naive in their acceptance of the honeyed words of Franklin D. Roosevelt the American people are now learning to their sorrow that they have been misled by promises which could not be fulfilled and by wild-eyed experiments which could only be disastrous. The President has surrounded himself with a coterie of left-wingers who have consciously or unconsciously led him astray.

The foundation of this Government rests upon a philosophy of living which subscribes to the principle of equal oportunity for all in a land of plenty where hard work and initiative pay handsome rewards in material profits and mental satisfaction. The individual, not the state, is supreme in our way of living.

Under the New Deal, regimentation and socialization are substituted for the principles of private initiative and self-advancement which have made America great. In 1940 the voters of this country will demonstrate they want no more unsound socialistic New Dealism but sound, sane Americanism.

Fox Furs and the Canadian Trade Agreement

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 28, 1939

Mr. BREWSTER. Mr. Speaker, on January 1, 1939, there took effect a reduction in tariff rates on silver- or black-fox furs from 50 percent to 37½ percent ad valorem under the terms of the trade agreement of the United States with Canada, which through most-favored-nation clauses became applicable to the other producing and competing countries, which import large quantities of these furs into the United States.

It is becoming apparent from a comparison of import figures for the first 4 months of 1939, which are all that have been compiled to date, with those of the corresponding 4 months of the past 3 years that the lowering of the tariff is threatening serious injury to American producers and is greatly aggravating an already grave situation resulting from economic conditions. Total imports of fox furs have increased in these months by from 30 percent to as high as 330 percent over the corresponding months in the 2 preceding years, and in no month of 1939 was there any decrease.

Imports of fox furs from Canada since January 1, 1939, including the last available figures, are as follows, by months, with figures for the corresponding months of the 3 preceding years:

Imports from Canada—silver fox, dressed or raw

	1936	1937	1938	1939
January	511	4,521	2,225	10,014
February	148	1,502	388	2,977
March	148	802	1,095	1,819
April	317	428	94	971
Total	1,124	7,253	3,802	15,781

A striking illustration of the effect of the tariff reduction on imports from Canada is shown by a comparison of figures for January to April 1939 with those for the full years of 1936, 1937, and 1938:

1936	6,402
1937	7,959
1938	8,685
January to April 1939	15,781

Should the rate of imports remain unchanged for the balance of this year, imports from Canada for 1939 will be over 600 percent more than the average imports for the preceding 3 years.

It should be particularly noted that in April of this year alone the imports from the United Kingdom, a classification used by the Department of Commerce, amounted to 1,668 as against total imports from the United Kingdom for 1936 of 7,844, for 1937 of 11,656, and for 1938 of 5,396; and the imports from all sources in January and February of this year alone exceed the total imports of the whole of the year 1938 by 25 percent.

Concurrently with the increase in imports the price of fox furs in the United States has decreased severely during the first 4 months of this year, the average price dropping approximately 28 percent from the average price of the first 4 months of 1938—that is, from $35.21 in 1938 to an average price of $25.50 in 1939.

The foregoing figures testify eloquently to the adverse effect of the present tariff rates made effective through the trade agreement with Canada and demonstrate the resulting very serious injury that has been suffered by an American industry. It is of vital interest to the American fox breeder that present conditions be remedied or at least ameliorated by a restoration of the 50 percent ad valorem duty.

California Legislature Endorses Voorhis Bill

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 28, 1939

RESOLUTIONS OF THE CALIFORNIA LEGISLATURE

Mr. VOORHIS of California. Mr. Speaker, as a means of expressing my appreciation and encouragement at the action of the California State Legislature in endorsing my bill providing Federal aid to States for meeting the needs of homeless nonresident people and in drawing attention to the pitiable condition of what are aptly termed our "agricultural refugees," I am pleased to have printed in the CONGRESSIONAL RECORD the two following resolutions recently passed by the legislature of my State:

Senate Joint Resolution No. 13, relative to the holding of an Interstate Conference on Agricultural Refugees and memorializing the President and Congress of the United States to sponsor such conference

Whereas the plight of agricultural refugees is a matter of concern to all States and to the Nation as a whole; and

Whereas the distressing conditions under which agricultural refugees now exist demand immediate amelioration: Now, therefore, be it

Resolved by the Senate and Assembly of the State of California, jointly, That the legislature of this State hereby memorializes the President and Congress of the United States to sponsor an interstate conference on agricultural refugees in distress, with participation therein of Governors of the States of origin and States of destination of the migrants, together with the participation of appropriate Federal agencies, and that the Members of the Senate and of the House of Representatives from California are hereby urged and requested to use all honorable means to bring about such a conference; and be it further

Resolved, That copies of this resolution be forthwith transmitted to the President of the United States, the President of the Senate, the Speaker of the House of Representatives, and the Members of the House and Senate from the State of California.

Senate Joint Resolution No. 14, relative to the Voorhis bill and memorializing the President and Congress of the United States to take immediate steps for the passage of such bill

Whereas there is pending in the Congress of the United States a bill known as the Voorhis bill designed to provide Federal financial aid for the care of destitute nonresidents, and to secure uniform residence requirements among the States; and

Whereas passage of this measure is of vital importance to the State of California because it receives disproportionately a heavy influx of destitute farmers; and

Whereas California is financially and otherwise unable to shoulder the relief burden imposed by such influx in the absence of Federal financial aid and uniform residence requirements among the States: Now, therefore, be it

Resolved by the Senate and Assembly of the State of California, jointly, That the legislature of this State hereby memorializes the President and Congress of the United States to consider and enact said Voorhis bill into law and that the Members of the Senate and of the House of Representatives from California are hereby urged and requested to use all honorable means in the furtherance of the enactment of such legislation; and be it further

Resolved, That copies of this resolution be forthwith transmitted to the President of the United States, the President of the Senate, the Speaker of the House of Representatives, and the Members of the House and Senate from the State of California.

Lend-Spend Program Must End

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

Mr. BENDER. Mr. Speaker, all dressed up in a new overcoat, the same old stuffed baby doll which made its debut under the New Deal in 1933 is ready for a repeat performance. The trimmings are different, but the boys who knew her in the good old days have no trouble whatever in recognizing the old girl. Under the guise of a new "lending" program, the National Government is offering for the fiscal year 1940 the same program which collapsed so miserably in the still-remembered days of 1938.

In the last 6 years Congress, driven by the whip of the White House master, has appropriated more than $20,600,000,000 for purposes of recovery and relief. Of this huge sum, more than $18,000,000,000 has been spent. Way back in 1933 the public-works bill set up a fund of over $3,000,000,000 for public construction. Within a year another $650,000,000 was added to the original sum. Even then the pattern was growing clear. Every appropriation meant an additional supplemental appropriation to round it off. We found ourselves moving along into the almost forgotten era of the C. W. A.—the Civil Works Administration. The triple A league to solve the farm problem was beginning to bat out a few hundred millions a year. That was the day of the Blue Eagle and General Johnson's National Recovery Administration.

By 1935 everyone recognized that the first act had closed and the show was a sorry failure. But the author was given another chance, and Congress voted him a lump sum of $4,880,000,000. Within 2 years, after a false-recovery boom

had vanished into thin air, we were right back where we had started from.

Certainly after two smashing failures it was time to start on a new tack. But men convinced against their will remain of the same opinion still. All that we learned as a result of our experience was ignored. Under the leadership of the "brain trust" we launched a third spending-lending program. This time the magic figure was to be $3,750,000,000. Most of this went into the activities of W. P. A. and P. W. A. We found ourselves turning over $300,000,000 for building loans. The R. F. C. was authorized to lend $1,500,000,000 more.

When are we to come to our senses? All of these things have failed. Every lend-spend program adopted so far has collapsed, leaving us precisely where we were. Our more than 10,000,000 unemployed remain out of work. Our "idle men, idle factories, idle money" remain idle. Certainly it should be apparent that the technique of the New Deal has not and cannot induce recovery.

Today we are being "sold" a new idea. The Government proposes not to spend our way but to lend our way back to prosperity. We are asked to lend out $3,860,000,000 this time. Part of this fund is to be lent to foreign governments in an effort to fight the growing influence of the dictators in South America. What manner of unseemly hocus-pocus is this? Is this a loan? The nations lying to our south, no matter how much we may desire their friendship, have not yet paid their existing debts to Uncle Sam. Let us not deceive the American public. If we are to give this money to Latin America in an effort to buy their good will, let us admit it frankly. If we are hoping to get it back from them on any normal loan basis, we are simply deceiving ourselves bitterly.

And as for many of the other aspects of the administration's proposals, these, too, suffer from the same defect of camouflage which characterizes our "loans" to foreign states. Self-liquidating projects, such as sewage-disposal plants, toll brides, toll roads, and hospitals, are worthy of every citizen's hearty approval. If there were some accurate estimate possible by which we might honestly come before the people of our Nation to say, "Every penny spent on this job will be returned to the Treasury by a definite date," we should rise in complete accord with the entire plan. But we know from the constantly repeated lessons of our history that it is one thing to build your hospital and another thing to make it "self-sustaining." We owe a duty to our people to make clear our intentions when we approve an appropriation.

The President and his advisers know well that our people are rapidly tiring of the endless disbursement of public funds which produce no recovery. It is because they recognize the unacceptability of a new "spending" program that Capitol Hill has invented a new set of symbols to accompany its latest spending spree.

It is our job to convince the Nation that even though the words are different, it is still the same old music, and every one of us must pay the piper if we choose to listen. It is our job to induce the Nation to turn off the record before the instrument breaks down completely.

Hearing of the Securities and Exchange Commission in San Francisco

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 28, 1939

EDITORIAL FROM THE SAN CARLOS (CALIF.) BULLETIN

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the San Carlos Bulletin of June 23, 1939:

[From the San Carlos (Calif.) Bulletin of June 23, 1939]

AND THIS IS AMERICA!

The Federal Securities and Exchange Commission is holding a hearing in San Francisco, which involves the brokerage firm of Walston & Co. and that pioneer and reputable banking house of Giannini.

This observer does not know the facts in the case, and if he did this would not be the place, in the process of a hearing, to pass judgment on them.

But this observer does wonder, in looking in on this hearing, whether it is being held in San Francisco, in the State of California, of the United States of America, or in darkest Russia.

The "examiner" sent out from Washington to hear this case is presiding as judge, jury, and prosecutor.

He is making his rules of law as he goes along, and it is seldom, indeed, that he will sustain any objection.

This case, as we understand it, involves only a few technicalities of the S. E. C. as set up by the alphabetic New Deal.

But surely, whatever may be those technicalities, they do not justify upsetting our American precedent of court procedure in a free country wherein any defendant is presumed to be innocent until found guilty.

Visitors at the hearing report many strange interludes. Lawyers are aghast at what they say are violations of ethical conduct.

Early in the hearing, they say, a defense attorney was hastily overruled on attempting to interpose an objection, and on protesting that he had not been allowed to state his grounds, was informed that all his objections were overruled, even before they were made.

When a charge was made that a defense witness had been approached by an attorney for the S. E. C., intimidated, and told that he had "better go along with the Commission," no attempt was made to investigate this important circumstance.

A charge made from the witness stand that the same Commission attorney had attended a surreptitious meeting with a few members of Transamerica's board of directors in an apparent attempt to foment dissension was strenuosly denied one day and admitted the next.

While the Commission had the right to subpena witnesses and records, this right is not being extended to defendants except at the discretion of the Commission, which demands to know in advance the nature of the testimony sought.

OR IS THIS RUSSIA?

This hearing, as we view it, takes the old Moscow attitude, that you're guilty from the word go, and that you can take "the works" or run for it.

The Securities and Exchange Commission, most admittedly, has accomplished some good reforms in this country—but the confidence instilled in the public by those reforms will be destroyed if such methods as now being used in San Francisco are to become precedent and procedure.

Prosecution is one thing—but when an "examiner" becomes judge, jury, and "district attorney," that isn't, to our way of thinking, the just and free American way of doing things.

Sit in at the hearing for a couple of hours yourself, see what you think—and ask yourself whether you, as an American citizen, would like to "stand trial" and have the reputation of your family attacked, without recourse, as those reputations of the Giannini family are being attacked in this "trial."

Our state of mind is not concerned with what the facts may or may not be in this case. Our concern, more important, is with the belief that no quasi-judiciary, such as set up by the S. E. C. in this hearing, can use the brass knucks of judicial arrogance and expect to receive anything but the Bronx cheer from the great democratic gallery that is the voice of fair play in this land that is America—where we're willing to stand trial in a real court, but where we don't want to be "pushed around" by some political appointee.

Let No One Misinterpret America's Will to Peace

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 28, 1939

EDITORIAL FROM THE LIVINGSTON (MONT.) ENTERPRISE

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which

appeared in the Livingston Enterprise, of Livingston, Mont., on June 25:

[From the Livingston (Mont.) Enterprise of June 25, 1939]

LET NO ONE MISINTERPRET AMERICA'S WILL TO PEACE

Gradually one by one, as war hysteria grows, Americans seem to be slipping away into the resigned belief that "there is going to be a European war; we can't keep out of it; and maybe it's just as well, because somebody has to stop the aggressor nations. Besides, maybe it would be good for business."

Bruce Bliven, a keen observer, has gone so far as to say that the American attitude toward Germany is now about what it was in February 1917.

This is, therefore, exactly the time to sit back, light a cigarette or eat a gumdrop, according to preference, and think a minute.

True, a chorus of loud and angry voices make the United States at the moment seem very bellicose. Certainly the people are deeply concerned, puzzled, angry, at the way the world goes. But the country is not nearly as angry, not nearly as bellicose, as some of the voices would indicate.

Behind every voice demanding "a strong stand," "firm measures," "being armed to the teeth," "standing for no more nonsense," "taking up our place in world leadership," and all those ringing phases there are thousands of silent, inarticulate men and women who cling to peace. They saw the results of the last great crusade in 1917–18. They look on a world tottering to ruin largely as a result of that war. They see today's wars, more destructive, more ruinous, more ruthless than of old.

These same people would fight to the death any imminent menace to our country, its lands and people, its vital interests.

But war is still hated and despised in this country as in no other. When President Roosevelt said "I hate war!" a murmur of approbation swept across the whole country. When he said "quarantine the aggressors," there was not unanimous applause, but division. And when he was quoted as having said something to the effect that "the Rhine is now our frontier," there was such a storm of indignation that he was forced to explain 3 days later that he said no such thing.

Let no one misinterpret America's will to peace. Some of the American colonists, before the Revolution, used a flag with a coiled snake and the motto "Don't tread on me!"

Not "Don't tread on Joe Doakes!" or "Don't tread on our particular conception of democracy," but "Don't tread on me!"

There has been considerable thrashing in the bushes near us. Some heavy footprints have clumped down perilously close. But as yet no foot has trodden on us. Until something like that happens, let us remain cool, unhysterical, and vigilant.

A Suggested Compromise on the Devaluation Measure

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 28, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, as a western Congressman representing a silver-producing State, I find myself in a dilemma in regard to the monetary bill which we are sending to conference. When this measure was before the House some weeks ago I fought hard to continue the stabilization fund, to continue the President's power to devalue the gold dollar, and I hoped to continue the power of the President to continue the purchase of domestic silver. Of course, I hoped that the President would see his way clear under this power to fix a price for American-mined silver at not less than 77 cents per ounce. As the bill left the House in April, a part of my desire was fulfilled in the measure at that time. As the measure has passed the Senate, a great change has taken place in it. That part of the Senate bill dealing with silver pleases me, but the other part does not. Now we are sending it to conference to see what compromise may be quickly worked out.

Any agreement which the conferees can reach should, of course, be reached quickly, for this legislation expires on June 30. I do earnestly hope that we may have a satisfactory conference report before the end of the fiscal year. No doubt very far-reaching effects will be felt, if there should be a failure of Congress to act on this matter before the end of the week. I certainly shall be willing to hold night sessions in order to get this matter satisfactorily disposed of on time.

GOVERNMENT CONTROL OVER THE DOLLAR

As a Congressman from Arizona I should like to see the President's power continued to devalue the gold dollar to the extent of 50 percent of its original value, and I should like to see the law provide for the purchase of American-mined silver at a price not less than 77 cents per ounce, and have the purchase of foreign silver left optional with the Secretary of the Treasury at any price he might deem reasonable. In the give and take of the conference I do not expect to see all of this wish of mine materialize, but since all legislation is the result of compromise, what is more logical than to expect some such compromise as the following: That the House conferees accept the Senate proposal in its twofold aspect regarding silver, and that the Senate conferees accept the House provision extending the power of the President to devalue the dollar and to continue the stabilization fund?

If I were a conferee on the part of the House in this case, I should expect that the Senate insist on stopping the purchase of foreign silver, and that the Senate also insist that it be obligatory on the Secretary of the Treasury to purchase American-mined silver at something over 77 cents per ounce. As a House conferee, I could concur in that matter, although it is a compromise, and does not represent all that a silver supporter could wish for. Furthermore, if I were a House conferee, I should feel that the overwhelming vote of the House some time ago to continue the stabilization fund and to extend the power of the President for dollar devaluation within a limit prescribed by law, would certainly justify my determined stand that the Senate should agree in this case to that House provision. Now, such a conference report would be logical, for it would be reporting out of conference two of the House proposals and two of the Senate proposals. I cannot think of a fairer compromise arrangement.

I have, on several occasions during this session, spoken at great length concerning silver, and I must not take time to do so now and here. A reference to my remarks in the CONGRESSIONAL RECORDS for February 24, 27, and 28, and again on April 18, will indicate my views on the use of the white metal in our monetary system.

SILVER PURCHASE WAS PROFITABLE

However, I would like to say one more thing in regard to our silver policy. I have heretofore explained that the purchase of American silver not only furnishes useful employment for thousands of laborers in the production of wealth but that to discontinue it would throw hundreds of thousands on relief and would cost four times as much to take care of them as the Government has thus far spent in the purchase of domestically produced white metal.

The so-called sound-money men of the East, whose spokesmen are the big bankers, have always raised the cry of inflation when anything was asked for the benefit of silver. These men wish to retain the control of our money system within their own hands, and they do not want an abundant supply of the people's money furnished as the Constitution says our money shall be furnished. I am not a rank inflationist, but I know several kinds of inflation far greater and far worse than to monetize all the silver there is mined in our country as it is produced.

Sometimes we are told that our Government has gone on a mad spree of buying silver. It is true that we bought a considerable quantity of silver under the Bland-Allison Act, and later under the Sherman Act of 1890, but I feel confident that Uncle Sam was not the loser thereby—in fact he was the gainer in the long run by this transaction. This great stock of white metal, after it had served a useful monetary purpose, became more valuable during the World War as a wartime necessity than its mint value as money. During the World War, silver as a commodity reached the price higher than $1.29 per ounce. It has been contended that the Government broke even on the cost of that silver but lost the interest over the period in which it was held in

storage. My answer is that this silver served in our coinage and also served as backing for a needed supply of silver certificates. Thus the Government had the use of the silver in a wholesome way for 40 years before finally selling it at a profit.

INCREASING INDUSTRIAL USE OF SILVER

The opponents of silver contend that the purchase of silver today at more than the world price is a pure waste. I certainly cannot agree to that. We must remember that silver plays a double role. It is not only a valuable metallic base for our currency, second only to gold in that respect, but it is a valuable commodity in the arts and trades. In this latter respect it is of increasing importance according to an announcement of a remarkable discovery recently made by one of our leading scientists at a great engineering school. A noncorrosive building material has been produced using as an alloy a very small percentage of silver. Who can say in the rapid progress of metallurgy today what will be the ultimate importance of silver as an alloy in the steel industry and in industrial lines?

For my own part I believe that all the silver that can be produced in this country can be properly used in our money system, and I am inclined to believe that the industrial use of this commodity, together with its wartime necessity, is likely in a short time to make our purchase of the metal now a wise and valuable investment. Not only do I plead for the mining industry of the West which produces silver directly or as a byproduct, not only do I plead for the kind of money known to our fathers, but in addition to that I have a hope amounting almost to a conviction that the present investments in silver will turn out to be a profitable investment in the commodity itself. Certainly if I were a House conferee, I should insist on this final legislation continuing the Government purchase of American-mined silver at a price of 77 cents per ounce or better.

American Legion State Convention in North Carolina

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, June 29, 1939

ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK, JUNE 26, 1939

Mr. REYNOLDS. Mr. President, on last Monday morning, June 26, at Raleigh, the capital of my State of North Carolina, the members of the American Legion in annual State convention assembled, had the pleasure of hearing our distinguished colleague, the Honorable JAMES M. MEAD. I ask unanimous consent that his address on this occasion be published in the Appendix of the RECORD. I am confident that those who read this address will find it extremely interesting, informative, and inspiring.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Commander, officers, delegates to the convention, ladies, and gentlemen, it is indeed a deep pleasure for me to visit the beautiful city of Raleigh, and to address members of the American Legion who are gathered here this week.

You are here to enjoy yourselves and certainly you could find no more choice spot than this clean, modern city located in the historic South. But, aside from the lighter vein of your convention, you have serious work to do and grave issues to discuss.

The attitude of your great organization in dealing with questions of neutrality, of armaments, and of peace, are appropriate subjects for your consideration. The lawmakers of the Nation will well take guidance from your counsel and advice on these and kindred subjects of national concern.

The American Legion has always been, essentially, a serious body. Its leadership has been constructive and its principles have been founded on a real concern for American welfare. You have evidenced calm and considerate judgment on matters of peace and neutrality. Today, you who have the knowledge that springs from experience—the bitter experience of war in all its horrible aspects—see the contemporary issues with clarity. You know the price that has been paid in the past because of the shortsightedness, the impulsiveness, and the avarice of mankind. You know the sufferings and sacrifices and sorrow that accompany armed conflict, and you know the victory is never commensurate with the cost in human life.

It is your duty to maintain leadership today. Twenty years ago you fought on the battlefields for your country. Today the battlefield is here and we fight for peace. The struggle must be no less militant—the goal no less precious.

Sometimes we are overwhelmed with the fatalistic predictions of those who can visualize no happy solution to the political and economic disturbances which rock the world today. Sometimes we are inclined to wonder whether the day will ever come when the bonds of brotherhood will be stronger than the bonds of hatred. Sometimes we grow weary of hoping that tolerance and amity will eventually triumph over bigotry and envy.

We have reason to be optimistic, however, for every man, regardless of his race, is inherently peace loving. What we need everywhere in the world is a stronger moral force as a weapon against oppression, persecution, and ruthless ambition wherever it may exist. The inherent nature of man and the history of his education and development lends encouragement to our conviction that there is a solution to these troublesome times and the role which we must perform is clearly indicated.

The constant, yearning, searching, propelling struggle of man for equity and stability in government will never be halted. Man is a restless, insatiable being; his passion for personal liberty and his desire for security are fundamental elements of his nature. They may at times be dissipated or polluted by moral degeneration, by oppression, or by violence, but they are never wholly destroyed.

Man has always struggled to perfect government to suit his current needs. Great civilizations have thrived under conscientious leadership; they deteriorated under autocracy and violence to personal liberty.

The tragedies of civilization are written in the finished chapters of vast and wealthy empires that decayed under misrule and maladministration.

After the last war the world seemed ready to accept democracy on a wholesale scale. New nations were carved out of old kingdoms and forms of representative governments were established. A metamorphosis in the governments of mankind was under way.

But, during the past 20 years, violence has been done to democracy. Social and economic conditions have rapidly changed. Government has had to keep step with sudden, breath-taking economic changes. European democracy proved itself too slow and too inept to cope with such changes and, as a result, representative government has found itself shunted aside for a more direct rule.

In America, the democratic system has stood the test for over a century and a half. It came as a rather natural development in the minds and hearts of men who sought to rid themselves forever of the liberty-shackling systems of Europe. Men came to these shores to escape oppression, persecution, and intolerance that colored the governments of their homelands. They labored and fought and suffered here to establish decency and liberalism in government. They meant this government to endure and to be so operated that it might serve the needs of all the people, in every conceivable circumstance. They took from Great Britain—the oldest representative government on earth—what they considered most workable here. They wrote a Constitution that, in humble yet eloquent terms, established the framework of a political structure combining simplicity, practicability, and strength.

Here was an effort on the part of liberty-loving people to join their ideas and ideals—their mutual hopes and fears—into an humanitarian doctrine that would adequately serve their needs.

Here, at last, conceived in hope and born of experience, was the essence of the most liberal government known to man.

Could this new neighborhood of men, combining many races and many creeds, establish and maintain those high principles in man-made government?

Could they provide the necessary machinery to protect this new Government from invasion and usurpation either at home or from abroad? Could they construct its framework so that it would be adequate to meet future unpredictable needs? Could they tie fast and forever the precious prerogatives of liberty and self-government? Could they, at the same time, provide an instrument of sufficient flexibility to satisfy the desires of the governed and yet preserve it from attack? After 150 years of successful service, men continue to marvel at the political handiwork of our forebears and at the triumph of this vast new venture into democratic government.

Representative self-government has succeeded in the United States because it satisfies human demands. Naturally, the representative form of government advocates human justice; pleads the cause of economic opportunity; teaches the futility of warfare and strife; points the way to happier relations between man and government.

But where do we stand today? We are firm adherents to the democratic philosophy. We have an enduring faith in its efficiency. We cannot help, therefore, being apprehensive at the fate of representative governments in the world today. Frankly the

outlook for democratic governments on earth today is not encouraging. It is beclouded by the European parade of new and tempestuous dictatorships. Communism, fascism, and nazi-ism are displacing weakened and distorted republics as well as tottering monarchies. Revolt, civil strife, oppression, and the wholesale splintering of representative government is the unhappy picture of today.

Meticulous care, powerful safeguards, and heroic defenses must be provided by democracy's friends to ward off every malicious attack threatening its welfare.

Human rights and personal liberties are flouted in many nations today. If the World War was a triumph of right over might, its effectiveness has been dissipated. Do we stand again (God forbid) on the threshold of human destruction?

Here are the wretched facts that bespeak contemporary international political immorality: World War treaties, agreements, and pacts have been sabotaged; the League of Nations made a mockery by its so-called friends; collective security given way to intense nationalism; international trade and finance thrown into hopelessness; violence, oppression, and persecution made part and parcel of political programs; democracy scorned and ridiculed by the new totalitarian states and sometimes questioned by its friends.

These conditions describe the plight of representative government today. There is nothing new in the usurpation of human liberties. There is nothing new in war itself. But, by reason of modern invention, human slaughter is made more horrifying than ever before in history. Just as mankind has developed new and violent forms of government, so, too, has he created new instruments of murder and torture.

The deadliness of new weapons; the speed in transportation and communication that has come with our age; these are factors that contribute to swift and merciless death in modern battle.

Will economic bewilderment and ruthless ambition destroy the gains which have been achieved by centuries of struggle and determination? Will they blot out another civilization? What will be the fate of dictatorships of this day and age? Will they succeed where democracies apparently have failed? Will they exert a continuing concern over human rights and individual security? Will they decimate representative self-government and institute a new and permanent political philosophy?

The history of man-made governments predestines the failure of totalitarianism. The class rule of the modern dictator cannot succeed because it is founded upon racial hate, territorial ambition, and vulgar paganism.

Today we need more morality in government and an intensified faith in democracy. Cooperation of all the people in national efforts to adjust the agencies of government to meet modern needs has never been more earnestly demanded.

As a Nation we are dedicated to high ideals and to the cause of liberty. We could never subscribe to any political philosophy but representative self-government.

Democracy is government plus liberty. Autocracy is government plus oppression. We must overlook no opportunity to strengthen the former. We must make every provision against invasion of the latter. We must fortify ourselves against unwelcome political philosophies by strengthening our agencies of government; by employing means for the security and well-being of all our people; by preserving inviolate the dignities and the liberties that man, of right, should enjoy.

This Nation has made its gains the "hard way." We have fought physically, economically, and politically for a more perfect government. Now we must fight for an awakening of national consciousness to existing threats to our welfare.

Man is still searching for the ultimate in government. Right at this moment in many nations of the world he appears to have wound up in a dark and dangerous alley where he must grapple with a new and terrible foe. He succumbed to the attraction of a misleading short cut to economic betterment. We have learned that there is no short cut to human happiness, no substitute for personal freedom. Let us apply ourselves today to what may prove to be the sternest battle of our Republic—the preservation of the institutions of free government.

Stabilization Fund and Weight of the Dollar

EXTENSION OF REMARKS

OF

HON. ELMER THOMAS

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, June 29, 1939

TELEGRAM FROM THE COMMITTEE FOR THE NATION

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a telegram sent today to numerous Senators and Representatives by the Committee for the Nation, on the subject of our monetary policy.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

The action by the Senate in rescinding the President's power over the gold content of the dollar in itself does not materially change, so far as price level or business conditions are concerned, the situation that has existed since February 1934, when the dollar was made equivalent to one thirty-fifth of an ounce of gold. It can become an important step forward if Congress will now use the monetary powers which it has recovered to lift the depression as many other nations have done.

Farm organizations and the Committee for the Nation have consistently urged that Congress live up to its constitutional duty "to coin money" and "regulate the value thereof."

The most constructive step that could be taken to bring about a prompt recovery would be the enactment during the present session of Congress of the monetary authority bill drafted by the late Frank A. Vanderlip and introduced into the CONGRESSIONAL RECORD by Senator WILLIAM BORAH, on June 20, 1936. This bill had the support of the major farm organizations and of the Committee for the Nation.

The purpose of the bill was to bring money under the control of the Government and to leave credit under the control of bankers. The bill would set up an agency of Congress. A monetary authority, as disinterested as the Supreme Court, to maintain a stable dollar with unvarying buying power in relation to a cross-section of thirty to forty of the most important basic commodities. Thus the dollar would be kept constant in relation to the necessities of life instead of a fixed weight of gold.

There would be set up in America a free gold market, such as exists in England, making it possible for all to purchase and own gold. Simultaneously, silver would also be released in a free market, which, with the 1926 price level restored, would mean a 60-cent to 70-cent open-market price for silver without Treasury subsidy. Thus American banks, corporations, and private citizens could own and store their wealth in the precious metals, the prices of which might fluctuate from day to day as other commodities do, but the dollar's buying power over the average of all commodities would remain constant.

When the history of the Roosevelt administration is written in its proper perspective, its most constructive and helpful act will be found to have been the restoration of prices in 1933 with the abandonment of the gold standard. This was the course urged by the Committee for the Nation and the national farm organizations. It was not devaluation but a revaluation to remove the swollen and harmful purchasing power that gold had acquired. While the price of gold was raised 69 percent (from $20.67 to $35 an ounce), farm and other basic commodity prices rose 67 percent, and the cost of living rose only 3 percent. Three and a half million men went to work in private enterprise in 4 months. Between March 1933 and February 1934 the value of stocks and bonds listed on the New York Stock Exchange increased approximately 50 percent, or more than $20,000,000,000. Private enterprise was being revitalized and our democratic institutions safeguarded.

The moving finger of history will also record that the greatest economic error of the Roosevelt administration was abandonment of this policy of restoration of prices by monetary action in favor of a fixed price of gold in January 1934. America, almost the last of the great nations to partially free itself from deflation by leaving the gold standard, was the first to return to it in January 1934.

Since then, during the past 5½ years, we have had only normal fluctuations in business around a depression level. There was a minor upswing that followed a rise in the world gold prices during 1936 and 1937. Then a new wave of world-wide hoarding brought about a rise in the value of gold and a collapse of commodity prices in the latter part of 1937 and 1938, pulling down farm income, general business, and employment.

With continuing high value for gold resulting from unrest, war preparations, and hoarding, this depressed condition is likely to continue, possibly for long periods. It will be accompanied, if we adhere to the present price of gold, with low prices and distress for farm and other basic commodities, except silver, and by heavy unemployment and poor business conditions. This will lead to an extension of price fixing for agricultural products, continued efforts to regiment business, and more State intervention.

Is it not time for the United States to heed the experience of the sterling nations? The principal producers among them have increased their prices of gold much more than the United States. Selling their commodities in world and domestic markets for the same reduced amount of gold as our farmers receive, they have an average price, in their own currencies, 30 percent higher than the 55,000,000 farmers and basic producers of the United States. These nations have high employment, profitable business, two to four times as much building activity, and generally balanced budgets. During the past 4 years, with 600,000,000 of population, their cumulative budget deficit has been less than one-third billion dollars while the United States, with one quarter the population, has had a deficit nearly 40 times greater—more than $12,000,000,000.

Since 1929 our price level has been distorted. It has been like trying to play billiards on a stepladder. Those on the floor had to keep calling for subsidies to lift them up.

It was not lack of productive power since 1929 that caused our distress. Our farms were able to produce food and fiber in abundance. Our factories were the best tooled, under the most efficient management, equipped with the best scientific processes the world has ever known. We had millions of the most skillful workers asking for nothing but a chance to produce and earn. What was at fault was our mechanism of distribution—our monetary system. Chaos was written on our price tags. A free-enterprise system can function only when the price tags remain in balance under free competition between all groups. Then only can goods and services be exchanged in highest volume. The swollen value of the gold in our dollar still holds the dollar prices of basic products depressed and in unbalance. Only when Congress corrects this shall we have general prosperity. Only then can the whole Nation swap goods and services on a level plane as formerly.

COMMITTEE FOR THE NATION.

The Democratic, Roosevelt, and American Way

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, June 29, 1939

RADIO ADDRESS BY J. FRANCIS SMITH, JUNE 23, 1939

Mr. MALONEY. Mr. President, I ask unanimous consent that there may be published in the Appendix of the RECORD a splendid address entitled "The Democratic, Roosevelt, and American Way," delivered by Mr. J. Francis Smith, chairman of the Democratic State Central Committee of Connecticut, over station WTIC on June 23, 1939. This address is very enlightening, and will help to set aside much of the unfortunate misunderstanding now existing concerning the Federal relief program and the problem of men who cannot find private employment.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow citizens of Connecticut, the subject of my talk tonight will be jobs. More specifically, it will be about jobs in private industry. This subject does not happen to be the exclusive property of Republican propagandists. For that matter, I think that it can be readily shown that interest in providing jobs has been very much more the major policy of the Democratic Party than it is that of their critics. During the political campaign of last fall the advertising experts of the Republican Party concocted the notion that they could sell a bill of goods to the people of this State by harping on the subject of jobs for everyone, without taking it upon themselves to tell what they were going to do about the problem other than to indicate their pious interest and mournful concern.

This policy has been carried forward to date. It leads me to lay before you the cold facts of a situation which is certainly the most serious problem facing this State and this Nation. The problem, in fact, is far too serious to be used as a political football or as a stepping stone for personal ambition.

I believe in the capitalistic system. I believe that only under that system can we enjoy the privilege of personal freedom of thought and action, religious and political, as well as economic, which we consider essential to a life worth living. Nevertheless, if, under this system, men and women who are capable and willing to work to earn their livelihood must be forced to rely on public or private charity, this situation can only be described as intolerable. This is no time to mince words. It may as well be understood that such a situation will not be tolerated. Either the unemployment problem will be solved or the capitalistic system will be destroyed, and with that system go democracy and all of the freedoms which we cherish.

I do not believe that there is a single informed person in the United States who is not keenly aware of the vital and overwhelming importance of this problem. I willingly give our Republican friends credit for a sincere desire to see our unemployed fellow citizens back at work. It is incredible that any honest American, regardless of party affiliations, should fail to be sincerely interested in the correction of a situation that threatens the very existence of our form of government as well as our future prosperity and well being.

Make no mistake about it—the issue is not whether or not the problem of jobs exists; it is not even whether or not there is interest in the problem; the issue is: What is going to be done about it? How did the problem originate? What is being done about it? What are now the alternative proposals?

As to the origination of the problem, I think that no one will deny that our present situation developed following 9 years of Republican national administration and grew more acute for 3 more years of that administration. When we come to consider the present Republican proposals for the correction of our difficulties, it is well to consider what were the circumstances in 1929 and in the immediately preceding years. The eminent historians, Charles and Mary Beard, in their excellent book America in Midpassage, describe the situation as follows:

"For nearly 10 years, it so came about, great business interests, to whose ingenuity and initiative the prosperity of the golden glow was attributed by admiring editors and publicists, pursued their course of 'free enterprise' without encountering insurmountable barriers. They demanded higher tariffs, and their demand was granted. They called for a material reduction in the heavy taxes on large incomes to release money for the expansion of industry, and their argument was accepted. They besought the Government to refrain from producing electric power on the public domain and along navigable waters and distributing it directly to consumers, and their beseeching was heeded. Under the easy laws of indulgent States they formed corporations, investment trusts, and holding companies, ever larger and more intricate in structure; they issued stocks and bonds at pleasure within the mild terms of generous legislation—without submitting their accounts and valuations to the scrutiny of Federal inquisitors. They wanted to be let alone, and in all those years not a single major statute adversely affecting their rights of property was written in the law books of the Union.

"Abroad as well as at home, business interests enjoyed the favor and protection of a benevolent government."

In other words, ladies and gentlemen, none of those restrictive, annoying, and irritating factors, which are now proclaimed by our Republican friends as the causes for the persistence of unemployment today, were present as we entered the pleasant autumn of 1929.

I am not going to recite the unpleasant events which you all remember, and which followed so closely a period of adherence to the policies now advocated by certain reactionary Republicans. Two brief newspaper quotations tell the story: "December 3, 1929, 'Hoover's message to Congress expresses optimism, covering all aspects of trade and industry.' December 12, 'stocks decline in widest break since November 12.'" And then later in 1930; "May 2, 'wave of liquidation.' May 3, 'another violent break in stocks.' June 6, 'market weak.' June 7, 'another sharp break.' June 8, 'stocks break heavily.'" In 1930 there was no fear of irritation, of antagonism, of restriction by the Federal Government. There was no expectation of anything but the most benevolent protection and assistance of business and industry; and yet here we had the large holders of securities predicting, through their sales of securities, economic disaster.

We come now to the subject of jobs. The number of unemployed rose rapidly from 2,000,000 to between fifteen and sixteen million, that figure being reached early in 1933, shortly before President Hoover left office. I call the attention of my Republican friends to what must be to them an amazing fact: The problem of jobs, especially jobs in private industry, had developed under a thoroughly benevolent Government.

I want to remind you now of what I said earlier about the fate of the capitalistic system and of democracy if the unemployment problem is not solved. Here are statements from two conservative groups of wage earners. First, the railway brotherhoods told Mr. Hoover that "there is a growing demand that the entire business and social structure be changed because of the general dissatisfaction with the present system. We cannot longer ignore this situation." Mr. William Green, of the American Federation of Labor, declared: "Finally, after 3 years of suffering, we, the organized workers, declare to the world, enough; we shall use our might to compel the plain remedies 'withheld by those whose misfeasance caused our woe.'"

I wish that history could say, or that I could say, that business with the assistance of a benevolent Government had proceeded to correct the unemployment problem as it developed. Of course, this was not the case. As early as 1931, Nicholas Murray Butler, a leading Republican, president of Columbia University, said there was "a lack of competent, constructive, courageous leadership—political, social, and economic." The answer of the Republican Party and Mr. Hoover to our difficulties was an extension of the benevolence and the protection of Government toward business. He poured out hundreds of millions of dollars to banks, insurance companies, railroads, and other large institutions, in the mistaken belief that if industry were helped, it in turn would be enabled to help the people. We know the result. The only progress was a progressive collapse.

In a speech on June 21 of this year, Gov. Raymond E. Baldwin asks the question: "Are we to have a government from the top down or from the bottom up?" The answer is that under a Democratic administration we will have not only government from the bottom up, but economic assistance from the bottom up.

When President Roosevelt assumed office in March 1933 the entire basis of the approach to the question of jobs was drastically changed. In fact, it was reversed. Every move was designed to directly affect the wage earner. It was intended, and it has worked out, that helping the man who earns and consumes, helps also those above him in the economic pyramid. The C. C. C. gave jobs directly to a number of youths, as did the N. Y. A. The P. W. A. created jobs on all sorts of public works. The W. P. A. gave jobs to millions of unemployed. Starting with the N. R. A. and carrying through with legislation designed to shorten hours, improve wages, and to establish the bargaining power of labor, efforts were

made directly to create employment on a basis consistent with American standards.

Obviously, the improved purchasing power of those persons directly affected has resulted in purchases of necessities, and, in turn, in business and employment. Furthermore, a direct attack on real causes of unemployment has been made by the application of common sense to our foreign trade, by the elimination of unnecessary holding companies and by applying regulations for the sales and securities of all sorts. We may ask where the much-desired confidence would be today if the fairly exposed abuses found in high financial places had been permitted to continue unchecked.

The Democratic way, the Roosevelt way, and, we think, the American way to attack the problem of jobs is to directly help those who are in need of jobs. Furthermore, the system works, as the Hoover Republican system did not. It is all very well for Governor Baldwin to say that we still have 11,000,000 unemployed and that the administration has made no progress. Actually there are a million more employables today than there were when the problem was created. There are 10,000 more people employed today in the city of Waterbury alone—and this is typical—than there were in 1932. The national income is estimated at $65,000,000,000 for this year as against $38,000,000,000 in 1932. Definite progress has been made, although no one would claim that the problem has entirely been solved.

We have all seen what happened under the system of benevolent assistance to industry. We have seen the progress that has been made by a direct attack on the problem. We now request the suggestion of alternative methods. What are they? I know of no positive suggestions for the improvement of unemployment in this State or in this country that have been offered by Republican spokesmen. Governor Baldwin is quoted as stating that business and industry and science stand ready, capable, willing, and eager to provide the more abundant life. This is not a proposal; this is a hope—a pious hope. He comments in the same speech about our national debt being permitted to go no higher. This means an immediately balanced Federal Budget. This, in turn, means the complete elimination of every expenditure for relief and employment, direct and indirect. In plain language this means the firing of some millions of persons tomorrow. The entire Republican philosophy as expressed by Governor Baldwin consists of having the Government cease to do anything about the jobs that concern him and his associates so greatly. The substitute for this direct assistance is the hope that business will in some miraculous way gain encouragement from the loss of billions of dollars of consumer purchasing power and will dash forward to prosperity and jobs for all. Unfortunately, this hope is exploded beforehand by the disaster of 1929 and the futility of 1930–32.

Whether we like it or not, the time has passed when the welfare of the individual citizen is to be left entirely to chance. The Government has assumed a responsibility that it will not be permitted to relinquish. No one will accept the idea that we can afford to cease our efforts and to hope that everyone will therefore receive a good job in private industry.

I am going to finish by quoting again from Dr. Butler. He refers to the situation as it existed in 1931, and he says:

"The universal answer of the officeholding class is 'Wait.' * * * Gentlemen, if we wait too long somebody will come forward with a solution that we may not like. Let me call your attention to the fact that the characteristic feature of the experiment in Russia, to my mind, is not that it is Communist but that it is being carried on with a plan in the face of planless opposition. The man with a plan, however much we may dislike it, has a vast advantage over the group sauntering down the road of life complaining of the economic weather and wondering when the rain is going to stop."

These words are worth thinking about. They warn us that when we hear someone offering vague promises of jobs in the event of Republican success we should be very sure that we know exactly how this desirable situation is to be attained.

Origin of the Name America

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, June 29, 1939

ARTICLE AND POEM BY LT. COL. C. I. KEPHART

Mr. REYNOLDS. Mr. President, I respectfully ask unanimous consent to have printed in the Appendix of the RECORD a brief article by Lt. Col. C. I. Kephart regarding the origin of the name "America," and in addition thereto a poem by Colonel Kephart entitled "Old Glory."

There being no objection, the article and poem were ordered to be printed in the RECORD, as follows:

ORIGIN OF THE NAME "AMERICA"

(By C. I. Kephart)

As Americans, I wonder how many of us really know the origin of the name "America." The assertion that it came from the forename of an Italian navigator, Amerigo Vespucci (1451–1512), is only the end of the story and not its beginning.

For centuries prior to the Christian Era the powerful nation of the Goths (or Getae), a Nordic people, inhabited the region now known as the Ukraine, north and northwest of the Black Sea, including the valleys along the lower Danube River. During the reign of Emperor Domitian (A. D. 81–96), of the Roman Empire, the Goths, in fear of treachery on his part, broke a long truce and attacked and defeated the Roman forces on the lower Danube. Oppius Sabinus was then the Roman Governor and Dorpaneus (Dekebalus) was the Gothic King in Dacia. A larger Roman army was then sent forward, but it, too, was defeated. So overwhelming were these successive Gothic victories and so well handled were some later reverses suffered at the hands of the Roman Emperor Trajan that the leaders were deified by the people and their descendants became the ruling family of the Gothic nation.

The first of these heroes was named Gaut, followed in successive generations by Hulmul, Augis, and Amal. Apparently by Amal's time the kingship of the Gothic nation had become hereditary in his family, for it is by his name that the renowned Amal family has come down in history. When the Visigoths withdrew from the nation in A. D. 476 upon the invasion of Europe by the Mongolian Huns the Amali continued to furnish the kings and other leaders for the Ostrogothic nation, even after the latter had broken away from the defeated Huns and had settled in Italy, until the extinction of the male line upon the death of Theodoric the Great.

Now—which is more important to us—it happens that this name Amal is also the origin of the name America, as applied to the Western Hemisphere. Used by admirers in the same way that American children are named for Washington, Jefferson, Lincoln, and other great Americans, the form became Amalric (from Amal-ric), meaning literally the "mighty Amal" and figuratively, as later used, "all-conquering leadership (or service)." When the Ostrogoths overran Italy, it became Amalrico, which was softened in the Italian patois to Amerigo. Then upon the proposal of Waldseemüller, a German geographer who relied on Vespucci's assertions of his discovery of the Western Hemisphere, the forename of the latter, Amerigo (or Americus in Latin), gradually came to be used on maps of the new world in the feminine form (America), as grammatically applied to land.

The Goths, with the Germans, Kimmerians, and others constituted the ancient liberty-loving nations of northern Europe, which resisted the advances of the Roman Empire in their directions and from which peoples we are largely descended. It is not too much to say that to their success in withstanding the despotic Romans we may attribute our existence as a self-governing people today. Thus it is quite auspicious as well as inspiring that the name of such a noble leader of the Goths should now be applied to the hemisphere of which our country is a part. The name of Amal might well enter our history books as representing a worthy antecessor of our own immortal Washington, who likewise demonstrated "all-conquering leadership (or service)."

OLD GLORY

America, our native land,
Home of the free divinely planned,
  Was gained by mighty men.
Unfurl Old Glory to the air;
It leads the strong, the brave, the fair
  As truly now as then.

No feudal lord or tyrant king
Shall o'er this worthy people fling,
  In ruthless unconcern,
The yoke of arrogance and shame
While waves that banner in our name
  So it all may discern.

The resolution that arose
From Valley Forge and struck its blows
  With glorified success
Shall be our everlasting might
To guard our land in sacred right
  And keep it from duress.

To all within and all without
Our righteous zeal will leave no doubt
  That this inheritance,
So won by valor unrestrained,
By our strong hearts shall be maintained
  In its pre-eminence.

God of our fathers guide us long
In constant aim and spirit strong
  And with a love of truth,
That our designs may e'er be just
And that flag saved unstained in trust
  To pass on to our youth.

The American Flag

EXTENSION OF REMARKS

OF

HON. W. WARREN BARBOUR

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, June 29, 1939

ARTICLE FROM NEWARK STAR-EAGLE

Mr. BARBOUR. Mr. President, I am glad to accede to the request of Mr. Paul Block, president and publisher of the Newark (N. J.) Star-Eagle, and ask permission to have printed in the RECORD an article which appeared in an advertisement sponsored by Newark Post, No. 34, and Suburban Post, No. 78, Jewish War Veterans of the United States, and published in the Newark Star-Eagle of Wednesday, June 14, for the purpose of promoting greater love for the American flag.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A REMINDER TO THE YOUTH OF AMERICA ON FLAG DAY

A flag is a symbol. It may stand for something good. Or it may mean something wicked and destructive to all mankind.

Old Glory waves over a land that represents "liberty and justice for all" * * * in vivid contrast to other lands blighted by barbarism and godlessness.

Americans have more reason today than ever to be proud of America—to uphold it in peace, to defend and fight for its ideals.

To the youth of America we say: Fight for your country in peace by driving its enemies from you. Cherish the freedom you now enjoy. It's your birthright as an American.

A traitor has no place in our midst. Especially when he comes to undermine our country. Shun the scoundrel who would destroy our national unity by preaching group hatred. He may call himself Communist, Fascist, or Nazi. Recognize him for what he is * * * an avowed enemy of America. America does not want him.

America wants no blood purges, no murder cults, no wholesale destruction of all religion. Swastika or hammer and sickle * * * both alike are a blight and a menace.

A PAGE FROM AMERICAN HISTORY

In the Revolutionary War, Col. Isaac Franks, of Philadelphia, was aide-de-camp to General Washington. Haym Solomon gave his entire fortune to save the American cause. He died penniless. Hundreds of Jews served in the Revolutionary Army.

In the War of 1812, Uriah P. Levy, commander of the brig-of-war *Argus*, ran the British blockade and destroyed 21 British merchantmen. He died a commodore, the Navy's highest rank.

In the War with Mexico Gen. David de Leon, of South Carolina, was twice honored by Congress for valor and ability. Moses Albert Levy served as Surgeon General.

In the Civil War 10,000 Jews served North or South with distinction and honor. In the Confederacy Judah P. Benjamin was Secretary of War; L. M. Harby, commodore of the Navy. In the North, Frederick Knefler, of Indiana, rose to the rank of major general. Edward S. Solomon survived every important engagement to become a brigadier general. Lincoln handed Leopold Newman, of New York, his commission as brigadier general while he lay dying of wounds received at Chancellorsville.

In the Spanish-American War 5,000 Jewish volunteers answered the call of their country.

In the World War 250,000 fought. Forming 3½ percent of the population, Jews contributed nearly 5 percent of the fighting forces. Approximately 10,000 Jews held commissioned rank. Over 1,100 Jews were cited for valor in action. Four Congressional Medals of Honor were awarded to Jews; 200 won the Distinguished Service Cross. Of 14,000 Jewish casualties, 3,400 made the supreme sacrifice.

The Milk Bill

EXTENSION OF REMARKS

OF

HON. HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 26, 1939

Mr. SMITH of Virginia. Mr. Speaker, the House has before it for consideration H. R. 6316, entitled "A bill to amend the act entitled 'An act to regulate within the District of Columbia the sale of milk, cream, and ice cream, and for other purposes, approved February 27, 1925.'" The committee struck out the entire bill and inserted an amendment which repeals all existing law and regulations for inspection and control of milk and cream in the District of Columbia. In place of the original bill the committee has inserted an amendment which by reference to a publication known as the United States Public Health Service milk ordinance of 1939 enacts that publication by reference only as the law for the control of the milk supply for the District of Columbia.

In subsequent sections of the amendment, however, certain exceptions are made to the United States Public Health Service milk ordinance which prohibits the local Health Department of the District of Columbia from controlling by inspection the quality and healthfulness of the product imported into the District of Columbia.

If one has been fortunate enough to obtain one of the mimeographed copies of this so-called Health Service Milk Code, he will find it provides specifically for inspection of the milk supply by local health authorities. If this were not so, the local health authorities would have no control or supervision over the milk and milk products imported into the District of Columbia and the way would be wide open for all of the serious and dangerous results that would follow from uninspected and unsupervised milk supply; but look at the provisions of section 6 of this bill, which I will refer to later. In the very foreword of this ordinance put out by the United States Public Health Service in mimeographed form is the warning that it should be adopted only "subject to the approval of the local legal authority." In view of the unprecedented manner in which the bill was considered and reported by the District Committee, I wrote to the Chairman of the District Commissioners, to the health officer, and to the corporation counsel asking each of them to advise me whether they had been consulted or their opinion asked relative to the advisability, propriety, or legality of this legislation. I received prompt replies from all three advising me that the bill had never been referred to them or any one of them, nor had their opinion as to its advisability from a health standpoint, from a legal standpoint, or from any other standpoint been asked. My information is further that this United States Public Health milk ordinance was never before the District Committee in its consideration of the bill, and I challenge any member of the committee to explain its provisions and their effect.

It is essential to an impartial consideration of this measure that we should know at least something of the background behind the bill, particularly in view of the unseemly haste of those in charge of the measure in bringing it to the House today (Monday) for consideration when the bill was not reported on the calendar until last Friday morning, when the report of the investigating committee directed by this House to investigate the subject has not been printed, when the hearings before the investigating committee have not been printed and have been abstracted from the committee room of the District of Columbia Committee by one member of the committee, and have not since that time been available to any other Member of Congress. The statement in the report of the committee on the bill at the bottom of page 2 that the record is accessible is not a fact unless it became accessible this morning too late for any Member of Congress to inform himself. I wish to make this statement quite emphatically, because my experience in Congress has generated a profound conviction that the membership of this House believes in fair play and fair consideration, and I am convinced that if the House knew the facts and the effects of this bill that there would not be 50 votes for it in this body.

Now, to the history and background of this bill: The Maryland and Virginia Milk Producers Association is a purely cooperative, nonprofit farmers' organization organized under the authority and encouragement of legislation enacted by Congress, for the sole purpose of marketing the product of its membership through the system of cooperative, collective bargaining devised and encouraged by the Congress. Its

members consist of about 1,300 farmers in Maryland, Virginia, Pennsylvania, and West Virginia, who supply about 90 percent of the fluid milk consumed in the District of Columbia. Sometime ago they discovered that a large amount of uninspected and unlicensed cream was being brought into the District of Columbia illegally by the Embassy-Fairfax Dairy under cover of darkness and by secretive and devious ways. After obtaining conclusive evidence of what was occurring, representations were made to the District Commissioners, who directed the Metropolitan Police to investigate the situation and clean it up. As a result of that investigation, James J. Ward, the president, and other officials of the Embassy-Fairfax Dairy were caught red-handed in the nighttime and arrested during the act of unloading a truckload of this unlicensed cream into their dairy plant. A few days ago the Embassy-Fairfax Dairy plead guilty to the charge and was given the maximum fine provided by law.

The congressional investigation of the bootlegging activities in the District ensued. The report of that committee was recently filed but has not yet been printed and therefore not available to the Members as a guide in forming their opinion as to the advisability of this legisation. In the evidence, upon which that report is based, is unrefuted and undisputed testimony that for months and for years this Embassy-Fairfax Dairy had been importing unlicensed cream, some of which was in such bad condition that it required the use of a neutralizer; that large quantities of unsalted butter of unknown quality was melted, mixed with this cream and skimmed milk and a reconstructed milk was produced through this process which was sold in large quantities in the District as grade A milk in flagrant violation of the law, and in competition with licensed milk of honest dairy farmers from whom they buy. In substantiation of the fact that this unlicensed and uninspected cream of unknown quality was imported and used by the Embassy-Fairfax Dairy, there was the testimony of several former employees of that concern which was undenied and undisputed, which gave the details as to the method and extent of these unlawful activities. Before the conclusion of the hearings of the investigating committee, the attorney for the Fairfax-Embassy Dairy who had been present at all of the hearings and heard the evidence, was invited to have his client take the stand and make any statement he desired relative to the subject matter. He declined, and the unquestioned evidence of the foregoing series of unlawful acts stands unchallenged in the record of those proceedings. In the light of that record and in view of the haste with which this bill has been brought to the consideration of the House, the suspicions of disinterested persons will naturally be aroused, and the question which first comes to mind is the obvious one, namely, Who will benefit by the enactment of this legislation?

I will try and direct my remarks to an answer to that query.

There are only four classes who could possibly benefit by the enactment of this law. They are: (1) The dairy farmer who produces milk; (2) the public of the District of Columbia who consume milk; (3) the legitimate and honest distributors who buy milk from the producer and sell it to the consumer; and (4) the chiseling distributor who cheats the producer by buying an inferior quality of uninspected product and manufacturing therefrom reconstructed milk, and who then cheats the consuming public by selling them this inferior product under the false label of grade A milk.

Let us analyze the situation with respect to each of these four classes. As to the dairy farmers who produce the milk, they would be the chief victims and chief sufferers from the enactment of this bill. They do not want it and have protested against it as vigorously as they know how. All they ask is an honest market in which all producers and all distributors will be treated alike and required to observe the same inspection and regulation. I can speak for them authoritatively on that subject. Not only has the local Cooperative Producers Association opposed this bill but the National Milk Producers Cooperative organization, speaking for a large number of dairy cooperatives throughout the United States, has vigorously opposed the bill and given unanswerable arguments against it, which could be found in the record of the hearings of the investigating committee if they were available to the Members of Congress.

At this point I wish to refute the statement and dispel the illusion that there is any trade-barrier wall about the District of Columbia so far as milk is concerned. Any producer within any distance that the District Health Department can inspect the farm can apply for and obtain a license to ship milk to the District of Columbia. The so-called milkshed is constantly expanding and widening and no one has objected or can object. But the city of Washington, like every other sizable city that I know anything about, that has any regard for the health of the community, requires inspection of the source of its milk by its own inspectors and any deviation from that policy would be a distinct backward step in health protection, as emphatically testified to by Dr. Ruhland, health officer of the District of Columbia.

(2) Would the consuming public benefit by this legislation? It would not, and an experience right here in Washington shows that it would not. The undisputed evidence is that the Fairfax-Embassy Dairy has not only been bringing in unlicensed cream, but reconstructing it with butter and skimmed milk and making a profit, according to the committee's report, of 26 percent on its capital investment, plus a possible 200 percent more through money mysteriously transferred from company accounts to accounts of the owners, but has not reduced the price even of this reconstructed milk to the consumers of Washington.

And, in the second place, the unquestioned evidence before the investigating committee was that, while the price of milk in Washington is 14 cents per quart, the average price of cities of comparable size in the Middle Atlantic portion of the country is 14.4 cents per quart. So that all of this wild talk about the high price of milk in the District is based purely upon imagination and is refuted by authentic statistics. Furthermore, I assert that it is neither to the interest, nor the desire, of the consuming public of Washington to lower the health standards of its milk supply, which, at present, is admittedly one of the very best in the United States.

(3) While representatives of practically all of the distributors of milk in the District of Columbia were present throughout the hearings and were accorded the opportunity to testify, not one expressed any desire for the adoption of the United States Health Service Milk Code except the attorney for Embassy-Fairfax Dairy, the concern that has been making huge profits through violation of the present milk law.

(4) The only class left who could or would benefit by the bill is the class of chiseling, cheating, dishonest distributors who wish to be free to pursue their nefarious practices of the past, in the future, with their immunity from prosecution for their delinquencies insured by this act of Congress. It is easy to see how they will benefit by this proposed legislation, and easy to understand their recent activity in attempting to bring it about.

Let us analyze the situation as it would be under the proposed bill. If this bill were adopted, any distributor could for the next 12 months under its terms have three classes of milk in his plant, namely, grade A, grade B, and grade C. There is no earthly power that could police such plants and prevent them from mixing the inferior grades with grade A and selling it for grade A price. The bill would deliberately place a premium on dishonesty amongst milk distributors and enable the dishonest distributors, without let or hindrance by any power or authority, and without any means of detection, to buy grade B and grade C milk at a cheaper price and sell it to the public as grade A. I challenge anyone to examine the Health Service Milk Code and attempt to refute this statement.

The real "joker" in the bill, however, is found in section 6. The opportunity to mix A, B, and C grade milk as heretofore indicated is as nothing compared to the opportunities afforded the dishonest distributor in this section 6. Adroitly spaced between two relatively unimportant sections, it amends the

United States Public Health Service Code by exempting entirely from the code shipments of milk and cream for "manufacturing purposes." The committee report on the bill advocating the adoption of this code for some strange reason omits all mention of section 6, which amends the code and exempts milk for alleged manufacturing purposes.

The whole theory of the report of the committee is based on the adequacy and perfection of the Public Health Service Code and yet, when you examine section 6, which is not mentioned in the report, you find that a large percentage of the milk and cream to be imported is excepted from the provisions of the code. Section 6, if enacted into law, may be rightly designated as the reward of Congress to the bootlegging distributor for his flagrant violation of the law in the past as disclosed by the undisputed testimony before your investigating committee. Under its provisions, the dishonest distributor is invited to continue his nefarious practice of "manufacturing milk" by reconstruction processes and selling it as pure grade A milk in competition with honest producers and honest distributors, because it was only through the provisions of section 4 of the present law permitting the importation of uninspected cream for ice-cream purposes that the scandalous conditions so recently revealed were made possible. To broaden and enlarge those opportunities for dishonest practices is the necessary effect of section 6.

There is but one issue in this legislation. I have no objection to any bill that Congress deems desirable, provided that all producers are treated alike and subjected to the same inspection by the health officer of the District of Columbia. To subject one producer to one character of inspection and regulation, and permit another producer to operate under less-stringent inspection and regulation, is manifestly unfair to the dairy farmers, and is manifestly inadequate for the protection of the health of the city. No amount of debate, argument, or discussion can change or diminish the eternal truth of that statement.

If Congress chose to stretch a corps of inspectors from here to Kalamazoo under the District Health Department, it could do so, and no one but the taxpayer could justly complain; but to subject the milk supply of the people of Washington to the examination and fancies of the local inspection forces of 48 different States would be little short of a crime against the health of the consuming public.

The report of the committee on page 3 says that the adoption of the Public Health Service Code "does not contemplate Government control or supervision except insofar as inspection of barns and dairies and the products themselves are concerned." This statement is utterly without foundation in fact and can be excused on the ground that the committee never had before it for consideration the Public Health Service Code which it now proposes to enact into law, and therefore is not familiar with its provisions. There is nothing in the wording anywhere that provides for any inspection, by the Federal Government, of any kind, character, or description of either the barns, the dairies, or the products thereof. The report of the committee claims that 2,300 local communities have adopted this milk ordinance. The evidence before the investigating committee was that the vast majority of this number were small communities with inadequate health departments, that of 10 cities of over 600,000 where inquiry was made, not 1 of them had adopted this ordinance and the undisputed testimony of all was that these communities that had adopted the ordinance all reserved and maintained the right of local personal inspection of the dairy barns and dairy plants supplying their communities with milk.

A lot has been said about opening this milk market for the benefit of dairy farmers from distant States, so as to give them a better market for their milk.

I respect the sentiment and views of the Members from those States who are properly on the alert for every opportunity to help the farmers in their own district in every way possible, and I would have no argument with those Members if I believed that this bill would do their farmers any good. On the other hand, I know this House well enough to know that there is not a Member here who would purposely and knowingly injure the farmers in any other section of the United States without corresponding advantages to his own people. I feel, therefore, that I can ask you to calmly analyze with me the effect of this bill, with the assurance that if you are convinced that it will hurt my people and not help yours that you will vote against it.

With that premise, let us see what would be the practical effect in operation of the proposed bill. The individual dairy farmer in Indiana producing 50 gallons of milk and shipping it to Chicago or Indianapolis could not as a practical matter ship his milk to Washington on account of the distance and freight involved. As an individual, he could not for the same reason ship his cream to Washington. The practical effect would be that he would sell his milk or cream to some local dairy, as he does now. The dairy, after handling, pasteurizing, and processing, would ship it to Chicago, Indianapolis, or Washington, as the case may be, and in the net result the individual dairy farmer would not get one dollar more for his cream than he gets today. When those dairies from Indiana and 47 other States began shipping their cream into the District of Columbia the net result would be to force down the market in Washington, compelling the local producers to meet the competitive prices, which they could do and would do on account of the differential in freight. There would obviously, therefore, be a loss to the local dairy farmers without any corresponding gain to those too far away to compete with the local freight rate.

So much for the effect upon the farmer.

The report of the committee has had much to say about monopolies. Let us see what the effect would be with respect to creating and fostering monopolies. The large dairy distributing concerns, of which there are some four or five, have plants located in strategic cities all over the United States. They all buy their milk on what is known as the two-price plan, namely, a certain price for what is known as "base milk," or milk used for fluid consumption, and a much lesser price for what is known as surplus milk not consumed by the fluid market, but used for manufacturing purposes. The natural and obvious practice of these large general distributors would be to take their surplus milk in one milkshed and ship it in large quantities into those milksheds where the price to the farmers were higher and to break down the price to the farmers on one milkshed after another. On the other hand, the small independent distributor without these facilities for shifting surplus milk from one area to another would be utterly unable to compete. The independent distributors in the country would be put out of business and the four or five huge distributing chains would enjoy a complete and unchallenged monopoly.

It has been freely asserted by those favoring this bill that it was in the interests of the consumers of Washington. Notwithstanding that only 3 days elapsed between the time the bill was reported and the time when the bill was brought up on the floor for consideration, the following consumers' organizations of Washington passed resolutions vigorously opposing the bill: The Housekeepers' Alliance, Brightwood Citizens' Association, Rhode Island Citizens' Association, Columbia Heights Citizens' Association, and the District of Columbia Federation of Women's Clubs.

If certain areas of the country persist in a policy of overproduction, that is no reason why they should be permitted to preempt and destroy the markets of other areas where, through cooperative methods, the farmers have maintained orderly production and orderly marketing.

I cannot conclude my remarks without expressing my surprise at the vicious attacks made by some Members in debate on the farmers' cooperative known as the Maryland and Virginia Milk Producers' Association. It has been charged that the farmers who have joined this cooperative have created a monopoly, that they have built trade barriers and that, by joining themselves in a cooperative movement, they have done a reprehensible thing. Surely Members of Congress who represent farming areas and know the difficulty of the farmer in obtaining anything like a fair price for his products will resent these aspersions which re-

flect upon every farm cooperative in the United States. Such criticisms are but the entering wedge to destroy all farm cooperatives.

If we proceed here to take away the farmers' right of collective bargaining through his cooperative association, we not only deal a staggering blow to all the farming interests of the country, but we reverse the policy of Congress that has been adhered to by both parties for a generation.

For a long period of time both the State and Federal Governments have indicated through legislatve action their approval of the encouragement and development of farmer-owned and farmer-controlled nonprofit cooperative marketing associations.

The right of such associations to organize and to operate collectively have been guaranteed by Congress. Congress recognized the problems of farmers associating themselves together collectively by exempting in the Clayton Antitrust Act the activities of farmers when associated together in nonstock, nonprofit cooperative associations.

This exemption was extended by Congress through the passage of the Capper-Volstead Act in 1922 to cover all cooperative associations, stock and nonstock, owned and operated by farmers. I am quoting the pertinent reference on this subject taken from the Capper-Volstead Act:

Be it enacted, etc., That persons engaged in the production of agricultural products as farmers, planters, ranchmen, dairymen, nut or fruit growers may act together in associations, corporate or otherwise, with or without capital stock, in collectively processing, preparing for market, handling, and marketing in interstate and foreign commerce, such products of persons so engaged. Such associations may have marketing agencies in common, and such associations and their members may make the necessary contracts and agreements to effect such purposes: *Provided, however*, That such associations are operated for the mutual benefit of the members thereof, as such producers, and conform to one or both of the following requirements:

First. That no member of the association is allowed more than one vote because of the amount of stock or membership capital he may own therein; or,

Second. That the association does not pay dividends on stock or membership capital in excess of 8 percent per annum.

And in any case to the following:

Third. That the association shall not deal in the products of nonmembers to an amount greater in value than such as are handled by it for members.

This policy of the Congress toward farmers' cooperative associations was continued and extended in 1926 through the passage of legislation setting up a Cooperative Marketing Division in the Bureau of Agricultural Economics and authorizing annual appropriations for the use of such a body in developing and encouraging cooperative marketing among farmers.

In 1929 Congress enacted the Agricultural Marketing Act, the purpose of which was designed to place farmers as rapidly as possible on economic equality with other groups. Congress authorized and directed the enactment and carrying out of the agricultural program in such a manner as to promote and encourage the establishment of farmer-owned and farmer-controlled cooperative associations. This legislation has been amplified and continued by the present administration through the development of the Farm Credit Administration.

The Farm Credit Administration has set up banks for cooperative associations in the 12 Federal Reserve districts of the United States. Such banks, together with a central bank located in Washington, D. C., make available to cooperative associations financing which is not readily accessible from the private banking industry. In addition the Farm Credit Administration operates and maintains a Research and Service Division, whose function it is to assist farmers' cooperative associations in solving their operating and economic problems.

Under the present agricultural program Congress has specifically authorized the Secretary of Agriculture to give such encouragement to farmers' cooperative associations as will be in line with the established governmental policy toward the development of farmers' associations of this character.

The Agricultural Marketing Agreements Act of 1937, which authorizes the establishment of marketing agreements for milk and other types of agricultural commodities, specifically recognizes the place of the farmers' cooperative association in the marketing picture.

In addition to specifying that the Secretary shall give such favorable consideration to farmers' associations as is in line with the policy of the Government toward such associations, Congress in this act specifically recognized the right of farmers' cooperative associations to represent their members and vote for such members in referenda conducted by the Secretary of Agriculture in connection with the establishment of marketing-agreement programs. Congress has also recognized in this act the right of such associations to blend the proceeds of milk of all its producers and make returns to its farmers on a blended basis, subject to such differentials as are ordinarily used in the market served by the farmers' association.

When the Robinson-Patman Act was adopted in 1937, Congress carefully attempted to safeguard the rights of farmers' cooperative associations by providing that nothing in the Robinson-Patman Act could be construed as preventing such associations from returning to their members the net earnings or savings of such associations in accordance with the patronage offered to such association by its individual member producer.

In addition to this long line of Federal statutes clearly expressing the policy of the Federal Government to encourage the formation and development of farmer-owned and farmer-controlled cooperative associations, the various State governments have enacted State legislation of similar character. Today more than 45 States have cooperative-marketing statutes authorizing the establishment of such associations within the State and granting them privileges not accorded to private groups.

Neutrality

EXTENSION OF REMARKS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

Mr. ANDREWS. Mr. Speaker, referring to recent expressions to me covering the neutrality situation, our relations with foreign governments and various attitudes on where this country should stand, I have been simply flooded with letters relating to this subject—so much so that it seems impossible for me to answer each letter in full. Hence, in justice to these communications, I wish to take this opportunity of giving my general views on this very important situation.

I have been greatly impressed by the many thoughtful recommendations which I have received and I think it safe to say that they represent almost all the conflicting views of which we hear today. Furthermore, it is evident to me that a great amount of hysteria and emotionalism has been unduly created in the minds of people generally, some even of great intelligence. This I attribute to unnecessary and tactless statements by public officials and the resultant headlines in the newspapers, comment by the columnists, wide use of the radio, and a general dissatisfaction with our present state of national being.

May I say first that I am unalterably opposed to war except in our own national defense and in support of the Monroe Doctrine insofar as this country is concerned. All of my energies as a member of the Military Affairs Committee are being directed toward peace and the national defense of only what we look upon as the continental United States. I am strongly opposed to any foreign entanglements, secret treaties, alliances, and secret handling of any matters in this connection by the President. Moreover, I am against extending to him any extraordinary emergency powers or any power beyond that provided for under the Constitution. Were you in my position as the Representative of our congressional district I feel sure you would be immediately impressed with a similar general attitude on the part of a very large majority

of fellow Members of the Congress. For this reason I see no possibility whatever of this country being involved in war and I do not believe that any attack upon us is in any way imminent.

You may rest assured that I am giving my best thought and study to the question of neutrality and how we may best remain neutral, no matter what might happen abroad. To my mind, actual, downright neutrality in the abstract is almost impossible of attainment—that is, upon any one set formula over any great length of time. Any statement or credo adopted now or at any one time may, as we have seen, not be a sound one for us later on as certain conditions abroad are changed. I am led to say this because of the thousands who wrote to me advocating the adoption of the present Neutrality Act 2 years ago, some 30 or 40 percent thereof, on a check-up which I made subsequently, switched their opinion to favor lifting the embargo on Spain, obviously upon the conviction that under that act we were passively favoring Franco, the aggressor. I cite this merely as an example.

In conclusion, it is evident to me that the entire subject is a much more profound one than the average person realizes, looking to continued peace for this country. I want you to know that your views have been appreciated, and you may rest assured that as your Representative in Congress any action I may take in the form of a vote on this question will be the result of my best judgment based purely upon those grounds which I feel will make for the best neutrality we can attain and maintain looking to the preservation of peace for this country.

Neutrality

EXTENSION OF REMARKS

OF

HON. W. O. BURGIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

EDITORIAL FROM THE CHARLOTTE (N. C.) OBSERVER OF JUNE 26, 1939

Mr. BURGIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Charlotte (N. C.) Observer of June 26, 1939:

[From the Charlotte (N. C.) Observer of June 26, 1939]

CRUX OF THE NEUTRALITY ISSUE

It is probably true, and, if true, it is unfortunate, that the average American citizen does not clearly comprehend the so-called neutrality controversy now raging in and out of Congress. The real issue is one of tremendous importance to this Nation and its people.

But it is not so simple as to be adequately described as a mere question of whether this Nation is to be neutral or not when war breaks out in Europe or elsewhere.

The present so-called Neutrality Act, as a matter of fact, already during its brief lifetime has had the effect of placing this country in an unneutral attitude by helping one side and not the other in foreign wars.

The debate now centers in the question whether the United States shall impose a mandatory embargo on arms, munitions, and implements of war to combatants.

The present Neutrality Act contains such a provision. The bill approved by the House Foreign Affairs Committee does not; neither does the Pittman bill which the Senate Foreign Relations Committee has before it.

Should either of these measures become law, therefore, the outbreak of war in Europe or elsewhere would not automatically cut off the sale of arms to both combatant nations. But such sales would be placed in the same category as the sales of any other commodities that enter into international commerce and be subject to whatever rules are laid down to govern trade with nations at war, as Barnet Nover explains.

Opponents of the Bloom and Pittman bills argue that these measures are unneutral since they would, in practice, favor Great Britain and France, which control the seas, and work against Italy and Germany, which do not. It is argued that, permitted to sell arms to all and sundry, the United States would, in actuality, find it possible to sell such necessities only to the Anglo-French bloc and would thus incur the hostility of Germany and Italy.

Advocates of a mandatory arms embargo say the proposals mean, in the long run, being drawn into the next war as the sale of munitions to Great Britain and France between 1914 and 1917 meant involvement in the last war. It is argued that, to avoid such involvement, the sale of arms, munitions, and implements of war to all belligerents must be stopped the day war breaks out.

Those holding such views obviously take no stock in the theory held by many thoughtful Americans that if there is a war in Europe, American interests would, in the long run, be far better served if Great Britain and France won than if those nations were defeated by the dictator axis powers.

And it is equally apparent that they take no stock in the argument that a neutrality measure of the kind which the foreign affairs committee of the House has approved might prevent war by making it clear to the totalitarian powers that they would have to reckon with the vast supplies which the United States could furnish to their enemies.

And, last but not least, as Mr. Nover points out, it is clear that the advocates of an automatic arms embargo deem it far more reprehensible for the United States to sell arms and munitions and airplanes to belligerents than to sell them scrap iron and cotton and copper and gasoline and food, even though actually a nation at war can no more get along without such commodities than it can without arms and munitions.

On this point Mr. Nover states the case logically. He says "there is today only a distinction of degrees rather than kind between arms and munitions and the material out of which those arms and munitions are made; between, say, the bombing plane and the high octane gas without which it cannot leave the ground; between the bomb which destroys innocent men, women, and children in civilian centers and the scrap iron without which these bombs cannot be manufactured.

"In other words, the distinction between arms and munitions and strategic raw materials which play an equally important role in war making is emotional rather than practical.

"If it is reprehensible for the United States to serve as an arsenal for one set of belligerents, it is no less reprehensible for us to serve as a reservoir of those innumerable commodities which all nations at war must have if they are to continue fighting.

"On the other hand, if there is nothing wrong in selling scrap iron and gasoline and motor trucks and cotton, the same applies to arms and munitions. Yet there is not a single Member of the House nor of the Senate, including the most vehement proponents of mandatory neutrality, who has proposed that once war breaks out the United States ban all sales to belligerents."

America's Bill of Rights

EXTENSION OF REMARKS

OF

HON. ANTON J. JOHNSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

ESSAY BY DWIGHT C. BURNHAM, OF MACOMB, ILL.

Mr. JOHNSON of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following prize-winning essay of 50 words written by a student of the Western Illinois State Teachers College:

I'm proud to be an American because my country, in making and upholding the Bill of Rights, has proved her tolerance, decency, intelligence, and respect for human rights. America's policy of being governed by majority rule is typical of her sportsmanship; on numerous occasions she has demonstrated her generosity and understanding in adjusting foreign and domestic problems.

DWIGHT C. BURNHAM, *Macomb, Ill.*

The Lending-Spending Plan

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

STATEMENT BY H. B. ELLISTON

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement

by H. B. Elliston, financial editor of the Christian Science Monitor:

THIS CHANGING WORLD—THE LENDING-SPENDING PLAN—PRESIDENTIAL PROGRAM ANNOUNCED WHEN BUSINESS INDEXES ARE TURNING UPWARD—ECONOMIC AND POLITICAL TIMING

(By H. B. Elliston)

President Roosevelt has undergone three fiscal metamorphoses. First, he was an economizer, rigidly committed to a balancing of the Federal Budget after President Hoover's "extravagance." This column could not go along with him on that Spartan tack. It was too deflationary, doubly deflationary, in fact, because budgetary thrift was combined with the locking up of billions of check money in those banks which were not allowed to open.

Then the President, taking to heart the recession that overtook business in late 1933, came out for Government spending as "compensation" for the falling off in business spending. The most popular name for the practice was "pump priming." In the nature of things temporary the object was to buoy up business with both funds and example, and, after recovery had been achieved, to taper off the Government spending. This was the type of program we had advocated in the Hoover regime. It was attacked severely in the academic world.

But as Prof. D. H. Macgregor says, in his book Enterprise, Purpose, and Profit, the method of encouraging business recovery by public works is "in the strange position of being argued out of existence by very detailed analysis, and restored to vigor by broad statements of common sense." The President's Budget message of January 1934 was packed with common sense.

Now there is a third fiscal metamorphosis expressed in the new lending-spending program. This is the fourth such spending plan. But it is different from its predecessors in that it is not inaugurated during a declining spell in business activity, nor is it intended to be temporary. For these reasons this column cannot see any economic wisdom in it.

A glance at the index of business activity published by the Christian Science Monitor will prove that business is not declining. Our index touched its lowest level 2 months ago, on April 8. It is now pointing up. Other business indexes are rising. In Washington the Bureau of Agricultural Statistics, regarded as the best forecasting agency at the service of the Government, is optimistic about summer business. And its hopefulness is echoed for the first time in many months in the current bulletin of the National Association of Purchasing Agents. The pump, in other words, is already working again.

As a matter of fact, the condition of the pump is the last consideration in the new spenders' ideas. They now say that it is the operation of the pump and not its condition that requires attention. The Government, it is argued, must give private enterprise a hand at it. As the President himself says, the new program is to be "a permanent policy of the Government."

The President's statement is vastly significant of an entirely new concept of government, I wonder whether we can appreciate all its implications. Under "compensatory spending" no new theory of government was involved except an extension of service to the community in helping to put private enterprise back on its feet. The new plan, however, contemplates the setting up of a state capitalism.

And the field of operations of the state as capitalist is pretty vast as the President has sketched it. In the nature of things that field will widen and deepen. Private capitalism, on the contrary, must contract, in the face of a new competitor with unmeasurable aspirations. For self-liquidating projects are the kind of business that private enterprise itself does.

Inevitably the new scheme of public enterprise is a means of first directing the economy and then of controlling it. Moreover, the State as capitalist will operate under politically manipulated conditions. What this will mean requires no elaboration in the light of the experience with relief. The year 1940 is said to be governing all calculations in Washington. Accordingly the new program has been weighed already in the 1940 scales. Anyway, it would be absurd to think that the new lending-spending program could be operated as a purely economic proposition. Any government that runs the economy must be in a position to buy up the electorate.

Maybe it is necessary in these complicated days for government to play an important economic role for even a democratic society. But in a democracy, surely, such a role must be primarily expressed in encouraging private enterprise. The one is dependent upon the other. If one is superseded, the other is, too. I can conceive of many "encouraging" services by government. Subsidies for men thrown out of work by technological changes or by changes in the tariff, manipulation of the tariff to prevent price rigging, financial encouragement of economic research and invention, revision of the patent laws, and so on. They would all release energizing forces of private enterprise.

The Government has recently taken such an "encouraging" step by revising taxes on venturesome capital. In itself this was constructive. But the good effect of the measure is offset by the sight of the state moving into the realm of private enterprise like a leviathan. Private investors are not going to take risks when they see government branching out in every economic direction. One uncertainty has been removed, but only to be displaced by another.

Accordingly, the only point I see in the lending-spending program is political. Economically speaking, it would have been less harmful, in my opinion, for the administration to announce that it was going to take over the railroads and use them as an economic fulcrum. At least the area of government intervention would then have been known. The new lending-spending program, on the contrary, puts up no such limit, and the way is thus paved for a further deterioration of the free economy.

Devaluation of the Dollar

EXTENSION OF REMARKS

OF

HON. J. PARNELL THOMAS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

EDITORIAL FROM THE NEW YORK TIMES OF JUNE 29, 1939

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of today:

[From the New York Times of June 29, 1939]

MR. ROOSEVELT AND THE DOLLAR

There is one ground on which the President's sharp rebuke to the Senate for its failure to renew his power to devalue the dollar would be logical. It has long been evident that the administration has regarded this power as an ace in the hole for a purely domestic "emergency." If business continued to drag despite the Government's efforts to "prime" it, if farm prices continued to fall despite the elaborate schemes that have tried to peg them, if one great "spending program" after another succeeded only in adding new burdens to the national debt, then there was always the possibility of using the President's power of devaluation to give business and prices another quick "inflationary" boom. To one school of the administration's advisers it has always seemed, in fact, that devaluation was the most important single factor in the vigorous if short-lived spurt of business and of prices that began in the spring of 1933. If the thing worked once, even for a little while, why couldn't it be made to work again—perhaps on the eve of an election? But it cannot be made to work again, it cannot even be tried again, unless the Senate now reverses itself and consents to give the President the power of devaluation. On this ground the chagrin of the administration at the Senate's vote is understandable. It is as if a perplexed magician discovered late in the second act that someone had taken his white rabbit.

On any other ground the President's objections to the Senate's action do not stand the light of examination. As he states the case, the Senate's refusal to give him personal authority to devalue the dollar, jeopardizes the national defense, puts "Wall Street" in control of the country's currency, and opens the door of opportunity to "the ring of international speculators" whose activities once before threatened, and now threaten again, to destroy the stability of the dollar.

But this is exactly what the Senate's action does not do. It is a fact to be remembered now that there was no question of the stability of the dollar until Mr. Roosevelt himself took office. The dollar was stable in terms of gold until the spring of 1933. It began to depreciate only when rumors first came from Washington that the new administration intended to force action which would cheapen it. It continued to depreciate only so long as this new administration played the extraordinary role of a "bear" on its own currency, in the most gigantic speculative operation which history has witnessed. It recovered stability when that amazing Government-managed speculation ceased.

What is the situation now? The fact of the matter is that opportunity for private speculation in the value of the dollar has been present only because of the existence of the very power whose impending loss the President now so bitterly deplores. "The ring of international speculators" whose activities he properly condemns has its only opportunity to gamble in the value of the dollar when word comes out of Washington, however ill-advised, that something will be done to change this value—that Mr. Roosevelt himself is once more contemplating making use of his power to devalue. Then rumors go around, "short selling" starts, and the dollar dips in terms of foreign currencies. The record of the last 5 years will show that every temporary decline in the dollar's value has been the direct result of such rumors of devaluation. These rumors can find credence only so long as it is possible for a single man, exercising a power never before given to an American President in the whole history of the United States, to devalue the dollar overnight, according to his own personal judgment or his private whim. Take that power away, and there goes with it the only opportunity for speculation which the situation now affords.

The American dollar is in a strong position so far as the reserves behind it are concerned. This country holds today more than half of the world's reserves of monetary gold—actually more than $2 in gold for every dollar of American currency outstanding. In these circumstances there is only one threat to the stability of the dollar. That is the possibility that Congress will restore the power to devalue and that the President himself will use it.

Neutrality—Food for Debate

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. MASON. Mr. Speaker, the following excellent article on the subject of neutrality, taken from the Christian Science Monitor of Monday, June 26, 1939, is both timely and pertinent to the great question now before the Congress, and it does provide food for thought. It is a thoughtful nonpartisan, impersonal analysis of the problems involved in the question of neutrality. It expresses my attitude upon this most important matter, and therefore I offer it for the consideration of the Members of this House by having it extended in the RECORD.

"NEUTRALITY"—FOOD FOR DEBATE—AN INTIMATE MESSAGE FROM WASHINGTON

(By Saville R. Davis)

Just how important is this question of war and peace? The House of Representatives has allotted 10 hours—a generous amount, so it was suggested—for debating the basic new text of what American wartime policy is to be. The Senate probably will be treated to a filibuster—an extremely dubious instrument ordinarily used by an undemocratic minority to coerce the majority—as its chief contribution to enlightenment on the subject.

The Bloom bill, which is currently the asking price of the administration on Capitol Hill, may represent the considered and earnest judgment of the State Department to the effect that broad latitude ought to be given the Chief Executive in matters of foreign policy. But from the standpoint of telling the people what their foreign policy is to be, and enabling them to share in the decision on it, the bill is so vague that the press is full of very natural misstatements as to its content.

If anyone does wade through the text of the bill, and study it in the light of the liberties recently taken by Mr. Roosevelt with the present neutrality law, he finds that the Bloom bill says simply to whomever is President: "In time of war, you may conduct American foreign policy approximately as you choose."

And what, then, is the policy of the administration which is thus to be the controlling factor? After some weeks of checking up I think I know; I think the President and Secretary Hull sincerely intend to support democratic powers against aggression with all the economic and moral resources of the United States, while yet stopping rigidly short of military action. But I couldn't prove this in the public print if I were offered a fortune. Nor could anyone in the press corps here.

WHY SECRET DIPLOMACY ENTERS

The reason is all too simple—and baffling. The administration has two foreign policies. It talks big to the axis, in an effort to contribute to the organization of peace and the discouraging of aggression. And it talks small to American public opinion which is only slowly coming to tolerate this dangerous business of active peacemaking. This may be a two-faced procedure, but it is not dishonest. Those in the extreme opposition who accuse the administration of deliberately leading the country down the path to war in the name of the strictest neutrality are making a grievous mistake. The fact of the matter is that a dual and hence a partially secret foreign policy is exceedingly difficult to avoid in a democracy at this stage of world affairs.

Consider the reasons why:

Diplomacy at the present stage of human development operates through reason backed by potential force. Reason has yet proved unable to convince a sufficient preponderance of men and nations that it can stand alone. The object of a peaceful diplomacy, then, is to see that force is sufficiently equated, as between rivals and rival alliances, so that neither side could win any selfish national aims by fighting, and both must inevitably turn to reasonable negotiation. If you voluntarily renounce the force behind your own reason, this careful balancing is wiped out, and, as someone has said, it may take two to start a quarrel but only one to commit a murder. The other fellow has all the force in such a case and you have nothing but persuasion.

You can dignify it with the name of moral force if you choose, but that is a perilous business in this day of sovereign nationalism; the chances are that there are enough skeletons in your national cupboard so that an opponent can make your self-asserted "morality" seem ludicrous to his own people. Your country may have the bulk of right on its side today simply because it vented its wrongs yesterday.

THE ROOSEVELT ARGUMENT

But this is to venture into an endless debate on right and wrong in international affairs, a debate which is highly complex in a period of profound social and political transition such as the present. To come back to the question of force as a means of countering force and thus opening the way to reason: The Roosevelt argument is that you cannot sustain a national strength for this purpose if you deliberately say to an aggressor that you will not fight, no matter what.

Moreover, there is no use in building a huge military and naval establishment and then serving blanket notice that you do not propose to use it except for defense, when it is a basic military and naval maxim that the most effective defense is offense. This is not the way that the diplomacy of balancing forces operates. Until such time as there develops a genuine international system with its collective police action, it is necessary for you, as a single nation, to encourage a lively doubt in the mind of a potential aggressor that you do not propose to see one country after another gobbled up, until finally you are left confronting the swollen opponent.

This—agree with it or not, as you choose—is what the administration is now doing. Talking big to the axis. And it is not all bluff, either, for there never has been a test of strength between pacifism and a fighting crusade since the peace movement became strong after the World War. It simply isn't possible to say now what the people would do.

But where—and this is the core of the matter—where does this leave the American people in their effort to make up their mind on the issues of war and peace? Even Congress had to be reassured as to the President's nonmilitary intentions by means of secret sessions at the White House and in Secretary Hull's hotel apartment.

THOUGHTFUL BUT LIMITED OPPOSITION

Those who would never trust Mr. Roosevelt to have a free hand in a matter of this delicacy have only one choice, of course, and that is to oppose at all points. This they are doing—though it is not to be forgotten in the search for a healthy opposition that many a good Republican follows the Landon conviction that "politics stop at the water's edge." But there still remains the far larger group of those who do understand the Roosevelt-Hull program in all its sincerity, and still have these profound doubts: That in helping to organize world peace by means of economic and moral pressure there is the gravest danger that the situation will get entirely out of control and the country be swept into the vortex of hatreds and killing, powerless to save itself at that late date. These persons have no adequate national forum for their views. And hence the vast undecided element among the people does not have both sides of the issue presented adequately for the vital national purpose of making up the people's mind.

There are occasional radio speeches on the other side, to be sure; and the various radio forums have done yeoman work after the fashion of America's Town Meeting of the Air. The local press does its best. The March of Time has just put out a powerful motion picture whose net effect on most people will be to counter what is bluntly termed British propaganda. One wing of the peace organizations is valiantly urging the case for great legislative caution.

But against these and other elements there is arrayed the great power of the Administration to fill the channels of news and opinion, and the disposition of Congress to fight shy of an issue on which there is so deep a cleavage. Such opposition news as there is, is minor and not of front page headline variety; all too frequently, it is necessary for the reporter to go out and turn up stories in order to give the other side a hearing.

GREAT NEED FOR PUBLIC DISCUSSION

If the foregoing facts and arguments point to any conclusion, it is this: That the Democratic system is already well advanced into another crisis in the long struggle of the people, under God and through their individual consciences, to control their destiny.

When the Constitution was drafted it was almost axiomatic that the people would not know very much of the issues of war and peace; these were largely left to the Government and particularly to the Executive. Even lately it has been traditional during one national election after another to say that the two parties differed little if at all in the major political issues of foreign policy. But today, as the peace movement grows, as the people come to realize that human statesmen are subject to many limitations and to overwhelming mental pressures in time of panic, this delegation of power no longer can so lightly be made.

There never was greater need for all of the channels of public opinion to open themselves to the best available thinking on both sides. If the administration is barred by the terms of secret diplomacy at this stage of the game from emphasizing restraint, and has to spend the most of its time arousing people to their enlarging responsibilities, Congress still is freer to speak its mind. And if Congress is timid, and limits itself to 10 hours of debate in the House and a filibuster in the Senate, the people will find other means. Two-sided debate is the people's way of educating itself, and education there must be in this all-important matter, so that the people can make the right decision when the time comes, and so that the statesmen will be compelled to listen.

An Understanding Official

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

EDITORIAL FROM THE MINNEAPOLIS TRIBUNE OF JUNE 25, 1939

Mr. KNUTSON. Mr. Speaker, under permission kindly granted by the House I insert herewith an editorial by James S. Milloy, Washington correspondent of the Minneapolis Tribune, which appeared in that excellent publication on June 25, 1939.

[From the Minneapolis Tribune of June 25, 1939]

HANES IS NEW DEAL'S APPEASER TO BUSINESS—UNDER SECRETARY OF TREASURY CREDITED WITH WRITING MOST OF NEW TAX MEASURE; MORGENTHAU STANDS STRONGLY BEHIND NEW ASSISTANT

(By James S. Milloy)

WASHINGTON, D. C., June 24.—The passage of the 1939 tax bill, it is conceded, marks a definite step in progress toward better teamwork between business and Government. Credit for its enactment must be given to conservatives in the Senate and House, led by Senator PAT HARRISON, and Secretary of the Treasury Henry Morgenthau and his Under Secretary, John W. Hanes, rather than the White House.

It is an established fact that President Roosevelt at one time acquiesced to a tax bill that would carry some provisions aimed at meeting objections by business leaders to the present tax on corporations, then suddenly deserted the tax-reform advocates at the behest of the little clique of business baiters who surround him. Finally, he went along when he realized that he couldn't saw off the limb Morgenthau and Hanes were operating from or swerve Senator HARRISON from his course without widespread repercussions that would have definite bearing on 1940 elections.

THREE DEFINITE DEVELOPMENTS

In 1938 Congress went beyond what the President desired in a tax bill, and he permitted it to become law without his signature. He later denounced the changes made in the undistributed-earnings tax, his pet approach to Huey Long's share-the-wealth goal. That a Democratic national convention, in which he has great personal interest, is due in June of next year, with general elections the following November, can be taken as the explanation for his statement that the 1939 version is satisfactory to him. He couldn't help himself, even if the bill just passed goes further in meeting the demands of business than the measure which he disliked some 12 months ago.

The tax bill's journey through Congress this year has brought out three very definite developments. First, it has demonstrated that Congress generally feels it is reflecting the view of the rank and file of voters when it takes steps to break the deadlock between business and the administration.

Second, it caught Harry L. Hopkins, as the new Secretary of Commerce whose aims and intentions were overpublicized, in a spot where he had to live up to his promises or run out on his Des Moines business appeasement speech and continue in the role of a subservient minor social worker who believed the spotlight for a brief period suddenly and peculiarly endowed him with extraordinary political judgment and statesmanship. When he deserted the tax-reform group at the first intimation that Mr. Roosevelt intended to execute one of his right-about-face plays, Hopkins continued the same team play that permitted the W. P. A. political scandals in Kentucky and other States. Friends and foes alike wrote him off as even an approach to a top Secretary of Commerce and disassociated him with presidential possibilities.

The third important development was that it set Henry Morgenthau, Jr., off in a new light and revealed John W. Hanes as measuring up fully to the expectations of his friends.

STOCK-EXCHANGE MEMBERS

John Wesley Hanes, from the tobacco industry of North Carolina and the stock-exchange atmosphere of New York, became a part of the administration just 18 months ago as a member of the Securities and Exchange Commission. He had become a member of the New York Stock Exchange in January 1935, and a week later was named to its board of governors.

That in itself was an unusual tribute to a man in his early forties. He was of the younger crowd, opposed to the so-called old guard, and his good friend and intimate of President Roosevelt, ex-Governor O. Max Gardner, of North Carolina, broke the ice for him at the White House through James Roosevelt. He was a director of more than a dozen corporations, had been president of the New York Tobacco Exchange before its liquidation, and held memberships in the New York Cotton Exchange and the New York Board of Trade.

After a few months on the Securities and Exchange Commission, Secretary Morgenthau became acquainted with him, admired him and finally drafted him as his Under Secretary. He immediately loomed up as a logical get-together man between business and financial interests and official Washington.

His talents in this direction soon drew him a volume of publicity, for men within the Roosevelt circle who have an understanding of business have been few and far between. About a year ago he contributed an article to a Sunday issue of the New York Times entitled "We Face a Test of Our Common Sense," which gave the higher-ups in business an insight into his sound thinking. He openly challenged the tendency within the New Deal to bear down on big business and cater to the small-business man.

He proclaimed that businessmen should assume sincerity on the part of administration in efforts to arrest the spiral of depression, and declared that changes in the tax laws should be credited to the willingness of either the administration or Congress, or both, to act.

When the preliminary discussions on the 1939 tax revision began, Hanes was assigned to represent the Treasury, and his capacity to interpret what business really needed and to remove some of its lack of confidence and under-dog resentfulness soon won for him the confidence of the more conservative members of the Senate Finance and House Ways and Means Committees.

At first he was inclined to spread his talents but, possibly taking cue from Secretary Morgenthau who has the happy faculty of concentrating on one goal until it is attained, he made tax reform his one and only objective. He worked so nicely with Senator HARRISON and Congressman ROBERT L. DOUGHTON, chairman of the House tax committee, that he even had a hand in preparing formal requests from the committee chairmen to the Treasury for its views.

He came to learn that Secretary Morgenthau, heretofore credited with one outstanding characteristic and that complete loyalty to the President, would stand by him in an effort to secure essential tax reform with or without the President's cooperation.

STRANGE WASHINGTON SET-UP

Hanes has been able to accomplish things because he seems to have a natural talent for meeting this strange set-up in Washington where the President's most influential advisers are not in his Cabinet, with one or two exceptions, nor in Congress, nor in the top flight of Democratic Party officials. They are spotted in minor posts throughout the Government.

Hanes may exchange intimate observations with Morgenthau, but closest friends hear from him no word of criticism of the White House inner circle or for the frigidaire treatment he receives from its occupant. So the inner group cannot trump up any charge of disloyalty against him.

It should be written up to the credit of Secretary Morgenthau that he insists on Hanes finishing the job of tax reform he started and it is understood that Mr. Roosevelt cannot shake off Hanes' affiliation with the administration without accepting Morgenthau's resignation.

So John W. Hanes is not likely to be discarded as have so many others who brought some actual knowledge of business thinking to this administration. He will continue to do a very excellent job in exceptionally difficult circumstances and under conditions that would force out a less resourceful and tenacious person in 30 days.

Competition and Free Enterprise

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

EDITORIAL FROM THE CHICAGO DAILY NEWS OF JUNE 22, 1939

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD I include an editorial of nonpartisan nature written by Col. Frank Knox, Republican nominee for Vice President in 1936. This editorial entitled "Competition and Free Enterprise," appeared in the Chicago Daily News, of which Mr. Knox is the editor, under date of June 22, 1939.

I emphasize that it is not of partisan nature. In my opinion every Member of Congress should thoroughly read it.

[From the Chicago Daily News of June 22, 1939]

COMPETITION—FREE ENTERPRISE

There is no class in the country more emphatic in its denunciation of the trend toward a regimented, planned economy, directed

by political officials, than the leaders of business and industry. There is no group more vocal in its lament over the progressive emasculation of the free-enterprise system than the men who occupy responsible managerial posts in the American factories, mills, banks, and stores. These men lift strident voices in shrill protest as they see government assuming greater and ever greater authority over private business, determining more and more what business can do and cannot do; supervising investment and the returns investment may earn; relations with and compensation for those employed and other conditions of employment; specifying methods of accountancy; and every year impounding more and more earnings for the support of a recklessly extravagant administration of public affairs.

Of all these things American businessmen are intensely aware, and most of them become almost lachrymose when they attempt to recite them.

But what are the leaders of American business and industry doing to save the free-enterprise system?

No one can doubt that economic freedom provides the very foundation for all other freedoms—freedom of speech, freedom of press, freedom of religion. If someone else holds complete control over your own and your family's means of livelihood, how much are you going to indulge in speaking your mind? If a dominant political bureaucracy controls the sources of a publisher's income, how free will be the press, the pamphlets, the books that find circulation? How free will religion be if it must rely upon political largess for its support?

Similar certainty characterizes the bald statement that there can be no free-enterprise system without competition.

It is competition, and competition alone, that gives feasibility and usefulness to a free-enterprise system. Without competition to correct the abuses that flow from selfish rapacity, or from an equally dangerous reaching for power, the free-enterprise system cannot operate at all. If competition is not given the chance to operate its corrective powers, the substitution of the socialistic system, either Fascist, or Communist, is certain.

There are only two choices.

We can restore a free enterprise system by reviving the competitive spirit and getting back upon the same prosperous road that in 150 years made the United States the most prosperous country in the world, with the highest living standards; or

We can surrender to those elements who believe the free enterprise system is outworn, and no longer workable, and who are deliberately planning to change our economy to that of the socialized state, where everything and everybody is regimented by an all-powerful political dictatorship.

There is no middle ground. We cannot be half free enterprise and half socialistic.

What has been the plainly marked policy of American business, as a whole, ever since that fateful day in October 1929 when our flimsy house of paper profits, following upon a period of frenzied borrowing upon future prospects, collapsed about our head?

It has consisted of an unceasing effort by leaders of commerce, industry, labor, and agriculture to keep prices up.

This in the face of a fall in income from eighty billions in 1929, to a low of forty billions in 1932. The farmers were subsidized not to grow crops, when millions of people in the cities were without many of the necessities. The labor unions insisted upon wage and hour schedules that increased unit costs of manufactured products, and thus inexorably reduced sales volume, and increased unemployment. Industry sought shelter from a competitive price war behind the N. R. A., which it cried aloud for and helped to organize. Commerce demanded the bolstering aid of an R. F. C. to shield it from the penalties of overcapitalization. And all this was done in a futile effort to preserve the price level of an $80,000,000,000 income, on a $40,000,000,000 national pay check.

No wonder we piled up a debt of $20,000,000,000. No wonder taxes mounted until out of every dollar of a depleted income everyone surrendered 38 cents to the tax collectors.

And we did this while stifling competition.

We said we wanted to preserve the free-enterprise system, but we deliberately sidestepped the sole corrective in that system that makes it work.

We would not face the realities.

We refused to pay the inexorable price of our excesses and our follies of the wild, mad days of the twenties.

We are either going to witness a steady slide into the hopeless, level morass of a socialized civilization and economy or we are going to face the bitter truth to which history with unerring finger points. The only way this or any other nation has recovered from previous depressions was to let prices follow the immutable law of a sharply lessened demand to lower levels until they reach the bottom, following as they will, and must, the lowered purchasing power of depression income. We have tried all sorts of artificial expedients to avoid this, but none of them has succeeded. None will succeed. None ever has.

We will get back to a healthy free enterprise system and a new prosperity when we remove the restraints and impediments we have put in the way of real competition. Excessively high tariffs, which make a monopoly of our domestic markets for certain favored industries, are one of the artificial barriers that must be swept aside. The efforts of labor leaders to raise wages and shorten hours in a time of depression and thus increase unit costs is another deterrent to a revival of widespread employment and the return of good times.

Trying, by means of loans from the Government, to keep afloat businesses that ought to undergo capital reorganization, only helps to postpone ultimate recovery. Paying billions of dollars in subsidies to farmers for not growing crops, has left the farmer worse off than he was before the Government assumed control of agriculture, and has increased food costs to the consumer, including the worker out of a job.

And we have all been guilty. We are intellectually dishonest if we try to load it all on the shoulders of the new dealers. They did, in the main, what the majority of us wanted them to do—that is, try to avoid the penalty of our own folly. Now, when all of the New Deal expedients have failed, we raise a great cry that we want a return to the old accustomed successful methods of a free economy.

If we do, then there is one vital move upon which the majority of us must agree, and that is, actually to restore competition.

Battlefront of Democracy

EXTENSION OF REMARKS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

RADIO ADDRESS BY THOMAS E. STONE, JUNE 7, 1939

Mr. IZAC. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include therein an address made over radio station WQXR, New York City, June 7, 1939, by Mr. Thomas E. Stone, chairman of the Council of United States Veterans, entitled "Battlefront of Democracy."

The address is as follows:

We begin this series of broadcasts, my friends, and particularly my comrades of the World War, at a time of common peril for the run of men in America. We lift our voices for the purpose of exposing a number of serious and sinister developments which cause and contribute to that peril. We have observed the actions of certain Nazi agents in the United States preparing disruption of our national unity at a time when Adolph Hitler has leveled a threat of war against the democracies of the world. And we have observed the actions of certain individuals and groups raising within our borders the banners of fascism, compounding what we consider to be treachery to our national tradition and treason to our national safety.

In these circumstances, we of the Council of United States Veterans, composed of men who have served this country in time of war, propose to throw ourselves into head-on collision with any such developments. We shall lay the facts before you. We shall clarify the issues as we see them, and we shall suggest a course of action in keeping with the situation.

Several months ago a large purple envelope, mailed from Erfurt, Germany, to an individual in New York City, came into the hands of Roy P. Monahan, chairman of the National Americanism Committee of the Disabled American Veterans of the World War. The purple envelope was a propaganda kit, containing 32 separate pieces of literature, all but five of them written in English, and mailed from Germany for distribution by Hitler's agents in the United States.

Invariably this literature pounds and beats the cause of Adolph Hitler, praising his friends and attacking his enemies, and invariably it attacks the Jewish religious minority in the United States.

Let's take the bulletins of the American Nationalist Confederation contained in this propaganda kit mailed from Germany. They state that they are published weekly from a post-office box in a small town in West Virginia. Across the top these bulletins bear three broad bands of color, the red, white, and blue, while stamped across these colors are the four crooked arms of the black swastika of Nazi Germany.

The bulletins of the American Nationalist Confederation list numerous other organizations, agencies, and individuals in the United States whom they recommend their readers to support. Included among these are the German-American Bund; the Defenders of American Liberty in Iowa; the Anti-Communism Society in Pennsylvania; the Pelley Publishers in North Carolina; Industrial Control Reports, Washington, D. C.; America in Danger, Nebraska; the Tomahawks, Washington; and a Reverend Winrod, who, during the last election in the State of Kansas, was a candidate for the office of Senator of the United States.

The following is supplied by the Institute for Propaganda Analysis, 130 Morningside Drive, New York City. I quote: "There are today in the United States some 800 organizations that could be called pro-Fascist or pro-Nazi. Some flaunt the word 'Fascist' in their name or use the swastika as their insignia. Others—the great majority—talk blithely of democracy or 'constitutional democracy' but work hand in glove with the outspokenly Facist groups and dis-

tribute their literature. All sing the same tune that lured the German people headlong onto the reefs of fascism.

"The Fascist technique is simple," continues the Institute for Propaganda Analysis, "First make the words 'Jew' and 'Communist' so odious that people will shrink from anything or anybody on which they may be pinned. Then you have only to call those people you don't like Communist or Jewish in order to destroy them. Hence, when Dorothy Thompson attacks the German Government, Liberation, the silver-shirt weekly, snaps back that her real name is Dorothy Thompson Levy. Alfred Landon attacks Dr. Winrod and immediately Liberation points out that M. stands for Mossman, which proves conclusively that Mr. Landon is Jewish. The New Deal is Jewish, the Democratic Party is Jewish, Cordell Hull is Jewish, Franklin D. Roosevelt is Jewish, the Masons are Jewish, the C. I. O. is Jewish, the A. F. of L. is Jewish—so they say."

It is reported to me from a source which I am not at this moment privileged to disclose, that one paper manufacturing company delivers to one of the organizations already mentioned in this broadcast sufficient paper to permit the distribution of over 300,000 copies of its bulletins of Fascist propaganda every week in the year.

It is now high time, my friends and comrades of the World War, for us to make up our minds as to how we are to meet these treasonable developments. Particularly since a retired major general of the United States Army has had the effrontery to join his efforts with those of the German-American Bund, has made a bid for the leadership of the Fascist conspirators within our borders, and has adopted the Hitler tactics of building up the label Jew and Communist for the purpose of pinning it on any one of us who may disagree with him.

Let us understand that these conspirators, when they level their attack against a minority among us, are actually driving their daggers into that basic value in our tradition which holds that every man shall stand equal among us, whatever his race or color or creed.

And let us understand that they are attempting to deceive us into believing that their first attack, on the first of the values that constitute our American tradition, is the end all and be all of their purposes.

Lets get this straight, my friends and comrades of the World War. Lets get this straight if we wish ourselves to avoid the necessity of marching with blood-stained feet in some future Valley Forge as we fight for our personal rights, our personal liberties, and our personal safety. Lets get this straight—our tradition stands intact in its entirety or it doesn't stand at all.

Our tradition may be compared to a dike which protects our liberties, your liberties and my liberties, the liberties of the run of men in America. It is a massive bulwark, tennoned in the granite bedrock of the Declaration of Independence, erected boulder by boulder and pebble by pebble out of the Bill of Rights and every last rule of law that gives the Bill of Rights specific application to the problems of our daily lives.

Beyond the dike, forever threatening our precious liberties, lie the restless forces of personal ambition, the surging forces of the private armies of terrorism, the ever-surging, ever-restless seas of potential tyranny, now agitated by the winds of foreign propaganda and blown up to turbulence by the storms of universal crisis.

Behind this dike of American tradition stand we—the run of men in America—moving about our humble but to us very precious affairs—seeking through democratic institutions to work out our common destiny while with some degree of foreboding we listen to the storm that whistles overhead.

Suppose that in these times of common peril for the run of men, suppose as the seas of potential tyranny are pounding against this mighty dike, suppose that we should hear borne down the wind a voice that called "There is one rock in that wall which is the cause of all the trouble. Dig out that rock and the seas will subside." Suppose that we, turning in wonder to look into each other's eyes, should then hear a voice among us saying, "The voice from the storm is right, forsooth. Tear out the rock and the seas will subside." Suppose that we should hear this voice in our midst persist in saying, "Let in the seas of tyranny. They seek but to drown only one small group among us and all the rest will be safe."

But, friends and comrades, we in our right minds have already heard the voices of ambitious men saying, as they expounded the creed of Adolph Hitler, "Tear out that rock of your tradition which protects all men, whatever their race or color or creed, for it is only one small group among you, one tiny minority, that causes the restless seas to move." And we have heard among us the voices of those who have not yet stopped to think, saying, "Tear out the rock as these ambitious men are demanding; for it is only this small group among us, this tiny minority, that the seas of tyranny seek to drown."

And now, friends and comrades of the World War, let us give our answer to these men whose ambition overleaps itself. And let us show an example to those who have not yet stopped to think. Our answer is this—wise, courageous, honorable, and as sure as instinct. That this wall, which is our American tradition of liberty, democracy, and equality, cannot stand for an instant, if it is breached by the tiniest fissure, the tiniest hole. That there can be no rights for the run of us unless we safeguard to the last iota, the rights of the least of us. That the flood of tyranny cannot select to drown any minority among us without drowning us all. And that we do not propose to let in the seas of tyranny against any one group, to find, when the storm subsides, that we must walk among our children with heads bowed down in a desolate waste that once was called noble America.

And now, let this be heard boldly and clearly above the storm. Let it be dinned into the ears of the traitors and into the ears of those who have not yet stopped to think. That we propose to defend the wall of American tradition, down to the last pebble, down to the last grain of sand. And that we stand ready to block with our bare fists, if need be, the tiniest hole that force or treachery may strive to open in the dike of our tradition, by denying liberty, equality, and the pursuit of happiness to any American on the score of race or color or creed.

And now you—you ambitious gentlemen who sound your horns as you stir your pack to bay the blood lust call to persecution of an American religious minority—you traitors to our American tradition.

We hale you before the bar of American opinion. We charge you with compounding internal treachery to our ideals of democracy at a time when Adolph Hitler is making a frontal attack on the democracies of the world. We find you guilty and we ostracize you—we banish you from the society of decent Americans and we condemn you to the Tower of Coventry, there, by the stern white light of your consciences, to read and reread until you know by heart every syllable of the Declaration of Independence, the Bill of Rights, and the Gettysburg Address of Abraham Lincoln.

And you, my friends, and you, my comrades of the World War—at this time when the precious rights of all of us stand now in peril—we charge you with a duty. In the name of common sense and common safety and in the name of common devotion to our democratic ideals, we charge you, each one of you, in your homes, in your offices, in your workshops, and on the street corners to show by your actions that you have made a common front with any minority whose freedom is under attack because of its race, its color, or creed. We charge you, in the defense of our common liberties, to join with us as we show by our actions that, although we may not agree with a single tenet of any such minority, we are nevertheless prepared to defend to the death, if need be, its right to hold and express it.

Neutrality Legislation

EXTENSION OF REMARKS

OF

HON. ROBERT A. GRANT

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

LETTER OF MR. FLOYD O. JELLISON

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written me by a constituent, Mr. Floyd O. Jellison, of South Bend, Ind., on the subject of neutrality and neutrality legislation. Mr. Jellison is a veteran of the Spanish-American War. He is active in veterans' and in civic affairs, and is a respected member of the bar. His letter follows:

SOUTH BEND, IND.

Hon. ROBERT A. GRANT,
Member of Congress, Washington, D. C.

DEAR SIR: Received your letter dated the 24th instant together with extract from House Report No. 856 in regard to the 1939 proposed Neutrality Act. I presume that the Congressman would not object to my offhand comment in regard to the same. Therefore, I will say:

Generally speaking, I am opposed to granting any more powers to the President. Having in mind the preservation of peace, the framers of our Constitution provided that the declaration of war shall be vested in the Congress, and I think that should be preserved in every respect.

It would take a lot of space to say what I have in mind on the subject of peace and war. However, there is a thing in our practice as lawyers known as the common law, which is the pronouncement of what is right. This has grown and developed from as far back as the days of Queen Elizabeth, and further, for that matter, to the present time, and as times have changed, we have had new pronouncements coming from the judiciary. Not that the judiciary makes the law, as the law is the right. The judiciary merely pronounces or proclaims what that right is.

On this subject the people have been too nervous to remain quiet and have rushed into the legislatures of our States with a view of getting acts passed so that they can have something to read, and have the law fixed so that they may know it by the words written into the acts of our legislatures. Now, this seems to be coming true of recent years in regard to our Federal Government.

Our international law is the common law of the nations, clearly defined by precedent, and each precedent makes a new pronouncement of it, so that every sovereign nation knows what the international law is and what the rights of a sovereign power are—not only in regard to its power within its borders but its rights on the sea, in the air, and everywhere.

There is no dispute in regard to this international law anywhere along the line. There was no dispute about the international law when Mussolini went down into Ethiopia; there was no dispute about international law when Japan went into China; there was no dispute about the international law when Hitler took over Czechoslovakia. In fact, there was no argument in regard to international right at the time Germany waded across Belgium in the World War. All of the acts that I have mentioned above grew out of pure cussedness bent upon aggression, bent upon thievery, bent upon taking something that did not belong to them.

Now, when that motive prompted the conduct on the part of these nations that motive cannot be curbed by writing a law into an act of Congress, because the motive will remain there still. I am opposed to the passage of a lot of acts by our Congress in a feeble-minded hope that it will help preserve the peace of this country.

I want this country to attend to its own business and to maintain the right to attend to its own business—and its chief business is to maintain its own sovereignty. When a sovereign nation surrenders any of its rights, then it is no longer sovereign—and by rights I mean not only to occupy its own land and to fight anyone, if they step their feet on its soil, but I mean the rights to enjoy its rights on the sea and its rights of commerce and its rights to build and maintain necessary coaling stations throughout the world and a right to sell its surplus products to anybody in the world who desires them. Those are our rights. Those rights must not be curbed. Another right that we have is to maintain our present form of government, although our present form of government may be a little bit difficult to define.

I like to think of our country as a republic. That is what my old "jograffy" used to say when I was in the primary grades, and I have never forgotten it. I still think that is what we have, although it has certainly been abused during the present administration. Some like to call it a democracy. That is all right if they want to call it a democracy—a representative democracy. Perhaps that is all right, but a representative democracy and a republic is one and the same thing—a representative form of government; a republic. We have to come back to that.

What I was going to say is this: If we have a right to maintain a representative form of Government, then it should be our privilege, if that right is imperiled, or about to be imperiled, to assert ourselves before it is too late.

I am not at all interested in having the United States go into the world with its armed forces in order to settle any quarrel between any nations of Europe, but I am interested in maintaining the right to maintain our present form of Government.

Let me ask you this question: Suppose that the United States of America was the only Republic on earth, or representative democracy, or democracy as it is called, and all other nations were of the dictatorial type with their dictators, kings and queens, and what not, just how long in that lonesome environment could we maintain all the rights of a sovereign power hereinbefore enumerated.

As I say, I want the United States of America to maintain its sovereign power. I want it to be free and untrammeled. I do not want it at any time "hamstrung" in advance in regard to any belligerency in the world. I want it to be righteous, and to be loved by the righteous nations of the world. Likewise I want it to be a silent, potential menace to the wrongdoer, but never to be put in motion by one man. But let the Congress speak when the time comes. This silent, potential menace to the wrongdoer will be America's greatest contribution toward maintaining world peace.

The Congress are our representatives—men of our selection, the best men presumably that can be selected from among our midst. They are the representatives of our representative democracy—our democracy—our Republic, and the best we can do is to leave it to our Congress—a Congress that is free and not "hamstrung"—to do the thing or not to do the thing when the exigencies arise, that our safety and permanent security seems to demand.

Very respectfully,

FLOYD O. JELLISON.

Campaign Contributions by W. P. A. Workers in Rhode Island

EXTENSION OF REMARKS

OF

HON. CHARLES F. RISK

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

Mr. RISK. Mr. Speaker, on Tuesday last the gentleman from California [Mr. GEYER] placed in the RECORD by unanimous consent a statement entitled "W. P. A. and Politics."

In the statement he made reference to two incidents which occurred in the last campaign in Rhode Island. One was that William H. Vanderbilt, then candidate for and now Governor of Rhode Island, had erroneously made a statement to the effect that certain W. P. A. workers had been laid off and men from another section in the State sent in to replace them on work necessitated by the hurricane of last September. The gentleman from California further stated that Mr. Vanderbilt later admitted his error. These two statements of the gentleman from California are true. So what about it? In my opinion it is to the credit of Mr. Vanderbilt that he admitted his error immediately after he found out that he had been misinformed.

The other criticism that the gentleman from California makes of the Republican Party in Rhode Island is that 101 W. P. A. workers are said to have donated a dollar each to the Governor's campaign fund. At this point I wish to insert a short article in the Providence Evening Bulletin of yesterday, which tells the story.

[From the Providence Evening Bulletin]

VANDERBILT FUND INQUIRY REQUEST IS GIVEN REBUFF—CELLER SEES NO NEED FOR PROBE OF W. P. A. CONTRIBUTIONS IN CAMPAIGN

WASHINGTON, June 28.—Yesterday's request by a Democratic Congressman from California that the House Judiciary Committee investigate a contribution of 101 one-dollar bills from as many W. P. A. workers to the Vanderbilt campaign fund last year met a rebuff today from the committee.

Representative EMANUEL CELLER, Democrat, of New York, acting chairman of the committee, said he saw no reason why the committee should call in Gov. William H. Vanderbilt and others to explain the contribution, as suggested by Representative LEE E. GEYER, Democrat, of California.

BILLS NOT SOLICITED

Vanderbilt declared last night the 101 one-dollar bills were not solicited. Today CELLER said:

"Even if the funds were solicited, it was no violation of present law.

"What Mr. GEYER pointed out happened in many States, and we are seeking to prevent it from happening again by reporting out the Hatch bill."

CELLER disclosed that the House Judiciary Committee hopes to report out the Hatch bill for favorable House action tomorrow. The Hatch bill is designed to minimize political activity by W. P. A.

Congressman GEYER suggested yesterday that the committee "request Governor Vanderbilt to inform it whether or not this reputed campaign contribution was used for his campaign, whether it was given to some charitable institution or whether it was given back to the W. P. A. workers."

He further asked that former Republican State Chairman Peirce H. Brereton and former State Committee Treasurer Edwin H. Arnold "be called before the committee to testify whether or not this money was solicited from W. P. A. workers, and also to inform the committee whether or not this was just a publicity move, using W. P. A. as an agency to solicit votes." GEYER urged the investigation in connection with the present consideration by the Judiciary Committee of the Hatch antipolitics-in-relief bill.

EXPLAINS MATTER

Governor Vanderbilt, at his summer home in Williamstown, Mass., said last night: "The story is exactly like this: A man came to the door of a friend of mine in Newport during the campaign, asked for the man, saw him, and gave him 101 one-dollar bills, and told him they were from 101 W. P. A. workers in Newport for my campaign fund. He knew the man was a friend of mine, he said. My friend did not know who the man was, and the man walked away after handing over the money. The money could not be given back to the W. P. A. workers because we did not know who they were. It went into the campaign fund."

Congressmen HARRY SANDAGER and CHARLES F. RISK said they "knew of the donations at the time and know they were entirely unsolicited and voluntary," but would communicate with Governor Vanderbilt to learn what he wished to do in answer to the Geyer statement. SANDAGER characterized GEYER as "erratic."

GEYER, who in a speech in the House said there was a "huge" Republican campaign chest in Rhode Island, declined to reveal his source of information.

One cannot deny the truth of the remark of Mr. Austin T. Levy that such a contribution was the "most significant contribution in this campaign," as quoted by the gentleman from California. It certainly was significant that 101 workers drawing down only the meager pay allowed by W. P. A. were willing voluntarily and anonymously to contribute a dollar apiece to the Republican campaign fund. It was evidence of the truth of statements made then and still being made that the men and women on W. P. A. are sick and disheartened at the prospects of nothing better. They have seen the ruinous

policies of this administration cause them to lose their positions in private employment. They see no future but misery and want under the New Deal. One hundred and one of them took this way of showing their dissatisfaction.

None of the gentlemen mentioned by the gentleman from California, Governor Vanderbilt, Mr. Levy, Mr. Brereton, or Mr. Arnold need be defended on the floor of this House. Theirs was a difficult job last October and they did it well. All of us who were candidates and in conference from time to time during the campaign know that there were two bugaboos standing in the way of a successful campaign—W. P. A. money and a stolen election. I know something about this combination, because I was a victim of it in 1936 and a near victim in the last election.

The gentleman from California rightly said "that the honest citizens of Rhode Island desire to be enlightened on the political activities and maneuvers of those who used the relief agencies in their State for political purposes." They do so desire and they did last October and they were enlightened. They proved that on election day beyond any reasonable doubt.

And the gentleman from California, in seeking to know what the campaign funds were used for, would be enlightened when he found out by far the greatest items in the Republican election expenditures in Rhode Island would read something like this:

(1) For educational program to secure honest election.

(2) For educational program to secure for W. P. A. workers the privilege of voting as they pleased without intimidation on the part of Democratic politicians and ward heelers.

Jitterbug Economics

EXTENSION OF REMARKS
OF
HON. DUDLEY A. WHITE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 29, 1939

Mr. WHITE of Ohio. Mr. Speaker, President Roosevelt's latest $3,800,000,000 proposed spending program is not only another ascent into the stratosphere of New Deal jitterbug economics, but, if adopted, it would be the first major step toward State socialism under which the Federal Government would take over private industry and the United States would become a totalitarian nation.

That is the real and startling situation which confronts the American people today. That they are for the most part unaware of the stark reality and the impending menace to democratic institutions is due to the intricacy of the subject and to the deceptive subtlety of the New Deal theorists who are using all of their bag of tricks to disguise outright spending as lending and socialistic projects as the normal functions of democracy.

Panic-stricken at the thought of retribution in 1940, now that the people at last realize the magnitude of the failure of the pump-priming schemes, the rule-or-ruin New Dealers are eagerly embracing the socialistic concept in an effort to escape the consequences of their economic follies. The bright young wizards of the inner circle have set the stage for another trick performance. So far the country has seen, in the proposed spending program only what the master magicians want it to see.

Yet there were telltale lines in the President's letter to the Democratic leaders on Capitol Hill. First, Mr. Roosevisit emphasized that only self-liquidating projects shall be included in his program. Then he made this highly important statement:

> There seems no reason why there should not be adopted as a permanent policy of the Government the development and maintenance of a revolving fund fed from the earnings of these Government investments and used to finance new projects at times when there is need of extra stimulus to employment.

Highly significant is the President's abandonment of the pretense about the existence of an emergency to justify his program and his contention that what he is proposing now should become permanent policy of the Government—a permanent policy of Government financing of self-liquidating projects. There is the key to the proposal. Explore the implications of that statement and the New Deal drive toward what might be euphemistically called "state capitalism," but which is better known as socialism, is laid bare.

The implications of the President's references to self-liquidating projects and to permanent policy become clearer if they are considered against the background of a memorandum recently submitted to the Temporary National Emergency Committee by Assistant Secretary of State Adolf A. Berle, who ranks high in the "brain trust." One of the less politically minded and more outspoken of the New Dealers, Mr. Berle, gave away what is behind this new rabbit-from-the-hat scheme.

"Either we are on the eve of a change in our financial system," said Mr. Berle, "or we are on the eve of a change in our social system."

Too clear a thinker not to see that the inevitable result of the New Deal plans, including his own, is a Socialist state, Mr. Berle stuttered in abashed confusion over the word "Socialist" in the sentence which follows, in his memorandum, the one just quoted.

Plainly—

he says—

> a revised financial system should not be conceived to settle the question of whether the United States becomes a Socialist country which, of course, I am not advocating. That will be determined partly by economic forces and partly by the thinking and desires of the country itself.
>
> In consequence, the system of finance has to be so adapted that it can serve equally well private enterprise, public enterprise, or a combination of both, and any intermediate forms which may appear.

The Berle memorandum, it will be recalled, was submitted in connection with his proposal to create a banking system for capital and capital credit. It assumes that it is a function of Government to create wealth by creation of Government debt. Mr. Berle put it this way:

> The Government can create, and does create, wealth in the form of roads, parks, public buildings, public hospitals, and the traditional public services of the Federal, State, and local units. Plainly, these, as they now stand, are not sufficient to serve as the market for more than a fraction of the capital-goods production in the United States.
>
> Briefly the Government will have to enter into the direct financing of activities now supposed to be private; and a continuance of that direct financing must be inevitably that the Government will ultimately control and own those activities.
>
> Put differently, if the Government undertakes to create wealth by using its own credit at the rate of $4,000,000,000 or so a year, and if its work is well done, the Government will be acquiring direct productive mechanisms at the rate of $4,000,000,000 worth a year, or thereabout.
>
> Over a period of years, the Government will gradually come to own most of the productive plants of the United States.

In other words, Mr. Berle contends—and correctly so—that we cannot go on spending billions of dollars for parks, highways, hospitals, and the like. But if Government spending on "self-liquidating" projects is to be "a permanent policy," we must turn to other types of projects. What kind? Why, as Mr. Berle puts it, "the direct financing of activities now supposed to be private" until, as he says, "the Government will gradually come to own most of the productive plants of the United States."

There you have it in a nutshell. The end visualized by Mr. Berle is but one stop removed from what Mr. Roosevelt now openly proposes. Perhaps Mr. Roosevelt does not see eye to eye with Mr. Berle in his objectives; perhaps he thinks he can stop within the limitations of what he now proposes.

But he cannot stop as long as he makes Government spending on "self-liquidating" projects in order to stimulate employment a "permanent policy" of the Federal Government. What he now proposes is a direct consequence of the last 6 years of New Deal spending. The proposed program already encroaches seriously on private enterprise. The next

dose of such spending will encroach further on private enterprise and so on until the Federal Government will "own most of the productive plants of the United States," unless the policy is abandoned in the meanwhile.

I cannot believe that Congress ever will authorize embarking on such a program. But if it does, we can take consolation in the fact that a saner and sounder administration will replace the new dealers before the second and third steps of what Mr. Berle visualizes are reached. If this is not true, then America indeed faces a dark future.

Jones in Key Spot—World's Biggest Money Job Comes to Texan on His Record as R. F. C. Chief

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

EDITORIAL FROM THE AUSTIN (TEX.) AMERICAN-STATESMAN OF JUNE 25, 1939

Mr. LYNDON B. JOHNSON. Mr. Speaker, I want to quote a concise, well-written editorial which is indicative of how the people of Texas feel about the President's appointment of our fellow Texan to the world's No. 1 finance job. This editorial appeared in the leading daily newspaper in the capital of Texas, the Austin American-Statesman, June 25, 1939.

It is as follows:

[From the Austin (Tex.) American-Statesman of June 25, 1939]

JONES IN KEY SPOT—WORLD'S BIGGEST MONEY JOB COMES TO TEXAN ON HIS RECORD AS R. F. C. CHIEF

The world's No. 1 financial job was placed in the hands of a Texan when President Roosevelt made his logical and expected selection of Jesse H. Jones as head of the new Federal Credit Administration.

This appointment called the Texan to a financial post more important than the head of the Bank of England, far greater than the Chairman of the Federal Reserve System, or the Secretary of the Treasury.

It in effect made Jesse Jones the lending official to every citizen and to every institution in the United States which shares the direct financial partnership with the Government.

Mr. Jones has proven himself in his service as a member and Chairman of the Reconstruction Finance Corporation. He has proven his service to the Nation was one of patriotism and not of politics; and if he does as well the work ahead as in the past, he will bring justice, fairness, and opportunity to the humblest citizen who needs his house repaired, and to the largest of the railroads, faced with problems of meeting pay rolls and keeping employed their hundreds of thousands of workers.

Above all, the billions of dollars this Texan lends on behalf of the Government will be lent intelligently.

It is safe to predict that the financial mind of Jesse Jones will carry on the lending division of the Government at a profit to the 130,000,000 people of the Nation.

Texas legislators a few weeks ago heard an address by Mr. Jones. They heard in it a disclaimer of political aspirations; more than that, they heard a straightforward pledge of allegiance and loyalty to the aims and objectives of the Democratic administration, a direct commitment to aid the Democratic Party bring to fruition its purposes and programs.

We believe it is correct that the skill, sagacity, and wisdom of this Texan had much to do with making the Reconstruction Finance Corporation program a success, of gaining for it the record of both stimulating employment and animating business, and at the same time making it pay its way. Thus we see the mind and statesmanship that caused to be created this tremendous new agency of Government cooperation with business and the citizen entrusted with the mandate to make it work.

Texas has confidence this job, big as it is, will be carried through to the credit of its chief and to the benefit of the people.

Devaluation of the Dollar

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

Mr. THORKELSON. Mr. Speaker, I regret that no time was given to me for reply to a member of my own party who yesterday voluntarily stepped forward to apologize in my behalf for having inserted my own remarks in the RECORD, in which I have discussed nothing but constitutional facts. It is not my intention to reply to the most distinguished gentleman nor is it necessary for me to acknowledge the gentleman's remarks. Members of Congress, however, should keep in mind that we are elected to represent the people in the United States, adhere to constitutional government, and state facts so that the people may be reliably informed as to what is happening to their own government.

Experience has taught me that misstatements fall by themselves, and I believe it is generally recognized that nothing but truth will prevail. If I am in error, if I am wrong, it will be better to designate the point wherein I am wrong, for I am always ready to defend my position, and I make no apology for any statements that I have made. No one realizes better than myself the forces behind this move. It will be only a short time until the people in the United States recognize the issue as clearly as I do.

The daily statement of the United States Treasury on June 22, 1939, presents the fact that thirteen and a half billion in gold certificates is held by the governors of the Federal Reserve banks and interests outside the Treasury. The statement also lists that the President and the Secretary of the Treasury have free use of $2,000,000,000 in gold. The gold in the Treasury is subject to withdrawal when needed to balance foreign accounts or other claims. The gold certificates held, as I have said, are claims against the gold in the United States Treasury, and so is any United States security held by a foreign government. This statement is confirmed by a letter from the Acting Secretary of the Treasury in the RECORD of June 22, 1939. The power which this gold wields is in the hands of international bankers and brokers, and this power is responsible for the condition of our country today. It reaches a little further than that, because the removal of gold from other nations is a tremendous power which may be used to cause dissension within such nations as are deprived of gold as a medium of exchange. It might in reality bring about such antagonism against the United States as to lead us into war. This power, I venture to say, is wielded by no more than 300 people.

It is indeed unfortunate that a small number of people wield such influence over the Nation's destiny that a spade cannot be called a spade.

Personally I am not a good hater, and at the present time I do not harbor such feeling toward anyone. I do not hate even those who are engaged in the destruction of our own Government, because I believe they are innocent victims of a few misanthropists. What I would like them to bear in mind is that in becoming party to subversive activities they bring about their own destruction, for those that are now leading the Nation to rule and ruin will, if they take charge, liquidate those who helped them in wreckage. As I have said before, labor itself and those who are now dupes of the radical and Communist will in time, if these wreckers are successful, shed tears on the ruins of their own liberties.

Our republican form of government is, in my opinion, the best government any country has ever had. It has carried us

for 150 years to prosperity and all good things in life that any people could ever hope to attain. It was founded by a people who were well informed about all sorts of governments, for they had lived amidst intolerance and persecution. With this experience they created the Government of the United States as a democratic republic. It is our duty to take the torch of freedom and carry it on so that we may perpetuate for ourselves and for our children the ideals of those who created the Republic of the United States.

Mr. Speaker, in glancing over the Evening Star, I saw an article to which I shall refer, because it is interwoven with the Neutrality Act of 1939:

DEVALUE POWER HELD NECESSARY FOR DEFENSE—PRESIDENT ROOSEVELT REBUKES ACTION, ADDING IT IS NOT FINAL

HYDE PARK, N. Y., June 27.—President Roosevelt said today that control over money would revert to Wall Street and international speculators if he were deprived of his power to devalue the dollar further.

The discontinuance of that authority, he said at a press conference, also would strike a very definite blow at national defense, because a country can be weakened by hurting its foreign trade.

Misleading information is the order of the day. It is to confuse all of those who are not in the sacred international monetary ring in Wall Street.

Devaluation of the international dollar to 12.4 grains of gold will automatically raise the gold to double its former value. It was $20.67 before 1933, and it will be $41.34 if the dollar is again devaluated. What does that do? It allows foreign nations to buy the same merchandise with 1 ounce of gold today that they bought with 2 ounces of gold before 1933. In other words, let us say that cotton was 10 cents a pound and wheat $1 per bushel before 1933, and both of these items the same price today.

Before 1933, when the dollar was 25.8, the farmer received 2,580 grains of gold for 1,000 pounds of cotton, and 2,580 grains of gold for 100 bushels of wheat.

Today, under full devaluation, the same farmer will receive 1,290 grains of gold for his 1,000 pounds of cotton, and 1,290 grains of gold for his 100 bushels of wheat.

Who takes the loss? No one but the American farmer and the manufacturer. The New Deal calls this good business, or a good-neighbor policy.

This constant meddling with money is for no other purpose than to fool the public so that we will not understand how the smart boys in Wall Street are selling us into serfdom. We now have bonds on the market that sold for $1 with 25.8 grains of gold, and since 1932 we have bonds on the market that were sold for $1 with 15.521 grains of gold. If the dollar is again devaluated, we will have another issue on the market selling for $1, which contains 12.4 grains of gold. This makes very little difference to the American people, for we are not allowed to use money secured on gold. The smart boys let us use hocus-pocus or play money, for they need the gold. This system creates confusion and consigns all international transactions into a pure gambling game. The Secretary of the Treasury's and the President's $2,000,000,000 gold stabilization fund is used for such purpose, for gambling on the international stock market.

This little play on further devaluation to which the paper refers is no doubt created by the inner circle as a smoke screen. Further devaluation does not matter. As a matter of fact, it would be better did we not have the fixed gold content for the international dollar. In such event, all international trading would be conducted as it is now, on grains of gold nine-tenths fine, but we would not be tied to a dollar with a fixed gold content. The power wanted was control of gold and further extension of the $2,000,000,000 gold stabilization fund. In order to pull the wool over our eyes, devaluation was set up to fool the statesmen, and it did, for the congressional gab fest was on further devaluation.

It is the Gold Reserve Act that sold the American Nation into poverty, and it is the Gold Reserve Act that deprived our own people of gold. It is the same act that has bestowed the right of ownership of all gold to the international money kings, who are now laughing up their sleeves at the imbecility of Congress. This motley international crew now holds title to $15,537,875,078.95 in gold, and we, the people, are left whistling on the corner with a tin cup in our hands.

In these remarks I have dealt entirely with international money and monetary transactions. The President should express no fear that monetary control may return to Wall Street. For it is there now, 100 percent. Over $15,000,000,000 in gold, if you please, is now owned and controlled by the money changers in Wall Street, and it is the first time in American history that the international pirates have had such control. This is not all, for the same gentlemen are using a hocus-pocus or commodity money and credit to acquire control of industries, business, real estate, railroads, and the merchant marine. They do not even have to use gold money for that. They buy this property, which was developed and built with gold money, with a hocus-pocus or commodity money. And this is the President's good-neighbor policy to the international money kings. When this spectacle ends, we will find that we have been sold and bought out in exactly the same manner as the German people were sold and bought out during the inflation. It is well to bear in mind that transfer of property is taking place today. And it would be interesting to know who the actual owners are or will be. I am reasonably sure that German history can be duplicated here.

Congress appropriates money for airplanes, and contracts are given to certain selected companies. Why does not the American people ascertain who owns and controls such companies? I mention this because little or nothing is granted to independent companies which can actually build aircraft as good and with higher speeds than the companies to which the contracts are given. I say, Why should not Congress look into that? It is this body that is responsible for appropriating this money.

We are in the most corrupt and rotten mess we have ever been in. The invisible government's press, radio stations, cinema, and propaganda bureaus, including the Federal propaganda bureaus, are hand-in-hand with this attempted sell-out of the Treasury. I wish we all could understand that it is we, the people, who are the suckers for this bunch of international monetary pirates. We are forced to use hocus-pocus money, but the money changers use gold. We stand in the breadlines, but the nobility in Wall Street live on the fat of the land and in shining palaces. Our own worker is beating the streets looking for jobs, while foreign labor is steadily employed.

Other nations' undesirables are allowed free entrance into the United States, for no other purpose than to create more confusion and poverty.

These glorified financiers are not satisfied with that, for they want to perpetuate another Gabriel, not over the White House, but within the structure itself. The same crew that has deprived the American people of sound security, sold them into poverty, created idleness and despair among our own people, is also intimately interested in the Neutrality Act which is up for consideration today.

The Neutrality Act of 1939 is for no other purpose except to involve the United States in war on the side the President may select. It is useless, for contingencies which this act attempts to regulate are already regulated under the rules of international law. The first paragraph of the act states exactly that:

Whereas the policy of the United States in foreign wars not affecting the defense of the United States is a policy of neutrality in accordance with the rules of international law.

The Neutrality Act is the offspring of a supreme egotist, for no nation is going to be very much disturbed by the

manner in which we pursue neutrality. It is regulated by international law, and this act will not change such regulations. Strange as it may seem, the New Deal is not satisfied unless it can meddle in everybody's business. In pursuing such course, our own industries and business are in the "dog house." I say, therefore, anyone who presumes that he can regulate the whole world is in my opinion a supreme egotist.

Let us get this picture straight. Congress alone has the power to declare war, and we may maintain peace by minding our own business. We cannot always preserve peace for ourselves, because it depends on whether other nations will allow us to remain peaceful. But we may be reasonably sure, if we do not stick our neck out, our head will still remain in place. There is no provision in the Constitution which delegates power to Congress to declare the President of the United States an international umpire on war, peace, and neutrality. If we are to estimate such ability upon past performance, there will be an international family row, as soon as he takes his position.

The act itself is a childish attempt at regulation, and the President will be in the same position as Johnny Tittle Tattle in school. He will stand aside and shout, "Tommy struck him first" when he proclaims the aggressor nation. It would be a good comical show for the rest of the world.

It does not take the President to inform the American public when nations are at war. Any child 8 years old knows that. Out in the Rocky Mountains, when two gunners start working, most of us duck to get out of the line of fire. That is the position of a neutral nation in international warfare. Keep out of combat areas. This can be done by denying our own ships the right to sail in such areas, and by not permitting our own citizens to travel in such areas on foreign ships except at their own risk. If any of us are so all-fired curious that we must travel across the Atlantic or Pacific to see men kill each other, we should also provide arrangements for our own funeral.

It is further well to bear in mind that we, the common people of all nations, are not those who create war. War is created by the same people who now own and control the international gold, and they are the same people who are responsible for nearly all wars. This crowd started the World War, the Russian revolution, the Spanish "red" revolution, the inflation in Germany, which led to race hatred, and the involvement in China, where communism prevails. It is the same crowd that made dope addicts of the Chinese, a people who were educated and well informed before we could read. It is the internationalists in the monetary group who are behind the communistic activities which are now attempting to destroy civilization. It is the same group of East Indian-Europeans who are now in control of narcotic trade and white slavery on the California coast. All of them combined are at odds with Japan for refusing to become a party to their trade.

The Neutrality Act will aline the United States definitely on the side of the Communist, which is clearly evident when I quote section 6:

SEC. 6. The foregoing provisions of this joint resolution shall not apply to any American republic.

It can be seen from this that in excluding American republics, Mexico is the republic which this bill has in mind. It is to Mexico that the casualties of the red revolution will be admitted, and the purpose is to aid their brother Communists in the United States. Mexico is also to be and is a departure point for illicit immigration, for entrance of those who crawl over the borders at night or along the coast line by boat. It is quite possible that airplane fields within the Mexican border will harbor bombing planes that can attack and set fire to a radius of not less than a thousand miles. Within such radius we will find many large cities and many large industrial plants for peace and war needs. We will not be attacked from across the water, and the Army and Navy are well aware of that, but we are not safe from activities in the nation south of us. Our attack will come from within, directed by the Third International through their agents in the United States, and necessary aid will be rendered by their brothers across the border in Mexico.

The Neutrality Act will help in consummation of this most abnormal state. The act further provides for disarming of our own people, and that is very important, because we will then be easier victims for the Communist who is well armed.

If any of us should object or fail to comply with the President's orders, we may be fined $50,000 and put in jail for 5 years. In the event that he should vent his spleen on a corporation, each and every important individual in such organization may be fined $50,000 and jailed for 5 years.

Personally I cannot conceive of any legislation that will more nearly place us in the same category as Russia than this neutrality bill. It empowers the rulers to get rid of the intelligentsia, as was done in Russia; and, if Canada were not to the north of us, I suppose many would be banished to the shores bordering the Arctic Ocean. Those who drafted this bill should not be very proud of it, for it is impractical in application and dangerous to our people. It is the most deliberate attempt to involve us in a war and place us at the mercy of our enemies that has ever come to my attention.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS
OF
HON. WADE H. KITCHENS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 29, 1939

LETTER FROM THE SECRETARY OF STATE

Mr. KITCHENS. Mr. Speaker, on June 23 Congressman DITTER had placed in the CONGRESSIONAL RECORD a letter from Mr. Millard Brown, president, Continental Mills, Philadelphia, to the Secretary of State relative to trade agreements. Herewith is the Secretary's reply to Mr. Brown. The error referred to in this correspondence was corrected in the CONGRESSIONAL RECORD.

JUNE 26, 1939.

Mr. MILLARD D. BROWN,
President, Continental Mills, Inc.,
Armat and Lena Streets, Philadelphia, Pa.

MY DEAR MR. BROWN: I have received your letter of June 3, 1939, containing further observations with respect to the trade-agreements program and, among other things, calling attention to a statistical error in my letter to you of May 15, 1939.

The error to which you allude was a rather obvious typographical one which should, of course, have been caught before the letter was released. Promptly upon its being called to our attention, steps were taken to make the necessary correction in the CONGRESSIONAL RECORD and elsewhere to which copies of my letter had been sent in response to incoming letters pertaining to this matter.

With regard to the other points raised in your letter, most of the arguments you advance have already been covered, either directly or by implication, in discussions and testimony relative to the trade-agreements program already available to the public.

Sincerely yours,

CORDELL HULL.

Neutrality

EXTENSION OF REMARKS
OF
HON. LEON SACKS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 29, 1939

RADIO ADDRESS BY HON. PATRICK J. BOLAND, OF PENNSYLVANIA, JUNE 28, 1939

Mr. SACKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of my colleague from Pennsylvania, Hon. PATRICK J. BOLAND:

This week is most critical in the history of the United States. The Congress has under consideration the Neutrality Act of 1939.

So that we could get the real opinion of America on every phase of this important topic, the Democratic majority has opened the bill to any pertinent amendment. Conscious that our world relations transcends domestic political consideration, we want our new legislation to be American legislation and not partisan Democratic or partisan Republican. We want it to be American legislation and not Asiatic or European legislation.

The House Committee on Foreign Affairs, which reported the pending bill, held extensive and most informative hearings on America's neutrality policy during which all testimony was devoted to various legislative methods to keep us out of war. The committee adopted the plan of Secretary Cordell Hull as the best practicable legislative enactment, in the light of all the circumstances, to maintain America and to save us from war.

We hope, for the future of our country, that partisanship does not taint the vote on this bill. This thought has been best expressed by the Republican New York Herald Tribune, which said on June 18 of this year, "It would be highly unfortunate if the fight over the neutrality legislation in Congress should be determined by votes cast upon a purely party basis.

"Neutrality is not in any sense a partisan question. The problem is not one of upholding Secretary Hull and President Roosevelt as members of the Democratic Party, but rather of deciding whether the measure which these gentlemen urge is soundly based. Such opposition as has been voiced to date has come almost exclusively from Republican sources. The minority report of the House committee is signed by 9 out of the 10 Republicans on the House Foreign Affairs Committee."

This committee has been confronted with the difficulty of adjusting and extending an American national policy so that it would apply in a world where international obligations and the rights of man have been suspended. This the American people realize as does the Congress. In the face, though, of this social disruption the committee has produced an American bill which, while in accord with the American policy fostered in a better and less-savage world and so fair to all people, at the same time safeguards America as a neutral and obviates our recourse to arms. The bill plans to maintain our economic life during a time of foreign wars without the medium of force and arms. This objective is within the scope of our national policy, and if the bill did not so provide America would legislate itself to economic ruin in a war it never made.

As Dr. Esther Brunauer, of the American Association of University Women, stated to the Committee on Foreign Affairs, "neutrality legislation has come to be the symbol of American foreign policy. Actually, it is only a small part of the whole foreign policy of the United States. Moreover, it is domestic law and governs only the actions of persons within the legal jurisdiction of the United States. Nevertheless, its implications for the general course of international affairs are far-reaching. No nation can formulate its own foreign policy without taking into account what one of the largest and most powerful nations in the world is likely to do in a given situation."

The best way to be neutral is to discourage war by any nation. This bill may accomplish that, for it affects the preparation for war made by the war-minded by giving all nations who can pay and transport an opportunity to draw on American resources. It does not, as does the existing embargo, close our markets at the expense of our own economy or in the interest of the war-prepared—prepared in spite of the American-sponsored Kellogg Pact, which means outlawing war.

The automatic embargo should be repealed, for it takes us out of world trade and out of the family of nations and alines us with those nations who have with deliberation determined on a rule of the world by force. The embargo forces us to repudiate our own plighted word under the Kellogg Pact, and is contrary to the principles laid down by accepted international law, as well as to the teachings of the great peacemakers. How inconsistent is the embargo with the teachings of Pope Leo XIII and Pope Benedict XV, Pope Leo said, "Consequent upon the repudiation of those Christian principles which had contributed so efficaciously to unite the nations in the bonds of brotherhood and to bring all humanity into one great family, there has arisen little by little, in the international order, a system of jealous egoism, in consequence of which the nations now watch each other, if not with hate, at least with the suspicion of rivals. Hence, in their great undertakings they lose sight of the lofty principles of morality and justice and forget the protection which the feeble and the oppressed have a right to demand."

As an American Congressman, fully realizing the great importance of the statement of this great humanitarian, my contention is that America should lift this embargo and not place us in the embarrassing position of helping an oppressor nation against the oppressed.

Pope Benedict XV pronounced against nations who would invoke force, when he favored: "As a substitute for armies, the institution of arbitration, with its high office of peacemaker, according to norms to be agreed upon and sanctions to be determined against a state which would refuse either to submit international questions to arbitration or accept its decisions."

The present bill embodies the plan of Secretary of State Cordell Hull, whose experience with the old act has convinced him that it is not workable in the interest of America. The Washington Post in a very thoughtful editorial makes a statement concerning the Secretary, which I believe most acceptable to the American people: "The proposals of the Secretary deserve the most favorable consideration, first, because they come from him. Nobody in the Cabinet enjoys a more universal trust and esteem than does the Secretary of State. He is not impulsive; he is singularly free from prejudice; he is, in this administration, remarkably consistent; he is not susceptible to pressure groups; and he is a man of peace."

The Hull plan and the bill ends the automatic embargo and reestablishes the cash-and-carry feature of the law, which feature lapsed on May 1 of this year. Instead of the embargo on munitions the cash-and-carry provision will apply to munitions as well as to other articles of trade.

Much congressional criticism is founded, not on the efficiency of neutrality control set forth in the bill, but on a prejudiced viewpoint of the President. Critics overlook that the President's control of foreign affairs is paramount to Congress excepting that Congress has the power to declare war. Those who wish Congress to have the absolute control of the neutrality policy present a ridiculous alternative to the neutrality bill in that they insist that Congress stay continuously in session to avoid war. We cannot declare war unless Congress is in session, and the philosophy of the critics of this legislation, therefore, in my opinion, would have Congress in continuous session which would be the only condition under which we could possibly be involved.

They present another dilemma when they state that the present neutrality bill is designed to make the President a dictator and at the same time that the bill is not neutral as against the dictators; in other words, they are stating that the President is against the dictatorship idea in government and at the same time wants to be one. This lack of logic only comes from a blind partisanship that the New York Herald Tribune condemns.

The Supreme Court of the United States said in the Curtiss-Wright case, "It is quite apparent that if, in the maintenance of our international relations, embarrassment—perhaps serious embarrassment—is to be avoided and success for our aims achieved, congressional legislation which is to be made effective through negotiation and inquiry within the international field must often accord to the President a degree of discretion and freedom from statutory restriction which would not be admissible were domestic affairs alone involved."

President Roosevelt is not the first President of the United States who has insisted that the President be given some discretion and freedom from legislative restrictions in regard to foreign affairs. George Washington, the first President, said: "The nature of foreign negotiations requires caution, and their success must often depend on secrecy."

The other and main point of attack on the present bill is the repeal of the embargo. For over 150 years this country developed without an embargo against a munitions provision in our law. We had the embargo for a short time and we have found that it works directly contrary to our own objectives and our own national pledges to the people of the world.

It became most apparent that this was so during the Asiatic troubles. If the President had declared the embargo in the undeclared war of Japan on China we could not have shipped munitions to China, but we could have shipped all raw materials necessary for munitions to Japan, which was in a position to process them into munitions, and China did not have such facilities. So, had the President declared the embargo, we would then have given material help to Japan, which had already violated the Nine Power Treaty and the Kellogg Pact, both of which we signed. We would have been in the same position as a man who helps his worst enemy destroy his best friend. This was neither human nor ethical nor practical from America's own interest in the progress of the world.

Moreover, the embargo in case of another world war would have put the war-making powers in the position of saying, "America must stop its trade." Strange to say, many of those who uphold the embargo are criticizing the administration because of unemployment. I venture to say that the unemployment of this country would be almost tripled if our trade were blocked by our legislative embargo. Strange to say that some of the critics of the embargo repeal have associated themselves with those who attacked the bill because it denies us freedom of the seas, due to the cash-and-carry provision.

Another class of critics insist upon the embargo because they say its repeal is unneutral in the event of war between the axis powers and the democracies. They are quite content to overlook the fact that the embargo would make us unneutral in favor of the dictators against the democracies; and, what is more important, they seem quite unconscious of the Kellogg Pact, which we instigated and which, at least morally, bound us to be against aggressive nations.

Chief Justice Charles Evans Hughes said of the second article of the pact: "It is not a profession but a pledge, positive and comprehensive. That is the heart of the treaty."

The militant American churchman, William Chase, of New York, argued before the Foreign Affairs Committee, saying that if America does not execute its own law, the Kellog Pact, we are not honest, and we cannot go before God and expect His blessing.

The Kellogg Pact was ratified by the United States Senate under the guidance of one of our foremost American statesmen, Senator BORAH, and there can be no question but that we gave up our so-called traditional, though somewhat mythical, policy of isolation when we entered the family of nations by signing the Kellogg Pact.

Partisan critics of the bill are deserting the official position of the Republican Party concerning neutrality. The Republican platform of 1928 endorsed the proposed Kellogg Pact, which was nonneutral as far as war and the makers thereof were concerned, and the Republican platform of 1932 went one step further, favoring

congressional enactment authorizing the United States to call or participate in international conference in case of any threat of violation of the Kellogg Pact. That proposal was never passed, but those who advocated it as a firm step against aggressors are today advocating an embargo which helps the aggressors violate the Kellogg Pact.

Some state this neutrality bill will help the defending democracies because they are in a position through their naval and maritime supremacy to come to our shores and get our goods, and that the dictators are not in a similar position. They have forgotten that the reason the democracies are in this position is because of the Washington Disarmament Conference, which was adopted during the time of President Harding and which gives Great Britain a supremacy on the high seas. We had nothing to do with other treaties which were made with Great Britain and Germany concerning the limitation of naval armament, which also put Great Britain in a position to acquire our goods by the cash-and-carry provision. We are making our law in time of peace on the status of power to which we have contributed and by which we secured certain important admissions from other countries. By the Kellogg Pact our Monroe Doctrine was recognized by the world.

President Roosevelt is not responsible for the Kellogg Pact, but President Roosevelt, under the constitutional oath of office, must recognize its obligations and so must the Congress.

There is little of logic and less of law in the objections to this bill. There is neither political neutrality nor international neutrality in the objections. It represents a very well worked out compromise between various thoughts as to safeguarding America from war, and all through the bill there is carried the idea of American rights and American obligations. Nothing better could be said for the bill than the words of our very able peace-loving and respected Secretary of State when he wrote the Congress the following guiding remarks: "These proposals are intended to aid in keeping the United States from becoming involved in war. They contemplate primarily a state of affairs in which relations in the world have ceased to be peaceful.

"Our purpose must be, at all times, to endeavor to foster that state of relations among nations which will maintain the fabric of world peace. In pursuance of that aim we have done, and must do, everything possible within the limits of our traditional policy of noninvolvement in overseas affairs.

"In considering the present proposals for legislation, we must keep in mind that, no matter how much we may wish or may try to disassociate ourselves from world events, we cannot achieve disassociation. The simple fact of our existence as a great Nation in a world of nations cannot be denied; and the substance of the legislation adopted in this country inevitably influences not only this country but also other countries. The problem for us is not whether we shall help any foreign country or any group of foreign countries. Nor is it that of passing judgment upon or interfering in other people's controversies. Rather, it is that of so conducting our affairs and our relations with other peoples, both before and after the outbreak of war elsewhere, that we shall be more, and not less, secure; so that we shall not become parties to controversies; and so that our attitude and actions will encourage other people to avoid rather than to become engaged in controversy."

The Far East in American University Curricula

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, June 30, 1939

ADDRESS BY HON. ELBERT D. THOMAS OF UTAH

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by the junior Senator from Utah, ELBERT D. THOMAS, before the Institute of Far Eastern Studies at the University of Michigan, Ann Arbor, Mich., on June 27, 1939, on the subject "The Far East in American University Curricula."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Three nights straight talking on subjects which I have loved to think about for a generation leaves me in a quandary as to whether to make these talks a trilogy of repetitions or to attempt definitely each night to stay within the given bounds of the announced subjects. If I had stayed within bounds, I should never have wandered over the earth. If I had remained with the conventional, I should never have thought of teaching oriental subjects. I could never have been poetic as Nitobe was, who wanted to learn so that he could be a bridge to carry eastern culture to the west and western culture to the east. My hope was merely to bring the eastern scheme of thinking into our western thought.

You may have a better time and learn much more if I stay in bounds, but I will not have half as much fun. Our meetings here at this institute are definitely for mutual benefit. Please let me go my way, get thoroughly mixed up, and enjoy myself for the minutes I am before you. From experience I have known for a long time that a visiting lecturer's task is merely one of being an irritant to furnish stimulus to what a generation ago we called the regular professor's raspberry remarks.

What is the place of the Far East in the curricula of American universities? Of course, the Orient always has had a place in all teaching and classroom discussion, but is it worthy of a branch of study by itself? More and more I answer, "Yes."

Anyone who will seriously study our earth will discover, at almost any period wherein he will take a broad approach to the study, a unity which is startling in its aspects. A university must aim at the great universals. The world, therefore, must of necessity be one of these universals.

Since this is a time of economic interpretation, let us approach the place of the Far East in the only true approach to economics that man may take today. The known world throughout all history has been an economic unit. Since the invention of money and the development of trade on a money basis men and their wares have gone into every nook and corner of known places, and the men in offering these wares have braved for the purposes of gain and advantage the vast unknowns. In this day when nations are attempting to build self-sufficient nationalistic entities, if the Far East impressed itself as it should, if the study of it were stressed in every institution, the fact of this economic world unity would prove the economic interdependence of nations and our vital relationships to that unit would be made plain.

Having accepted this thesis, we realize that our national economic ills probably could be solved if the study and the thought that is being put into an attempt to solve those national ills were tempered by a recognition of the actual fact of world economic unity. If this earth is an economic unit, do you not see that the economic ills of the world cannot be solved on a strictly nationalistic basis? Since the invention of money the universal acceptance of gold and silver as money throughout the earth has brought a money unity into the world. There are many kinds of money, but each has a common denominator, and that through the ages has been gold and silver. In the production and the consumption of the earth's products the outlet for surpluses has been some far-away ultimate consumer. The ultimate consumer in this world-wide economic scheme will therefore be that people with the ability to absorb and pay for surpluses. The ultimate consumer will therefore be that part of the world where the greatest mass of population is. The ultimate consumer will therefore also be found in that part of the world where there has always been an ability to absorb profits and take all surplus investments.

In what I have said I have assumed a world unity based upon gold and silver money economy. Some thinkers are suggesting that the day of metal-based money is passing and that the world of the future will be one where economically organized nations will compete with one another on the basis of nationally combined labor and resource strength. If that day ever comes that people closest to the ultimate consumer, with the cheapest, lowest labor standards, labor and the greatest labor surplus, will have the greatest advantage. America's interest in the Far East will then not be merely an academic question; it will be one of the most vital concern if we are to maintain in any way our living standards.

Leave for a moment that thought and return to this one, made so plain to us by Mr. Sloan, of the General Motors, when he testified before the Monopoly Committee. General Motors had become self-sufficient. That great organization did not need to borrow; it was not dependent upon a second party for financial resources. Its products, therefore, have always found an outlet with profit. Where has this outlet been? It has been the whole world, and there has been in the world the ability to absorb. Then, in connection with the testimony, it was pointed out that the United States last year made $18,000,000,000 in profits that had to seek investment or be left as simple savings. Due to the fact that our economic scheme had become national in its scope, the investment channels abroad had become closed. America's economic world had in a sense therefore become bounded by the oceans. This was not entirely our fault; it was primarily because of the conditions among those peoples whom we shall term the ultimate consumers of our surpluses in goods and investing money.

Now, throughout history, or at least for the last 2,000 years, gold and silver as basic moneys have always remained comparatively scarce in Europe and America because of the greater degree of power in eastern Asia to absorb, to retain, and to keep whatever surplus in these two metals the world had produced. Let us state it in another way: For 2,000 years the mere fact that in China we have had private property and private ownership and hundreds of millions of people gainfully employed has meant that China has taken ultimately the surplus of practically everything. So much so has this been the case that I venture the assertion that an economically sick China has in the course of two or three seasons spelled an economically sick Europe and America. Having ventured that statement, let us look at the facts: We have had war and an economically sick China since 1911. I shall have to leave this

thought with this conclusion, which will be my first reason for suggesting that the Far East has a place in our university curriculum: We know where the world's surpluses can be consumed providing the people have the buying power. For the first time in China's history the Chinese in this long period since 1911 have had drained from them that which they have always relied upon to continue their purchases, regardless of pestilence, famine, war, or privation. Since 1911 the foreigner, especially in exploiting China, has taken his profits in the metals. He has drained from the Chinese the Chinaman's hoarding, and China today, exhausted, is unable to buy. In olden days, or in the days before 1911, when the individual made a profit, he put that profit in silver slugs. He hid these pieces of silver in his adobes or mud plaster when he built his house. Fire came; all was destroyed; his apparent wealth was wiped out. But no; in the ashes and in the debris he searched and found again his capital to start him going once more.

We must remember that the concept of private property and the theory of personal or family ownership, the two economic fundamentals of a democratic society, have persisted in China since times before Christ, and on these two simple principles has economic democracy there rested. If we are to restore prosperity to Europe and to America, based upon the use of money in free buying and selling, which has reflected the economics of the world for centuries, we must in some way or other cease thinking in terms of a simple national economy and base our efforts upon what are the facts—a world-wide economy. Has the Far East a place in economic study? Probably the greatest and most important place. One season after peace is restored in the Orient and Chinese labor has a chance to accumulate its ordinary New Year's holiday spending, there will be no American surplus cotton.

Yet, materially sordid as we Americans are supposed to be, I would not leave a justification of bringing the Far East into our curriculum on merely an economic basis. Has there not been throughout history this similar unity in other fields also when we have studied properly? How else can we account for such close, almost identical practices in the laws of the lands that we find when we compare the canon of Shun with the code of Hammurabi? How can we account for great centuries of spiritual outpourings, like the sixth century before Christ, where so much that is the best of China, the best of India, the best of ancient Palestine, in religious thought is discovered?

We recognize these unities when we study world conquests. We recognize these unities when we think of the history of Buddhism or of Christianity and the spread of these great systems along the channels of world trade.

We recognize these unities, too, in given periods like the seventeenth and eighteenth centuries, when the thought, coming as a result of the newly discovered world and newly opened trade lines, burst upon Europe, producing a unity which shows itself in great universal social and political revolutions. Just because the unity is only apparent during periods of great activity, great catastrophes, great war, it does not follow that it has not been there all the time. The young Dauphin who became Louis XVI took an interest in printing, printed and made a book written by Fenelon, whose title was "Telemaque." Proudly Louis went to his grandfather with the first copy. Louis XV opened it and read: "The sovereign * * * should show himself a model of virtue, of respect for religion, and an example of piety and zeal."

"Monsieur le Dauphin," said the King coldly, "you have done enough. Break the plates."

Confucian political thought had dawned upon Europe.

Does anybody imagine that the political philosophy of the Chinese sages had not influenced that thought? Who could attempt today to write on English or American literature and leave out consideration of the imagist poems brought into our scheme of poetry as a result of contact with the Japanese Hokku and Tanka poems? What would a study of religion be without some reference to Confucianism or Buddhism? How can we explain the transplanting of western nationalistic thought based upon loyalty to the King into the Mikado cult of Japan without understanding the possibilities of using some theory of Shinto to develop the thoroughgoing modern national state such as exists in Japan today. If we see the contributions of the west in the great activities that are taking place in the east, so if we but study the east, we shall see the influence of it upon our thought, our literature, our history, and our economic life in the west. What better answer can we find to the racial crudities which are being taught today in Germany in regard to the purity of the German race than to discover how thoroughly mixed the Japanese people are racially speaking when the facts are brought to play upon their own notion of constantly and everlasting thinking of themselves as a racial unit?

We think in America that we like democracy, its toleration, its great freedoms of thought and action, its recognition of personal and private property, its right to buy and sell, its devotion to peace. Probably we can find the results of those institutions which we here point out as the characteristics of our democracy upon the habits, the characteristics of a people, if we will study deeply China, the long-lived empire, whose similar institutions have made for stability there as well as contributing to China's ability to live down miseries, sufferings, and disasters.

I wonder if the student of today could not understand Europe's warring states and Europe's economics, Europe's revolutions, a little better if he had studied, or let us say if he had thought of the period of China's warring states as a laboratory for deduction. There is a thousand-year block of history open to the student of sociology, politics, international relations, and interstate conflict, the like of which is not presented anywhere else in the world to the scholar who will attempt to analyze present-day Europe and predict its future. If we want to be thoroughly and completely objective about the possibility of the evolution and development of an international law based upon morality, where better could we turn than to China to study the history of the conflicting states and realize from actual historical fact what happens to a great number of states when they exhaust themselves in strife instead of building themselves up in cooperative endeavor?

Then, too, there is Japan, the great meeting place, where theories which evolved in the east and in the west have been fused in the building of a nation.

In economics, then, the Far East has a place in our curriculum. In history, then, if the Far East is left out we have no concept of world-wide trends. In literature and language, in religion, and in social science, and especially if we remain in the fields of geology, archeology, and anthropology, we shall always find a place for the Far East in our studies.

In education there must of necessity be that approach which brings out the facts of world unity rather than emphasizing the assumed facts of diverse and nationalistic entities, which are responsible for so many of the ills which striving, contesting nationalisms are attempting to solve for themselves.

In 1909 or 1910 President Eliot visited the Far East. He felt that eastern Asia had not much to contribute to our educational scheme. His deduction was based upon the thought that the east had not evolved a scientific method. But sad to relate we had not evolved a scientific method in our study of the east. This institute proves that today we now have the scientific attitude. Much will come from this.

The National Scene—Its Recent Past and Its Immediate Future

EXTENSION OF REMARKS

OF

HON. EDWARD R. BURKE

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Friday, June 30, 1939

ADDRESS BY HON. MILLARD E. TYDINGS, OF MARYLAND, BEFORE THE AMERICAN IRON AND STEEL INSTITUTE

Mr. BURKE. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by the Senator from Maryland [Mr. TYDINGS] before the American Iron and Steel Institute on May 25, 1939, at the Waldorf Astoria Hotel, New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a distinctive honor and a particular pleasure to be asked to address this distinguished gathering of Americans. Here are represented the leaders of one of the great industries of our country. In talking to you tonight I shall make some comments upon the national scene, its recent past and its immediate future. Of course, the past is behind us. It cannot be changed. The future, on the other hand, is yet ahead and is ours to make what we will.

Out of the abundance of our great wealth and the accumulations from former periods of prosperity, it has been possible during the last 7 years to experiment in the field of government in a most lavish fashion. If one experiment did not work well, it could be discarded and a new one attempted. Our resources were so great that at first the cumulative effect of experiments, both good and bad, did not deliver its full impact upon our economic life.

However, even in a country with resources as great as ours, a decline in these resources and a tiring of the patience of the people with continuous Government innovations in the end more than ever demand sound remedies.

We are now approaching that point in our national economy. At the beginning of the depression in 1929, our national debt was less than $20,000,000,000. Today it is $45,000,000,000. How much is $45,000,000,000? Well, if we were to begin paying off this debt at the rate of $500,000,000 a year, it would take five generations of American citizens to discharge it.

The interest charge on our national debt alone is now more than $1,000,000,000 a year. If we were to begin at once a policy of paying current interest on the debt and decreasing that debt in principal $500,000,000 a year, it would consume 25 percent of our present entire national income for 90 years. The interest on the national debt takes 17 cents out of every dollar which the people pay in Federal taxation.

It would take 3 generations, or 60 years, to bring down our national debt to where it was 8 years ago, if it were reduced $500,000,000 a year.

This is the situation into which the "brain trusters," the "rubber stamps," and the "Yes, Yes" boys have got the financial affairs

of the United States Government. The men who advocate spending oneself out of debt are the ones who advocate drinking oneself sober. In fact, these self-styled and pseudo liberals are the real reactionaries. They are the forces which are selling the American people into economic slavery.

Always they proclaim that next year, as a result of Government spending, the income of the country is to be increased 20 to 30 percent. In the meantime, while they spend, elect, and experiment, confidence in the future is lost, the army of unemployed mills about the streets of our cities and towns as it has done for the past 10 years. In the meantime, agriculture has known few periods of even remote prosperity.

The man on the side lines, who views it all, is driven to the belief that under the guise of improving the condition of the people, the National Government is actually squandering their substance and prolonging the misery of the masses.

Obviously, this cannot go on interminably. To keep on, year after year, borrowing against the future, and chasing the mirage of prosperity in a desert of reckless and wasteful expenditure is to embrace real disaster eventually.

The whole reckless program is carried on in the same fashion that Mark Antony employed with the Roman populace. You recall that Mark "came to bury Caesar, not to praise him."

Today, the same emotional build-up is used in this country to put over certain programs. As soon as common sense commences to dissipate the sophistry and lure of mere words, a new emotional build-up, interlarded with name calling and epithets, is begun.

Last Monday night I listened to the address of President Roosevelt before the Retailers National Forum. In the course of his address, the President said, I quote: "It would be bad for business to shift any further burden to consumers' taxes. * * * Remember, as businessmen and as retailers, that any further tax on consumers, like a sales tax, means that the consumers can buy fewer goods at your store."

I agree thoroughly with the position taken by the President. It would be more interesting to have the President's comment upon the effect on consumers' purchasing power when the day comes—if it ever does—when the lavish expenditures which he has constantly advocated are to be paid for, as they will be, by the consumers of the Nation.

The President feels, he says, that a consumers' tax would be very bad for business. But the President did not say that eventually it will be the consumers of this Nation who are going to pay off the tremendous debt which the present administration is foisting upon many generations to come.

If additional consumers' taxes would be injurious now, they will be injurious whenever they are laid, and they will have to be laid as I shall presently prove if the debt is not to be repudiated, directly or indirectly.

Now bear with me. Out of the $5,520,000,000, which the Budget Bureau estimates will be the total tax income for the United States in 1939, all of the corporations and all of the income-tax payers of the Nation will pay $2,086,000,000. How is the remaining $3,434,000,000 raised? It is raised now, and always has been raised, by taxes on the masses of the people, the consumers of the Nation. And keep in mind that while the masses of the people—the consumers—are now paying over 60 percent of our total national tax revenue, it is not enough to make income match outgo, for at the same time we are annually spending billions of dollars more than we are taking in.

It is, of course, true that when debt-payment time comes that the corporations and the income-tax payers alike are going to have to pay heavy additional taxes. But even if we take every cent of income from all of the people in this Nation who receive more than $100,000 a year, it would only amount to $974,000,000. It is obvious that the well-to-do, if we took every cent they received, could not produce the money needed to meet our present expenses or to make up the sums needed for the eventual payment of the debt. The billions to be raised annually must come out of the sweat and toil of the working masses of this Nation, the white-collar worker, the farmer, the laborer, and the skilled mechanic.

The President's logic that consumers' taxes hurt business is sound. If this is sound and true now, it will be equally sound and true when the consumers of the United States pay, as I have shown they must pay, the additional taxes necessary to liquidate the national debt.

Of course, if the President is playing a hunch that prosperity, which has been continually promised each year for the last 6 years, really does come, say after January 20, 1941, then all may be well. But if the President's hunch should be wrong, what then? It is bad policy to run a government on hunches. It is bad to run it on money that five future generations will have to raise in order to make the Nation solvent.

Obviously, the policies of the present administration cannot go on interminably. Indeed, to pursue the course much further is to hasten disaster. How, then, can we turn the flank of this movement, so shot with sophistry? That is the task of those who are in positions of leadership, in and outside of government, the task of getting the 120,000,000 men, women, and children of this country back on the road of real recovery and improved conditions.

I shall attempt to prove tonight that there is only one way, in the main, in which this can be achieved, and that is by the revival of the private business of the Nation.

By business, I mean agriculture, mining, electric light, power and gas, manufacturing, construction, transportation, communication, trade, finance, services, and miscellaneous enterprises.

In normal times 50,000,000 persons find employment in one or the other of these activities. At present some ten or twelve million of those normally employed are without work or only partially employed.

How, then, can the machinery of business be started so that at least a large part of the army of the unemployed can be absorbed in everyday work, so that taxation and governmental expenditures can be decreased, and through the orderly exchange of goods and services we can again know a normal life in this Nation?

First, I am of the opinion that much of the half-baked legislation, some of which has been discarded, such as the N. R. A. and the A. A. A., the spend-yourself-out-of-debt and similar panaceas, has had its roots in a lack of comprehension of what the businesses that I have named really mean to the Nation.

Our people have forgotten, it appears, that the only place in which a citizen can find work outside of government is in some line of business, whether it be manufacturing, transportation, or agriculture; that government has nothing in the way of revenues except what it derives from the conduct of private business; and that unless business can be resuscitated, unemployment, burdensome taxes, annual deficits, and a disastrous national debt are inevitable.

In my judgment, the people of this Nation, particularly the working people, do not appreciate fully how much they have at stake in the revival of business. Until they do, bad legislation, useless experimentation and innovation, and evil times are likely to persist.

The charts which you see on the wall were prepared during the administration of Franklin D. Roosevelt. They are not my figures. They are the figures of the Department of Commerce of the United States Government.

The first chart is entitled "Business Savings From 1929 to 1937," a 9-year period

It deals with every business in the country, including agriculture. Look at the figures. In the year 1929 the business of the United States took in $2,583,000,000 more than it paid out.

In 1930, all the businesses of the Nation paid out $5,000,000,000 more than all the businesses of the Nation took in.

In 1931, all the businesses paid out $8,052,000,000 more than they took in.

In 1932, all the businesses of the Nation paid out $8,942,000,000 more than they took in.

In 1933, all the businesses of the Nation paid out $3,094,000,000 more than they took in.

In 1934, all the businesses of the Nation paid out $1,429,000,000 more than they took in.

And in 1935, for the first time in a 5-year period, all the businesses of the Nation took in $310,000,000 more than all the businesses of the Nation paid out.

The startling summation shows that from January 1, 1929, down to and including December 31, 1935, all the businesses of the Nation paid out $23,529,000,000 more than was taken in.

Business, during the years from 1930 to 1934, inclusive, was living upon the resources it had collected and set aside in good years. During this period of time, most of these resources were used up. While it is true that in 1936 and 1937 business as a whole was able to make a small profit, it was not sufficient to replenish the resources which business itself, not Government, spent during the 5 deep years of the depression. Business, during these 7 years, 1929–35, inclusive, has spent practically the same amount of money which the Federal Government has spent in an effort to overcome and survive the depression, for business has used up $23,529,000,000 of its accumulated resources in the period I have indicated. Without these resources, built up in good years, there would have been universal bankruptcy and economic chaos in this country. It was only because business had set something aside in the sunny days that it was able to carry on through the long storms and economic rain of the 5 years succeeding 1929.

And yet, in the face of that contribution, high personages in Government lose no opportunity to berate, belittle, and attack, and sometimes to persecute men who have carried on through the depression at a greater loss of resources than the National Government has experienced.

The man who preaches to the American people a general hatred of all businesses teaches them to hate the very source to which they must look for food, shelter, and clothing for themselves and their families. No one has a bigger stake in the revival of business than have the 50,000,000 people who in normal times find employment in these various businesses.

Let me next refer you to the chart on manufacturing, embracing all the various activities of our people in the production of heavy and consumers goods—the steel, the automobile, clothing, furniture, typewriters, tools, bricks, and the like. What do we find? We find that out of every income dollar which the great manufacturing interests of this Nation have taken in, an average of more than 80 cents of that income dollar was paid to labor.

When a man buys an automobile from one of the large automobile manufacturing concerns, it never occurs to him that about 82 cents out of every dollar he paid for that automobile went for labor. He assumes that in the plant where the machine was fabricated, the component labor percentage was a good deal less than 82 percent of the cost. He fails to realize that labor is a part of the cost of all the materials used, of transporting, and manufacturing the steel in the product; that labor is a part of the cost of taking the coal out of the ground, with which the plant

is operated; that labor is a large part of the cost of growing the rubber, transporting it to this country and fabricating it into the tires with which the machine is equipped.

But a careful examination of all these facts, made under this very administration in Washington, shows that 82 cents out of the manufacturing income dollar goes to labor.

Let me next transfer your attention to transportation, under which are included the railroads, the bus companies, the boats, and other agencies engaged in transporting cargo and persons. Out of every income dollar received by the combined transportation industries of this country, approximately 75 cents goes for wages.

Let me next call your attention to the field of mining and quarrying, where the millions of miners in all branches of that activity are employed. Again we find that approximately 80 cents out of every mining-income dollar goes to pay wages.

The cost of the materials and equipment used in the mines is made up largely of the cost of the labor necessary to gather, transport, and fashion them into objects for use. This is part of the labor cost of operating the mines, as well as the payment of the labor which actually does the mining in the mines.

Now look at the great field of construction. Here again we find that approximately 80 cents out of every income dollar goes to pay labor.

Again, if we combine all of the industries of the Nation together, including agriculture and forestry, in which the labor content is extremely low, we find that about 65 cents out of every income dollar from every source of work in the Nation goes to pay labor.

In sum, who has a larger stake in the revival of American business than do the millions of men and women employed in these activities?

My primary desire in wishing to revive the business of the Nation is not so the well-to-do can make more money, but so the very poor may have an opportunity to work at fair wages and steady hours, so they may support themselves and their families according to the American standard of living. And where else in the United States can the unemployed find work at such a level of pay and steady employment except in a revival of business?

When I hear of sit-down strikes and efforts to array class against class, and hear businessmen denounced as a group, and see the chaos that everywhere is evident, I know these things would not be if to those who are employed could be brought the knowledge that out of every income dollar which most businesses receive, approximately 80 cents goes to those employed in that business.

Too many people who are employed assume that labor is only a 10-, 20-, or 30-percent charge against the income dollar of the business in which they are engaged and this lack of knowledge puts them in the frame of mind where they become the prey, the tools, and the pawns of those who really exploit them in the name of progress.

Again let me remind you gentlemen that these charts and these figures were prepared in the Department of Commerce under the present national administration. They are in book form and can be obtained by any citizen upon requesting copy of booklets on National Income in the United States. There you will find these studies carried out in more detail than time will permit me to bring out here tonight.

I would like to see these charts hung in every business house and plant of this Nation, along with other charts showing that the masses of the people—the consumers—pay 60 percent of the national taxes. That would lay the foundation for some good solid common-sense thinking. For the same working people who get the income from some line of business pay approximately three-fifths of all the tax money which the Government of the United States collects. They would then come to realize, first, that in the revival of business there is employment for all; and, second, that in lavish governmental expenditures there are additional burdens for all to pay.

What I have heretofore presented are facts that cannot be refuted, explained away, or denied. No one in this Republic will deny that the masses of the people are now paying and have been paying three-fifths of all the taxes which the National Government collects. Certainly the present administration will not deny that in most lines of business activity the workers of the Nation receive about 80 cents out of every income dollar from employment in private business. These two facts in themselves show that the real hope for prosperity is in the revival of business, big and little, and there is no hope for prosperity from any other source whatsoever.

The classic example of the havoc wrought by the governmental policies now in force in this country is that of ancient Rome.

When Rome was a republic, with a government similar in many ways to that of the United States, discontented pressure groups began electing senators pledged to give more relief to the unemployed and who would favor the trade guilds, which were very powerful in Rome during the last days of the republic. Under these conditions, prices kept going up, unemployment increased and the trade guilds eventually obtained a monopoly of all jobs. As their wages went up and up unemployment increased. Inflation came about and reached such proportions that money became practically worthless—gold practically disappeared from circulation as it was so precious. At one time oyster shells were used as money.

All of these measures, which led to the ultimate destruction of Rome, were of course offered in the name of suffering humanity, to relieve distress, and to provide a more abundant life, by the boys who were "going to do something about it."

They were the so-called progressives and liberals of the Roman era, just as their successors of the modern age are called the progressives and liberals of today.

These were the conditions that caused the fall of the republic. These minority groups ushered in the parade of the dictators, Sulla, Pompey, and Crassus, who in turn gave way to the Caesars. The dictators, during their terms of office, it is true, managed to straighten out to some extent the evils and distresses brought on by these minority groups, but under the Roman Empire the same thing occurred again.

The policies which I have criticized in this country—that is, of attacking and harassing business and preventing its normal revival—have created every dictator in Europe.

The swiftness with which policies are promulgated and in the face of criticism, altered and changed but never abandoned, induces a goodly proportion of our people to think that all proposed action is progress. Sometimes it is, but many economic crimes are committed in the name of progress because the experience of the past is disregarded, because the remedies, while temporarily beneficial, are often in the end worse than the disease.

The present national administration is literally filled with the counterparts of those who wielded power in ancient Rome. These men preach democracy and free enterprise, while they set in motion the machinery to destroy it.

Frequently, they abuse the Governments of Russia, Germany, or Italy, heaping criticism on these governmental systems of state control and in the next breath they advocate the measures which will imitate them. In their advocacy of economic policies, they embrace the identical systems which they in generalities frequently condemn. They proclaim that the American system of government under which we live, and which has brought us to the highest standard of living in all the world's history, is in truth a great failure and must be replaced by systems that have proven over and over again to be a sure means of ruin.

They profess a belief in democracy, while attempting to get control of an independent branch of the Government, the Supreme Court; by attempting to drive out of public life, by the use of Federal funds and Federal power, the men who dare to disagree with them and dare to fight for the preservation of the institutions of this country.

These are the men who disregard over and over again the fact that the workingman, rather than the well-to-do, has been paying and will continue to pay over half of the tax revenues of the Nation; that it is the workingman and not the well-to-do who receives approximately 80 cents out of the business-income dollar.

I suggest to you gentlemen that you help carry these eternal truths to those with whom you are associated in business. Put the Government charts on the wall, about the pay and the taxes of the masses of the people, and you will begin to get a response, because the American working man and woman are sound at heart when they are in possession of the facts.

Some high authorities look with apparent scorn on the lack of confidence among businessmen in the present state of affairs. They think recurring deficits, continual tirades against business leaders, changing tax structures, and countless innovations of government are no impediments to a business revival. This point of view is so juvenile that it is unworthy of refutation.

No sensible man is inclined to take risks, to enlarge his plant, to replace outmoded equipment, to lay in a stock of goods beyond day-to-day needs, when he cannot even remotely guess what new experiment touching his business, what new tax, what new lavish and wasteful governmental expenditures are to be inflicted today or tomorrow.

In spite of the inspired derision there is to the lack of business confidence, if fear is banished and a genuine respect and confidence for and in governmental policy is restored, it is the one thing that will provide more jobs than all the relief appropriations will provide from now until doomsday.

I suggest the following as a partial program to restore confidence and to create new employment for the idle, in private business.

First, reorganize the Federal Government to accomplish not alone efficiency but real and general economy. Let me point out one item to illustrate. Many millions can be saved in all departments by dropping the press agents and propaganda and other activities which are costly, and more political than anything else.

Second, eliminate more than a score of borrowing corporations and agencies of the Federal Government and let the United States Treasury borrow as needed for all the Federal Government. Then our national obligations may be a part of our National Government business statement. Today many agencies are borrowing billions of dollars which the Government really owes but which are not carried as a part of the Government's obligation. An example of this is the United States Housing Authority which has so borrowed $800,000,000 and is now about to borrow $800,000,000 more.

Third, have a thoroughly honest purge of the welfare rolls and base relief on real need, coupled with a requirement that localities bear a definite portion of the burden so that local interests may be aroused and demand elimination of the frequent abuses.

Fourth, whatever moneys it is necessary to appropriate for the welfare of our people, have a tax program that raises sufficient revenue to at least approximate the staggering appropriations and recurring deficits of the present day. This can be done by broadening the income-tax base so that each citizen in the Nation, according to his ability to pay, carries a part of the national tax burden. We must wipe out the deficits or at least reduce them to understandable proportions.

Fifth, overhaul the Wagner Labor Act by giving the employer the right to the free speech guaranteed by the Constitution and the right to speak out and to act when he believes that influences are attempting not to help but to exploit those who work with him.

Sixth, revise the Social Security Act. Eliminate the intended accumulation of reserve invested only in the national debt. Place it on more of a pay-as-you-go basis. It is full of inequalities. At present the farmer gets no direct benefit from it, yet he pays his share of security taxes just the same, for the employers' social-security taxes are passed on in increased prices to this large group of our citizens.

Seventh, remove the expenditure of public funds from one-man domination, where too often political considerations rather than the public welfare dictate where and how it shall be spent, as was the case in the building of bridges in Maryland during the last campaign.

Eighth, keep the three branches of our Government—executive, legislative, and judicial—independent of each other, by resisting encroachments of any one upon the other two.

I believe that the accomplishment of these things will, more than any others, restore needed confidence and put our country on the road to better times. It may be that there are a score of important things to do in order to revive the business of the Nation. But do each and every one of them and fail at the same time to restore confidence in Government and they will not avail to accomplish the recovery intended. Without confidence there can be and will be no real business revival.

Finally, let me repeat: Let the 50,000,000 workers of this Nation employed in private business know, through information and education, that theirs is the biggest stake of all in a revived business; that the present state of affairs demands that business in every form, big and little, should be encouraged, not discouraged; helped, not hindered; supported, not attacked; for with the coming of confidence and the revival of business there is work for the unemployed at good wages and steady hours, a better market and better prices for the farmer, a decrease in the governmental burden of taxation, and a normal way of American life.

We are rapidly approaching a decisive moment in our national history. The men who love America cannot be content to stand on the side lines. The facts which I have attempted to present here tonight should be presented in understandable form to the scores of millions who work every day in private business for a living. The time to commence is now. America's past, by comparison with that of any other nation, is the greatest of them all, and her future will be the greatest of them all if those in positions of leadership, in and outside of Government, stand by the eternal truths of history and carry the facts about the present day to the millions of our fellow citizens.

Debunking Private Power Interests on the Tax Question

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 27, 1939

Mr. RANKIN. Mr. Speaker, we have about succeeded in debunking the Power Trust by showing the overcharges for electricity in the various States, by showing what electricity is worth, what it should cost the ultimate consumer, and by answering their propaganda against the T. V. A.

They have now come back with the plea that they pay taxes, that public power systems do not have to pay, and try to make the people believe, and to make the Congress believe, that those taxes absorb these overcharges.

We have now debunked them on that point. We have a complete report by the Federal Power Commission, showing the amount of taxes, cash contributions, and free services rendered by public and by private power companies in every State in this Union. After taking into consideration all their alleged free services, all their taxes, all their alleged contributions, and giving them credit for all of them, according to their own figures, they are still overcharging the American people more than $850,000,000 a year for electric energy.

During the year 1936, the last year of which we have a complete report of all phases of this issue, including the taxes paid, the people of these United States used 90,937,660,000 kilowatt-hours of electricity for which they paid $2,052,833,080. Under the Ontario rates the cost would have been $827,073,918, which shows that they were overcharged $1,125,759,062 according to the Ontario rates or the rates prevailing in the Province of Ontario, Canada, where they have one of the finest public power systems in the world.

But the private power companies come back and say that the Ontario system pays no taxes and attempt to lead the American people to believe that amounts paid in taxes by the private power companies are sufficient to absorb these differences.

The report of the Federal Power Commission shows that during the year 1936 the private power interests paid in taxes of all kinds, municipal, State and Federal, including income taxes, cash contributions, and free services, all told, $275,286,073.

That amount taken from the $1,125,759,062 overcharge, according to the Ontario rates, would still leave an overcharge of $850,472,989 a year, after deducting for all taxes, all cash contributions, and all free services rendered by private power interests.

And, strange as it may seem to the friends of the private power interests, according to their own reports to the Power Commission, they paid in taxes, cash contributions, and free services only 13.2 percent of their gross revenues; while the public power systems, including municipal plants and cooperative associations, paid in taxes, cash contributions, and free services 25.8 percent of their gross income.

Now, let us break these overcharges, cash contributions, and free services down by States and show what the overcharges to the people in each State amounted to after all these taxes, contributions, and free services were deducted.

ALABAMA

During the year 1936 the electric light and power consumers in the State of Alabama were overcharged $8,367,842, according to the Ontario rates.

Private power utilities in Alabama during that year paid in taxes, cash contributions, and free services, according to their own reports, $3,188,634. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $5,179,208.

These taxes, cash contributions, and free services paid by the private power companies in Alabama during that year amounted to 13.4 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 16.7 percent of their gross revenues.

Thus it will be seen that although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Alabama were overcharged $5,179,208.

ARIZONA-NEW MEXICO

During the year 1936 the electric light and power consumers in the States of Arizona and New Mexico were overcharged $6,875,027, according to the Ontario rates.

Private power utilities in those two States during that year paid in taxes, cash contributions, and free services, according to their own reports, $1,305,275. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $5,569,752.

These taxes, cash contributions, and free services paid by the private power companies in Arizona during that year amounted to 15.7 percent of their gross revenues, and in New Mexico they amounted to 8.7 percent; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, in Arizona, amounted to 34.5 percent of

their gross revenues, and in New Mexico they amounted to 28.9 percent.

Although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems in 1936, yet, after deducting all taxes, cash contributions, and free services paid by the private power companies to the States, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Arizona and New Mexico were overcharged $5,569,752.

ARKANSAS

During the year 1936 the electric-light and power consumers in the State of Arkansas were overcharged $6,572,934, according to the Ontario rates.

Private power utilities in Arkansas during that year paid in taxes, cash contributions, and free services, according to their own reports, $1,113,298. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $5,459,636.

These taxes, cash contributions, and free services paid by the private power companies in Arkansas during that year amounted to 10.9 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 38.6 percent of their gross revenues.

While the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Arkansas were overcharged $5,459,636.

These overcharges in Arkansas in 1936 amounted to $5,540,389, although the Arkansas Power & Light Co. was buying power wholesale at 3.5 mills a kilowatt-hour, which is much below the T. V. A. wholesale rate; and the overcharges in Arkansas, according to the T. V. A. rates in 1936, amounted to $5,540,389, while in 1937 they amcunted to $6,470,500.

CALIFORNIA

During the year 1936 the electric light and power consumers in the State of California were overcharged $69,824,595, according to the Ontario rates.

Private power utilities in California during that year paid in taxes, cash contributions, and free services, according to their own reports, $16,821,488. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $53,003,107.

These taxes, cash contributions, and free services paid by the private power companies in California during that year amounted to 13.6 percent of their gross revenues, while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 15.3 percent of their gross revenues.

Private power companies in California paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of California were overcharged $53,003,107 in 1 year.

Yet the Power Trust plead their taxes as an excuse for their exorbitant rates.

COLORADO

During the year 1936 the electric light and power consumers in the State of Colorado were overcharged $9,405,579, according to the Ontario rates.

Private power utilities in Colorado during that year paid in taxes, cash contributions, and free services, according to their own reports, $2,019,683. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $7,385,896.

These taxes, cash contributions, and free services, paid by the private power companies in Colorado during that year amounted to 13.3 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 21.4 percent of their gross revenues.

Although the private power companies paid 50 percent less of their gross revenues than was paid by publicly owned systems in Colorado that year, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Colorado paid an annual overcharge of $7,385,896. And yet the power interests try to hide their rate extortions behind their tax smoke screen.

CONNECTICUT

During the year 1936 the electric light and power consumers in the State of Connecticut were overcharged $20,871,308, according to the Ontario rates.

Private power utilities in Connecticut during that year paid in taxes, cash contributions, and free services, according to their own reports, $4,821,124. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $16,050,184.

These taxes, cash contributions, and free services paid by the private power companies in Connecticut during that year amounted to 11.8 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 29.1 percent of their gross revenues.

Thus it will be seen that although the private power companies in Connecticut paid just a little more than one-third of the percentage of their gross revenues that were paid by the publicly owned systems; yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Connecticut were overcharged $16,050,184 in 1 year.

I wonder if the people of Connecticut realized that they were being robbed to this extent on their light and power bills.

DELAWARE, DISTRICT OF COLUMBIA, MARYLAND, AND WEST VIRGINIA

During the year 1936 the electric light and power consumers in the States of Delaware, the District of Columbia, Maryland, and West Virginia were overcharged $35,425,844, according to the Ontario rates.

Private power utilities in Delaware, the District of Columbia, Maryland, and West Virginia during that year paid in taxes, cash contributions, and free services, according to their own reports, $10,023,170. This includes all cash contributions and free services, as well as all taxes to the States, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $25,402,674.

These taxes, cash contributions, and free services paid by the private power companies in Delaware, the District of Columbia, Maryland, and West Virginia during that year amounted to the following percent of their gross revenues: Delaware, 7.4; District of Columbia, 13.3; Maryland, 9.9; and West Virginia, 13.5; while the taxes, cash contributions, and

free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to the following percent of their gross revenues: Delaware, 11; Maryland, 45.7; and West Virginia, 25.4. There are no public utilities in the District of Columbia.

After deducting all taxes, cash contributions, and free services paid by the private power companies to the States, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Delaware, the District of Columbia, Maryland, and West Virginia were overcharged $25,402,674.

DISTRICT OF COLUMBIA

I have just discussed the District of Columbia rates and overcharges in connection with Delaware, Maryland, and West Virginia.

FLORIDA

During the year 1936 the electric light and power consumers in the State of Florida were overcharged $13,679,913, according to the Ontario rates.

Private power utilities in Florida during that year paid in taxes, cash contributions, and free services, according to their own reports, $1,823,922. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $11,855,991.

These taxes, cash contributions, and free services paid by the private power companies in Florida during that year amounted to 9.1 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 53.7 percent of their gross revenues.

Although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, 9.1 percent as against 53.7 percent, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Florida were overcharged $11,855,991.

And yet they plead their taxes as an excuse for robbing the people of Florida with an annual overcharge of approximately $12,000,000.

GEORGIA

During the year 1936 the electric light and power consumers in the State of Georgia were overcharged $13,170,549, according to the Ontario rates.

Private power utilities in Georgia during that year paid in taxes, cash contributions, and free services, according to their own reports, $2,622,913. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $10,547,636.

These taxes, cash contributions, and free services paid by the private power companies in Georgia during that year amounted to 10.9 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 44.8 percent of their gross revenues.

Private power companies paid a far smaller percentage of their gross revenue than that paid by the publicly owned systems, only about one-tenth; yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Georgia were overcharged $10,547,636.

Behind this camouflage of taxes, they rob the people of Georgia of more than $10,000,000 a year.

IDAHO

During the year 1936 the electric-light and power consumers in the State of Idaho were overcharged $3,819,921, according to the Ontario rates.

Private power utilities in Idaho during that year paid in taxes, cash contributions, and free services, according to their own reports, $1,506,265. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $2,313,656.

These taxes, cash contributions, and free services paid by the private power companies in Idaho during that year amounted to 17.7 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 69.6 percent of their gross revenues.

Private power companies in Idaho paid a smaller percentage of their gross revenues than that paid by the publicly owned systems—only about one-fourth—yet, after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Idaho were overcharged $2,313,656.

ILLINOIS

During the year 1936 the electric light and power consumers in the State of Illinois were overcharged $81,359,771, according to the Ontario rates.

Private power utilities in Illinois during that year paid in taxes, cash contributions, and free services, according to their own reports, $24,600,996. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $56,758,775.

These taxes, cash contributions, and free services paid by the private power companies in Illinois during that year amounted to 14 percent of their gross revenues, while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 25.2 percent of their gross revenues.

Although the private power companies paid a much smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Illinois were overcharged $56,758,775.

No wonder the friends of the Power Trust in Congress voted the other day to prevent T. V. A. power from being transmitted into Illinois.

INDIANA

During the year 1936 the electric light and power consumers in the State of Indiana were overcharged $26,362,062, according to the Ontario rates.

Private power utilities in Indiana during that year paid in taxes, cash contributions, and free services, according to their own reports, $7,218,748. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $19,143,314.

These taxes, cash contributions, and free services, paid by the private power companies in Indiana during that year amounted to 12.1 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 35.4 percent of their gross revenues.

After deducting all taxes paid, cash contributions, and free services by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes in 1936, still the people of Indiana were overcharged $19,143,314.

No wonder the Power Trust is fighting to keep T. V. A. power out of Indiana.

IOWA

During the year 1936 the electric light and power consumers in the State of Iowa were overcharged $17,253,896, according to the Ontario rates.

Private power utilities in Iowa during that year paid in taxes, cash contributions, and free services, according to their own reports, $3,182,661. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $14,071,235.

These taxes, cash contributions, and free services, paid by the private power companies in Iowa during that year amounted to 10.4 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 25.1 percent of their gross revenues.

KANSAS

During the year 1936 the electric light and power consumers in the State of Kansas were overcharged $13,243,207, according to the Ontario rates.

Private power utilities in Kansas during that year paid in taxes, cash contributions, and free services, according to their own reports, $2,256,626. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $10,986,521.

These taxes, cash contributions, and free services paid by the private power companies in Kansas during that year amounted to 12.7 percent of their gross revenues, while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 28.9 percent of their gross revenues.

KENTUCKY

During the year 1936 the electric-light and power consumers in the State of Kentucky were overcharged $11,657,132, according to the Ontario rates.

Private power utilities in Kentucky during that year paid in taxes, cash contributions, and free services, according to their own reports, $2,313,474. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $9,343,658.

These taxes, cash contributions, and free services paid by the private power companies in Kentucky during that year amounted to 9.9 percent of their gross revenue, while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 55 percent of their gross revenues.

Thus it will be seen that although the private power companies paid a far smaller percentage of their gross revenues than that paid by the publicly owned systems, only about one-eleventh, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Kentucky were overcharged $9,343,658.

No wonder the people of Kentucky are crying out for protection against such robbery.

LOUISIANA

During the year 1936 the electric light and power consumers in the State of Louisiana were overcharged $11,242,378, according to the Ontario rates.

Private power utilities in Louisiana during that year paid in taxes, cash contributions, and free services, according to their own reports, $3,510,074. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $7,732,304.

These taxes, cash contributions, and free services, paid by the private power companies in Louisiana during that year, amounted to 16.3 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 52.3 percent of their gross revenues.

Thus it will be seen that although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Louisiana were overcharged $7,732,304 in 1 year. Yet the power companies are monopalizing the gas fields of Louisiana and producing power at less than it costs to produce and transmit it in Ontario. The people of Louisiana are simply being made slaves of the Power Trust.

MAINE

During the year 1936 the electric light and power consumers in the State of Maine were overcharged $8,327,764 according to the Ontario rates.

Private power utilities in Maine during that year paid in taxes, cash contributions, and free services, according to their own reports, $1,601,337. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $6,726,427.

These taxes, cash contributions, and free services paid by the private power companies in Maine during that year amounted to 11.6 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 11.7 percent of their gross revenues.

Thus it will be seen that although the private power companies paid about the same percentage of their gross revenues for taxes as that paid by the publicly owned systems; yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Maine were overcharged $6,726,427 a year. I wonder how much longer the people of Maine will submit to being robbed in this way. Remember that Maine almost joins Ontario.

MARYLAND

I have discussed the Maryland rates and overcharges in connection with Delaware, the District of Columbia, and West Virginia.

MASSACHUSETTS

During the year 1936 the electric light and power consumers in the State of Massachusetts were overcharged $54,066,121, according to the Ontario rates.

Private power utilities in Massachusetts during that year paid in taxes, cash contributions, and free services, according to their own reports, $15,669,719. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $38,396,402.

These taxes, cash contributions, and free services paid by the private power companies in Massachusetts during that year amounted to 15.3 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 16.2 percent of their gross revenues.

Private power companies in Massachusetts paid a smaller percentage of their gross revenues than that paid by the

publicly owned systems in 1936, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Massachusetts were overcharged $38,396,402.

How can the people of that proud State submit to paying this tribute of more than $38,000,000 a year? No wonder the friends of the Power Trust worked so hard to defeat the Connecticut River project. It would have given the people of Massachusetts and Connecticut a yardstick that would have protected them from these exorbitant overcharges.

MICHIGAN

During the year 1936 the electric light and power consumers in the State of Michigan were overcharged $46,590,901, according to the Ontario rates.

Private power utilities in Michigan during that year paid in taxes, cash contributions, and free services, according to their own reports, $9,474,464. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $37,116,437.

These taxes, cash contributions, and free services paid by the private power companies in Michigan during that year amounted to 10.9 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 22.1 percent of their gross revenues.

Although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Michigan were overcharged $37,116,437.

Remember that Michigan joins Ontario. It must be a great punishment to the people of Michigan to have to pay this annual tribute of more than $37,000,000 a year under these circumstances.

MINNESOTA

During the year 1936 the electric light and power consumers in the State of Minnesota were overcharged $19,661,711, according to the Ontario rates.

Private power utilities in Minnesota during that year paid in taxes, cash contributions, and free services, according to their own reports, $4,509,410. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $15,152,310.

These taxes, cash contributions, and free services paid by the private power companies in Minnesota during that year amounted to 12.7 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 16.3 percent of their gross revenues.

Private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Minnesota were overcharged $15,152,310.

Minnesota also joins Ontario, but instead of enjoying Ontario rates her people are forced to pay this tribute of more than $15,000,000 a year.

MISSISSIPPI

During the year 1936 the electric light and power consumers in the State of Mississippi were overcharged $5,644,259, according to the Ontario rates.

Private power utilities in Mississippi during that year paid in taxes, cash contributions and free services, according to their own reports, $860,090. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $4,784,169.

These taxes, cash contributions, and free services, paid by the private power companies in Mississippi during that year amounted to 11.8 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicy owned systems, including municipal power plants and cooperative associations, amounted to 46.3 percent of their gross revenues.

Although the private power companies in Mississippi paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Mississippi were overcharged $4,784,169.

When you consider the fact that the people in the northern part of the State, which is served by the T. V. A., get their electricity at rates that are about equal to the Ontario rates, you can realize what a terrible burden this overcharge of $4,784,169 a year places upon the people of the rest of the State.

MISSOURI

During the year 1936 the electric light and power consumers in the State of Missouri were overcharged $28,005,786, according to the Ontario rates.

Private power utilities in Missouri during that year paid in taxes, cash contributions, and free services, according to their own reports, $4,952,715. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $23,053,071.

These taxes, cash contributions, and free services, paid by the private power companies in Missouri during that year amounted to 9.6 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 27.1 percent of their gross revenues.

Thus it will be seen that although the private power companies paid a much smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Missouri were overcharged $23,053,071.

There is enough undeveloped water power in Missouri to supply the entire State, but these selfish interests have been powerful enough to prevent its development. They do not want to lose their power to rob the people of Missouri of this $23,000,000 a year.

MONTANA AND UTAH

During the year 1936 the electric-light and power consumers in the States of Montana and Utah were overcharged $10,093,040 according to the Ontario rates.

Private power utilities in Montana and Utah during that year paid in taxes, cash contributions, and free services, according to their own reports, $3,174,164. This includes all cash contributions and free services, as well as all taxes to the States, the counties, the municipalities, and to the Federal Government, including income taxes. This amount, taken from the overcharge according to the Ontario rates, leaves a difference of $6,918,876.

These taxes, cash contributions, and free services paid by the private power companies in Montana and Utah during that year amounted to 14.7 percent in Montana and 14.8

percent in Utah of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted in Utah to 36.8 percent of their gross revenues. There were no public utilities in Montana.

Thus it will be seen that, although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the States, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Montana and Utah were overcharged $6,918,876.

No wonder the Power Trust is opposed to all public power movements in these two States.

NEBRASKA

During the year 1936 the electric light and power consumers in the State of Nebraska were overcharged $9,686,163, according to the Ontario rates.

Private power utilities in Nebraska during that year paid in taxes, cash contributions, and free services, according to their own reports, $1,680,085. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $8,006,078.

These taxes, cash contributions, and free services paid by the private power companies in Nebraska during that year amounted to 11.7 percent of their gross revenue, while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 18.4 percent of their gross revenues.

Thus it will be seen that, although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Nebraska were overcharged $8,006,078.

This explains why the Power Trust is so viciously opposing the efforts of Senator NORRIS to secure cheap electricity for the people of Nebraska. They prefer to collect this tribute of $8,000,000 a year.

NEVADA

During the year 1936 the electric light and power consumers in the State of Nevada were overcharged $1,344,276, according to the Ontario rates.

Private power utilities in Nevada during that year paid in taxes, cash contributions, and free services, according to their own reports, $276,051. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $1,068,225.

These taxes, cash contributions, and free services paid by the private power companies in Nevada during that year amounted to 11 percent of their gross revenues, while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 38.6 percent of their gross revenues.

Thus it will be seen that although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Nevada were overcharged $1,068,225.

Remember that Boulder Dam is in Nevada, which helps to hold these overcharges down.

NEW HAMPSHIRE

During the year 1936 the electric light and power consumers in the State of New Hampshire were overcharged $5,394,965, according to the Ontario rates.

Private power utilities in New Hampshire during that year paid in taxes, cash contributions, and free services, according to their own reports, $1,766,294. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $3,628,671.

These taxes, cash contributions, and free services paid by the private power companies in New Hampshire during that year amounted to 12.6 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 15.6 percent of their gross revenues.

Private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of New Hampshire were overcharged $3,628,671.

New Hampshire is almost in sight of Ontario, and yet the people of New Hampshire pay the highest light and power rates of any State in the Union, with the probable exception of Louisiana.

NEW JERSEY

During the year 1936 the electric-light and power consumers in the State of New Jersey were overcharged $57,442,472, according to the Ontario rates.

Private power utilities in New Jersey during that year paid in taxes, cash contributions, and free services, according to their own reports, $15,171,613. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $42,270,859.

These taxes, cash contributions, and free services paid by the private power companies in New Jersey during that year amounted to 16.6 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 35.5 percent of their gross revenues.

Although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet, after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of New Jersey were overcharged $42,270,859.

I wonder how the people of New Jersey can continue to meet this burden and pay this tribute of more than $42,000,000 a year.

NEW MEXICO

I have discussed the New Mexico rates and overcharges in connection with Arizona.

NEW YORK

During the year 1936 the electric light and power consumers in the State of New York were overcharged $190,237,801, according to the Ontario rates.

Private power utilities in New York during that year paid in taxes, cash contributions, and free services, according to their own reports, $47,638,465. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $142,599,336.

These taxes, cash contributions, and free services paid by the private power companies in New York during that year amounted to 15 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 14.4 percent of their gross revenues.

After deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of the State of New York were overcharged $142,599,336 a year, according to the Ontario rates, just across the line.

NORTH CAROLINA

During the year 1936 the electric light and power consumers in the State of North Carolina were overcharged $14,993,500, according to the Ontario rates.

Private power utilities in North Carolina during that year paid in taxes, cash contributions, and free services, according to their own reports, $4,672,228. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $10,321,272.

These taxes, cash contributions, and free services paid by the private power companies in North Carolina during that year amounted to 14.2 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 40.5 percent of their gross revenues.

Although the private power companies paid a much smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of North Carolina were overcharged $10,321,272 a year for power that is largely generated on the rivers of North Carolina that should be used for the people of North Carolina instead of compelling them to pay this tribute of more than $10,000,000 a year.

NORTH DAKOTA

During the year 1936 the electric light and power consumers in the State of North Dakota were overcharged $3,329,169, according to the Ontario rates.

Private power utilities in North Dakota during that year paid in taxes, cash contributions, and free services, according to their own reports, $557,351. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $2,771,816.

These taxes, cash contributions, and free services paid by the private power companies in North Dakota during that year amounted to 11.7 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 41.6 percent of their gross revenues.

Thus it will be seen that although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of North Dakota were overcharged $2,771,816.

OHIO

During the year 1936 the electric light and power consumers in the State of Ohio were overcharged $61,783,138, according to the Ontario rates.

Private power utilities in Ohio during that year paid in taxes, cash contributions, and free services, according to their own reports, $15,992,845. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $45,790,293.

These taxes, cash contributions, and free services paid by the private power companies in Ohio during that year amounted to 12.8 percent of their gross revenue; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 18.3 percent of their gross revenues.

Although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Ohio were overcharged $45,790,293.

Ohio also joins Ontario, and a majority of the State is within distribution distance of the T. V. A., and yet they are forced to pay this enormous tribute to the Power Trust of more than $45,000,000 a year. Besides power could be generated with coal produced in Ohio and laid down in every section of Ohio at approximately the Ontario rates.

OKLAHOMA

During the year 1936 the electric light and power consumers in the State of Oklahoma were overcharged $13,211,777, according to the Ontario rates.

Private power utilities in Oklahoma during that year paid in taxes, cash contributions, and free services, according to their own reports, $2,521,809. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $10,689,968.

These taxes, cash contributions, and free services, paid by the private power companies in Oklahoma during that year, amounted to 11.9 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 55.1 percent of their gross revenues.

Thus it will be seen that although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet, after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Oklahoma were overcharged $10,689,968.

Electricity could be generated with Oklahoma gas, coal, or water power and distributed all over the State at rates that would save them this tribute of more than $10,000,000 a year.

OREGON

During the year 1936 the electric light and power consumers in the State of Oregon were overcharged $9,554,733, according to the Ontario rates.

Private power utilities in Oregon during that year paid in taxes, cash contributions, and free services, according to their own reports, $2,991,543. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $6,563,190.

These taxes, cash contributions, and free services paid by the private power companies in Oregon during that year amounted to 15.8 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants

and cooperative associations, amounted to 17 percent of their gross revenues.

Thus it will be seen that although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Oregon were overcharged $6,563,190.

We hope to relieve the people of Oregon from this enormous burden with cheap power from Bonneville Dam.

PENNSYLVANIA

During the year 1936 the electric light and power consumers in the State of Pennsylvania were overcharged $104,899,526, according to the Ontario rates.

Private power utilities in Pennsylvania during that year paid in taxes, cash contributions, and free services, according to their own reports, $22,760,997. This includes all cash contributions and free services, as well as all taxes to the States, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $82,138,529.

These taxes, cash contributions, and free services paid by the private power companies in Pennsylvania during that year amounted to 11.7 percent of their gross revenues, while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 40.1 percent of their gross revenues.

Thus it will be seen that, although the private power companies in Pennsylvania paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet, after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Pennsylvania were overcharged $82,138,529.

Electricity could be produced in Pennsylvania with either coal or water power and distributed all over the State at rates that would relieve her people of this enormous tribute of $82,000,000 a year.

RHODE ISLAND AND VERMONT

During the year 1936 the electric light and power consumers in the States of Rhode Island and Vermont were overcharged $13,118,329, according to the Ontario rates.

Private power utilities in Rhode Island and Vermont during that year paid in taxes, cash contributions, and free services, according to their own reports, $2,618,145. This includes all cash contributions and free services as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $10,500,184.

These taxes, cash contributions, and free services paid by the private power companies in Rhode Island and Vermont during that year amounted to: Rhode Island, 8.6 percent, and Vermont 16 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to: Rhode Island, one-tenth of 1 percent and Vermont 42 percent of their gross revenues.

Thus it will be seen that although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet, after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Rhode Island and Vermont were overcharged $10,500,184.

No wonder the Power Trust opposes water-power development in New England.

SOUTH CAROLINA

During the year 1936 the electric light and power consumers in the State of South Carolina were overcharged $7,739,228, according to the Ontario rates.

Private power utilities in South Carolina during that year paid in taxes, cash contributions, and free services, according to their own reports, $3,568,706. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $4,170,522.

These taxes, cash contributions, and free services paid by the private power companies in South Carolina during that year amounted to 20.4 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 38.8 percent of their gross revenues.

Thus it will be seen that although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of South Carolina were overcharged $4,170,522.

We hope to relieve the people of South Carolina of these enormous overcharges when the Santee-Cooper and other public power projects in that State are completed.

SOUTH DAKOTA

During the year 1936 the electric light and power consumers in the State of South Dakota were overcharged $3,656,259, according to the Ontario rates.

Private power utilities in South Dakota during that year paid in taxes, cash contributions, and free services, according to their own reports, $532,229. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $3,124,030.

These taxes, cash contributions, and free services, paid by the private power companies in South Dakota during that year amounted to 10.4 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 43.1 percent of their gross revenues.

Although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of South Dakota were overcharged $3,124,030.

TENNESSEE

During the year 1936 the electric light and power consumers in the State of Tennessee were overcharged $13,131,487, according to the Ontario rates.

Private power utilities in Tennessee during that year paid in taxes, cash contributions, and free services, according to their own reports, $3,456,604. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $9,674,883.

These taxes, cash contributions, and free services paid by the private power companies in Tennessee during that year amounted to 15.5 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and

cooperative associations, amounted to 37.6 percent of their gross revenues.

Thus it will be seen that although the private power companies paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Tennessee were overcharged $9,674,883.

TEXAS

During the year 1936 the electric light and power consumers in the State of Texas were overcharged $37,845,164, according to the Ontario rates.

Private power utilities in Texas during that year paid in taxes, cash contributions, and free services, according to their own reports, $6,357,439. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $31,487,725.

These taxes, cash contributions, and free services, paid by the private power companies in Texas during that year amounted to 10 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 38.7 percent of their gross revenues.

Although the private power companies in Texas pay a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Texas were overcharged $31,487,725.

Electricity could be generated with the natural gas that is now going to waste in Texas and distributed all over the State at the Ontario rates. But then the Power Trust could not rob them of this enormous tribute of $30,000,000 a year.

UTAH

I have discussed the Utah rates and overcharges in connection with Montana.

VERMONT

I have discussed the Vermont rates and overcharges in connection with Rhode Island and Vermont.

VIRGINIA

During the year 1936 the electric light and power consumers in the State of Virginia were overcharged $14,011,961, according to the Ontario rates.

Private power utilities in Virginia during that year paid in taxes, cash contributions, and free services, according to their own reports, $2,860,814. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $11,151,147.

These taxes, net contributions, and free services paid by the private power companies in Virginia during that year amounted to 11.7 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 53.1 percent of their gross revenues.

Although the private power companies in Virginia paid a smaller percentage of their gross revenues than that paid by the publicly owned systems, yet after deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Virginia were overcharged $11,151,147.

WASHINGTON

During the year 1936 the electric light and power consumers in the State of Washington were overcharged $15,662,930, according to the Ontario rates.

Private power utilities in Washington during that year paid in taxes, cash contributions, and free services, according to their own reports, $3,301,133. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $12,361,797.

These taxes, cash contributions, and free services paid by the private power companies in Washington during that year amounted to 12.5 percent of their gross revenues; while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 11.3 percent of their gross revenues.

After deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Washington were overcharged $12,361,797.

That is the reason the power interests are fighting Bonneville and Grand Coulee.

WEST VIRGINIA

I have discussed the West Virginia rates and overcharges in connection with Delaware, the District of Columbia, and Maryland.

WISCONSIN

During the year 1936 the electric light and power consumers in the State of Wisconsin were overcharged $25,323,124, according to the Ontario rates.

Private power utilities in Wisconsin during that year paid in taxes, cash contributions, and free services, according to their own reports, $7,712,058. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $17,611,066.

These taxes, cash contributions, and free services paid by the private power companies in Wisconsin during that year amounted to 16.4 percent of their gross revenues, while the taxes, cash contributions, and free services paid by the publicly owned systems, including municipal power plants and cooperative associations, amounted to 17.6 percent of their gross revenues.

After deducting all taxes, cash contributions, and free services paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Wisconsin were overcharged $17,611,066.

Wisconsin also joins Ontario. How can her people live and compete with the Canadians as long as they have to bear this overcharge of more than $17,000,000 a year?

WYOMING

During the year 1936 the electric light and power consumers in the State of Wyoming were overcharged $1,871,522, according to the Ontario rates.

Private power utilities in Wyoming during that year paid in taxes, cash contributions, and free services, according to their own reports, $279,413. This includes all cash contributions and free services, as well as all taxes to the State, the counties, the municipalities, and to the Federal Government, including income taxes. This amount taken from the overcharge, according to the Ontario rates, leaves a difference of $1,592,109.

These taxes, cash contributions, and free services, paid by the private power companies in Wyoming during that year amounted to 9.4 percent of their gross revenues. There are no public utilities operating in Wyoming.

After deducting all taxes paid by the private power companies to the State, the counties, the municipalities, and the Federal Government, including income taxes, still the people of Wyoming were overcharged $1,592,109.

CONCLUSION

Mr. Speaker, this is an appalling record. These figures showing the amount of taxes, cash contributions, and free services rendered by the private power companies are furnished by the power companies themselves. How can anyone read these facts and then defend these exorbitant overcharges?

I wish everyone who turns an electric switch anywhere in the United States could examine this report and see for himself the enormous burden of overcharges the electric consumers in his own State now have to pay.

Mr. RICH. Mr. Speaker, will the gentleman yield?

Mr. RANKIN. I am sorry I cannot yield. But I will say to the distinguished gentleman from Pennsylvania [Mr. RICH] that, as I have shown, one of the States in which the people are most heavily burdened with overcharges for electric lights and power is that of Pennsylvania. [Applause and laughter.]

Paul V. McNutt's Record as Governor of Indiana

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

ARTICLES BY RAY E. SMITH

Mr. LUDLOW. Mr. Speaker, over and over again in my daily associations in the House of Representatives I am asked by Members of Congress:

"What kind of Governor was Paul V. McNutt? I have heard much favorable comment on his administration of the affairs of the State of Indiana and I would like to know more about his record in the Governor's office."

Interest in the brilliant, dynamic ex-Governor of Indiana, whose attractive personality is beginning to loom big on the national horizon, is keen, especially among students of government. They have heard of his masterful handling of the State's finances, which wiped out the State debt and brought the State to the felicitous situation of having a balanced budget with cash on hand, while Illinois on the west had a debt of $1,062,213,500, and Michigan on the north was struggling with a mounting levy and a State debt approximating $742,000,000, and many other States of the Union were debt-ridden, with no prospects of getting "out of the red."

They have heard of the Indiana gross-income-tax law, a McNutt creation, and how it saved the Indiana schools, and they are anxious to know how it works. They have heard how he reorganized the State government, at one stroke reducing the number of State departments from 169 to 8, thus abolishing waste and overlapping and saving the taxpayers of Indiana $2,000,000 a year.

They have heard of his masterful handling of the relief problem by which the needy were cared for in a manner that won unstinted praise, and they have been especially impressed with the fact that during the darkest, bitterest, most soul-wracking period of the depression every Indiana school teacher was paid promptly and in full when payment was due.

In order to satisfy what I believe is a very general desire to know more about Mr. McNutt's achievements as the chief executive of a great State, and what manner of man he is and what manner of governor he was, I present, by unanimous consent of the House for publication in the RECORD, four brief articles written by a distinguished journalist of Indiana, Ray E. Smith, editor of the Hoosier Sentinel, on the subject McNutt's Record as Indiana's Governor, as follows:

I

Now that more than 2 years have passed since Paul V. McNutt turned over the reins of Indiana government to his successor and soon afterward was appointed United States High Commissioner to the Philippines by President Franklin Delano Roosevelt, citizens of Indiana are becoming more conscious of the real accomplishment and progress during his 4 years as Governor.

In these past 2 years Hoosiers have had an opportunity to take inventory of the McNutt administration. Time has brought out the wisdom of the McNutt policies and torn aside the mantle of partisanship so that today those who formerly were Governor McNutt's bitter critics are acknowledging his statesmanship.

No Governor ever entered into office in more difficult times than Paul V. McNutt in January 1933. This State was in the throes of the worst business depression in its entire history. The State was in debt and its citizens were carrying an unbearably heavy tax burden. There was a threatened State deficit of $7,000,000. A hundred thousand families were hungry and begging for food, clothing, and shelter. Thousands upon thousands of men and women were able to work and willing to work but were idle because there were no jobs.

Citizens were losing their homes, their farms, and their life savings as bank after bank closed its doors. People could not pay their taxes and the credit of the State was seriously imperiled. Schools were closing for lack of funds, emptying children out into the streets.

Governor McNutt had a broad vision, however, and set about without delay to produce a remedy for each problem. He put through his program and pulled Indiana out of the mire. Hope and confidence were restored.

Before launching into a discussion of the McNutt program that redeemed Indiana, one should know the kind of man McNutt is. Tall, platinum-haired, handsome, able, well educated, and a brilliant speaker, McNutt is one of the most highly intelligent and well-schooled men who ever sat in the Governor's chair.

A graduate of Harvard University, he was professor of law and dean of the law school of Indiana University. He is a man of culture, great charm, and personal distinction. When he knows he is right, he drives ahead to accomplish his purpose.

While he had dabbled some in Democratic politics in his home county, McNutt got his first taste of "big time" politics in the American Legion, first as State commander of Indiana and later as national commander. It was then, back in 1929, that a group of his friends began to groom him for Governor.

McNutt is an ardent Roosevelt supporter. During his 4 years as Governor of Indiana he kept in step with the Roosevelt administration. It was his success as an administrator and his New Deal loyalty that caused the President to select him for High Commissioner to the Philippines.

McNutt was one of the most efficient and socially minded State executives in the country. He reorganized the decrepit State government and put through a number of enlightened acts. His administration was clean and economical. As early as 1934 he was talked of as a Presidential possibility, as Vice President in 1936 when President Roosevelt ran again, and as his party's choice for President in 1940. He declined to let friends boom him for Vice President, but there is a definite and well-defined movement now on foot throughout the Nation among his friends to place him in the White House in 1940, in the event Roosevelt does not seek a third term.

When the seventy-eighth general assembly met in early 1933, Governor McNutt appeared before the State lawmaking body and outlined a program designed to relieve the State from the dire effects of the depression. An emergency existed, he said, and the militant Governor demanded emergency action. He had a program to solve the State's ills and he laid it before the legislature.

He was favored with near-record majorities in both houses during the 1933 and 1935 regular sessions. Under his guidance the party whipped 292 acts and resolutions through the legislative mill during the 1933 session. During the 1935 session 352 acts and resolutions were written into the State's statute books, making them record volumes in size and content.

Keystone of the McNutt administration was the State government reorganization act passed by the 1933 legislature. It centralized the administrative control and responsibility with the Governor and reduced the number of departments from 169 operating during the previous administration to 8. The Governor, who is answerable to the people for his administration, was given the power to govern. The reorganization act did away with overlapping of duties of various State departments and resulted in a $2,000,000 annual saving in the operation of the State government. In McNutt's own words, "It put good business methods into the operation of our State government." The centralization brought cries of "dictatorship" from the opposition party, but was highly commended by the press.

II

The general assembly enacted record volumes of legislation during the administration of Governor McNutt to meet existing emergencies, to coordinate the State's program of legislation with that of the Roosevelt administration, and to fulfill platform promises.

The opposition party charged that the legislature was a "rubber stamp" for McNutt, but strong party lines led to enactment of virtually every measure that received administration approval. So intelligently had the McNutt legislative program been drafted that none of the new laws, although most of them were rushed through to meet an emergency, was voided by a court of last resort as unconstitutional.

Chief criticism against the McNutt legislative program centered upon the reorganization act, gross income, and liquor-control acts. The Governor defended each vigorously in the 1934 and 1936 campaigns while the opposition party assaulted them. The tremendous majorities given to the Democratic Party in Indiana in both elections was a vote of confidence by the people in the McNutt administration.

As mentioned in the first article, the Reorganization Act reduced the number of State departments from 169 to 8. Departments under the act were executive, commerce and industry, audit and control, education, public works, state, law, and treasury. The attorney general was made an appointive officer, serving at the pleasure of the Governor, instead of elective.

The act gave McNutt authority to appoint the staffs of all departments except private secretaries to elective officials. This created a wide source of political patronage, which gave the Governor a firm grip on his party organization.

The 1933 legislature passed a Gross Income Tax Act which levied a 1 percent tax on the gross business of retailers and income of individuals who make above $1,000 a year and a fourth of 1 percent on manufacturers and wholesalers. The gross-income tax became the principal issue of the State election of 1936. The Republicans pledged themselves to repeal the controversial measure. Chief opposition to the tax came from small retailers, who contended it bore heavily on them. M. Clifford Townsend, the Democratic candidate for Governor, pledged a continuance of the tax, but promised a conference at which alleged inequalities in the law would be considered. As a result, the 1937 general assembly raised the exemption on individuals and retailers to $3,000.

With the return of intoxicating liquor in 1933 after a long era of prohibition, a liquor control act was enacted by the McNutt administration. It gave the State control over the sale and dispensing of beer, wine, and spirituous liquors. It set up regulations against out-of-State brewers as a protection to Indiana breweries. Amendments to this act in the 1935 and 1937 legislatures remedied features of the original act, but it ranked as one of the best liquor-control laws in the country.

Other "model" laws were enacted to fulfill McNutt's promises to provide legislation governing operation of banks, building and loan associations, credit sales, and insurance companies in the State. The 1933 banking law, improved in 1935 after operating tests, is considered one of the best in the Nation. Numerous other States have copied it.

McNutt also pledged himself to furnish adequate financial aid to the aged and the physically handicapped. Indiana was among the first to enact such a program financed entirely by the State. In Indiana, at the end of his term as Governor, were 40,372 persons receiving old-age assistance, 2,008 receiving blind assistance, and 21,777 dependent children being cared for in private homes instead of State institutions. The aged and helpless are getting an average of $15.69 a month, the blind an average of $18.15 a month, and the payments for keep of dependent children average $12.70 a month.

In 1936 when the Federal social-security program was outlined by the Federal Government, McNutt called a special session of the general assembly to enact legislation to make the State program conform. Bills providing for unemployment compensation and pensions for the blind, aged, and dependent were hurried through the legislature, which pledged itself to consider only social-security problems.

Democrats held overwhelming majorities in the senate and house of representatives during both the 1933 and 1935 sessions. In the 1933 session the Democratic house majority was 91 to 9 and in the senate the majority was 43 to 7. The Democrats held a 65 to 35 majority in the house in 1935 and in the senate the majority was 38 to 12.

Another act sponsored by McNutt in the interest of governmental economy was known as the "skip election" act. City elections in the State were held in years when no other elections were due. To set up the ballot machinery for this one election was considered a needless expense, so the administration caused a bill to pass changing the city elections to the same year as county and township and State elections. City officials whose terms expired in 1933 were continued in office until the regular State election in 1934. This change in the election laws brought about a saving of $300,000 at a time when budget balancing was a chief issue.

III

A balanced budget, decrease in property taxes, and maintenance of the State's high educational standard by partial diversions of gross income and excise receipts into that channel were the chief financial accomplishments of the administration of Governor McNutt.

Income from taxes had fallen so low in 1932 and 1933 that when McNutt assumed office a deficit of $3,416,424 in the general fund at the end of the fiscal year, October 1, 1933, and twice that much the following October 1, unless remedial measures were taken quickly, stared him in the face. On January 10, 1933, McNutt appeared before the State legislature and said of Indiana's current fiscal affairs: "I realize that to balance a budget, not of your own making, is an undeserved hardship, but in this instance it is an imperative duty." He recommended strict economy and adoption of new sources of revenue.

McNutt was concerned about schools. In some parts of the State terms had been cut because there was no money to pay school teachers. Unless something was done, when it came time for school bells to ring in the fall of 1933 a number of schools could not open or keep open for more than 2 to 5 months at the most. By the first of 1934 school officials predicted at least 100,000 children would be running the streets because of closed schools.

The State legislature heard McNutt express his views on maintenance of school standards in this fashion: "Roads and buildings may wait, but not the children. The care of the State's wards and education of its children is an obligation the State cannot deny, even in times of great stress."

With the legislature geared for emergency action, McNutt began to move toward his objective with induction of the gross income, intangibles, auto license, liquor, and other tax receipts, and with the pooling of the State's resources in the general fund. He urged the legislators to consider a plan to divert State receipts into the school system.

To save the schools the gross-income-tax law was enacted. It provided that funds collected by the State would be distributed to local school units for payment of school-teachers' salaries. It was McNutt's hope that payments eventually would reach $600 per teaching unit. During 1934 first payments of $404 per teaching unit were made, including money collected in 1933 and 1934; during 1935 payments were $400 per teaching unit, and $425 the next year. Business improved so greatly that in 1937 payments were $500, and they climbed to $700 per teaching unit in 1938.

The gross-income tax saved Indiana's schools. The Hoosier State in 1935 was one of three in the Nation where every school teacher's salary had been paid and no school term had been shortened under 8 months. Governor McNutt received national recognition for this feat.

With the diversion of funds, the Governor immediately started an attack against local boards in an effort to reduce local property-tax levies. He contended funds awarded school corporations should aid materially in the effort to lift the tax burden from property owners.

Just how successful the gross-income tax and other new revenue-producing taxes of the McNutt administration were in lowering property taxes is best illustrated by comparing total property taxes. In 1932, the last year of Governor Leslie's administration, they were some $140,000,000. In 1936 property-tax levies, collectible in 1937, were only $97,786,000, or 30 percent less.

McNutt had promised that the tax basis would be broadened, because when he took office property taxes were carrying approximately 80 percent of the entire government load in Indiana. The gross-income tax distributed the tax basis by collecting the following amounts which otherwise would have had to come from levies on real estate: In 1934, $8,095,217; 1935, $8,044,600; 1936, $8,580,750; 1937, $10,035,250; and 1938, $13,913,550. This money goes into the general fund, and $4,000,000 was used for public-welfare program in 1937 and $6,220,392 in 1938, making it unnecessary to raise or create any new taxes.

Under the McNutt leadership the State cut expenses and created new sources of revenue, and ended the 1933–34 fiscal year with a balanced budget. The balance at the close of the 1934–35 year was $9,250,000. On July 1, 1936, McNutt announced a balance of $10,892,205 in the general fund and not a cent of State indebtedness. When the 1936–37 fiscal year ended on July 1, 1937, Indiana had the unobligated balance of $23,855,879.

McNutt left the State on a solid financial foundation, without a penny of indebtedness and with a tax system which many States have copied. The fame of the Governor's administration spread to New York and the Wall Street Journal sent a reporter to Indiana to write a series of articles about Indiana's achievement. After reviewing how Indiana had strengthened and restored its financial condition the famous New York financial paper declared: "Indiana has demonstrated that governmental economy and special tax legislation may be combined to meet changed business and economic conditions."

IV

The story of relief in Indiana under former Governor McNutt presents a record of high constructive achievement. It not only provided useful relief work for the State's needy unemployed, particularly those with dependents, but it contributed to the conservation, development, and expansion of material resources in the State and the physical equipment of various communities.

More important still, the program gave the State's unfortunates a glimpse of the finer side of life, teaching them to use their leisure for physical and intellectual advantage, to learn new trades by which to earn a living, restore their self-respect and heal their broken spirits.

It was the Governor's commission on unemployment relief, created by the general assembly early in 1933, which was made responsible for administering to the urgent needs of 100,000 destitute Indiana families. So efficiently was this work organized to eliminate waste, extravagance, and duplication of relief distribution that Indiana's per capita costs were the lowest in the Nation.

When the Civil Works Administration to create jobs through a public-building program was established by the Federal Government, the Governor's commission was functioning so capably that it was assigned the task of administering the Federal program in Indiana. When the C. W. A. was discontinued the commission became the administrative agency of the Federal Emergency Relief Administration for Indiana.

McNutt's farsighted program of taxation and businesslike management of governmental expenditures had placed the State in such sound financial condition that the Federal Government's edict that the States contribute up to 40 percent of the money needed to finance relief during the winter and all of 1935 brought no dismay. Indiana had been bearing about 40 percent of the load for some time, and was paying out about a million dollars a month while dispensing Federal money amounting to about $2,500,000 a month.

Wayne Coy, former secretary to the Governor and now administrative assistant to the High Commissioner, was made director of the Governor's commission on unemployment relief some months after the work was started, following the resignation of the first director. Carrying out McNutt's ideas for putting men and women to work rather than giving direct relief, Coy rapidly climbed to fame, and his executive ability was recognized in other States and in Washington.

In May 1935 Coy was called to Washington by Harry L. Hopkins, National Relief Administrator, to outline for President Roosevelt the program of the new Works Progress Administration in connection with putting 3,500,000 employable persons to work under the $4,000,000,000 work-relief law. He remained in Washington to assist in the final drafting of rules and regulations and to address a meeting of State administrators of the Works Progress Division who would handle the field work under the new law.

Indiana's relief machinery already was so complete and functioning so smoothly that the State was first to get the W. P. A. projects started on August 1, 1935. Three and a half months later the State had attained its job quota, as fixed by Hopkins, by placing 74,500 persons in jobs by November 18, 1935. There were on that date a total of 1,191 projects scattered throughout the 92 counties and numerous communities. Various types of construction projects were started for men, and the women were given work making garments to distribute to the needy, especially children; repairing school and library books; making surveys; or doing similar types of work.

McNutt's outstanding leadership in meeting the problems of relief in Indiana was recognized by Hopkins, who named the Governor to the advisory board of the National W. P. A.

Significant in the success of Indiana's relief plan as formulated by McNutt and carried out by Coy was the choice of projects which allowed the maximum amount of funds for labor. The aim was to have small projects that would use the most man-power instead of adopting those where a large percentage of funds would go for materials. Wherever possible communities were asked to supply materials so that more money would be available for labor.

From the start of the W. P. A. program until July 31, 1937, the allotments of Federal work-relief money to Indiana totaled $96,802,561. Sponsors' contributions to projects under this program during that period totaled $11,872,659. These figures represent a monthly average of more than $4,000,000 which were distributed over the State during 24 months. The handling of such huge sums efficiently and accurately was no small task, but the organization set up by former Governor McNutt and administered by Coy until he resigned to accompany the new High Commissioner to the Philippines has continued to function without a single breath of scandal or charge of inefficiency.

Cooperating with the national administration and objective of President Roosevelt as closely as possible, the Indiana work-relief program started by McNutt has continued to adhere to certain general principles which were evolved from experience during the early days of the depression. These principles were: First, persons on work relief should not be employed on jobs that any public unit ordinarily hires done. Second, work relief should in no way injure the standing of other workers. Third, the rate of pay should conform to the basic minimum for a decent living standard. The rate in Indiana was fixed at 30 cents per hour. Fourth, work relief should not be made so attractive as to deter workers from taking private employment when available.

In administering this program the Commission made no discrimination on account of party, creed, or race. Relief, both direct and work, was assigned solely on the basis of need. The public approved of the methods worked out by the Commission, because they were found to be more worth while than a mere dole, and the taxpayers got something tangible for their money in the improvements that were made as construction projects. Intangible gain was recognized in the revived courage and morale of the workers, which averted the danger of evils which have followed in the wake of enforced and prolonged idleness in other countries.

Government Expenditures

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, June 30, 1939

EDITORIAL FROM THE WEST UNION (W. VA.) RECORD

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial on the subject of Government expenditures, published in the West Union Record, of West Union, W. Va., under the heading, "Let's Stop It."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the West Union (W. Va.) Record of June 22, 1939]

LET'S STOP IT

In this year the Federal Government is spending four times as much for unemployment relief as the total cost of the Federal Government in 1916. I repeat this because I want this astonishing fact to sink in. This year the Federal Government alone is spending $2,741,000,000 for unemployment relief, as compared to $734,000,000 for all expenses of the Federal Government in 1916. Thirty-three States now take from the Federal Government for relief alone, exclusive of grants and subsidies, more than they pay into the Treasury from which they draw. Virginia and Illinois are among the 15 States in all the Nation drafting less relief money from the Federal Treasury than they contribute in tax revenue.

The interest charge on the Federal debt is now $1,050,000,000, and this is 40 percent more than the total Federal expenses in 1916.

Today for every dollar you pay in Federal taxation 20 cents goes directly to the payment of interest. If the Budget were balanced now, and the sum of $500,000,000 paid each year on the Federal debt, it would take 56 continuous years to reduce the debt to where it was 8 years ago.

We are being told that we are in a new era. We are listening again to the story that the old rules no longer hold; that the magic of new advisers and new tricks in financial manipulation have wiped out the significance of addition and subtraction. We are listening to the siren song of debt and still more debt. Wishful thinking and mere good intentions are not quite enough. In India the mother who casts her infant into the Ganges as an act of worship to the devouring crocodile is inspired by the most sacred intentions. But it is pretty hard on the infant. Is it any wonder that the average businessman, as Secretary Morgenthau says, has the state of mind of "What's the use?"

You know and I know that the extravagance of today must be paid by great taxation tomorrow. You know that tax-free Government competition throttles private enterprise. You know that oppression by needless governmental regulation stifles the business spirit.

The Federal Government alone is spending $23,000 every minute of every day and every night, including Sundays, and of this $11,500 is being added each minute to the public debt.—From a speech made by Senator BYRD of Virginia before the Illinois Manufacturers' Association at Chicago April 25, 1939.

The facts thus emphasized by Senator BYRD ought to alarm every patriotic, intelligent American citizen. We believe that if these facts could be presented to every citizen in the plain, simple, but forceful way in which the Virginia Senator has stated them, the people all over this Nation would at once demand that Congress put an end to extravagance and wild spending, add not another penny to the national debt, and immediately proceed to cut down expenses in all departments of the Government.

The spending program has been given a sufficiently long trial and it has failed to do what it was intended to do. It has been proved that a nation cannot spend itself into prosperity any more than can an individual.

Two and two make four today just the same as they did when we started out on our search for Utopia or for the more abundant life. The old-time virtues of thrift, economy, frugality, industry, and self-reliance are just as trustworthy today as they have ever been. Not a single time-honored principle of political economy, nor a single time-honored principle of private or public morality, nor a single cardinal virtue of any kind has been proved false or misleading in all these hectic years we have been trying to remake humanity and to establish a New Jerusalem here on earth. We have run into a stone wall every time we have gone contrary to any of those old principles or virtues, and practically all our troubles have come through our failure to be guided by them.

Everybody who has any sense at all knows well that we cannot go on indefinitely spending the way we are now spending and have been spending during the last 10 years. Nobody knows, not even the greatest financial experts, just how long we can continue to add to the already colossal national debt before we reach a state of bankruptcy or of financial and industrial chaos. But everybody knows that very thing will happen at some point or stage if we go on as we are now going and have been going. Why take chances on the happening of such a calamity? Why try to see just how far we can go without stepping over the precipice? Why not stop now while we are still on safe ground?

Every voter who can write and who believes our national debt has gone as high as it should go should write to his Senators and Congressmen urging them to do everything in their power to call a halt to the spending orgy.

Here is what the Industrial Review in a very able editorial recently said about our national debt:

Writing in the Saturday Evening Post, Harry Scherman, the distinguished economist and author of The Promises Men Live By, says, "There is only one alarming aspect of our national debt, in my opinion—the apathy and ignorance of the American public with regard to it. The common attitude is: If the experts differ as widely as they seem to do, why should an ordinary citizen add the national debt to his other workaday worries; sufficient unto the day are our own debts; if some great national disaster is really involved, poor posterity, not ourselves, will suffer it.

"But 10 or 12 years from now is hardly posterity. Quite a few economists are of the mind that this short period may easily witness an economic tornado arising from the debt if its uninterrupted rise is not permanently reversed."

This public callousness toward a fiscal policy that, long enough continued, can result in nothing else than national bankruptcy, is one of the most tragic things in our life as a people today. Nine short years ago the debt had just passed the $16,000,000,000 point, and millions of thinking people were worrying about it. Today the debt has reached $41,000,000,000—and most of us seem to take it for granted, as if it were as uncontrollable and as little important as a change in weather.

All the flag waving in the universe cannot save a spendthrift nation from revolutionary chaos. And that is something that the general public does not yet seem to realize. Public officials in the Nation's Capital are now almost helpless to stem the tide of spending, even if they so desired. The desire to stop spending the Nation into ruin has got to start at home. Every man and woman must come to realize that the Federal debt is rapidly approaching proportions that threaten the very foundations of individual liberty.

There is no such thing as "free money." As one public official, a United States Senator, recently pointed out: "We get the money from you * * * and you don't get it all back * * *. We take your shirt and give you a little piece of the shirt tail. Then you go back home waving and shouting, 'Look what Uncle Sam gave me.'"

The debt is controlled—or not controlled—by the men we elect to office—the Congressmen and the State legislators and county and municipal officials. And these men are controlled—or not controlled—by the people. The debt problem comes squarely back to us—the voters of America, who must decide whether we shall return to fiscal sanity or go whole hog toward ruin.

An Explanation of Neutrality

EXTENSION OF REMARKS
OF
HON. JOSH LEE
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Friday, June 30, 1939

ARTICLE BY HARLAN MILLER

Mr. LEE. Mr. President, on June 23 Mr. Harlan Miller, in his delightful column, had a very fine treatment of the neutrality law and the proposed neutrality legislation in the form of a conversation between father and son. I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in part in the RECORD, as follows:

[From the Washington Post of June 23, 1939]

OVER THE COFFEE

(By Harlan Miller)

A SENATOR EXPLAINS NEUTRALITY TO HIS SON

SON. Who'll have to fight if we choose the wrong kind of neutrality?

DAD. You will. So I'd better explain it to you simply.

SON. Why are there so many plans?

DAD. Because a few amateur statesmen think they're smarter than the State Department.

SON. Which bill do you favor? They mean well, don't they?

DAD. Sure; but I'm for Cordell Hull's neutrality-for-peace plan. He's an experienced statesman.

SON. But what's wrong with an embargo against selling to either side in a war?

DAD. Because that's exactly what the dictator war lords want us to do. Such an embargo is the same as giving Hitler 500 new submarines.

SON. How would Hitler vote on our neutrality bills?

DAD. He'd vote against Secretary Hull's peace-neutrality bill and cheer for embargo. Then he could go to war tomorrow, with the world at his mercy.

SON. But why do you call Mr. Hull's bill a peace bill if it would make Hitler mad?

DAD. It might make him mad, but it would discourage him from fighting, because the peaceful nations would be in better position to defend themselves.

SON. But why do some Senators favor a neutrality bill that would bring on a war?

DAD. Because they think we can stay out of the next world war—wishing will make it so. We might move off the planet.

SON. Then what do you think is the best way for us to stay out of the next war?

DAD. By doing all we can—and that's plenty—to prevent the next war.

SON. How can the embargo be neutral if it would bring on a war quickly?

DAD. It's about as neutral as sinking half of England's fleet or destroying half of the French air force.

* * * * * * *

SON. But just what does the Hull neutrality-for-peace bill do?

DAD. It lets our own Government decide where Americans can travel or trade, instead of letting the dictators decide that.

SON. But wouldn't it be dangerous to give that power to any President?

DAD. I think any President and State Department would be just as anxious to prevent war and keep out of it, and just as patriotic, as Congress. The "frozen neutrality" bills would let the dictators fix our foreign policy.

SON. But who is supposed to conduct our foreign affairs under the Constitution?

DAD. The Constitution puts the President in charge of our foreign relations. But he cannot get into a war or even make a treaty without the consent of Congress.

SON. Is Congress trying to take the President's constitutional power away?

DAD. It looks that way; and its as bad for Congress to encroach on the power of the Executive as for the President to encroach on the Supreme Court.

SON. Do you think there will be a world war this year?

DAD. Every move we make on Capitol Hill is being watched. If we don't repeal the embargo, and if we defeat the Hull proposals, it would be a signal for the aggressors to attack.

SON. We tried to be neutral in 1914, didn't we? But we couldn't stay out.

DAD. If England can't count on our help, and if Hitler can't count on our isolation, there won't be any war.

SON. Maybe we could keep out of the next war by resigning from the human race. * * * But we can't do that by passing a law, can we?

Well, It's Here

EXTENSION OF REMARKS
OF
HON. DAVID D. TERRY
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 29, 1939

ARTICLE BY MR. J. CARROLL CONE, MANAGER, ATLANTIC DIVISION, PAN AMERICAN AIRWAYS

Mr. TERRY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include an article by Mr. J. Carroll Cone, a former resident of my home town, who was a passenger on the *Yankee Clipper* on its first flight across the Atlantic. This was a history-making occasion and was the forerunner of a regular trans-Atlantic service. The article is as follows:

[From National Aeronautics for June 1939]

WELL, IT'S HERE—CHERISHED DREAM OF TRANS-ATLANTIC AIR SERVICE NOW A REALITY

(By J. Carroll Cone, manager, Atlantic division, Pan American Airways)

All the way out to the port I had to keep telling myself that this was really it, that men and machines were about to start cruising

over the North Atlantic Ocean between America and Europe on regular schedule.

This thing that men had talked about, had dreamed about, had planned for these many long years actually was here. I have been in the air business, in one capacity or another, for 22 years. I have heard engineers with tight scalps and less learned men with loose scalps and imaginations equipped with overrunning gears discuss flying the Atlantic with big transports. I have watched the airplane grow from a spindly legged upstart, so to speak, to a brawny man. I have listened to men who have flown the Atlantic say glibly that it was just a matter of a little engineering and nerve; and I have listened to others, their minds hedged around by inelastic figures, say it was impossible.

But here it was. And by the grace of Providence I was in on the start of it.

The car rolled smoothly to a stop in front of the base offices at Port Washington. The crew was on hand. All papers were in order. Baggage was weighed. Friends stood about looking rather envious. I couldn't blame them. Juan Trippe, president of Pan American Airways, and C. V. Whitney, chairman of the board, whose vision made all this possible, were obviously elated. Air lines run on chronometers, but sheer enjoyment is a matter of human emotion.

The *Yankee Clipper* was only one of three big flying boats in Manhasset Bay. There, too, were the sister ship of our plane, the *Atlantic Clipper*, and the veteran ship, *Lieutenant de Vaisseau Paris*, the latter newly arrived from France on an experimental flight. The bay actually looked cluttered up with transoceanic planes.

OFF TO EUROPE

The inevitable news reels, microphones, and newspapermen were accommodated. Good-byes were said.

"We are ready, sir," said Capt. Arthur La Porte to Mr. Trippe. Mr. Trippe and Mr. Whitney wished us "bon voyage."

We trooped down the long walkway to the float where the clipper rode easily, tethered fore and aft as a precaution against her eagerness to get away. Close up, her hull looked like the side of a skyscraper. We walked aboard, the 17 of us—14 members of the crew and 3 "observers." The hull door was closed. The big 1,500-horsepower Wrights coughed once or twice, caught, and began singing. A motor's roar may sound like noise to a landlubber but it is music to a pilot.

The lines were cast off. We taxied slowly out to our take-off lane.

Through the window at my elbow I could catch a glimpse of those ashore. Handkerchiefs were waving. A news-reel man was cranking his camera.

I had to bring myself up sharply. We were not flying to Baltimore or Bermuda. We were going to Europe. We were the first ever to fly the North Atlantic by commercial timetable. Others would follow. The whole operation up to this moment was deceiving. It was deceiving because everything was being done in 1-2-3 order, as though Skipper La Porte and his crew merely were carrying out a routine assignment.

We wheeled about into the wind. For a moment the motors continued to tick over. Then the throttles were notched up. Hull and wing responded. We were moving. White water fled past the windows. The bay water began to exert less drag. I knew we were on the step. It would be only a moment now.

There—we were up.

Well, I thought, I'd better look at the timetable. It said the next stop was Horta, almost 2,400 miles away. I wondered idly who had once proved, with paper and pencil, that this was impossible.

HAIL TO THE WORLD OF TOMORROW

Down below little boats drew tiny wakes on the water. Spectators at the base were pin points. We swung westward over the world's fair. La Porte talked with Chairman Hinckley, of the Civil Aeronautics Authority, while the brilliant colors of the fair swept beneath our wings. We wheeled east for the long haul over the Atlantic.

How can a person describe something he has looked forward to for so long, to find that it fills all his expectations? The motors, throttled back to cruising speed, sang on. Blue-coated officers went about their duties as casually as though they had been flying the North Atlantic for a hundred years. Every hour an engineer walked out into the spacious wings and checked up on the engines. The navigator took his sights. The skipper, an eye on everything at once, walked about the commodious bridge and occasionally sauntered forward for a peep at the controls.

Sleeping was easy—if a man wanted to sleep. I stayed awake as long as I could, hearing the officers talk about radio contacts. Finally I turned in. I was oblivious to the murmur of the motors. In fact, an hour after we were aloft I had to think about them to be aware of them. The mind schools itself to ignore sound which is ever present.

I dozed off. Then I was awakened suddenly. Someone was shaking my arm. What was the trouble?

"Telephone, colonel."

Telephone? In the middle of the Atlantic? I walked "upstairs" to the bridge. Maj. Lester Gardner, of the Institute of the Aeronautical Sciences, was calling from the S. S. *Washington*.

"I don't think we can hear him," I remarked.

He and Dr. George Lewis, director of research for the National Advisory Committee for Aeronautics, were off there in the Atlantic somewhere. The radiophone, I was told, would have to carry 280 miles northeast to the *Washington's* position.

Suddenly Lester's voice boomed in. It practically carried away my eardrum.

"Hello," he said. I helloed back.

Then, in the darkness of the Atlantic, Lester delivered a little speech across that 280 miles of ocean, speaking from a surface ship plowing along interminably to a great transport high above, streaking eastward at almost 180 miles an hour. Our Boeing was sliding along on a tail wind.

I suspected that Lester had that speech, wishing us Godspeed, all written out. I'll have to ask him.

HORTA "ON THE NOSE"

We flushed Horta right out of the middle of the Atlantic. The sun was coming up. The Azores lay there like little bits of green finery anchored in the middle of a blue millpond. As we swept in to put the hull of the Boeing on the water, Pan American's 55-foot patrol boat stood in the harbor proudly with the American flag whipping from her masthead.

As we settled into the water and slowed down, two welcoming boats, each with a brass band aboard, began circling. The bands blared forth. We tied up and disembarked. Girls swarmed around, flowers in hand. I had to smile a little as the girls presented the crew, those husky, sun-browned air mariners, with little bunches of posies.

We were entertained while the "first flight covers" were canceled, restamped, and loaded on the clipper. It took hours. In fact, we had to scour the islands for enough stamps to go around. To make up for the robbery, the clipper graciously delivered a consignment of stamps at Horta on the return trip.

Then we were off again.

I never have ceased to marvel at the uncanniness of clipper navigation. But picking up Horta was just a routine problem to La Porte's crew. Now, again streaking eastward, the bow of the clipper was splitting the middle of the river Tagus when Lisbon came into view.

A night's sleep and we were ready to be away again. But a mistral was blowing at Marseille. The waves, the reports said, were 7 feet high. Should we go? The skipper, who as always, had gone over his weather reports with his junior officers, nodded. La Porte knew his mistrals. Better yet, he knew his craft and its capabilities.

Our 7 hours aloft were uneventful. The wind, characteristically blowing only on the surface of the land and water, giving us no trouble aloft, had subsided somewhat, and the waves were kicking up with less frequency. We circled the harbor three or four times while La Porte studied the situation. Then we leveled off.

TAXI-ING IN REVERSE

I have done a lot of flying in my time but I've never seen anything like this. I scratched my head as the flaps came down. Was he really going to try it? The hull touched. The clipper came to rest with all the lightness of a baby carriage. The wind was too high to turn around, so La Porte cruised backward to his anchorage behind the breakwater. He actually sailed the ship stern-first.

More receptions. Officials of the city and of air France officiated. We had a prodigious taste of French hospitality. We dined. I learned anew what travelers talk about when they get poetic about French food. Then to bed.

We were up at 4:30 and away at 8:30. Flying by now had become one of those 10-minute tours over a relief map of the world. The Alps sprang out of the French countryside. Everybody aboard wanted to see Paris. After a few hours flying "over the top," we dipped through the clouds which swept under our great wings and looked down upon "Gay Paree," the city whose springtime inspired the writer of a popular song.

Then on to Southampton.

The return trip was repetitive. Swinging north of our course on the way to Lisbon, we passed over Issoudon, France, where I served as chief instructor in flying for some months before going to the front during the World War. Again my mind was filled with memories. Had men dreamed of trans-Atlantic service during those days when we strived so hard to meet the demands of the G. H. Q. for more pilots?

I caught glimpses out the window of Vatan, where the soldier-flyers more than 20 years ago entertained themselves on leave from camp, and of Chateroux, where many Americans received their wartime primary training in flying.

SIGNS OF STRIFE IN SPAIN

The clipper sailed serenely over the ocean, a half mile off the Spanish coast when we picked up the Bay of Biscay. I did not have to strain my eyes to see the marks of warfare. Santander and Finisterre had witnessed some of the bloodiest fighting in the Spanish conflict, and the destruction bore testimony to it.

At the border of Spain and Portugal we swung inland. The day was perfect. Oporto, famous for its wines, swept below our hull. Cliffs periodically reared high above the shore line, and in the spaces between were white-sand beaches.

Our welcomes at Lisbon and Horta were as cordial as those on the day we first dropped in for a visit. Specially trained girls worked like mad on mail cancelations in the Azores to speed our departure so that we could keep to our schedule. Even then, we remained in the harbor for more than 7 hours before the last sack of mail was put aboard.

We were up again, headed for Port Washington to complete our tour of a sizable portion of the world, to log 11,000 miles in a week. Our 7-league boots were striding westward to the cadence of four great motors.

Day waned. Dinner was served. The weather grew thick. We were in a warm front, which meant fog and rain. For 2 hours we

sped onward on instruments. We emerged, only to enter a cold front with high head winds.

"CHANGE COURSE FOR BERMUDA"

"We'll change course for Bermuda," remarked Captain La Porte, explaining that the character of the disturbance was such that the use of the alternate port seemed advisable.

Presently we flew out of one fork of the cold front, and the skipper elected to set his course for Port Washington again. Once more, as the magnitude of the storm became apparent, he pointed the clipper's nose toward Hamilton.

Up on the bridge the work went on. Engineers inspected the motors. I sat down in one of the comfortable armchairs on the flight deck, more spacious than the entire cabin interior of the conventional domestic transport. Here was a workroom built to order for the men who go "down to the sea in winged ships."

When the clipper tucked its prow into the warm waters of Bermuda, Skipper La Porte still had 1,100 gallons of fuel in his tanks. That was more than enough to fly on to New York. But he preferred to fly the way he had been taught—to take no chances, to keep his reserve fuel intact for a moment when he might need it to skirt a storm area.

Again we were entertained. As at Horta, Lisbon, Marseilles, and Southampton, Pan American base crews met us smilingly, aware that they, too, were parties to a historic occasion. Imperial Airways' Captain Powell took us to breakfast.

Then we were away again for Port Washington.

HOME AGAIN

Long Island's long, finger-like shore line appeared in the distance. Now we were over land again. The roof of the big hangar at the Port Washington base appeared off our port bow. The clipper swept by majestically, banked gently, and drifted toward the bay. The hull touched. Water streamed by the windows.

As we taxied toward the shore I could see bright blobs of color where people were waving us a greeting. A crewman tossed a rope out of the forward hatch. The motors were stilled. A boat drew alongside and we clambered aboard.

At the dock welcoming hands met us. Even the customs and immigration men, who are pretty serious about their duties, were smiling broadly. Mr. Trippe and Mr. Whitney were beaming with happiness over the success of their dream of 10 years ago. They had given to the United States the prestige of inaugurating the first commercial air service over the North Atlantic Ocean to Europe.

I heard Captain La Porte say, "I wish I could say the flight was spectacular, but I can't. It was just routine."

Riding easily at the float was a reminder that the *Yankee Clipper* merely showed the way. She had flown by timetable to Europe and back to establish the world's first commercial transport service across the North Atlantic. But other ships would follow. In fact, one was already pulling at its lines to be away. The *Atlantic Clipper* was ready for her stint, that same day.

As I rode back to the city from the base, I reflected that what men had dreamed about had come to pass. An ocean had been swept away and continents had been united.

But it will take me a little time to realize that we journey to Europe and back in the space of a week.

Sweden Day—New York World's Fair

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 30, 1939

ADDRESSES BY HON. GUSTAF MOLLER, MINISTER OF COMMERCE, OF SWEDEN, AND HON. FRANK CARLSON, OF KANSAS

Mr. CARLSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include the addresses given by Hon. Gustaf Moller, Minister of Commerce, of Sweden, and myself, at the Sweden Day services at the New York World's Fair. These services were held at the Court of Peace on Sunday, June 25, 1939, at 2 p. m. The services were in charge of Count Folke Bernadotte, Commissioner General, and were rebroadcast in Sweden. Present at these services were several representatives of the Swedish Government, together with a large group of Swedish-Americans from all over the United States.

The following address was given by the Honorable Gustaf Moller, who has served his country with honor and distinction for many years as a member of the Swedish Parliament. He is the father of social-security legislation, and at present is Minister of Commerce.

It is a great honor to have been designated as the speaker for Sweden on Sweden Day at the New York World's Fair. I will try to explain as briefly as possible the leading principles which animate the Swedish community and the life of the Swedish people.

The Swedish people are a democratic people. Proof of their love of liberty appears on every page of Sweden's history, and this record goes back to dim antiquity. The feudal barons of Sweden never succeeded in making serfs of the Swedish farmers—as they did in most other European countries. Liberty in Sweden is therefore based not alone on the theoretical conviction that internal freedom is an indispensable condition for a people's happiness. Traditions of nearly a thousand years have made liberty as a matter of course a part of the atmosphere in which we live. We could as little imagine life without liberty as life without air. I think I have the right to say that I would pity the man who would seriously attempt to set himself up over the Swedish people as a dictator and try to deprive them of that share of their birthright which is liberty.

Liberty and democracy are one. Without liberty there can be no democracy and without democracy no liberty. But true democracy has many other elements. It can become firmly established only among an enlightened people. Every citizen must have a sound knowledge about both the political and the social systems. All citizens must learn to know the possibilities and limitations of each. In Sweden we try to spread such civic education to every corner of the land. As part of this work we have, what I believe to be, in proportion to the population, the world's most extensive system of adult education, including as it does thousands of groups in which serious studies are pursued voluntarily by both young and old.

In building a democratic Sweden on a permanent basis, we work earnestly to abolish all forms of social injustice. Among my listeners today may be many who left their native land because they despaired of being able to gain for themselves a decent livelihood. But the fact is that in the lifetime of the generation to which I myself belong, Sweden has passed through what might be called an economic and social revolution. A social reform of great scope has been put through. These reforms came to a climax during the past 6 or 7 years. Hundreds of thousands of Swedish men and women and their children, therefore, enjoy today actually more comforts than they did during the boom period of the 1920's.

The great industrial progress has laid the foundations and the organized labor movement has built up the high standard of living which is now general in Sweden and which, in respect to the industrial workers, is the highest in Europe. At the same time we have had the pleasure to see grow up in our country a new spirit—a new mental attitude, in which a will toward cooperation and mutual adjustment, instead of strife among the different social classes and population groups, has found a natural soil.

It is certainly true that we have achieved results—partly very good results. But that does not mean that we are satisfied. There are many important social problems yet unsolved. We still have many thousands of Swedes who are too poorly housed. And there are several hundreds of thousands whose income is still too low.

Being convinced that satisfactory social conditions are necessary, not only for the individual who lives under them but for society as a whole, both as a basic foundation and as an armored fortification against antidemocratic heresies, we are firmly determined to solve the remaining social problems in our land. We shall never tolerate the existence of substandard housing nor such low individual incomes that undernourishment and other consequences dangerous to health become inevitable. We are convinced that the resources of present-day Sweden are sufficient, if properly utilized, to enable every citizen willing to work, as well as his wife and children, to live a satisfactory life from an economic point of view. Our intention to reach this goal is a deeply serious one, and we do not purpose to allow ourselves to be blocked. In this way we intend to continue to build up a Sweden of democracy and liberty for the benefit of all—and I repeat—all its inhabitants.

One of the purposes of the Swedish exhibition is to give concrete illustrations in words, pictures, and figures both of what we have achieved and what we are still striving to achieve—in other words, both of the Sweden of today and the Sweden we are trying to create for tomorrow. Other parts of the exhibition are intended to show what the Swedish industrial art can produce. Parallel with our endeavors to remove from our community socially unworthy conditions, we are trying to give to our people an appreciation of quality and beauty in the building of a rejuvenated Sweden. To that end we must show that it is possible to combine, in the things which are to be used within the four walls of a home, beautiful form, suitability, and a reasonable price.

It is for me a rare privilege to be able to convey to this audience, in which there are so many Americans of Swedish ancestry, the most cordial greetings from the people of Sweden and the Swedish Government. In general, the ideals which inspire us and inspire the American people are identical. Especially the Swedes who have found a new fatherland in the United States cannot lose, as long as they are Swedes, the noble inheritance they have received from the land of their birth—namely, a deeply rooted love of liberty, democracy, and peace. If danger should threaten freedom and

democracy, it is my firm conviction that they would be in the first ranks as the defenders of those precious privileges. As supporters of the rule of liberty and democracy they will never fail or falter.

Following Mr. Moller's address, I delivered the following address:

Mr. Chairman, honored guests, ladies, and gentlemen, I want to assure you I regard it a distinct honor and pleasure to have the privilege of attending this Swedish Day exercise. It is an added pleasure to appear on this program with the Swedish Minister of Commerce, the Honorable Gustaf Moller. I want to add my word of appreciation to Mr. Grover Whelan and the New York World's Fair officials for their many courtesies. As Swedish-Americans we are grateful to them.

My only regret is that you were not privileged to have as one of your speakers this afternoon the honored and distinguished Senator from Minnesota, Senator ERNEST LUNDEEN. I am here, trying in my humble way, to perform a service he would have rendered with great honor and credit.

As one whose parents came from the Provinces of Ostergotland and Vermland in 1883, my veins throb with Swedish blood. They were among that group of settlers who heeded the call to go westward. The history of our Nation has been marked by glorious achievements of our Swedish pioneers and citizens. In fact, the history of our great and glorious Republic would not be complete without the brilliant chapters that have been written by the sturdy Swedish pioneers who began coming to our shores 300 years ago. They and their descendants have contributed so greatly to our country's development and security. The Swedish people are to be found on the rock-bound coast of New England, in the forests of Michigan, the sun-kissed prairies of the Middle West, as well as the Pacific coast. No one people who came to our shores so quickly embraced the American ideas. They became imbued with American ideals and in truth and fact became Americans. They are law-abiding, liberty-loving, God-fearing people.

As Swedish-Americans we should recall with honor and pride the names of great Swedish pioneers who have made history. It was John Morton, Swedish settler in Delaware, who arose from a sick bed and was carried to Independence Hall, where the Continental Congress was in session, to break the deadlock that existed over the Declaration of Independence. Be it said to his everlasting credit that he voted to strike the shackles from our people and to cast a vote in favor of liberty and democracy.

Another distinguished patriot of that period was John Hanson, of Maryland, who was elected and served with honor and distinction as the first President of the United States, being elected by the Continental Congress.

The history of the United States is not complete without mention of the inventive genius, John Ericsson. That great Swedish-American stands out as one of the foremost engineers and inventors of all times. Historians declare that next to the immortal Lincoln and Grant, Ericsson did more to save the Union than any other.

In recent history what name of Swedish descent is more dynamic than the name of Col. Charles A. Lindbergh. As Swedish-Americans we should not be too modest in telling the world that four stars in the first flag of the Union were from States settled largely by Swedish pioneers, namely, the States of Delaware, Pennsylvania, New Jersey, and Maryland. The first star is credited to Delaware, and it is an inspiration to every Swedish-American citizen who visits the Washington Monument in the Nation's Capital to note the inscription on the stone that carries the name of the State. It reads, "Delaware, the first State in the Union to adopt the Constitution, and it will be the last to reject it."

Mr. Chairman, we might continue to dwell on the glories of the past, but the history of the Swedish pioneers will continue to be written in the future. Isaiah, the prophet of old, wrote "Where there is no vision people perish." The Scandinavian citizens of our country have always had a forward look. In this day and age, with its domestic economic problems and with a delicate international situation, it is well for us to take stock of ourselves. Our ancestors came to establish their homes in a country where liberty, justice, and democracy would prevail. The three outstanding inheritances that we have received as a Nation from the Swedish pioneers are first, religious tolerance; second, a policy of peace and fair dealing; and third, respect for minority groups. Think what these three traditions of our civilization would be worth to some of the European nations today.

In our own country it is well for us to watch or we may lose these long-cherished traditions. Someone has said that our Nation can never be destroyed from without, but that we are in grave danger from enemies within. The darkest period in our Nation's history was from 1861 to 1865, when we were fighting among ourselves. In a world that seems to be teeming with isms, where class is being arrayed against class, where bigotry and where religious and racial prejudices are rampant, I believe it is high time for every American citizen to renew and pledge anew our faith in the principles laid down by our forefathers. In other words, as Americans let us serve notice that we have room in the United States for only one "ism" and that is Americanism. Our native country of Sweden has not only furnished our Nation with an excellent stock of citizens, but as a nation she stands out as a shining light for peace in a war-mad world. We might well as a Nation profit by their example and keep our heads in time of stress and unrest. Let us bear in mind that parting admonition of George Washington, the Father of his Country, when he said, "We should beware of foreign entanglements."

Unfortunately, European nations have fought over boundary lines for the past thousand years and will no doubt continue to do so in the future. In my opinion that is their problem and not ours. Let us assure the world that we have unlimited resources for national defense, but also let us assure our American citizens that never again will we send American boys to be slaughtered on foreign soil. Ours is a peace-loving Nation, but that does not mean we will not fight for the protection of our homes, our churches, and institutions.

In conclusion, let us clearly perceive these principles that were laid down by our Swedish ancestors and adhere to them. These were the same principles that gave us our independence. The same faith and the same loyalty will preserve that independence forever. I firmly believe that out of the clouds of unrest that are now enveloping the world our country will emerge stronger than ever. In seeking remedies for our present abnormal situation we must not destroy the initiative and incentive which drive nations and men alike toward a higher goal. I have confidence that the Swedish people of our Nation and their descendants, who have been so thoroughly imbued with the ideals of liberty and democracy, will continue to carry on. Finally, let us hope that religion will rise again like a great tide throughout the world and reach the hearts of men, so that they will not want to abuse or take advantage of each other. Perhaps, my friends, the real answer to our problem rests in religion and the church; for unless the hearts and minds of our people are kept clean, honesty and righteousness cannot be cultivated. If throughout the world we have noticed a weakening of the moral fiber and an increase in the lower warlike tendencies of men, we may all well wonder whether we need a change in our social order as much as we need a change in our hearts.

As Swedish-Americans, let us pledge anew our loyalty and devotion to our country.

Dare We Break the Vicious Circle of Fighting Evil With Evil

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

SERMON BY DR. HARRY EMERSON FOSDICK

Mr. BENDER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following sermon preached at the Riverside Church, New York, N. Y., by Dr. Harry Emerson Fosdick:

For some of us it is easier to believe in the Christian theology than in the Christian ethic. A generation ago many were saying: We cannot believe your Christian ideas of God, but the ethical principles of Jesus are the hope of the world.

Today, however, it is the ethical principles of Jesus that are difficult.

By the Christian ethic I mean no mere ordinary, humane decency, loving those who love us, but rather the radical, sometimes incredible, demands of Jesus that we love our enemies, that if smitten on one cheek we turn the other also, or if compelled to go 1 mile we go 2 instead, that we do good to those who hate us and pray for those who despitefully use us and persecute us. There is the rub today.

The reason for this is the extraordinary vividness with which a powerful temptation assails us all, the temptation to resist evil with evil. When on the western prairies a conflagration starts, men fight fire with fire, burning a swath across which the advancing flames cannot leap. What is thus well done in the physical world we are continually tempted to do in the moral world. We fight evil with evil.

WE COPY THOSE WE HATE

In war, if one side uses poison gas, the other side may at first be horrified, but in the end we all succumb. It takes poison gas to fight poison gas. If one side uses conscription, which is of the essence of dictatorship, the other side, being a democracy, at first is shocked, but in the end copies the technique of the enemy. It takes conscription to fight conscription.

In personal relationships we are habitually tempted to meet bad temper with bad temper, resentment with resentment, sometimes chicanery with chicanery, and in all this we are morally sustained because we think we are resisting evil—as, indeed, we are, but with evil.

At that crucial point Jesus parts company with us. It is there that his revolutionary ethic begins.

Listen to him: "How can Satan cast out Satan?" Hidden away in the third chapter of Mark's Gospel that searching question stands, summing up, I think, the essential meaning of Jesus' way of life. "How can Satan cast out Satan?" How can evil be the cure of evil? How can two wrongs make a right?

No question could be more pertinent to our modern world, where today violence rises on every side, ill will is rampant, aggressive iniquities must be resisted by good men, and the temptation to fight evil with evil is almost irresistible.

Nevertheless, the question of Jesus haunts the Christian conscience and in quiet moments of insight reveals a strange, uncanny common sense—how can Satan cast out Satan?

ANSWERING EVIL BY MORE EVIL

In the first place, how can the vicious circle of evil answered by more evil, answered by more evil, answered by more evil still, ever be broken unless, somewhere, someone refuses to go on with it?

Watch this vicious cycle of wrong answering wrong. Iniquity rises, demanding that we fight back. So, following the pattern of the natural ethic, against which Jesus took his revolutionary stand, we fight bitterness with bitterness, hatred with hatred, violence with violence, evil growing in a mounting crescendo as wrong answers wrong.

This process is afoot everywhere, from international relationships, where they bomb our cities and kill our women and children, and so we bomb their cities and kill them, to personal relationships, where we say, "He has been unjust, I will show him, I will pay the devil in his own coin.

In this regard how like we human beings are to dogs. For one dog barks and the other barks back and the first barks more loudly and the second becomes more noisy still, in a mounting crescendo of hostility. So one man excused his terrier to the exasperated owner of another, "After all," he said, "the dog is only human."

THE TRAGEDY OF NAME CALLING

From the time, as children, we fell into angry name calling, each trying to lay his tongue to some more stinging epithet, we all have faced this elemental problem; and now that, more mature, we are more dignified, our resentment taking a colder form but remaining still resentment quite unredeemed, who does not know that vicious circle of bitterness answered by bitterness, answered by bitterness again? It is the tragedy of the world.

Shakespeare dramatized this in Romeo and Juliet, which, far from being a drama of romantic love alone, is first of all a play about a feud—the house of Capulet against the house of Montague. The first and last words of the play concern the feud, one house against the other, hating each other, meeting violence with violence, evil growing by what it feeds upon and two wrongs never coming out right. Remember Mercutio, slain in the duel and in the insight of his dying moment crying, "A plague o' both your houses!"

"GIVE ME THY HAND"

In the theater one sees people go out before the final scene as though, the love poetry being over, they thought the play was done. Shakespeare would have disliked that. It is the final scene, the climax of the play that he was driving at, where Capulet and Montague stand ashamed and penitent, their long and bitter feud stopped in midcourse by a love that broke the vicious circle of its hate. In that final moment of the play, when a Christian might kneel as before the mystery of the cross, Capulet says, "O brother Montague, give me thy hand."

So Shakespeare after his own fashion dramatized what the Christian ethic would say, that the world's feud can never end and the vicious circle of wrong answering wrong come to a close until, somewhere, somebody refuses to go on with it. Jesus meant this by His homely saying that if a man is smitten on one cheek he should not smite back, starting thus an endless chain of retaliation.

Let him try a new technique. Better, He would say, that one adventure on a revolutionary ethic and, if two blows must be given, take both rather than give one. Let him see if he cannot thus break the endless sequence of fighting evil with evil, whereby we always become the evil that we fight.

This, of course, is what the pacifists at their best are driving at with reference to war. The most shameful aspect of our present international situation, I think, is the way we ape the enemies we hate.

ARE WE "YES MEN" TO DICTATORSHIPS

The dictatorships say, war, so we say, war. They build vast armaments, so we build vast armaments. Step by step, day by day, we become their "yes men." They say, dictatorial control of the nation for the sake of war's efficiency. So in Washington we propose bills that provide on the day of war's declaration that the Nation shall conscript life, property, labor, conscience.

The dictatorships say: Let the War Department determine the foreign policy! So we, too, against the tradition of our people and the very words of our Constitution say the same thing, and in Washington—witness the proposition for the fortification of Guam—not so much the civilian representatives of the people as the Army and the Navy begin to initiate, and so ultimately to predetermine our foreign policy.

WE FIGHT EVIL WITH EVIL AND BECOME THE EVIL THAT WE FIGHT

What apes we are! We copy those we hate. We fight evil with evil and become the evil that we fight. We will conquer them, we say; and so first of all we let them make us in their image.

All this we do, thinking Jesus to be a visionary idealist. He is not. His ethic shows a more realistic insight into what is going on in this modern world than does our boasted hardheadedness.

Despite their governments, the people of all the nations in their hearts and homes want peace. Somewhere, sometime, millions of men and women must stand up and cry: We're through; we will not go on forever with war causing more war, causing more war, causing more war still.

If someone says, But we may be compelled to go to war! I ask only that the meaning of that be realistically faced. For in the war you say America is compelled to enter, every cruelty that human beings, implemented with unprecedented instruments, can inflict on human beings will be inflicted. In that terrific wrestling bout no holds will be barred. The word "sacred" will be dropped from the human vocabulary, and neither child nor woman, home, church, school, honor, nor plighted faith will be respected.

NO ONE CAN REALLY WIN A WAR

If we are the apes of our enemies in peacetime, in wartime we will be apes, indeed. Every cruelty they devise we will match. Every devastation they inflict on human beings we will equal. In the end no barbarity will be beneath us.

The boys we bore in travail and reared in love in our homes, schools, and churches will become the "yes men" of the enemies we fight in every dastardly deed they do. They will be compelled to.

And when it is over, in a world where all agree that no one can really win a war with civilization, it may be wrecked, with a thousand new problems raised for every one solved and countless hatreds engendered for every one satisfied, I can think of only one factor that still will stand quite unimpaired; namely, the strange man of Galilee whom many call a visionary idealist still asking with infinite sorrow, "How can Satan cast out Satan?"

Let us take a further step and note that whether or not this principle of Jesus that evil is not to be fought with evil appeals to us, depends primarily on what it is that most of all we want. Do we really want to cast out Satan? Do we most of all desire to get rid of the evil of the world? Multitudes of people want something else altogether—their own prestige, personal or national, their gain and profit, their vengeance even, or their private conquest. Of course, to such Jesus' ethic is preposterous.

THE SUPREME AIM OF JESUS

We cannot see His meaning truly any more than we can see the windows of a Gothic cathedral until we go inside, and from within His life understand what most of all He wanted. Above all else He wanted to rid the world of its evil. Whatever it cost, whether it brought Him to the cross or no, somehow to rid the world of its evil was His passionate desire. If that is what a man wants, then evil is not an instrument to use.

It is only in the light of this supreme aim and motive of Jesus that one can see His ethical principles as reasonable. If one wants most of all to cast out Satan, then an alliance with Satan is no means to that end.

THE FOLLY OF VINDICTIVENESS

Translate this into personal life and its truth is clear. A man does a wrong to us; what do we want? It may be that our first impetuous desire turns to vindictiveness—an eye for an eye and a tooth for a tooth.

So one man I know of had an enemy. For years financially he laid for him until he got him, sold him out, lock, stock, and barrel, house, and furniture, and, with a satisfaction which only the vindictive know, cried, "My God! but that's conquering!" If a man wants that, then Jesus' ethic is preposterous.

When, however, a man did Jesus a wrong, Jesus felt concern for the man. There are different ways in which one can intimate the presence of need and more unmistakable than to be unfair, unjust, ungenerous. When a man does a wrong it is as though he flew unwittingly a flag of distress and uttered a cry for help.

Evil-doing may be variously interpreted. It may cry to us, "Revenge!" It may say, "Ignore me!" It may say, "S. O. S.; there is a need to be met, a deep want in this man's life, an evil that by good will, perchance, you may help to cure."

So, when the Samaritan villagers used Jesus despitefully, He was sorry for the villagers. When Judas betrayed Him He was heartbroken because He could not help Judas. It was the wrongheartedness itself He wanted to get rid of—the unkindness and bitterness He wished to banish from the earth. When one takes the measure of this supreme motive Jesus' ethic becomes not preposterous but inevitable. Satan cannot cast out Satan.

RISK AND SACRIFICE ARE NECESSARY

If someone says that this ethic is risky, that it is bound to cost sacrifice, and when used on some people is sure to fail, I answer, of course it is. During the last blizzard, we are told, a woman living on a branch of the Ohio saw a poor dog drifting on the ice floes and, touched with pity, ran to the stream, with difficulty launched her boat, fought for 2 hours before she reached the dog and brought him safely back. Then he bit her and she died of rabies.

There are human curs like that. Of all men in history do you think Jesus did not know it? But He would say, I think, "Take it any way you will, human life is risky; you cannot avoid risk in life; and the salvation of the world depends on men and women who will take this risk, to face ill will with good will, to try to break the vicious circle of evil's sequence, where wrong answers wrong, and, when two blows must be given, to take both rather than give one."

A MINISTRY OF GOOD WILL

If we say in certain personal relationships this ethic can be made to work, and it was only of these individual relationships that Jesus was thinking, I suspect that shows how little we know about Jesus' world. He was not tucked off in a forgotten corner of the earth. He lived on one of the major highways of the Roman Empire. Every breath of news, I suspect, from the Thames to the Euphrates, soon or late came to Nazareth.

He lived in a violent generation when force ruled the world and might made right as terribly as it does today. He lived in a nation seething with violent revolt. He dealt not only with Sadducees, compromising with Rome; not only with Pharisees, waiting for their supernatural Messiah to come from heaven and redeem them; but with zealots, fiery, militant, revolutionary rebels, crying out for bloodshed to make right their heinous wrongs.

This public situation, so dreadfully like ours, Jesus had in mind when he turned his back on revenge and bloodshed and based his ministry on undiscourageable good will.

It was this public situation he faced in the temptation at the beginning of his ministry, when the devil, as it were, showed him all the kingdoms of the earth and said, "All these things will I give thee, if thou wilt fall down and worship me."

How perennial a temptation that is! How terribly it assails us all today! To join forces with the devil to beat the devil, to fight evil with evil—ah, Christ, how did you resist the pressure of it in your time and how in a world like this do you expect us to follow you?

SATAN CANNOT CAST OUT SATAN

Yet when in calmer moments one faces the facts, one wonders if he is not right. Satan cannot cast out Satan. All history is a running commentary on that. The means determine the end. Everlastingly that is true—the means determine the end. We of all generations should understand that.

Did we not fight a war to make the world safe for democracy? We were resisting evil. We prided ourselves on that. We were morally indignant against a real wrong and sacrificially devoted to a holy cause. We would make the world safe for democracy. Conscription to make the world safe for democracy! Poison gas, bombing of open cities, blockades that starved millions, to make the world safe for democracy! Dictatorial control of the whole Nation's life—even of what we ate and wore—the very suspension of the Bill of Rights, to make the world safe for democracy! And in the end a treaty, the only kind of treaty modern war can issue in—vengeful, selfish, cruel—to make the world safe for democracy!

THE SANEST REALIST OF US ALL

So we woke up to find the world less safe for democracy than it had been in generations. We discovered that war, being essentially totalitarian and dictatorial, cannot defend democracy, but that the means determine the end. Ah, Christ, you are not a visionary idealist; you are the sanest realist of us all. Satan cannot cast out Satan.

Let us take a further step and note the positive power of this ethic when it is put to work. For it is not weak, as the average man thinks, but very strong. Of all ridiculous beatitudes, some would say, the most incredible is the one where Jesus sums this ethic up and the faith on which it is built: "Blessed are the meek: for they shall inherit the earth." What nonsense! says the average man.

Yet would you stake your credit upon the opposite? Blessed are the Hitlers, for they shall inherit the earth! Would you? Grant him every temporary victory you think possible. Would you say that in the long run he will inherit the earth? I know no intelligent person who thinks that. All history rises up against that.

EMPIRES BUILT ON FORCE FADE AWAY

Like children's sand houses built upon the shore, age after age the tides of destiny have risen and wiped out the empires built on force. Of all contrasts in history none could be more disproportionate than that between the Roman Empire on one side and Calvary's cross upon the other. Yet the Roman Empire has fallen and many another empire since, like children's blocks toppling in a row, but still that cross stands and haunts the conscience of the world.

So I think Jesus sat many a day upon the hills above Nazareth and looked across the plain of Esdraelon, stretching mile after mile before his gaze. There the historic battles of the world had been fought. There the empires of the Euphrates and the Nile had clashed. Age after age violence had met violence and kings and pharaohs had fallen in futility, and Satan had never cast out Satan yet.

It was from that vision, not first of an ideal but of the facts, that Jesus went out, I think, determined though he died for it, to introduce into the world a new and revolutionary ethic—meet ill-will with good will, dare to break the vicious circle of evil answering evil, never fight wrong with wrong. Satan cannot cast out Satan.

THE PROPER USE OF FORCE

This does not mean that all use of force is satanic. Coercion has its proper place in life, always indicating a pathological condition but capable of salutary use in the interests of the whole community, as, for example, against the insane or the criminal. Even in such realms, however, the Christian ethic has been so far influential that not retaliation but cure and reformation have become the test and aim of intelligent procedure.

Because one believes in municipal police one is not by any logic driven, as some seem to suppose, to believe in war. War is a highly specialized form of force, in its preparations, procedures, and results distinguishable from any other of force's exhibitions. One may believe in the police and think dueling wrong; one may grant the salutary nature of coercion communally applied for the good of all and still think gladiatorial shows are unmitigated and outmoded evil.

WAR IS SATANIC AND ONLY SATAN GAINS

So one may pray and work for an ultimate international community, in which the collective security of all is the aim of all and the policing of the world is the joint affair of all, and may still see clearly that at the present moment no war will mean that or anything aimed in that direction, but will be the old satanic, retaliatory process, motivated by imperialistic ambitions and waged with sadistic savagery to an end catastrophically evil. War is satanic and only Satan has anything to gain from it.

However, some may doubt the possibility of applying this principle to public affairs, how can one doubt its magisterial power in personal relationships? I would almost venture to say that any special fineness of spirit that anybody here possesses is his because sometime he has lived at the receiving end of this ethical principle.

For there are three kinds of goodness in the world. First, coerced goodness, where someone is good to us because we can require it. That is not impressive. Then there is deserved goodness, where we have been good to someone and now, quid pro quo, so much for so much, he is good to us. That is not deeply impressive. Then there is undeserved goodness, where we have been unworthy, ungenerous, unkind, unjust, and lo, someone comes back at us with good will and friendliness.

From the days at home when our parents so treated us through all our lives no force has reached so deep, laid hold so hard, lifted so powerfully as that. Thank God not everybody has slapped back at us. Thank God some people did go the second mile with us. The salvation of the world depends on the multiplication of people who understand and practice that adventurous ethic.

WHAT SHALL AMERICA DO?

Do not represent me as having said that it is simple to apply this principle to the world's large affairs. It is desperately difficult. No one of us is wise enough to see around the next corner. Only as Americans this seems clear, that we are at the fork of the road and that either we are going to throw the vast influence of this Nation on the side of those constructive forces that make for international good will and conference instead of violence or else we are in for an era dominated by our aping of our enemies.

They make war. We make war. They build vast armaments. We build vast armaments. They use poison gas. We use poison gas. They say, all restrictions off on the most brutal instincts of mankind. We say the same, until once more, fighting evil with evil until we are the evil that we fight, far from conquering our enemies we let them make us after their own image.

So at long last, at the end of a ruinous era we shall be facing again the question—which God grant us grace to face now before it is too late—"How can Satan cast out Satan?"

A Time for Rededication

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

EDITORIAL FROM THE BROOKLYN EAGLE

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared recently in the Brooklyn Daily Eagle:

[From the Brooklyn Eagle]

A TIME FOR REDEDICATION

The Council Against Intolerance in America is urging a Nation-wide observance of Independence Day, devoted to a theme of "a stirring national rededication to American ideals of tolerance and freedom," to be sponsored in the various communities by a broadly representative group of organizations and individuals.

This suggestion comes at an opportune time. Current world developments are of a character to arouse the fear that tolerance is becoming a dead letter, that prejudice, hatred, and persecution are constantly becoming more conspicuous in human relations and that they are making for bitterness and strife.

Although these influences and forces are far more pronounced abroad than in the United States, there are all too often disturbing evidences that we have not been untouched by the virus of intolerance. It is not a pleasant thought to contemplate but nothing is to be gained by closing our eyes and our minds to the less appealing realities of life. That there are those in our midst who are disposed to whip up the furies of racial and religious animosities is hardly deniable.

Independence Day seems an acceptable time for an enlightened and a determined effort to stifle whatever threat to American ideals may exist. There is a need for a rededication to democracy, to the principles that found such eloquent expression in an immortal document, to the dignity of man, to all that is best in our life as a Nation. There is a great deal of oppression and terror in the world. Our traditions call for tolerance, peace, and liberty. Let us hold fast to them.

Pennsylvania Legislature Passes Law To Put Politics Into Relief

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

EDITORIAL FROM THE PHILADELPHIA RECORD

Mr. SNYDER. Mr. Speaker, the House granted me leave to extend my remarks in the RECORD, and I include an editorial from the Philadelphia Record, as of June 28, 1939. The editorial is very timely at this particular time. The Congress of the United States has been making every effort to administer relief to the needy people in the United States on a basis of merit. The Republican Party leaders, and many of the so-called "spokesmen" of that party, have accused the Democratic Party and the Democrats for the last several years of using the Federal agencies, such as W. P. A., to boost the party and themselves politically.

The fact that the Democratic Party is the majority party and the party that is held responsible for making these Federal appropriations for relief, and the fact that in all democracies we must have at least two political parties, lest we be an autocracy or a dictator government, there would be nothing unnatural or out of the ordinary if political procedure would creep into these agencies the same as it has crept into every other Government agency since the beginning of the Government.

However, last fall, in the State of Pennsylvania, the candidate for Governor, Arthur H. James, and his cohorts abused the Democratic Party and the Democratic leaders shamefully on the ground that they used the relief agencies politically. He and his cohorts promised the people that if he were elected he would clean up Pennsylvania in that respect. The people elected him Governor last November 7. He has been Governor since January 16, 1939. I think it is generally conceded that he has forgotten practically all his promises to the people of Pennsylvania, and especially the one when he said he would "humanize relief." The following editorial, taken from the Philadelphia Record of last Wednesday, will tell better than I can tell how Governor James is preparing to use the Federal relief money that will be allotted to the State of Pennsylvania:

[From the Philadelphia Record of June 28, 1939]

PENNSYLVANIA ADOPTS THE HITLER RELIEF SYSTEM

Governor James has shamed himself and his party by signing the Van Allsburg and Pierson relief bills.

The first of these is a deliberate and systematic attempt to make the relief set-up a mere vote-getting adjunct of the party in power. It buys votes with public money.

The Van Allsburg Act removes civil-service protection from State relief employees. This is a natural beginning for the process of making relief into a political football.

Next, it gives county boards authority to fix amounts of relief payments to individual families and to delegate subcommittees of snoopers.

Experience has shown that local boards are more subject to political influence than a State relief system, and the Van Allsburg bill does everything possible to encourage the local boards to play politics with human misery. We'll be surprised if a lot of these "subcommittees" don't turn out to be composed of party workers, employers in search of coolie labor, etc.

But vicious as it is, the Van Allsburg Act is merely an extension of the worst practices of American plunder and patronage politics.

To find a comparison with the Pierson bill it is necessary to cross the ocean to Nazi Germany. There is nothing like it in the American background, nor has any American State adopted such a law.

"Germany has solved the unemployment problem." The remark is frequently heard. But how has Germany solved it?

Labor battalions are drafted from lists of the unemployed. Jobless engineers, clerks, factory workers have been given picks and shovels and put to work on the roads. Thousands have been farmed out as virtual slaves to big farmers. Stenographers have been pressed into domestic service.

That's the way Germany solved the relief problem.

The Pierson Act provides that any "able-bodied" person on relief shall be made available for work if requisitioned by any State, county, or municipal agency or institution. The work is free to the institution. The jobless man now receives merely his relief rate. No provision is made for increasing it to take care of transportation costs or the increased amount of food needed by a man doing hard manual labor.

The public agencies of Pennsylvania, under this law, become the foremost employers of sweatshop labor in the land. They can get work done at $6 and $7 a week.

What's more, private employers—corporations, farmers, etc.—can recruit labor from the relief rolls at prevailing rates of pay. The local boards decide the prevailing rates.

Where these boards are dominated by employers seeking cheaper labor, the board can certify a low prevailing rate, force unlimited numbers of reliefers into employment at that rate and undercut the wages of persons now working in private industry.

The underlying theory of the Pierson Act is identical with the underlying theory of the Nazi relief system—that when a person falls into the unemployed class he is fair game and can, under pain of starvation, be made to perform any kind of work at any kind of wages.

These are the two bills signed by Arthur James, the workingman's friend, the breaker boy, the statesman who was going to humanize relief.

These two bills are the G. O. P.'s contribution to the great problem of unemployment that faces the State and the Nation. Not a single attempt to create jobs (except for Republican Party workers); not a constructive idea in administration.

Of all the failures of the James administration to date, these relief bills are the most glaring and the ones most certain to turn the public against the Republican Party.

John Burrwood Daly

MEMORIAL ADDRESS

OF

HON. JAMES P. McGRANERY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN BURRWOOD DALY, late a Representative from the State of Pennsylvania

Mr. McGRANERY. Mr. Speaker, today I pause to pay my humble and respectful tribute to the loving memory of Hon. J. BURRWOOD DALY, who represented the Fourth District of Pennsylvania in this House, having been first elected to the Seventy-fourth Congress and thereafter reelected to the Seventy-fifth and Seventy-sixth Congresses, and who passed away during the present session, on March 12, 1939.

It was my pleasure to have known Congressman DALY most intimately for many years in the practice of law in the city of Philadelphia, where he was one of the city's most outstanding and distinguished lawyers. His kindly manner and keen intellect attracted to him many warm friends. His life was a full and complete one—the father of a large family, all of whom have been reared to adult life previous to his passing.

I like to remember him best on an evening last summer, when I had dinner with him in the garden of a restaurant on the river front in Washington, after he had spent the week-end at Manresa, a Catholic retreat in Maryland. At that time he spoke to me of life and death—he had no fear of death as life itself had been very kind to him. He discussed the happiness of his family life and the full and complete love and affection of a lovely and devoted wife.

There is no doubt in my mind that if "Burrwood," as he was happily known, had followed the easy road, he may have had many more days here upon earth, but his conscientious application to duty in connection with his arduous

task as a Member of the Appropriations Committee was a terrific strain upon him. He would not have it otherwise.

His family, his colleagues in the House, and his host of friends mourn him—he will always be enshrined within our hearts as a true and noble character; and in entering into his eternal reward, he has already heard "Well done thou good and faithful servant."

Competition—Free Enterprise

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, June 30, 1939

EDITORIAL BY FRANK KNOX

Mr. WILEY. Mr. President, I ask to have published in the Appendix of the RECORD an editorial written by Frank Knox, reprinted from the Chicago Daily News, Thursday, June 22, 1939, entitled "Competition—Free Enterprise."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Chicago Daily News, June 22, 1939]

COMPETITION—FREE ENTERPRISE

(By Frank Knox)

There is no class in the country more emphatic in its denunciation of the trend toward a regimented, planned economy, directed by political officials, than the leaders of business and industry. There is no group more vocal in its lament over the progressive emasculation of the free-enterprise system than the men who occupy responsible managerial posts in the American factories, mills, banks, and stores. These men lift strident voices in shrill protest as they see Government assuming greater and even greater authority over private business, determining more and more what business can do and cannot do; supervising investment and the returns investment may earn; relations with, and compensation for, those employed, and other conditions of employment; specifying methods of accountancy; and every year impounding more and more earnings for the support of a recklessly extravagant administration of public affairs.

Of all these things American businessmen are intensely aware, and most of them become almost lachrymose when they attempt to recite them.

But what are the leaders of American business and industry doing to save the free-enterprise system?

No one can doubt that economic freedom provides the very foundation for all other freedoms—freedom of speech, freedom of press, freedom of religion. If someone else holds complete control over your own and your family's means of livelihood, how much are you going to indulge in speaking your mind? If a dominant political bureaucracy controls the sources of a publisher's income, how free will be the press, the pamphlets, the books that find circulation? How free will religion be if it must rely upon political largess for its support?

Similar certainty characterizes the bald statement that there can be no free enterprise system without competition!

It is competition, and competition alone, that gives feasibility and usefulness to a free enterprise system. Without competition to correct the abuses that flow from selfish rapacity, or from an equally dangerous reaching for power, the free enterprise system cannot operate at all. If competition is not given the chance to operate its corrective powers, the substitution of the socialistic system, either Fascist or Communist, is certain!

There are only two choices.

We can restore a free-enterprise system by reviving the competitive spirit, and getting back upon the same prosperous road that, in 150 years, made the United States the most prosperous country in the world, with the highest living standards; or—

We can surrender to those elements who believe the free enterprise system is outworn, and no longer workable, and who are deliberately planning to change our economy to that of the socialized state, where everything, and everybody, is regimented by an all-powerful political dictatorship.

There is no middle ground. We cannot be half free enterprise and half socialistic.

What has been the plainly marked policy of American business, as a whole, ever since that fateful day in October 1929 when our flimsy house of paper profits, following upon a period of frenzied borrowing upon future prospects, collapsed about our head?

It has consisted of an unceasing effort by leaders of commerce, industry, labor, and agriculture to keep prices up.

This, in the face of a fall in income from eighty billions in 1929, to a low of forty billions in 1932. The farmers were subsidized not to grow crops, when millions of people in the cities were without many of the necessities. The labor unions insisted upon wage and hour schedules that increased unit costs of manufactured products, and thus inexorably reduced sales volume, and increased unemployment. Industry sought shelter from a competitive price war behind the N. R. A., which it cried aloud for and helped to organize. Commerce demanded the bolstering aid of an R. F. C. to shield it from the penalties of overcapitalization. And all this was done in a futile effort to preserve the price level of an $80,000,000,000 income, on a $40,000,000,000 national pay check.

No wonder we piled up a debt of $20,000,000,000. No wonder taxes mounted until out of every dollar of a depleted income everyone surrendered 38 cents to the tax collectors!

And we did this while stifling competition.

We said we wanted to preserve the free enterprise system, but we deliberately sidestepped the sole corrective in that system that makes it work.

We would not face the realities.

We refused to pay the inexorable price of our excesses and our follies of the wild, mad days of the twenties.

We are either going to witness a steady slide into the hopeless, level morass of a socialized civilization and economy, or we are going to face the bitter truth to which history, with unerring finger, points. The only way this, or any other nation, has recovered from previous depressions was to let prices follow the immutable law of a sharply lessened demand to lower levels, until they reach the bottom, following as they will, and must, the lowered purchasing power of depression income. We have tried all sorts of artificial expedients to avoid this, but none of them has succeeded. None will succeed. None ever has.

We will get back to a healthy free enterprise system, and a new prosperity, when we remove the restraints and impediments we have put in the way of real competition. Excessively high tariffs, which make a monopoly of our domestic markets for certain favored industries, are one of the artificial barriers that must be swept aside. The efforts of labor leaders to raise wages and shorten hours, in a time of depression, and thus increase unit costs, is another deterrent to a revival of widespread employment and the return of good times.

Trying, by means of loans from the Government, to keep afloat businesses that ought to undergo capital reorganization only helps to postpone ultimate recovery. Paying billions of dollars in subsidies to farmers for not growing crops has left the farmer worse off than he was before the Government assumed control of agriculture, and has increased food costs to the consumer, including the worker out of a job.

And we have all been guilty. We are intellectually dishonest if we try to load it all on the shoulders of the new dealers. They did, in the main, what the majority of us wanted them to do—that is, try to avoid the penalty of our own folly. Now, when all of the New Deal expedients have failed, we raise a great cry that we want a return to the old, accustomed, successful methods of a free economy.

If we do, then there is one vital move upon which the majority of us must agree, and that is actually to restore competition.

Neutrality

EXTENSION OF REMARKS

OF

HON. A. F. MACIEJEWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

Mr. MACIEJEWSKI. Mr. Speaker, no issue facing the American people is more vital than the problem of how best to safeguard the peace of the United States. It is not a problem susceptible of an easy or certain solution. For that reason it demands the best thought of the Nation regardless of domestic political considerations and party alinements. With Europe still preparing for the possibility of waking up some morning to find itself involved in another great war, our neutrality legislation is of most importance to America today.

For the past few days my office has been flooded with letters from my constituents covering the neutrality situation, our relations with foreign governments, and various attitudes this Government should take with respect to this important subject. Since it is humanly impossible to answer all of these letters in full, I am taking this means of giving my views on this vital question.

While the communications I have received impressed me very much, since I have every reason to believe they expressed the sincere and thoughtful recommendations of the writers, they, nevertheless, represent almost all of the conflicting views we hear today. In my humble opinion the people generally have been imbued with a great amount of hysteria attributable, undoubtedly, to statements by public officials, headlines in the newspapers, wide use of the radio, and a general dissatisfaction of the present state of our country.

First, let me say that the district I represent is typical American and my constituents are unalterably opposed to war except in our own national defense. To this view I subscribe wholeheartedly. In my humble opinion we should direct our energies toward peace and the national defense of only what we look upon as the continental United States. Having listened to the debate in the House during the past few days, it is my judgment the majority of the Members of the House do not approve of any foreign entanglements, secret treaties, or alliances, and, further designating to any individual in this country extraordinary powers beyond that provided for under the Constitution. However, the bill in its present form will undoubtedly be amended so as to provide certain changes that will permit of some neutrality legislation rather than none at all.

Second, let me say further that my best thought and study is being given to the question of neutrality and how we may best remain at peace no matter what happens abroad. To my mind downright neutrality is almost impossible of attainment; that is, upon any set formula over any great length of time. Any set formula adopted now may, because of changing events abroad, have to be changed later.

Looking to continued peace for this country is a much more profound question than the average person realizes. I should like to say to my constituents that their views are appreciated and, as your representative in Congress I assure you that any action I may take in the form of a vote on this question will be the result of my best judgment based purely upon those grounds which I feel will make for the best neutrality we can attain and maintain looking to the preservation of peace for these United States.

Devaluation of the Dollar and Stabilization Fund

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 30, 1939

STATEMENT BY RICHARD A. STADERMAN

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herewith excerpts from the testimony of Richard A. Staderman, president of the American Good Government Society. Inasmuch as the monetary bill recently passed by the Senate this June embodied a number of the principles advocated in the bill proposed by the American Good Government Society in April, I believe the additional recommendations of this society—not yet acted upon—to be worthy of further study and consideration.

The matter referred to is as follows:

DEVALUATION OF THE DOLLAR AND STABILIZATION FUND

UNITED STATES SENATE,
SUBCOMMITTEE OF THE COMMITTEE
ON BANKING AND CURRENCY,
Washington, D. C., March 16, 1939.

The subcommittee met at 10:30 a. m., pursuant to adjournment, in room 301, Senate Office Building, Senator CARTER GLASS (chairman of the subcommittee) presiding.

Present: Senators GLASS (chairman of the subcommittee), BANKHEAD, ADAMS, TOWNSEND, TAFT, and MILLER.

* * * * * * *

STATEMENT OF RICHARD A. STADERMAN, OF NEW YORK CITY AND WASHINGTON, D. C., PRESIDENT, AMERICAN GOOD GOVERNMENT SOCIETY, WASHINGTON, D. C.

Senator GLASS. Please state your name and occupation for the record.

Mr. STADERMAN. My name is Richard A. Staderman, of New York City and Washington, D. C. I am president of the American Good Government Society, whose address is Tilden Hall, Washington, D. C. It is a nonpartisan, national organization dedicated to a happier America.

* * * * * * *

I believe most of the members of the committee have received copies of our suggestions on the gold and silver situation. Our proposal, in brief, for which we have a suggested bill, is that the foreign and domestic problems relating to both gold and silver be at the present time divided into more or less two parts, and our proposal is that the foreign purchases of both gold and silver be discontinued, while the domestic purchases be continued for 1 year.

* * * * * * *

Our reason for opposing the gold and silver coming in is not only the excess reserve situation but also the fact that foreign nations have obtained with this gold and silver total deposits and investments in this country of $3,000,000,000. Those are the Federal Reserve figures. On these investments the foreign nations can collect interest and dividends. In other words, they send us gold and silver which is, from the standpoint of our domestic customers, unproductive. They have unloaded this gold and silver on us and they actually draw returns on these investments. That is one of our major reasons which leads us to oppose the foreign-purchase policy.

There are a number of collateral details which would have to be taken care of, and that is provided for in our suggested bill.

Senator, to keep within the allotted time I might request at this time that our brief suggestions be incorporated in the record to give the precise details of our plan.

I happen to have a letter from William Allen White, who speaks very favorably of our plan, and if it is agreeable I should like to incorporate that into the record. Also a letter from the Treasury which acknowledges receipt of our proposal.

* * * * * * *

ADDITIONAL TESTIMONY SUBMITTED BY AMERICAN GOOD GOVERNMENT SOCIETY BEFORE UNITED STATES SENATE COMMITTEE ON BANKING

INTRODUCTORY NOTE

(Not part of previous testimony)

In view of the expiration this year of certain laws relating to gold, silver, devaluation, and the Treasury stabilization fund, Richard A. Staderman, president of the American Good Government Society, appeared March 16, 1939, before above committee and presented the suggestions of the society's board of governors. It is worthy of note that Secretary of the Treasury Morgenthau is personally on record previously against the principle of subsidies of gold and silver sellers. Senators GLASS, TAFT, and TOWNSEND criticize the entire gold, silver, and devaluation program. Senator ADAMS opposes present gold program. Senator MCCARRAN and Chairman EDWARD TAYLOR, House Appropriations Committee, would abolish purchases of foreign silver but continue the domestic. Without necessarily committing anyone named above, approval of the bill below has come from persons of both major political parties, including William Allen White, who writes us: "I don't see anything I can add or subtract * * * strength to your arm and hang on to your idea."

The following revised bill and annotations are part of Mr. Staderman's additional testimony:

THE AMERICAN GOOD GOVERNMENT SOCIETY'S REVISED BILL

"To extend and amend existing legislation on gold, silver, and Treasury stabilization, and to provide dynamic stability in the international value of money

"Whereas present Federal reserves of gold and silver provide a reserve exceeding 200 percent of the amount of money in public circulation; and

"Whereas continuation of certain existing policies would enable aliens to send the United States additional gold and silver for the acquisition of stocks, bonds, and other wealth of the United States, and subsequent receipt of interest and dividends on such acquisitions; and

"Whereas such additional gold and silver to be buried in Treasury vaults would be of no practical use to the United States; and

"Whereas experience has proven that a fixed international price of gold brings depressions from other countries to the United States; and

"Whereas maintenance of adequate monetary policies within the United States is not dependent upon a fixed price of gold:

"Be it enacted, etc.—

"SECTION 1. It is hereby declared the policy of Congress to (a) establish dynamic stability in the international value of United States money as contrasted to present inflexibility arising from fixity in the price of gold; (b) to terminate present purchases of foreign silver by the Treasury; (c) to diminish excess bank reserves and the undesirable inflationary possibilities thereof caused by excessive inflow of gold; (d) to diminish the steady increase in securities of this Nation and its businesses held abroad; (e) to prevent future, sudden, and drastic changes in

foreign-exchange rates as might injure normal export and import trade; and (f) to avoid further devaluation of the dollar.

"SEC. 2. The Secretary of the Treasury is hereby authorized and directed to cease purchases of foreign silver not already contracted for. Silver now held in the Treasury shall remain valued for monetary purposes at present amount of approximately $1.29 per ounce.

"SEC. 3. Preferably through agreement with one or more foreign nations consuming large quantities of exports from the United States, he shall endeavor to stabilize the exchange rate of dollars in terms of one or more respective foreign moneys and through the stabilization fund use his best efforts to prevent the rate of such foreign money or moneys in terms of dollars from either rising or declining by an amount exceeding one-half of 1 percent per week variation from the average rate of known transactions during the previous week, such average to be weighted according to the proportionate amount of transactions at various levels. He shall take no part in influencing the rate between said one-half of 1 percent limits and shall discontinue purchases of foreign gold except insofar as necessary to prevent said one-half of 1 percent limits being exceeded, but any such foreign gold shall be purchased at as low a price in dollars and sold at as high a price in dollars as is consistent with the exchange stabilization herein provided, and he may pay not over $35 per ounce for any such gold, thereby avoiding further devaluation of the dollar in terms of gold. Should he find it impossible or unwise to prevent the exceeding of said one-half of 1 percent limits, he shall so permit, but shall apply the formula herein provided as soon as practicable.

"SEC. 4. There are hereby extended until June 30, 1941, present powers for purchase, by order of the President, of gold mined in the United States and/or silver mined in the United States, but the net prices paid therefor shall not exceed $35 per ounce for such gold nor $0.6465 for such silver. The value of gold shall remain $35 per ounce for Treasury reserves or bank reserves. The restrictions on holding, buying, or selling gold other than coin, and on holding, buying, or selling coin for numismatic purposes, are hereby repealed, but no gold shall be exported or imported except by the Treasury, or as authorized by and at the Treasury's discretion, in settlement of balances of payments in foreign exchange, except such as may be allowed under Treasury regulations for numismatic purposes or for dental or manufacturing processing.

"SEC. 5. All laws or parts thereof inconsistent with this act are hereby repealed: *Provided*, That, except as amended by this act, the stabilization fund and statutes relating to gold and silver shall have force until repealed or amended by the Congress."

REVISED ANNOTATIONS

While officially favoring extension of present legislation, Treasury Secretary Morgenthau in a carefully prepared release of March 23, 1939, admits that our fixed $35 price of gold allows wide fluctuations in foreign-exchange rates, this "less favorable position of the dollar" having helped cause our exports for January 1939 to drop 40 percent under those for January 1938 (p. 14). Our society would reverse this process by stabilizing foreign-exchange rates and allowing gold to fluctuate relatively freely, thus protecting export and import trade. The inflow of almost $9,000,000,000 of foreign gold and silver since January 1934 has bought billions of our securities and bank deposits on which foreigners collect interest and vote their shares of stock, causing a growing foreign domination of our industries. Mr. Morgenthau admits these foreign holdings to be "of dubious advantage to the United States" (p. 20), and a possible "disturbance" to us in "times of stress" (p. 21). Our bill corrects this.

THE AMERICAN GOOD GOVERNMENT SOCIETY,
Washington, D. C., April 25, 1939.

Hon. CARTER GLASS,
United States Senate.

MY DEAR SENATOR GLASS: A number of leading persons have recently responded favorably to our plan to improve present policies relating to gold, silver, and stabilization. These include Prof. F. W. Taussig, of Harvard, and Dr. Davis R. Dewey, of Massachusetts Institute of Technology.

Inasmuch as we are hopeful that the President of the United States may yet decide to send a message to Congress suggesting improvements in these policies, we have quoted these gentlemen in an open letter to the President (which we should like to request to be placed in the official record of the hearings before your subcommittee, along with our testimony on March 16).

We express our appreciation of your own stand for what you feel is right in our gold and silver policies, and hope that you may find our suggestions helpful.

Yours most sincerely,

RICHARD A. STADERMAN, *President.*

[Press release: Release not earlier than morning paper, April 26]

OPEN LETTER TO THE PRESIDENT OF THE UNITED STATES

WASHINGTON, April 25.—An open letter to President Roosevelt giving the views of leading economists on a plan for improved gold, silver, and stabilization policies was made public today by Richard A. Staderman, president and editor of the American Good Government Society, a national, nonpartisan organization with headquarters here. This society's plan was recently presented before the Senate Banking Subcommittee which is considering action on monetary legislation expiring in June. Text of the letter follows:

APRIL 25, 1939.

MY DEAR PRESIDENT ROOSEVELT: Eminent economists have recently commented upon our plan for improvement of existing legislation relating to gold, silver, and stabilization, which we transmitted to you on March 4 and upon which we testified to a Senate Banking Subcommittee on March 16. As you may recall, we advocate discontinuance of Treasury purchases of foreign silver, diminishing of purchases of foreign gold, temporary extension of power to purchase domestic gold and silver, and stability in foreign-exchange rates rather than price of gold.

While you were in the War Cabinet, the Chairman of the Tariff Commission was Prof. Frank W. Taussig, of Harvard University, which you and I claim as alma mater. As the author of leading books on economic theory and international trade, he is revered by many as the "dean of American economists." In a letter of April 14, Dr. Taussig says of our plan and proposed bill: "In general, I am in hearty accord with you," and despite our suggested changes, says: "I take it you have seen Secretary Morgenthau's recent statement in answer to questions from Senator Wagner about the gold fund and its meaning. That was a good statement, and there is little in it that is inconsistent with what is said in your testimony * * *."

Prof. Davis R. Dewey, of the Massachusetts Institute of Technology, is author of the many editions of the standard text, Financial History of the United States. In a letter of April 13, he expresses his belief that our plan is "in the right direction." We have also received expressions of interest in our plan from E. R. Stettinius, chairman of the board of United States Steel, and other leaders.

Economics Profs. Frank D. Graham and Charles R. Whittlesey, of Princeton, in the current issue of Foreign Affairs magazine, hold that: "To continue to buy gold as at present" will cause "the pot of gold in which rainbows are said to terminate * * * to turn to ashes in our hands." Their objectives are similar to ours, although their method would be to restrict inflow by "a sizable import duty on gold * * * accompanied by a corresponding export subsidy to facilitate an efflux of the metal without loss to foreign buyers." We should be glad to offer this as an alternative to the corresponding portions of section 3 of our proposed bill.

With kind personal regards, I remain

Yours most sincerely,

RICHARD A. STADERMAN,
President, the American Good Government Society.

Treadway, Travesties, and Trade

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, June 30, 1939

Mr. COFFEE of Washington. Mr. Speaker, periodically, during the present session, we have heard outbursts of opposition to the trade-agreements program which Congress wisely provided for in 1934. The latest general tirade of our Republican friends against trade agreements was on May 22.

TRADE AGREEMENTS AND THE PRESS

On that date the gentleman from New York [Mr. FISH] loudly and bitterly complained that the press was not fair because it did not carry critical statements, such as were being made on the floor of the House that day, against the trade-agreements program. The gentleman claimed that Secretary Hull's statements were headlined in the papers all over the country. On the following day the gentleman from Massachusetts [Mr. TREADWAY], who was apparently disappointed because his Republican round robin against the trade agreements was hardly mentioned in the press, attempted to set the press straight on what it should print about trade agreements. He did not like what he termed State Department propaganda being carried by the press.

Now it appears fairly obvious why the press does not carry statements such as these gentlemen continually make against the trade-agreements program. Newspapers are in the business of publishing news, and the very definition of what constitutes news precludes their carrying the words—yes, empty words—spoken by these gentlemen. Their statements have about as much substance as the huffing and puffing of big bad wolves, and that does not constitute news. I am told, however, that the papers in the districts of these gentlemen, as a matter of local pride, when hard pressed for copy, do carry an occasional critical statement of our colleagues.

When these gentlemen really have something to say, I am sure the press will carry the full story, even though it may be critical of trade agreements. I think the press is to be complimented on its stand regarding this national program and on its unbiased publishing of the factual news about trade agreements. Furthermore, as has been frequently pointed out, the editorial attitude of many leading Republican papers, such as the Herald Tribune, the Washington Post, and the Boston Herald, supports trade agreements. A survey of editorial comment made after the signing of the trade agreement with the United Kingdom and the new agreement with Canada indicated that something like 75 percent of the press, irrespective of party affiliation, was favorable to Secretary Hull's accomplishments.

The effort to increase the foreign trade of the United States by means of entering into agreements with foreign governments for the reciprocal lowering of tariff barriers has met with the general approval of outstanding citizens of all important political parties. They see in the present method a great improvement over the previous one; the people deplore a return to the old logrolling methods, where the loudest voice was customarily awarded the greatest tariff benefits, without regard to the national interest.

Now, in addition to a series of flimsy attacks on the trade-agreements program to the effect that this or that industry has been "sold down the river" and that concessions granted have flooded the country with imports, despite factual information to the contrary; that concessions granted to one country have been extended to other countries gratis, despite the improved treatment with respect to thousands of tariff items which the United States has received in return; that the delegation to the Chief Executive of the power to lower duties by means of trade agreements is unconstitutional, the attention of the House has been directed to the "efficient and high-geared propaganda machine of the State Department." Just what is propaganda? Are we to apply the word "propaganda" to information collected by the various departments and agencies of the Government merely because it happens to substantiate the position of the administration that trade agreements have contributed to the improvement in the foreign trade of the United States? No higher tribute could be paid to the quality of the material which is condemned as "misleading" and "one-sided" than that which the gentleman from Massachusetts [Mr. TREADWAY] and the gentleman from New York [Mr. FISH] themselves paid when they stated that it appeared in headlines of newspapers.

MR. TREADWAY'S BAD PROPHECY

I can well understand why the gentleman from Massachusetts does not like trade agreements. In the first place he had an important part in the enactment of the Hawley-Smoot Act, and the trade-agreements program is correcting some of the inequities of that act. To criticize the Hawley-Smoot Act has very much the same effect on the gentleman from Massachusetts [Mr. TREADWAY] as to tell a mother that her child's head is too large, that it is cross-eyed, or that its arms are too long. As in the case of the mother with her child, the gentleman from Massachusetts is prejudiced in favor of the Hawley-Smoot Act. From his point of view apparently there could be nothing wrong with that disastrous piece of legislation. The country, however, seems to have thought otherwise.

The other reason why I imagine he does not like trade agreements is that for the past 4 or 5 years he has maintained that through this program the United States would have an "unfavorable balance of trade"—that is, imports would exceed exports, and that this state of foreign trade would be disastrous to the country. The record has proven that the gentleman was dead wrong in this respect since exports exceeded imports by more than a billion dollars in 1938. He is now attempting to justify his bad judgment by dragging a red herring across the trail.

THE MOST-FAVORED-NATION PRINCIPLE ONCE MORE

According to recent remarks of Congressman RANKIN—May 23—Republicans themselves seem to have met all the issues raised against trade agreements by the gentleman from Massachusetts [Mr. TREADWAY]. Some Republicans, however, keep harping on the alleged evils of the most-favored-nation treatment as it relates to trade agreements. This principle is claimed by Republicans as having been originated by them. It is a necessary provision for trade agreements, irrespective of who is responsible for its adoption as a part of our commercial policy. I note that on May 26, in a speech in Salt Lake City, Utah, the Honorable Edgar B. Brossard, a Republican member of the United States Tariff Commission for the past 16 years, claims credit for this principle for his party. In explaining the Trade Agreements Act, Dr. Brossard said:

> In other words, all concessions granted to one country are generalized to like products of all foreign countries, except those countries found to discriminate against United States commerce. This provision is in accordance with the unconditional most-favored-nation policy first enunciated by Secretary of State Hughes in 1923 and later embodied in the Tariff Act of 1930.

The gentleman from Massachusetts [Mr. TREADWAY] must know that his party practiced the same sort of unconditional most-favored-nation treatment in all the rates of duties decreased and increased under the flexible tariff provisions of the acts of 1922 and 1930. Of course, it did not seem so bad in those days because most of the rates were being increased rather than decreased, especially those changed under the act of 1922. The most-favored-nation clause was then said to be operating in reverse, in that all countries were treated equally badly.

In connection with this most-favored-nation principle, it may be of interest to note that when President Hoover, on January 1, 1932, reduced the duty on "turned boots and shoes," as a result of a cost investigation by the Tariff Commission, the reduction applied to the imports of shoes from Switzerland, the chief competing country, and from Czechoslovakia, England, France, Germany, and all countries which exported any of these shoes to the United States.

The gentleman from Massachusetts [Mr. BATES] a few days ago claimed that great prosperity had come to the shoe industry on account of tariff protection on shoes from the break-down of the Czechoslovak agreement. I am glad that a member of the opposition admits that there is one industry in a prosperous condition, even if he does attribute it to the wrong cause.

A man coming from an important shoe district surely ought to have known that the rates of duty were not reduced in the Czechoslovak agreement on cement-soled shoes, which constitutes about 90 percent of the imports into the United States, the kind which are said to have come in strongest competition with domestic products. The principal thing brought about by the suspension of that agreement was the removal of the quota on imports which was fixed to protect the domestic producers. Now Germany took over that part of Czechoslovakia where the shoes were manufactured only in March of this year and the upturn in the shoe industry started last fall, according to the gentleman's own statement.

The principal reduction in duties on shoes in the Czechoslovak agreement was on shoes sewed or stitched by a process known as McKay; this reduction was from 30 to 20 percent; the rate established in the Tariff Act of 1930. This rate had been increased from 20 to 30 percent by ex-President Hoover at the same time he reduced the duty from 20 to 10 percent on turned boots and shoes. Even partisans ought to keep the record straight and keep the cause-and-effect relationship clear. I am glad the shoe industry is prosperous, but the elimination of the Czechoslovak agreement could have had little effect on it.

As has been pointed out by the Honorable Robert Lincoln O'Brien, sometime Republican Chairman of the Tariff Commission, there is this contrast in the most-favored-nation treatment as practiced in the present administration and the Hoover administration. For reductions made on this side under trade agreements we obtain some reductions in trade barriers on the products which we wish to sell foreign countries. I know it will be said that they made their re-

ductions on the cost-of-production formula. That is mere quibbling. All the reductions made under agreements are based on much more comprehensive information, and are made from the point of view of national good rather than the benefit of some pressure group.

EFFECTS OF TRADE AGREEMENTS ON AGRICULTURE

Since the gentleman from Massachusetts [Mr. TREADWAY] talks as if he is about the only representative of agriculture, particularly when the matter of trade agreements comes up, I want to submit the following trade figures in farm products with agreement and nonagreement countries, and I hope the gentleman will not designate it as "State Department propaganda." I know he does not like to have figures showing results of trade agreements in the RECORD, but this information happens to come from the Department of Agriculture.

United States foreign trade with trade-agreement countries[1] and with other countries

[Department of Agriculture figures]

	Year ended June 30			Increase (+) or decrease (−)	
	1935–36	1936–37	1937–38[2]	1937–38 over 1935–36	
United States (domestic exports):	*Mill. of dol.*	*Mill. of dol.*	*Mill. of dol.*	*Mill. of dol.*	*Pct.*
Of farm products:					
To the 16 countries	186	207	288	+102	+55
To all other countries	580	525	600	+20	+3
United States imports (for consumption):					
Of agricultural commodities:					
From the 16 countries	468	600	454	−14	−3
From all other countries	674	937	701	+27	+4

[1] Belgium; Brazil; Canada; Colombia; Costa Rica; Cuba; El Salvador; Finland; France, including her colonies, dependencies, and protectorates other than Morocco; Guatemala; Honduras; Haiti; Kingdom of the Netherlands; Nicaragua; Sweden; and Switzerland.

[2] Preliminary.

It is seen that farm products exported from the United States to the 16 countries with which agreements were in effect at the time rose by $102,000,000, or 55 percent, from the fiscal year 1935–36, when only three of the agreements were in effect throughout the year, to the fiscal year 1937–38. Farm exports to all other countries rose by $20,000,000, or by 3 percent, for the same period.

A detailed analysis of the increase in the exports of farm products to agreement countries shows that the major portion was in products on which foreign countries granted concessions. This occurred in spite of the fact that two of the greatest droughts in our history held down farm exports, while these droughts increased competitive imports from 1935 to 1937. The harvests of 1937 and 1938 have naturally had the reverse effects on imports of agricultural products, which were less than half of what they were in 1929.

WORKERS AND TRADE AGREEMENTS

As well as posing as the friend of agriculture the gentleman sometimes sheds a few hypothetical tears for workers because he alleges they have been treated so badly under the New Deal. I have mentioned the support given to trade agreements by the Republican press. On the question of wages and foreign trade I call the following excellent editorial from the Philadelphia Bulletin to the gentleman from Massachusetts [Mr. TREADWAY'S] attention:

WAGES AND FOREIGN TRADE

General recognition, which crosses party lines, has been given to Secretary Hull for his intelligent attempts to expand our foreign trade. The reciprocal-pacts program is the most extensive effort to restore normal conditions to international trade made by any of the great powers in recent times.

Wage earners are apt to be indifferent to such steps, or to view them with a certain hostility because of a fear that their standards of living will be lowered by competition with low-paid labor abroad. Aside from the fact that the principle of protection is not questioned by Secretary Hull, and is still in force to defend the American worker, he can be shown to be a positive gainer from an expansion of our exports.

The chief gains in exports under the reciprocal pacts have been in household refrigerators, radio apparatus, industrial machinery, and aircraft.

These are all industries in which the wages are among the highest in the United States.

High wages and effective industry are always found in each other's company. Foreigners want distinctive and well-made American products, and the high wages paid to the workers in those industries are no bar to their sale abroad.

American workers, after the experience of 1931–32, with the highest tariff of our history, no longer listen to the "full dinner pail" high-tariff fallacy. In those days they could hardly afford a dinner pail, to say nothing for food to go in it.

Is it "Little Sir Echo" of the American Tariff League, or "the Voice of the home-market club?"

The gentleman from Massachusetts [Mr. TREADWAY] has raised the point of propaganda. He uses all of the threadbare and discarded arguments of high-tariff lobby organizations in his attacks against the administration's reciprocal-trade agreements, although he says he is in favor of reciprocity. The gentleman from Arkansas [Mr. KITCHENS] a few weeks ago gave the gentleman from Massachusetts [Mr. TREADWAY] an appropriate title, possibly deserved by his many fulminations against the trade-agreements program, along the lines of certain groups always seeking excessive tariff subsidies. Mr. KITCHEN'S designation was "Little Sir Echo" of the American Tariff League. I do not wish to detract from that fitting title, but would like to submit a modification. The gentleman at times sounds very much like "the Voice of the home-market club." It is understood that the erstwhile, moribund home-market club raises its languishing head to take an occasional potshot against the trade-agreements program through "its voice" in the House.

Attack of Science Against Cancer Gathers Headway

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, June 30, 1939

ADDRESS BY HON. HOMER T. BONE, OF WASHINGTON, AT LAYING OF THE CORNERSTONE OF NATIONAL CANCER INSTITUTE

Mr. MAGNUSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by Senator HOMER T. BONE, of Washington, delivered at the National Cancer Institute building near Bethesda, Md., June 24, 1939, as follows:

This Nation is marshaling its forces to conquer cancer, the greatest scourge that has ever assailed the human race. Its causes shrouded in obscurity, and the methods of treatment uncertain, it has become one of the great enigmas of modern times. Medical science has enabled us to meet and conquer so many other dread diseases, but cancer has remained a challenge to the understanding and achievements of science.

The attention of Congress was repeatedly drawn to the fact that an increasing number of human beings were dying every year from this disease, but despite the earnest efforts of thoughtful men in Congress, they were unable to arouse interest to a point where the Federal Government itself would undertake the work of combating it. In 1937 a bill was introduced, having for its purpose the creation of a Federal institution to be known as the National Cancer Institute. Congress was advised that cancer at that time was killing 140,000 human beings in this country every year—that every 2 years the death toll took 70,000 more lives than were lost in battle and died of wounds in all the wars of the Republic.

Such a hideous and unnecessary sacrifice could no longer be overlooked, and on a hot afternoon in July of 1937 Senators and Representatives gathered in a big committee room in Washington to agree upon the form of a bill designed to set up a great beacon light of hope in a wilderness of fear. That proposed legislation became a splendid reality, and on the 5th day of August 1937 the President of the United States approved the legislation and the National Cancer Institute became an accomplished fact.

EVERY SENATOR SIGNED

For myself, I can only say that it was one of the happiest moments of my life when 96 Members of the United States Senate

attached their names to the bill creating this great institute and the legislative objectives of that bill appeared on the horizon as a magnificent reality. Never in the history of this Republic had the entire membership of either body of Congress sponsored a piece of legislation. Such an action reflected a great outpouring of sentiment and evidenced a grim determination to stamp out a disease that was threatening every home in America.

Scarcely a Member of either House had escaped some unhappy contact with this fell destroyer. So rapidly had the incidence of mortality increased that the shadow of death hovered over every home. As I speak to you today, one woman out of every seven is doomed to face the terrors of this awful disease. Its cruel ravages on women distinguish cancer as a thing apart and entitled to special attention at the hands of civilized government.

POOR HARDEST HIT

It is no respecter of youth or age. The chief bulwark of defense against it at the present moment is adequate diagnosis in the early stages, and because of this the expense attendant upon such diagnosis sets up an impassable barrier for the poor, from whose ranks comes an increasing number of victims. The tragedy of this whole picture is appalling.

The great institution coming into being on the spot where we stand represents the first effort to coordinate and give central direction to Nation-wide efforts to stamp out cancer. There have been outstanding contributions in this field, but little coordination of the work of the various research agencies, for, while they were not in the slightest degree wasting their efforts, there was a lamentable lack of understanding of what other research experts were doing. Radiation experts, biochemists, pathologists and other scientific workers were largely compelled to go their own separate ways.

INSTITUTE PROVIDES TEAMWORK

It is to the magnificent institute we are here creating that we look for teamwork, organization, friendly cooperation, and sympathetic direction which will in nowise interfere with the splendid achievements of individuals and groups which we know will work in complete harmony with the National Cancer Institute.

This institute represents no effort to regiment or to organize cancer research under the direction of a "super mind" or dictator. It is, rather, an effort to encourage and to hearten and strengthen those who labor in this field. It is here because even the marvelous achievements of science have so far failed to discover the real cure for cancer. It is here, a magnificent reality, because we are going to put money as well as brains behind those who give their time and their energy to work that will be a boon and a blessing to humanity.

CANNOT ADMIT DEFEAT

The conscience of the country has been touched by the ravages of this disease of which so little is known. Out of this is arising a high-minded purpose to meet and conquer an enemy worse than war. America, the greatest Nation that ever graced the tides of time, immeasurably enriched by the manifold beauties of modern science, cannot, and will not, admit defeat in the struggle which will center in the great institute, the cornerstone of which is being laid this day. Certainly the blessings of humanity should, and will, rest upon this noble effort.

Out of the work of the scientists who will breathe the breath of life into its activities will grow that body of knowledge concerning cancer which may for the first time bring hope to those who have suffered from a scourge that has been known to the practitioners of curative arts for 3,000 years.

We are timely in our efforts, for statistics show that 1 in every 10 persons past 35 years of age is destined to have cancer. I have seen those I loved deeply go down into the valley of the shadow, with the warm blood of youth still coursing through their veins and the love of life strong in them. I have witnessed their agony as they struggled against the thought of leaving loved ones. I have felt that terrifying sense of frustration and futility that comes to all who have seen the cruel manifestations of this dread disease. I have walked in the shadow with these friends who felt the touch of the destroyer; I have seen the futile efforts to check cancer's ravages.

RESEARCH IS ONLY HOPE

It has been estimated that the ideal application of all the available knowledge we now possess would reduce annual cancer mortality by about 25 percent; that is about 35,000 persons could be saved yearly. The other 105,000 would be doomed to death. The only possible hope of decreasing this vast amount of human misery is through fundamental and clinical cancer research.

The National Cancer Institute is the intelligent answer of a great people to that problem, and it is to this aspect of the institute to which we would do honor today. It ought to make us feel that our country is purposeful and that we are placing true values on human life—that the arts of peace and the love of our fellows are still the vital and essential part of the American way of life.

Here, in a beautiful setting made possible by the generous donation of the land by Mrs. Luke Wilson, this institute will carry on its work.

LEADERSHIP IS DISTINGUISHED

That I was able to contribute in any degree whatever to the realization of the dreams of scientists over the years will always be a source of joy and pleasure to me. I am happy in the thought that the work which will be carried on by the National Cancer Institute has been committed to able hands. The distinguished Surgeon General of the United States, Dr. Parran, and his associates in this work, Dr. Voegtlin, Dr. Hektoen, Dr. Thompson, Dr. Spencer, and others, whose work will be intimately related to the operations of the institute, are men whose scientific attainments should bring to us the assurance that all modern science can offer will be brought to bear in the work of discovering the causes of cancer and eliminating them as we have eliminated the causes of other tragic diseases. The men who constitute the National Advisory Cancer Council are men outstanding in their professions. To all of them the work in hand is a labor of love. Under their direction the efforts of all the forces in America fighting cancer will be coordinated and correlated.

CONGRESSMAN MAGNUSON HELPS

I would not permit this occasion to pass without paying tribute to the generous efforts of WARREN MAGNUSON, my young colleague in the House, whose home is in Seattle, Wash. When the bill was pending in the Senate, Congressman MAGNUSON introduced a companion bill in the House. Upon the bill's passage in the Senate, he gave freely of his time and energies in securing its passage in the body of which he is a Member. For all of us it is a most happy circumstance that not a single vote was recorded against it in the House of Representatives. I am glad that WARREN MAGNUSON is here to share with us the joys of this occasion.

WORSE THAN WAR

In view of the fact that the amount of money suggested for the work which this magnificent institute will accomplish is but a fraction of the cost of one of our smallest warships, it is to be hoped that Congress will be unremitting in its efforts to see that funds are made available every year to continue this work.

The annual death toll of cancer is greater than that of any war in which we have yet participated, and if there be justification for the preparations for war, there is certainly even greater justification for the modest expenditures which we propose to continue the work of combating this destroyer of human life.

INSTITUTE BRINGS ASSURANCE

I thank the men who are carrying on this work, and all their associates and assistants. From the bottom of my heart I thank the millions of women associated in various organizations, and the great army of thoughtful people in all walks of life whose intelligent appreciation of the grim necessity for action and whose enthusiastic cooperation in securing the passage of the Cancer Act made possible the creation of the institute, the cornerstone of which is being laid today. We may leave here today with the assurance that we are seeing the beginning of the work that will bring hope to millions, and upon which the blessing of Almighty God should rest.

Commencement Address

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, June 30, 1939

ADDRESS BY PHILIP P. CAMPBELL TO GRADUATING CLASS OF BAKER UNIVERSITY, BALDWIN CITY, KANS.

Mr. CAPPER. Mr. President, on June 3 Hon. Philip P. Campbell, who represented the Third Congressional District of Kansas in the National House of Representatives for 20 years, delivered the commencement address to the graduating class of Baker University at Baldwin City, Kans.

This commencement address of Mr. Campbell is worthy of the reading and the careful—I might say prayerful—consideration of every American. In the hope that every Senator, at least, may read it and benefit from this inspiring message, I ask unanimous consent that it be printed in the Appendix to the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President and fellow students, I am impressed with the many changes that have taken place while I have been away. The trees, the buildings, and the campus, all have changed. Fashions are not the same. Then, no one would have presumed to deliver an address, on an occasion like this, clothed in anything but a Prince Albert, buttoned to the neck and reaching to the knees. Even the table cloth, then, hid the legs of the table to the floor; now, a few doilies are scattered over it.

Then, too, the world was only 6,000 years old. The Ten Commandments were known as the statement of a natural law for

the observance and guidance of man. The Lord's Prayer was known and repeated. People were impressed with the wisdom and importance, to them, of the Sermon on the Mount. Men refreshed their souls daily with the things of the spirit.

At that time also personal industry, personal thrift, personal honesty, personal ambition, and the will to assume personal responsibility were cardinal virtues. Boys in the humblest homes were inspired with an ambition and determination to become good farmers, good lawyers, good preachers, good doctors, and worthy statesmen. It gave them hope to see successful men in every walk of life, recruited from the homes of the humble poor.

A large majority of the Congress of the United States come from the humble homes of our country. Many of them have started in what are now called the slums, in large cities, as newspaper carriers and bootblacks. Poverty at birth and lowliness of station has not been a handicap to them. No position has been so high as to be beyond the aspirations of the humblest youth. There were no boundaries beyond which they did not aspire to go. Frontiers opened to them in every direction. They saw opportunities in the arts and sciences, in the invention of new conveniences, and in the discovery and use of unused natural resources. They were inspired by the successful achievements of such men as Rockefeller, Carnegie, Edison, Bell, Ford, and many others, all of whom started as poor boys. They did not deem themselves underprivileged to make their way through difficulties to success. These personal aspirations and ambitions gave promise of newer and better things in the future.

If I were asked, this morning, what period in our history witnessed the greatest advance for the well-being, comfort, and happiness of mankind, I would say the period began when man assumed personal responsibilities for every relation in life. It was when the citizen became master of his government, and did not submit to being mastered by it. It was when men supported the government, and did not ask it to support them. It was when men were impressed with personal responsibility to self, to family, and to God.

Men impressed with a spirit of personal responsibility created new conditions and advanced civilization. They nourished their souls and awakened their imagination. They developed the arts and the sciences. They entered new frontiers. They created new opportunities and new industries. They made the impossible possible. They made the impracticable practicable. They initiated conversations between their homes and business places, and extended them across continents and over the seas. They made it possible for song and speech to be heard in the remote places of the earth. They developed new processes for the conduct of agriculture and industry. They made instruments that relieved labor of its drudgery. They created new materials which at first were looked upon as luxuries, then took the place of old necessities. They lengthened the span of life. They made living better and more comfortable. They made and wore better clothing. They provided and ate better food. They built and lived in better homes. They revolutionized transportation. They made new and profitable employment, then, for millions of men and women, and provided profitable investment, then, for billions of capital.

The hope of personal reward for personal effort inspired the ambition of the millions who participated in raising the material standards of life to the high plane of living upon which the world entered.

Those who achieved these results and made these new conditions were men and women who believed in themselves and believed in and trusted their Creator. They made their minds better by cultivating them. They developed their souls. They were inspired by the spirit with which God endowed them. They took their inspiration from the Creator and honored Him with their achievements.

The billions of wealth they created were widely distributed among millions of thrifty people. The wealth they stored up by their industry and frugality has been honoring drafts upon it, in recent years, that run into so many billions that they stagger the imagination.

It is not forgotten that when the world was tried in the crucible of a great war the men who believed in themselves, and assumed personal responsibility from their youth, provided the greatest amount of materials for military and civilian uses. They supplied food, clothing, and every instrument of war. They supplied billions of credit, capital, and material wealth. They contributed a strong manhood and womanhood that had been developed by personal responsibility. These men and women stood the test when the supports of civilization were attacked. They had the highest type of courage and ability. They had endurance. They had wisdom. They knew how to carry out a military order, though they had trained themselves as civilians.

It is worth noting, here, that one lone sergeant who had assumed personal responsibility from his youth, and who would, today, be rated as one of the underprivileged, believed in himself and believed in God. He crossed no-man's land alone and entered the enemy's trench. He brought back 29 men for whom everything had been planned from their youth. They were not taught to assume personal responsibility as they were maturing into manhood. They had been regimented, even as is done today with many of the youth of the world.

There was an opportunity to continue the great advance that had been made, for the benefit of mankind, into other and greater frontiers. But the Ten Commandments began to be observed loosely. The Lord's Prayer was largely neglected. The Sermon on the Mount was no longer impressive. The spirit was not depended upon to nourish the soul and fire the imagination.

The things that are important have not changed—nature, truth, and the natural law that governs life have not changed. These are the same as in the beginning. The relation of man to his Creator has not changed. Changes in men's opinions do not change or alter truth. The change in opinion with respect to the age of the earth has not altered or changed its age. Man has not been relieved from personal responsibility to the Creator. The Ten Commandments, the Lord's Prayer, the Sermon on the Mount are as important, in the daily life of men today, as they were when given to the world. The decree of God that man shall earn his bread in the sweat of his face has not been altered or modified. It is as true now as it was when uttered that a man may not reap where he has not sown. Personal responsibilities were imposed by the Creator upon every rational creature. Those responsibilities are from the beginning and to the end.

Groups entertaining various beliefs contrary to these fundamental truths have, during the ages, attempted without success to modify them. The world is, today, vexed with experiments by these groups. There are attempts by specious arguments to destroy the personality of men by making them a part of a common mass. Men are told they have no personal responsibility to their Creater. Men are beguiled into the belief that personal industry, personal ambition, personal achievement, are not important. Those who have hidden their one talent are taught to pity themselves and to accept a place in a mass group which is to be ministered to, at the whim of a bureau chief, from the increase made by those with five talents.

The creature to whom God gave a personality loses it when he enters a common mass in a regimented group. He loses his place in the world. He loses his identity. He yields his chance to make his own way.

This unnatural social and political philosophy is accepted by many, in many parts of the world. Those who accept that philosophy and are satisfied to live under it, not only sacrifice their personality and their opportunities to serve themselves, but they hold nothing back to leave to their posterity. The freedom, traditions, and religion they inherited from their ancestors are sacrificed.

All attempts by groups of men to alter the natural law that imposes personal responsibility on every man for the natural growth and maintenance of his body, for the development of his mind, and for the enlargement of his soul have failed, and will continue to fail until the nature of man and his relations to his Creator have been modified or changed by the Creator.

The world is suffering today from a tragic malady because man has defaulted in his personal and spiritual obligations.

There is need of a Great Physician upon whom the world is not calling. Quack doctors have offered their services, and their services have been accepted. These quacks are beguiling the people to accept specious but spurious remedies. The experiments they are making are leaving the world worse from day to day. They are making mankind unambitious, unhopeful, and sordid. The world is seeking only the material things that it looks upon as a daily necessity. It looks only to the hour. It faces downward, not forward or upward.

The tenets of the Sermon on the Mount are disregarded. The most powerful governments in the world are creating the greatest armies and building the greatest navies known in their history. One government creates an army and builds a navy for aggression, for the acquisition of additional territory, and for securing dominion over additional people. Another government creates armies and builds navies as a defense against aggression. Countries seize territory and subject its inhabitants to their control. Governments confiscate property belonging to the citizens of other countries and defend the theft as a national policy.

Class distinctions have been created between men. Men and women willingly accept opportunities to mortgage the future, for their children to pay, to secure what looks like easy money for present use. Politicians and political bosses have sold their influence for filthy gain. Judges have sold their opinions on the law, for cash. The distribution of billions from the public Treasury, in the name of charity, immediately before election, has been extolled by its distributors as a public virtue.

It is not strange, therefore, that the condition of man everywhere has been growing worse from day to day, from month to month, and from year to year, until despair is overcoming hope. The world is groping in a dismal night. Those who administer the affairs of some of the great governments of the world deny the existence of God. Others ignore God. Still others assume they have the power of God.

On May 23, 1939, 100 prominent clergymen of various faiths in the city of New York issued a statement in which they said:

"From a moral and religious standpoint, the cause of our tragedy is our refusal to govern our lives in accordance with the old truth that we are all persons of immeasurable dignity, struggling through the world together with brothers under one God, toward one goal."

These clergymen could have added to what they said that we can be relieved from further tragic disaster only by the cleansing power of the Spirit of God operating upon all the people in every walk of life and firing them with a personal ambition to assume personal responsibility.

The necessity for a general cleansing and regeneration of all, from the humblest citizen to those in the highest stations, cannot be overstated. The application of the cleansing power of the Spirit has not been more urgent than at the present moment.

The conscience of mankind everywhere must be awakened. All must be made to see the debauch the world is having and the tragedy it is bringing to men and women everywhere. They have defaulted in the things of the spirit and in their personal responsibility to themselves and to God.

The question that presses itself upon us for solution can be solved only by the resumption of natural obligations that go to the foundation of civilization. Defaults that invite penalties are facing us.

"If broken vows this heavy curse have laid,
Let altars smoke and hectacombs be paid."

It is as true of the Christian, the Mohammedan, and the Buddhist, as it was of the pagan, that penalties must be paid when men default.

I speak as a layman. I have had the experience of many of my fellow citizens. I knew, as a child, the most limited comforts in a little box house on the prairie. As a youth I knew responsibility and performed the labors of a man. I had the joy, after reaching maturity, of working my way through this university. I studied law on the farm during the week, and took examinations on Saturdays. The years I spent in the practice called upon every resource, mental and spiritual, I could command. The 20 years I spent in Congress were filled with great responsibilities. Since retiring from Congress my business has given me contact with men of affairs and with conditions in many parts of the world. It has all been a rich experience.

In the light of that experience, from the days of my childhood to the present hour, I am led to the conviction that the unsolved problems that vex the world today can be solved, only, by the people of the world renewing their relations to their Creator, assuming natural personal responsibilities, and by calling upon men of God to lead the governments of the world out of the murk, that, in its spiritual blindness, it wandered into.

But there is a ray of light that gives a sign of hope. Men are again beginning to require the things of the spirit. They are again beginning to look upon themselves as creatures of God with personal responsibility to themselves and to Him. They are finding the earth earthy. The things upon which they have been leaning are falling.

Ministers of God and laymen everywhere are awakening to their responsibility to relieve the future from the encroachments of the evils of the present.

The theater is recognizing the truth that sordid things do not satisfy. It is realizing that the Creator made man with a soul and that the soul must be satisfied. The radio now makes an appeal with sacred hymns. The theater is beginning to dramatize devotion to the Creator.

It is doubtful if ministers have had greater responsibility at any time during the Christian era than they have today. It is theirs to fully revive the longings of the soul for better things. It is theirs to aid in renewing in man a desire for the operation of the spirit, and in restoring a belief in, and a dependence upon God. It is theirs to lead in lifting the world out of its sordidness, and in helping it out of the distrust that makes the present so tragic. It is theirs to aid in restoring man's confidence in himself as he has confidence in his Creator.

It is appropriate, here, to say that many ministers, in the past, lost the opportunity for better service to mankind and to their Creator by attempting to shift responsibility for the personal conduct of men to the legislature and to the sheriff.

I have told you how the world rose into better things and the way that led it into evil. I have indicated how mankind can rise again.

Now, may I have a personal word with you?

You will not find it either profitable or enjoyable to begin active life by entering a struggle to get, what you may be told, is your share of what has already been created, by the initiative, the ambition, and the industry of others. New opportunities are beckoning you. New frontiers are awaiting for you to enter—in the creative arts and sciences; in architecture, in building; in chemistry, in the creation of new products; in the distribution of all products from points of production to places of consumption; in identifying what is now commonly called rackets, and removing the racketeers, whoever they are and wherever they are found. The world is anxiously awaiting the solution of that problem, of profitable production and distribution, of the products of agriculture and industry, so that no one among the teeming millions of the earth need fail to secure an abundance of the necessities and comforts of life. Your opportunities for service to yourself and to mankind are boundless in these fields.

You must not forget the truth, that in your relations to the affairs of the world there is no substitute for personal industry, personal integrity, personal thrift, providing for personal security and assuming all personal responsibility. When you do not forget these old virutes, and practice them, you will make your own way.

You must not forget that what Nature has created cannot be turned in ways that are contrary to Nature's laws. You must not forget the greater truth—that when you forget the things of the spirit you will suffer in the things of the flesh.

"Lord God of Hosts, be with us yet,
Lest we forget; Lest we forget."

Reciprocal-Trade Agreements

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, June 30, 1939

LETTER FROM MILL SUPERINTENDENT

Mr. MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter recently received by me:

MATSON MILL, INC.,
South Glastonbury, Conn., June 21, 1939.

Hon. WILLIAM MILLER,
House of Representatives, Washington, D. C.

DEAR SIR: As we understand, the State Department is planning to reopen the agreements with France, Belgium, the Netherlands, Switzerland, Sweden, and Finland, we wish to call your attention to the fact that for the first 5 months of this year 4,368,000 yards of cloth were brought into this country from England alone.

Compared to the production of this mill, which was approximately 227,000 yards for the first 5 months of the year, and gave employment to 150 people, it would mean that we would have had 20 woolen mills the same size as our plant running in this country at the same rate we were over the same period. And when you figure the number of woolen mills which have been dismantled in this same period in New England alone it makes one wonder what the people of New England are going to do for work if this continues.

When you consider the number of people out of work in this State alone due to woolen mills being closed down, I am sure they would appreciate knowing that the men whom they have chosen to represent them are doing everything in their power to check this and get them back to work.

Yours very truly,

MATSON MILL, INC.,
H. A. LANDRY, *General Superintendent.*

The Townsend Creed

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, June 30, 1939

Mr. ANGELL. Mr. Speaker, the Townsend National Recovery Organization recently held the fourth annual convention in Indianapolis, Ind. There were upward of 12,000 delegates and representatives in attendance, representing most of the States of the Union. A program extending over 3 days was had, during which time many subjects in which this group were interested were discussed, particularly national recovery and old-age annuities.

There was adopted at this convention, by unanimous vote of the delegates, a Townsend Creed. This creed is a statement of sound American doctrines and is worthy of consideration, not only by the Members of Congress but by every American citizen who is interested in the welfare of our country. It is particularly of interest to those who want to do their part in restoring to America national recovery, so that the 12,000,000 of unemployed, as well as the twenty-two and a half million who are on relief may again find remunerative employment in private industry.

The creed is as follows:

TOWNSEND CREED

We believe in a Nation-wide retirement security program based on American principles of equity and justice without the possibility of discrimination on grounds of race, color, or religion.

We believe that technological advances, declining birth rates with the attendant decrease in the number of those acceptable to industry, constantly increasing demands for retirement of our

senior citizens, require retirement should begin at the age of 60 at the latest.

We believe that the retirement of the elders is a matter of concern to the entire body of society, and, therefore, should be financed by a universal tax based upon the total volume of business.

We believe that any social-security program should be made operative on a basis which will return to profitable employment all those not retired and, thus, open the doors of opportunity to the youth of our land.

We believe that stagnation of business, idle bank reserves, idle factories, idle men are caused because of the lack of purchasing power in the hands of the many.

We believe this condition can be remedied only by the release of the taxes collected from the people into the channels of trade and commerce on a scale that will permit the living of the people to be on the typical American standard instead of a bare subsistence level.

We believe that the immediate spending of tax moneys and their returns through the channels of trade should be restricted wherever possible to the purchase of American goods made by American workmen; that they should be spent within the United States and should be used discreetly to avoid returning employable persons to idleness, and this principle should be continued in any sound recovery program.

We believe that this and all other Government activities should be placed on a pay-as-you-go basis, as neither this Nation nor any other nation can survive constantly increasing indebtedness. We must have a balanced National Budget to protect the American way of life.

Neutrality Legislation

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

Mr. DICKSTEIN. Mr. Speaker, this is not the first time this House is called upon to pass a neutrality bill. In the present administration we have made and amended not less than three different measures dealing with this subject. At times the tendency of the House was to leave everything to the Executive, since under our constitution it is the President who has the sole responsibility of conducting our foreign affairs. Later on legislation was enacted which sought to tie the President's hands in every conceivable way.

The world is drifting toward war. Whether or not statesmanship of foreign countries is equal to the task of sustaining world peace, the time will come, if it is not already on hand, when our Government will have to reassert its traditional policy of being neutral when European governments see fit to fight each other.

Such was our position in the war of 1914, although 3 years later it became necessary for us to become ourselves parties to the conflict. Let us hope such will not happen when a new war breaks out in Europe.

The object of the present neutrality legislation is precisely how to avoid becoming involved in a new world war. We must make every effort to prevent this country from becoming a party to a new conflagration by taking appropriate steps to make our neutrality real and not illusory.

I am sure that world peace will be preserved if legislation is passed which will make it definitely impossible for our country to interfere in a world conflict. It is true that there are any number of textbooks and treatises dealing with the rights of neutrals under international law, but all of us who are old enough to remember the last war know also how the so-called rules of international law are being violated all around when a war really breaks out. Countries at war do not care how they trample upon the rights of others to achieve their military ends, and countries of peace are very hard put to it to be friendly to belligerent powers and yet maintain their neutrality. It is exactly such a situation which calls for stringent measures to safeguard our neutrality.

One of the most important features in any war is the obtaining of supplies to enable the military machinery to function. Modern warfare differs from the old-time military maneuvers in that whole nations are involved and not only the soldiers serving in the military forces of their respective countries. Every phase of national life is now involved in a war, and so-called contraband is not merely limited to arms and ammunition, or closely related commodities. At the present time contraband includes not only items which make warfare possible, but nearly every item which may be used for the ordinary purposes of daily life. A nation at war is no less anxious to keep cotton or petroleum, oil or coal from reaching an enemy nation than it is to keep guns and airplanes from reaching the armed forces of the enemy. It is, therefore, quite clear that in exporting coal or oil, or even agricultural products, we may become involved in war by being classed with those who aid the enemies of another nation at war.

This makes it absolutely important that if an embargo is to be placed upon our exports, rigidly and automatically our whole economic life would be ruined, whether we entered another war or not.

It is our policy not to become involved in any war, but can Congress foresee every situation which may arise in the future, or can the President foresee such situations? A general and inflexible automatic embargo on all exports would be a grave error.

As a matter of fact, such a provision of law might have just the opposite effect. If the world knew that under no circumstances could any supplies from this country reach a country at war it would be encouraged to continue with wars rather than avoid them. What we should strive for is to avoid conflict, but we can best do so if we avoid incidents which might involve us in a conflict.

Any embargo which may be placed on American exports should be left to the discretion of the Executive and should not be made automatic. By doing so, I am sure the cause of peace will be advanced, while otherwise we may become involved in a conflict which would even be bloodier than the one from which we emerged in 1918.

America Must Guard Against Involving Itself in Foreign Wars

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 30, 1939

TELEGRAM TO EDITOR OF THE PHILADELPHIA INQUIRER

Mr. RANDOLPH. Mr. Speaker, I did not participate in the so-called neutrality debate. I followed the speeches carefully, and at this time, just after the bill has been passed, I include the following telegram:

APRIL 5, 1939.

MANAGING EDITOR, THE PHILADELPHIA INQUIRER,
Philadelphia, Pa.:

Re wire twentieth, I do not believe the United States should participate in foreign wars unless by popular referendum and unless the citizens of our Nation vote to do so. I believe that the men and women of America who are to do the fighting and the paying in the event of war should themselves determine whether we should enter it. I think we should arm. I think we should have a strong defense with emphasis on increased air power. The scene of warfare has changed from land and sea to the air. We should never arm as an aggressor or for an alliance with warring nations. Such procedure would involve us in conflicts in which we should take no part. It is wrong for us to try to police the world. I know the mothers of America do not wish to rear their sons to become cannon fodder on foreign battlefields.

Neither should our money be loaned to warring countries. We have had a sad experience with debts owed to us by foreign

nations. Instead of making the world safe for democracy, the last war seems to have given rise to dictatorship. I feel that we should be more than a war-avoiding nation; I think we should be a peace-promoting people. We can best bring this about by minding our own business.

JENNINGS RANDOLPH, M. C.

Neutrality

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 29, 1939

Mr. ANDERSON of California. Mr. Speaker, it is with a feeling of tremendous responsibility that I approach the subject of neutrality that is now being discussed in the House of Representatives, a responsibility not only to my district and State but to the entire country, a responsibility that cannot be taken lightly at a time like this when the world is in a state of turmoil and the eyes of every nation are focused on the Congress of the United States.

It has been my privilege during the past few days to hear the subject of peace and neutrality discussed by some of the most able men in the country—men whose many years of experience in world affairs are capable of commanding our closest attention and most profound respect. Those of us who are less experienced must be guided by their mature advice and counsel. Many of them served in this honorable body during the trying years from 1914 to 1918, and their past experience and sound judgment now stands us in good stead.

We are all aware of the probable consequences of another great war. The world is in the throes of a tremendous economic depression, and poverty and want are not unknown in our own country. To take any action which would force our Nation into entangling foreign alliances would be unthinkable at this time. Our constituents are looking to us, as their representatives, for the necessary assurance that the United States will remain aloof from world-power politics while we bend our every effort to bring back prosperity and to maintain peace here at home.

I have the honor to represent a district in which reside approximately a half million citizens of this great democracy. It is my duty to protect their interests and, by my vote, to assist in making it certain that we will not become involved in another conflict such as threatened our very civilization some twenty-odd years ago. I sincerely trust that we, as representatives of the people of this country, will find it possible to pass legislation at this time which will insure a permanent and an honorable policy of true neutrality.

Ohioans Paying Dearly for United States Treasury Gifts

EXTENSION OF REMARKS

OF

HON. DUDLEY A. WHITE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 30, 1939

ARTICLE FROM THE CLEVELAND PRESS OF JUNE 20, 1939

Mr. WHITE of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Cleveland Press:

[From the Cleveland Press of June 20, 1939]

OHIOANS PAYING DEARLY FOR UNITED STATES TREASURY GIFTS—GOVERNMENT HAND-OUTS ARE OVERBALANCED BY LEVIES ON STATE'S PROPERTY

(By Ned Brooks)

WASHINGTON, June 20.—The huge hand-outs which Ohio is receiving from the Federal Government are more than counterbalanced by the millions of dollars which Buckeye taxpayers are being compelled to contribute to the support of poorer States, an examination of receipts and expenditures disclosed today.

While Ohio during the fiscal year 1938 was receiving $223,205,701 in Government largess of all forms, it was paying into the Treasury a total of $335,417,098 in Federal taxes, a difference of more than $112,200,000.

Actually, the burden was even heavier on the Ohio taxpayer, since the Government deficit during 1938 was $1,535,000,000. Had the Government been operating on a balanced Budget, the Ohio taxpayer would have been nicked for an additional $90,000,000. Instead, this sum is added to Ohio's share of the national debt.

In contrast to Ohio's adverse position on the Federal balance sheet are the records of less prosperous States in the South and West. Alabama during 1938 put $16,929,000 into the Treasury and got out $37,680,000. North Dakota paid in $1,579,000 and received $39,900,000. Arkansas contributed $8,046,000 and got back $43,202,000.

DEBT EXCEEDS FARM VALUE

Deficit spending has boosted Ohio's share of the $40,000,000,000 national debt to $2,095,460,000 on a population basis and the share is about $100,000,000 higher if computed on a ratio of taxes. Cleveland's proportion is approximately $290,000,000; Cincinnati's, $149,000,000; Columbus', $95,000,000; and Akron's, $84,000,000.

A compilation made recently by Representative DUDLEY A. WHITE (R., Norwalk), showed that Ohio's share of the Federal debt exceeds the assessed value of all farms and property outside municipalities by $522,821,000.

The debt share also is about one-seventh of the entire assessed property valuation of the State and some three-quarters of a billion dollars higher than the entire Government debt in 1916, before the United States entered the World War.

Approximately half of all Federal grants and expenditures in Ohio during 1938 went into the work relief and the National Youth Administration programs, according to an analysis just completed by the National Emergency Council. Major items of the $223,205,701 poured into the State included:

W. P. A. and N. Y. A.	$109,635,012
Crop-curtailment benefits	6,619,248
Farm Security Administration	5,666,575
Soil Conservation Service	976,284
Bureau of Roads	8,531,155
Civilian Conservation Corps	7,057,577
Public buildings (Treasury)	2,900,533
Public Works Administration:	
Non-Federal	7,324,128
Federal	447,401
Housing	5,840,762
Social security benefits	18,575,833
Rivers, harbors, flood control	9,118,984
Education and rehabilitation	1,061,807
Surplus Commodities Corporation	3,282,000
National Guard	1,785,944
Veterans' Administration	31,363,765

In addition to these direct expenditures and grants, Ohio received $39,405,396 through various Government loan agencies, including $17,160,923 from the Reconstruction Finance Corporation, $11,439,494 from the Farm Credit Administration, $1,707,923 from the Farm Security Administration, $3,179,826 from the Rural Electrification Administration, $1,910,787 in Federal Reserve loans to industries, and $2,107,000 in Treasury purchases of securities in building and loan associations.

Ohio also benefited by $28,113,437 in the insurance of notes and mortgages by the Federal Housing Administration.

To carry these expenditures and loans, assist in paying for the normal upkeep of Government and help support the poorer States, Ohio paid $335,417,098 in Federal taxes. The larger items of this total were:

Corporation income	$91,417,755
Individual income	63,204,670
Liquor	35,911,512
Tobacco	8,532,907
Stamp taxes	3,723,322
Manufacturers' excises	38,056,843
Pay roll (Social Security)	48,127,865

Of the $223,205,701 in grants and expenditures in Ohio, $23,952,762 went directly to State departments, the latter item alone constituting more than 20 percent of the State's revenue. The largest single item went for paying the Government's share of old-age pensions.

Neutrality Act

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 29, 1939

Mr. WOLVERTON of New Jersey. Mr. Speaker, it has been apparent as the debate on this bill has progressed that the differing viewpoints as to what should be the neutrality policy of this Nation has not been based upon partisan considerations. Nor should it be. The question is too vital to our national and individual welfare to permit any such consideration to dictate our thought or action.

The desire to keep our country at peace, and, prevent its involvement when war exists elsewhere, is the common desire of both Republicans and Democrats. Nothing more certainly proves the absence of partisanship, in the settlement of this issue, than the fact that members of both these two great political parties have in many instances expressed opposite views to that of their own party colleagues. Thus, the consideration of the bill has not been along strict party lines. Every Member of this House, regardless of political affiliation, is sincere in the desire to adopt a national policy that will preclude our involvement in war and enable us to remain at peace with all the nations of the world.

In determining the course to be pursued by myself, in voting upon the several questions that call for decision in formulating our neutrality policy, it has seemed to me that the surest way to avoid war, or entanglements that may lead to war, would be for this Nation to avoid all traffic in arms and munitions of war with nations that are engaged in a war to which we are not a party. Furthermore, such a course would be consistent with the idealism that has made this Nation the leader in every movement to promote world-wide peace. We are justified in the pride we have taken in this leadership, and, we should avoid the adoption of any policy that would have a tendency to weaken or destroy it.

For this Nation to advocate the discontinuance of war as a means of settlement of national differences, and then to sell the munitions and instruments of war that will produce the horrors of war, is so plainly inconsistent as to be without any justification whatsoever. To do the latter leaves us open to the charge that commercial gain means more to us as a nation than all else. Profit thereby supplants idealism and financial gain takes the place of the desire for peace. I am unwilling to relinquish our leadership in the cause of peace upon any such monetary basis.

Nor would the guilt of participation in a war not our own be avoided by a mere "cash and carry" clause that will permit a nation with the greater sea power to take the instruments of death from our shores. The fact that American ships cannot be used for the purpose of transporting war material does not remove the blot resulting from the fact that we have supplied the material, nor will it entirely preclude the possibility of our involvement. Of course, if we adopt a policy that permits the sale of war material to nations at war, then it would be wise to adopt the "cash and carry" clause, but certainly not with any thought that it absolves us from the guilt of participation in a war not our own.

I realize that in almost every conflict we can discern some element or circumstance that will induce us as individuals to feel sympathetic to one side or the other. But, from a national standpoint we cannot express our sympathy by extending aid without becoming involved.

There is no better substitute for avoiding entangling alliances that lead to war than a national policy that precludes the sale of munitions and instruments of war to nations engaged in war. The adoption of such a policy not only makes less likely our involvement in foreign wars, but it also places our Nation in a position where it may at all times consistently advance the cause of peace and good will among the nations of the world, and maintain that leadership of which we are so proud.

The numerous and varied discretionary powers delegated to the President by the provisions of this bill constitute, in my opinion, a condition that is serious enough to justify opposition to the bill.

My objection to these features of the bill has no relationship to the particular person who occupies the office of President. Today it is a Democrat. At another time it might be a Republican. My objection is more fundamental than partisanship. It is based on the opinion that no one man in this Nation, Republican or Democrat, should have the power to make decisions that might carry us into the throes of war. Congress alone has that power under the Constitution. Although this is true, yet it is conceivable that acts of the President under the discretionary powers in this bill may make war impossible to avoid.

No President would deliberately carry the Nation into war, yet a single move or decision upon his part might have that effect. The greater the discretion the greater the possibility. Many of the discretionary powers contained in this bill are fraught with danger, either from exercise or failure to exercise.

I cannot with clear conscience give my support to the bill in its present form.

R. E. A. Projects

EXTENSION OF REMARKS
OF
HON. KNUTE HILL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, June 30, 1939

Mr. HILL. Mr. Speaker, more than $200,000,000 has been allotted by the Rural Electrification Administration for the construction of power lines into rural areas throughout the United States. This has meant the projection of the comforts made possible through the utilization of modern conveniences to thousands of rural home owners. This in itself is a great achievement, but in addition the R. E. A. program has provided a business stimulant for industries in all sections of the country where are manufactured the materials which transfer electricity into home comforts. It means new orders for electrical equipment—radios, washing machines, flatirons, electric refrigerators, vacuum cleaners, and a host of similar appliances.

Under leave to extend my remarks, I ask unanimous consent to include therein a table showing how the extension of R. E. A. lines into rural areas stimulates the sale of electrical appliances, which in turn, creates jobs and releases currency.

Since this compilation, the R. E. A. has announced an eighth project for Washington, where its program is just getting under way. The project includes 258 members residing near Ellensburg, Wash., in the Fourth Congressional District. The R. E. A. loan was for $151,000. The seven former projects, included in the tabulation, include the Benton R. E. A., located near my home town of Prosser; the Orcas Power & Light Co., at East Sound; the Mutual Power & Light Assn., at North Bend; the Inland Empire

Rural Electrification, Inc., at Spokane, the Quinault Light Co., at Quinault; Public Utility District No. 1 of Cowlitz, at Longview; and Public Utility District No. 1, at Chehalis.

The number of new appliances purchased through the R. E. A. program in the 16 States included in the following table are based upon surveys:

State	Number of projects	Total allotment	Number of homes electrified	Value of materials ordered	Value of appliances ordered	Number of new radios	Number of new flatirons	Number of new washing machines	Number of new electric refrigerators	Number of new vacuum cleaners	Number of new water pumps	Number of new electric ranges
Alabama	14	$4,826,550	14,478	$3,137,257	$2,635,860	12,500	11,700	6,800	2,800	2,300	2,400	500
Florida	5	1,098,000	3,294	663,700	592,920	2,800	2,700	1,500	850	500	560	160
Georgia	34	10,927,615	32,771	7,102,949	5,898,780	27,200	26,500	15,400	8,500	5,200	5,500	1,600
Illinois	24	12,144,630	36,432	7,893,989	6,557,760	31,300	29,400	17,100	9,300	5,800	6,100	1,800
Indiana	34	12,776,195	38,200	8,304,526	6,881,040	32,800	30,900	17,900	9,900	6,100	6,500	1,900
Kentucky	24	6,782,720	20,346	4,418,768	3,662,280	17,500	16,500	9,500	5,300	3,200	3,400	1,000
Michigan	14	10,726,000	32,178	6,971,900	5,898,780	27,600	26,000	15,123	8,366	5,100	5,400	1,600
Minnesota	34	14,531,736	43,593	9,445,628	7,846,740	37,500	35,300	20,500	11,300	6,900	7,400	1,700
Missouri	26	9,342,000	28,026	6,072,330	5,244,680	24,100	22,700	13,100	7,280	4,400	4,700	1,400
Ohio	28	13,041,025	39,123	8,800,000	7,042,000	18,300	10,100	18,300	10,100	6,200	6,600	1,900
Oklahoma	18	5,834,000	17,500	3,792,100	2,940,360	15,100	14,200	8,226	4,550	2,800	2,900	870
Tennessee	12	4,235,058	12,705	2,742,787	2,286,900	10,900	10,200	5,900	3,300	2,000	2,100	600
Texas	52	15,499,185	46,497	9,982,820	8,361,460	40,000	37,000	21,800	11,689	7,400	7,900	2,300

Japanese Embargo

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 30, 1939

LETTER TO THE EDITOR OF THE NEW YORK TIMES

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I include a letter to the New York Times printed in the June 25, 1939, issue. This article shows admirably the threat to western democracies. The letter was written by Henry H. Douglas, of the Washington Committee for Aid to China.

[From the New York Times of June 25, 1939]

ADVISING BRITAIN—HER STAND IN CHINA VIEWED AS SHORTSIGHTED

To the Editor of The New York Times:

It seems incredible that Great Britain, if she wishes to maintain even a vestige of her influence and prestige in the Orient or in any part of the world, can continue to pursue the course she has been following in the Far East.

On June 14, R. A. Butler, British Under Secretary for Foreign Affairs, remarked, after the Japanese had begun the Tientsin blockade: "What measures will be appropriate must depend to some degree on the nature of the action taken by the Japanese." If the British, or any of the interested nations, for that matter, are now unable to see the nature of the action to be taken by the Japanese, there is small hope they ever will.

The Amoy affair was no mere incident. It was the first of a series of tests to see just how far Japan could go in defying the principal foreign interests in China. It was the beginning of another phase of the cycle of aggression that was begun by the Japanese uncontested occupation of Manchuria back in 1931.

Anyone but a Chamberlain should have been able to see the trend long ago. It has been expressed before, but on June 16 Tatsuo Kawai, official mouthpiece of the Tokyo Foreign Office, declared: "The days of foreign settlements in China are numbered. They are a relic of times when China was a quasi colony of western powers." The statement, "The days of foreign settlements in China are numbered" may, with no recourse to imagination whatever, be extended to mean that the days of all western influence in China are numbered.

AN OUTLINE OF COURSE

In the immediate world situation there are two other matters in which Japan's present action plays a significant part. The first is to stall the negotiations for an Anglo-French-Russian alliance against the aggressors, and the second to distract attention from Europe to pave the way for a move soon to be made by Hitler.

The course of the Japanese program is clear. China is to be conquered, all western influence is to be driven out, leaving the Japanese a clear field. Indo-China and the Netherlands Indies will follow, with Japan eventually controlling the whole Pacific and all of east Asia. Seizure of the Philippines will come as hardly more than a matter of course when the way has been properly prepared. With Japan in control of this vast area all trade there will be closed to the western nations. By that time Japan will have built up a vast modern industrial machine, fed with resources obtained by seizure, not paid for as we must pay, and operated by slave labor, which even now in China receives but the equivalent of about 10 cents a day. How can any western nation hope to compete against such a situation?

CONCRETE PLAN SEEN

Great Britain apparently regards the Tientsin situation as an isolated incident, which, however, it is not. It is part of a concrete program mapped out by Japan months and years ago.

To quote from a London dispatch of June 15: "The British are apparently insisting that they could find something to do. But at every turn the experts admitted that they ran into the hard fact that almost any step they could take would be double-edged and would hurt Britain as much as Japan." Any constructive action in such a situation requires some sacrifice. It is either a case of making a sacrifice now or losing everything in the end.

There is an effective, concrete step which could be taken by Great Britain now, and which would entail a minimum of sacrifice. She could stop all trade in war materials with Japan. In 1938 the British Empire supplied $63,379,547 of materials for war purposes to Japan, or 20.69 percent of Japan's total imports of such materials. The Empire feeds the Japanese war machine with vast quantities of tin, rubber, lead, nickel, aluminum, and zinc—all grist for the mill which sharpens Japan's weapons against those who so very thoughtfully supply them. British rubber and tin are very important items to Japan. She would have difficulty in obtaining them in sufficient quantity elsewhere.

AN AMERICAN STAKE

Any or all of the above considerations may equally well be applied to all western interests in China. Japan is concentrating on Great Britain at the moment, but each will have its turn. Today Japan's courtesy to Americans is disarming; tomorrow there will be no courtesy. Under other circumstances it might be a good thing for China to be rid of the foreign settlements and extraterritoriality, but should other nations get out at the demand of a country which has no more right there than themselves? Are they to yield to a power-mad bully who will, as they take to their heels, use his ill-gotten power to set back the clock of civilization for centuries and create a situation to plague the world for generations to come?

Japanese domination will mean the end of all foreign trade and influence in occupied China. It may already be too late, but if Great Britain, the United States, and the Netherlands, which supplied 85 percent of the $306,393,950 of war materials imported by Japan in 1938, were to cease supplying this material, it would soon stop Japan's aggression, contribute to the victory of a free, progressive China, vitally weaken the strategically effective three-cornered alliance of Japan, Germany, and Italy, with the ensuing assurance of peace, bring to an end the long series of blunders and bungling on the part of the democratic powers, and an end to our compounding of difficulties for the future. The democratic powers are now financing the program of the aggressor nations.

HENRY H. DOUGLAS,

Executive Secretary, Washington Committee for Aid to China.

WASHINGTON, *June 20, 1939.*

Establishment of Identity of Applicants for Visas

EXTENSION OF REMARKS

OF

HON. ARTHUR D. HEALEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 30, 1939

LETTER FROM THE SECRETARY OF STATE

Mr. HEALEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by the Secretary of State to the Honorable HATTON W. SUMNERS, chairman of the House Committee on the Judiciary:

DEPARTMENT OF STATE,
Washington, June 19, 1939.

The Honorable HATTON W. SUMNERS,
Chairman, Judiciary Committee, House of Representatives.

MY DEAR MR. SUMNERS: In accordance with the request made orally to Mr. A. M. Warren, chief of the visa division of this Department, by your committee, I am glad to furnish a statement of the precautions taken by our consular officers to establish the identity of persons applying for visas.

Our immigration laws divide aliens into the two major categories of nonimmigrants and immigrants. In the category of nonimmigrants are foreign government officials, temporary visitors for business or pleasure, aliens passing in transit through the United States, seamen, and "treaty aliens" entering the United States pursuant to the provisions of a treaty of commerce. Visas issued to nonimmigrants, other than seamen, are stamped on their passports. Visas to seamen are issued in the form of a visa on a crew list. Immigrants are issued either quota or nonquota immigration visas on forms printed and supplied by our Government. Immigrants are also required to present passports, but the visa is a separate document.

It is difficult to state accurately but it would be reasonable to estimate that approximately one-half of the nonimmigrants applying for visas, other than seamen, are known personally to at least one member of the consular establishment where the application is made. Many aliens, as you know, visit this country with regularity. An applicant who is not personally known to any member of the consular office is required to establish his identity. Each alien must also satisfy the consul that he is in fact a bona fide nonimmigrant. In so doing he is usually required to show what property and family ties he possesses, both in the foreign country and in the United States. Letters from banks, commercial houses, chambers of commerce, and prominent local individuals, and identity cards when available, are submitted by applicants having no personal connections with the consular establishment. Letters from banks usually bear a specimen signature of the applicant and chambers of commerce frequently affix photographs of the person concerned to their letters of introduction. Identity cards are usually issued by the police and ordinarily include a photograph of the bearer. In doubtful cases the applicant may be required to appear and identify himself with another individual known to some member of the consulate, and an independent investigation is frequently conducted.

Seamen are carefully examined to ascertain whether they are bona fide seamen. They carry identification cards bearing their photographs. Their names are carefully checked against card-index files maintained in consular offices. Independent investigations are made and in doubtful cases the alien's name is removed from the crew list.

The examination of nonimmigrants is in no sense perfunctory. The passport presented is a means of identification but the requirements to be met to establish nonimmigrant status are far-reaching and are far more effective than the passport in establishing the applicant's identity. If there have been cases in which a nonimmigrant has successfully personated another individual, and I am not aware of any such cases, I can state unhesitatingly that such cases are rare.

With immigrants, who only in rare instances are personally known to members of a consular establishment, it would be a more difficult task to be satisfied as to their identity if it were not for the safeguards provided in the immigration law. Section 7 (c) of the Immigration Act of 1924 requires every immigrant applying for an immigration visa to furnish, if available, two copies of his dossier and prison and military record, two copies of his birth certificate, and two copies of all other available public records concerning him which are kept by the government to which he owes allegiance. The documents are regarded as "available" when they can be obtained by reasonable effort even though their production may take time or cause inconvenience. Immigrants are also required to present passports which serve mainly as an official means of identification and as evidence that the immigrant has been authorized to proceed abroad.

The application of the average immigrant may be under consideration for a period of from 1 day to several months, depending upon the circumstances of the case and adequacy of the documents and other evidence presented. Many letters and affidavits concerning the applicant are also submitted. The facts related in these letters and affidavits are carefully checked against the applicant's independent statements. These in turn are checked with the official birth certificates, police and military records, and the passport. Doubtful cases are considered by boards consisting of two or more officers in the consular establishment and an independent investigation is conducted.

The immigration law and regulations thereunder have provided the foregoing means of establishing the identity of visa applicants. Our consular officers are constantly discovering cases in which aliens have presented false documentation or have personated another individual. They are alert to these attempts and, I am happy to state, are effectively controlling irregular practices of this character. For this reason it is my opinion that our present safeguards in this respect are practical and efficient.

Sincerely yours,

CORDELL HULL.

Let's Have Neutrality

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 30, 1939

Mr. REES of Kansas. Mr. Speaker, this is the most important measure that has come before Congress during this session. It is a problem in which our entire country is interested—an issue vitally affecting the welfare and happiness of people of every class and creed. It certainly is not a partisan or political matter in any sense of the word. This question transcends all political and economic lines. It involves our attitude toward other nations in event of a world crisis in which we may or may not be directly interested. We are endeavoring, as I view it, to provide legislation which will prevent, so far as possible, this country from becoming implicated in any way in the disputes and entanglements and even the armed conflicts among other nations of the world. It is a gigantic problem.

The bill before us this afternoon contains too many dangerous provisions. In my judgment it is not a neutrality bill. It places too much power, to much authority, in the hands of one individual in a time of severe crisis. It matters not how much faith we have in the judgment and the integrity of one man; it is manifestly wrong, under a democratic form of government, to clothe one person during a most crucial time, with all the powers and with all the authority provided in this measure. If there is a time when we do not want a dictatorship in determining questions of policy it certainly is in the time of a war crisis.

Let us take the cover off the ball. This is not a neutrality bill in the full sense of the word. I think it is wrong that the people of this country should be confounded and confused, and led to believe that it is a neutrality measure. A good deal has been said on the floor of the House from time to time about the manner in which this Congress for the past 6 years has surrendered its powers, its prerogatives, and its authority in favor of the Chief Executive. Now then, in enacting this most important piece of legislation—a bill affecting the lives and liberties of 130,000,000 men, women, and children—shall we, as Members of Congress, abdicate our power and authority in favor of one man?

There are 10 sections in the bill. Nineteen times in ten paragraphs you will observe the following words: "Whenever

the President shall find," or "whenever the President shall have issued his proclamation," or "whenever the President has invoked any proclamation"—he may do thus and so. I am not here to say that the man who now occupies the Executive chair will use the authority provided in this bill. I do not know. But I do say to you that the Members of the Congress of the United States who are, after all, the representatives of the people, should not extend these unheard-of powers to any one individual. I shall not support any measure placing the power and the responsibility in the hands of the President to name the aggressor among warring nations of the world.

Under this legislation the question of the arms embargo is thrown out of the window. Either directly or indirectly, as you want to put it, this country becomes the storehouse for arms and munitions of warring nations. This bill is fine for the munitions makers. Under it the sky is the limit for the sale of arms and war materials. America must not become the arsenal for foreign nations in time of war. Such action is bound to draw us into a world conflict.

Under an embargo act heretofore passed by Congress—even though, in my judgment, it was not properly invoked—we did try to prevent the sale and trade of arms and ammunition to countries engaged in armed combat. Our attention, as well as the attention of the administration, has been directed to the manner in which we have been taking part in the war with China. Recent figures show that 54 percent of Japan's imports of essentials for war purposes during the year 1938 came from the United States. We sold her 90 percent of her scrap iron and steel, 90 percent of her copper, 82 percent of her alloys, and 52 percent of the other iron and steel manufactured goods. She bought 76 percent of her aircraft from this country. The reason given for not imposing the arms embargo was that Japan had not officially declared a state of war with China.

In addition thereto, this country has become the great manufacturing plant for furnishing war materials to the various countries of the world. Under the terms of this measure, when it comes to the question of selling arms and munitions—the gate is open.

Right here I should like to add that we have paid Japan, during the last 2 years, about $2,000,000 in profits on gold which she has exchanged for these war goods—the profit being made because we pay more for foreign gold than it is actually worth on the world market.

It has been pointed out a number of times on the floor of this House that this bill provides that the President is given power in the event of war among other nations to designate the aggressor in such conflict. And as the bill now stands, he can go still further and designate areas of combat. Certainly, if the Chief Executive is given the right to designate the aggressor nations in time of such a crisis, right there we are taking sides in that conflict. And if we take sides, then we become an ally of one nation and an enemy of the other. If we are going to have a neutrality law, let us make it neutral in fact. If not, then let us designate it by another name, and let the people of the Nation know that it is not a neutrality law but simply a measure designating the policy or position we are going to follow in the event of foreign wars. Let us be fair and honest about it. It is not our province to take sides. If we are going to pass a neutrality bill, we cannot say to one nation, "We will help you because we have decided that your rights have been invaded," and to the other nation, "You are the aggressor; you are our enemy."

Certainly we must take our place and assert our rights among the nations of the world. But it should be our business to do our part in the advancement of peace by keeping out of the affairs of other nations. It is not for us to dictate the kinds of government they should adopt, or to meddle in their affairs. Let us adopt a motto of "minding our own business." Let us tell the world this afternoon that we are adopting a policy by which we will not ship bombs, bombing planes, war machines, or deadly weapons of any kind to any nation that will be used for the purpose of annihilating human beings. Let us serve notice today that we will not participate in any more foreign wars.

Wars do not decide anything. They never have. They never will. We found this out to our sorrow and disappointment. We tried as we saw it—not only to save our Nation, but to save the whole world, for democracy. Certainly, if any other nation or group of nations sees fit to attack us, we will defend our country against all odds and will use all our material wealth and the equipment we have at hand, to see that no foreign power is permitted to perform any act of aggression against our Government. Every man, woman, and child in this country will rise in support of the defense of our country and our Government against any and all aggressors. But we will not, so far as I am concerned, and I believe so far as most of the American people are concerned, send our boys to foreign soil to fight in foreign wars.

Neutrality or War?

EXTENSION OF REMARKS
OF
HON. HOMER T. BONE
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, June 30, 1939

EDITORIAL FROM SEATTLE STAR AND TACOMA TIMES

Mr. BONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on neutrality appearing recently in the Seattle Star and the Tacoma Times, both of which are members of the Scripps league of western newspapers.

Because this editorial points unerringly to the hideous dangers to the Republic which lurk in what seems to be our policy in the Far East, it is well worth the attention of thoughtful and patriotic Americans.

The author of the editorial has made a real contribution to the cause of peace in pointing out the grim significance of the so-called protection policy which was the greatest contributing factor in thrusting us into the World War. Fighting for the rights of a comparatively few Americans in China may destroy every right we cherish here at home; for the price of war might be the destruction of the Republic.

I believe that the great majority of the people of my own State agree with the conclusions of the writer of this editorial and that the people of this Nation want peace; for in the maintenance of peace lies the only hope for the solution of our own economic problems.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEUTRALITY OR WAR?

Is it worth a war?

That is the question that the American people must decide about happenings in the Far East. If our Nation is destined to assume control over events in Asia and influence the outcome of the Japanese-Chinese war, then we must be prepared to go to war in foreign lands. The Japanese Nation is too far involved in China to retreat now. This fact must be faced.

We can estimate the costs of a victorious war against Japan—perhaps a million American lives, perhaps $50,000,000,000, perhaps the end of American democracy.

We can estimate the fruits of victory—perhaps a democratic and free China and a Japanese people grateful for the overthrow of their militaristic government; but perhaps again a China still ruled by war lords; or taken over by Soviet Russia instead of Japan; perhaps a Japanese Nation made all the more bitter and warlike by defeat, like Germany.

The American people have a right to decide to go to war with Japan, if they so will it.

Until they have so decided, the Government of the United States owes it to our people to follow the proven paths of neutrality in the Far East.

We kept out of the Spanish civil war by keeping our soldiers, sailors, and marines out of the war zones, by telling our nationals to trade in the war zones at their own risk, by giving financial support to neither side. We can stay out of the Japanese-Chinese

war or a possible Japanese-British war by following the same course.

Or, we can be drawn into the far eastern war by a continuation of the present administration policy of persistently keeping American armed forces in the midst of the war zone, of encouraging Americans to remain in China and stand up for their "rights," of lending continued financial support to China or more silver purchases and more currency stabilization loans, of building Japanese enmity by continued diplomatic utterances directed against Japan.

We are a proud people. If we allow our Government to continue its disastrous policy of entanglement in Asia, sooner or later our national honor will be compromised and we will go to war, undoubtedly to a victorious war, but probably also to a national disaster.

Now is the time to decide before it is too late. Now is the time for the people of America to see that our Government unentangles itself and gets out of China, or to make up our minds to go to war against Japan.

Keep America Out of War

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, June 30, 1939

RADIO ADDRESS BY DR. GERALD B. WINROD

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD one of the finest addresses that ever it has been my fortune to read. I refer to an address by Dr. Gerald B. Winrod delivered over radio station XERA, at Del Rio, Tex., on Sunday evening, April 30, 1939, entitled "Keep America Out of War," a subject of heartfelt interest to every mother in our Nation, an address which I wish could be read by every citizen of the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I speak to you tonight about the international situation.

I have chosen this method, for coming into your home, to defend the great moral and spiritual principles upon which our founding fathers built the Republic, as against the encroachments of ideas which are being transplanted to American soil from the Old World.

I have chosen this method for making vocal the deep feeling of resentment, entertained by the American people, against any foreign policy which might cause the United States to become a part of Europe's impending conflagration.

We have witnessed, during the last few weeks, a growing state of alarm as our country has come to realize that it is being pulled unmistakably toward the vortex of war.

The thought of marching feet, broken hearts, and bleeding bodies has settled like a pall upon the millions of anxious hearts.

If the present trends are not reversed, we will find ourselves overtaken by a holocaust that will make the horrors of the World War fade into insignificance.

And, mark you, the day we go to war, that day the Constitution will be abolished, and the United States will find itself in the coils of dictatorship.

Our social order is not prepared to stand the shock of another war at this time. Participation in any struggle means the end of representative government in this part of the world.

With our enormous public debt, with our crushing tax burden, with our unemployment problem, with the rapid growth of class hatreds, with the undermining influence of alien "isms," with the loss of moral and spiritual vitality, with the demoralization of patriotic sentiments, with the surrender of American nationalism to the pernicious philosophy of internationalism—our institutions, in which we enjoy our liberties, are simply not prepared to stand the strain of another war.

War means not only the spilling of blood for America—it means dictatorship. Neutrality is therefore a necessity.

A few days ago, Senator REYNOLDS, of North Carolina, made a speech on the floor of the United States Senate, in which he said that a referendum should be held before plunging our Nation into war. And he said further that only American mothers should be allowed to vote, when the referendum is taken.

In other words, leave it to the mothers, and you may be sure the United States will remain neutral!

The mothers suffer most in time of war. Therefore, they have a right to be heard, on the matter of starting wars.

When Senator REYNOLDS had finished speaking, another Senator rose to his feet and praised the speech. He denounced the present effort to thrust our country into war. He denounced those who have prostituted news-gathering agencies, to promote a campaign of hate, a campaign of hysteria, a campaign to stir war passions among the American people.

After commending Senator REYNOLDS for thus defending the mothers of the boys who are called to arms, this Senator from the State of Washington, said these words: "If this crazy business continues * * * if this crazy business continues, it may not be safe for a United States Senator to stand here and make statements like that."

That Senator knew what every man in public life knows—namely, that professional propagandists find it easy to ignite the passions of the American people when once they gain access to the channels of public information.

George Creel, whose duty it was to dish out the hell broth of war propaganda to be served to a gullible public during the World War, once boasted that he could change the "so-called mind" of the United States "on any given subject" in 3 weeks' time, if the "proper machinery" was in his hands.

By "proper machinery," he, of course, referred to the press and other agencies most frequently used for planting ideas in the public mind.

For the last several months, every conceivable scheme has been employed, every trick has been used * * * all the way from fantastic attacks by celestial beings transported by radio from the planet Mars, down to bedtime stories told to babies in their mother's arms * * * every conceivable art, scheme, trick, has been used to produce a consciousness of war in our country.

Inflammatory speeches, loose talk on the part of both private citizens and public officials, references to the probability of war before fall, falsehoods circulated as news, twisted press dispatches, syndicated magazine articles, and a hundred other types of hate propaganda have been released—all blended together into a gigantic, Satanic symphony, for the sole purpose of preparing the American people for war.

Many instances of false reporting through otherwise reputable channels of public information could also be cited.

But suffice to say, that much of the material which comes into our homes from day to day as news, dealing with the international situation, is cursed with the taint of propaganda. It will pay you to try to read between the lines.

United States Senator WHEELER, of Montana, said last week: "There is a hysteria sweeping over this country at the present time which, if not checked, is very apt to lead us into war with Germany or some other dictatorial power."

Ask yourself, Who would stand to profit most?—who, which group would benefit greatest if Senator WHEELER's prophecy were to come true?

Under dictatorship there can be no freedom of the press. But in a democracy, where a free press is supposed to be maintained, propagandists find it necessary to set up an intricate mechanism, a system tuned down to absolute exactness, leaving nothing to luck or chance, if public reactions are to be controlled.

Yet, in spite of the engines of propaganda which have been turned loose, in spite of the program of hate with which the public mind has been bombarded; in spite of all this, the vast majority of people don't want war. They favor peace. They want neutrality.

They favor allowing the nations of Europe the privilege of settling their differences in their own way, with no interference on our part.

They are against the treacherous policy of the United States taking sides, lining up with this nation or that nation, meddling in the affairs of Europe.

When this is done, naturally we sting the pride of other countries. This in turn causes them to retaliate. It prompts them to pay us back in our own coin. It places them in the position of exchanging blow for blow, insult for insult.

Another thing that we need to learn is the fact that our country is not called to be an umpire in the line-up—in the new alinement of the nations.

Let other countries settle their squabbles according to their own ideas. But let us mind our own business.

Let us resolve firmly that not one drop of American blood shall ever again be spilt beyond the frontiers of the United States.

Let us, in the language of the Declaration of Independence, let us, "We the people," decide once and for all that foreign soil shall never again be baptized with the blood of the sons of American mothers.

Remember, we made the "world safe for democracy"—once.

Europe has made practically no changes for the better during the last 150 years. And nothing that we can do at this late date will improve the situation.

Let the nations overseas be told plainly: "You have our sympathy, but do not expect military assistance from us. We tried conscientiously to help you during the tragic years of 1917 and 1918. We mixed our blood with your blood on the battlefields of France. We thought we were fighting for high ideals. We tried to convince ourselves that it was a holy war. But today, after 20 years have come and gone, we stand disillusioned. We are not in position to finance another war for the very good reason that the last one has not been paid for."

It was 22 years ago this month that Woodrow Wilson made his dramatic appearance before the Congress to announce our entrance into the World War.

He assured the nations at that time that our motives were altruistic. He told them that we wanted nothing from the struggle in the way of material rewards.

We were only asking for the privilege of making the world "safe for democracy." We only wanted to fight for the "freedom of the seas." We only wished to have a part in a "war to end wars." And the Allies took us at our word!

We won that war! But is democracy safe? Are the seas free? Did the World War end war?

When our boys began landing in France, the French Government made us pay duty on every can of beans, every pound of food, and all the war supplies which we shipped to France to help save the hides of 50,000,000 Frenchmen, concerning whom it has been said, they "can't be wrong."

When the war came to an end the same Government tried to impose another duty on the same food and supplies which were left over before allowing us to bring them back home. Finally, to settle the dispute, we sold the remaining stocks to France, at a loss of a billion and a half dollars.

When it came time to send American soldiers to Europe, the Allies furnished some of the boats. They charged us from $140 to $180 for every man thus landed on French soil.

The United States even paid damages to France for the ground on which the American armies fought. We paid the French Government for property destroyed by the exploding of American shells as the war progressed.

While in France, our soldiers dredged harbors, built docks, and erected thousands of miles of telephone and telegraph lines. All of which remained as permanent improvements to the country.

We built hundreds of miles of railroads on French soil, which roads are still there, being used for transportation purposes. Thus our soldiers contributed to the industrial development of France.

And now, I would be lacking in candor if I did not remark, that our former Allies, notably France and England, refuse to even pay their war debts. And since they will not pay, the burden of redeeming the bonds issued to finance the World War must eventually fall back upon you—the taxpayers of the United States.

These are matters which you and I should bring to the attention of the internationalists who are insisting once more on beating the tom-toms of war.

By the time all of our obligations are met we will have a total investment of more than a billion dollars in the World War.

To that add thousands of lives sacrificed. To that add millions of broken hearts. To that add thousands of blasted homes. To that add the break-down of national morality which always accompanies war.

I tell you this page of history must not repeat itself. American soldiers must never again be compelled to fight on the soil of Europe. Christians and patriots simply must shoulder their responsibility in this solemn hour.

There is nothing new about all this propaganda for war. Every scheme now being used was used prior to our entrance into the World War.

Let us keep our defenses strong. Let us be prepared at all times to smash an invading foe into oblivion. But let it also become a permanent, fixed policy, a premise, embedded deep in the very soul of the Nation, that never again will we enter a war which might provise to take one American soldier beyond the frontiers of the United States. Stop this nonsense about our frontiers being somewhere in France.

I repeat, * * * the vast majority of our citizens don't want war. Regardless of what has transpired during the last few days and what will transpire in the days that are just ahead, the great body of American citizens feel, as Thomas Jefferson felt, when he said these words: "I have ever deemed it fundamental for the United States never to take an active part in the quarrels of Europe."

I submit that it is only a small minority of internationalists who actually want to see American soldiers landed once more in Europe. But I warn you that this minority possesses great power in molding public opinion. The secret of its strength is the fact that it is so well organized and so well financed.

Permit me to say, parenthetically, that no sensible reason exists for the United States being drawn into war with any foreign power.

Our geographical position is the envy of the world. There are 4,500 miles of water on the east. There are 10,000 miles of water on the west. We have no boundary disputes on either the north or the south.

The Canadians are good neighbors to the north. The Mexicans are good neighbors to the south.

Our natural resources are such that we could live for a hundred years if we didn't receive a loaf of bread from the outside. On the other hand, every country is glad to buy our products.

We have no enemies who wish to attack us. Even now, in spite of the fact that our foreign policy of recent months has served to produce animosity in some quarters—even now, there isn't a nation in the world but what would be willing to make any sacrifice, within reason, to cultivate our friendship.

We are the one county, out of the great family of nations, so favored by the all-wise Providence that we can enjoy a feeling of peace and security, while other peoples are exhausting themselves in the white fires of war.

Our country is waiting for a spontaneous expression on the part of "We the people"—the great rank and file of citizens who suffer most in times of war.

You have in your hand a powerful weapon for peace, if you will only use it. This weapon is described in the first amendment to the Constitution—that portion of the great document called the Bill of Rights.

There we read that the individual citizen of the United States shall, at all times, enjoy the right of petition. As an American, you have the privilege, the responsibility, of making your wishes, your demands known to your duly-elected representatives at the Nation's Capital.

Under the Constitution, the President has no authority to make foreign policy or to conclude treaties with other nations. That function belongs solely to the Congress.

This is what United States Senator GEORGE had in mind the other day, when he said: "The issue of peace and war lies right here in this Chamber and the Chamber at the other end of the Capitol. It ought to be made abundantly clear that we will not carry the country into war."

It is imperative that you and I, together with millions of other Christians and patriots, shall make our views known to Senators and Representatives with all possible haste.

Christians hate war. They believe in the sanctity of human life. They love the song which the world heard nineteen centuries ago on the plains of Bethlehem: "On earth peace, good will toward men." They follow the adorable One, whom we affectionately call the Prince of Peace.

Through the use of petitions, we may impress our will for peace upon those in authority, by dispatching five simple words to Senators and Representatives: "Keep America out of war."

Now is the time to act. Once war is declared, it will be too late. When war is declared, it becomes treason to speak in defense of peace. If you wait until then to protest you will be sent to prison or shot as a traitor.

Now is the time to register your opposition to participation in Europe's coming war. Now is the time to send letters, telegrams, or petitions to the Senators and Representatives of your States.

If you wish to use the little white form of petition, which thousands of people have used during the last week, drop me a line, indicating the number of blanks needed, and I will see that they are supplied.

Talk against the United States' becoming involved in Europe's coming war. Work against it. Agitate against it. Pray against it.

In olden times, Daniel, the prophet, told the king of Babylon that there was an infinite mind, an infinite hand who presided over the destinies of nations. He urged the monarch to seek the favor of Almighty God in a spirit of reverence and humility, but Nebuchadnezzar insisted upon going his own way. Disaster overtook his empire as a result.

History is replete with records of supernatural intervention in times of stress, when people have taken their problems to God through prayer.

Abraham Lincoln called a day of prayer to bring the Civil War to a close. We should rest upon the power of prayer to keep us out of war.

Lincoln once said it was not a matter of God being on his side, but it was rather a matter of him being on God's side. In other words, he was concerned to know the will and the purpose of the Infinite, so that he might adjust his plans accordingly.

I say history is replete with acts of supernatural intervention.

The Spanish armada and the British fleet met in the English Channel for a great naval battle in the year 1588. Spain had three ships to England's one. The British vessels were equipped with larger guns, but they were hopelessly outnumbered.

While the fighting was in progress a hurricane unexpectedly swept the channel, blowing the Spanish fleet into confusion. The British seized upon the advantage thus gained and won a smashing victory. Queen Elizabeth was so certain that she had witnessed an act of supernatural intervention that she had a medal struck on which were engraved the words, "God blew and they were scattered."

Napoleon dreamed of bringing all Europe under a system of one-man government. The time came when he reckoned himself strong enough to attack Russia. He mobilized 400,000 men and launched an invasion.

The lumbering Russian bear enticed him farther and farther from home, by conducting carefully planned retreats. When he finally reached Moscow he found the city in ashes. There was neither food nor shelter for his armies.

And a few days later found his fighting forces buried beneath a shroud of snow. The elements, not the Russians, defeated Napoleon and sent him back to Paris—to disgrace, exile, and finally Waterloo.

The first gas used by the Central Powers during the World War was released the afternoon of April 22, 1915. The soldiers on the other side were to be taken by complete surprise. The scientist in charge of the attack satisfied himself that the wind would continue to blow in the direction that it was going for at least 36 hours.

Then the gas was turned loose.

But no sooner was this done than the wind suddenly changed and whirled the billows of poison back in the direction from whence it came. This mysterious turn of the wind had much to do with deciding the final outcome of the war.

The scientist who directed the attack was greatly puzzled, and stated in his report that, in 40 years of keeping records, the wind had never been known to do such a thing before.

One of the strangest experiences of the World War occurred on the banks of Italy's lazy river, the Piave. Troops had poured for days over the Alps and were ready for a vigorous offensive. Venice was almost in sight.

This particular river is noted as being a slow, sluggish stream. But suddenly the skies blackened, the rain began to fall. There was a terrific cloudburst. The little stream overflowed and in a few minutes had become a raging torrent. Men, horses, ammunition, and supplies were swept on its crest. The lines broke and over 40,000 prisoners were taken.

When the Italian general was congratulated upon his victory he replied with deep emotion, "No; God did it. God did it."

Tonight, as Americans we face an uncertain future. The world is in turmoil. The weeks and months ahead are fraught with tragic possibilities. Let us face the future with a firm reliance upon the faith of the fathers.

Our national life must be purged of every "ism" except Christian Americanism.

International atheistic communism, the parent of every other alien "ism," must be wiped out.

We are faced tonight with the absolute necessity of a spiritual rebirth, a moral renaissance, a sweeping revival, a vitalizing of Christian and patriotic sentiments.

Said the Psalmist of old: "Righteousness exalteth a nation but sin is a reproach to any people."

God of our fathers be with us yet,
Lest we forget, lest we forget.

Lending Our Way to Prosperity

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 1, 1939

ARTICLE FROM THE AMERICAN BANKER

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the American Banker of Friday, June 30, 1939:

[From the American Banker, New York, June 30, 1939]

LENDING OUR WAY TO PROSPERITY

(By Leonard P. Ayres, vice president, Cleveland Trust Co.)

When governments initiate new programs of action designed to bring about business recovery, the businessmen whose interests are most fundamentally at issue are the bankers. The reason why that is so is that the efforts of the Government must always deal with the things that constitute the normal business of the banker, such as money, loans, expenditures, bond issues, and interest rates. Bankers are always much concerned when governments introduce innovations in these matters in order to stimulate business activity, for banking knows from long experience that such measures adopted to meet temporary emergencies always remain as lasting changes.

During nearly 7 years our national administration at Washington has been struggling with the three R's of the New Deal—reform, relief, and recovery. It is not possible to disentangle the multitude of new measures enacted by the Congress during the past 7 years and to state precisely which ones among them were relief measures, which were directed at instituting reforms, and which were intended to stimulate recovery.

ATTEMPTS TO LIFT PRICE LEVELS

Nevertheless we can with reasonable accuracy classify the recovery measures in two great groups, and we can state with some confidence that a third group is now being planned. The first of these three groups of efforts for business recovery was made up of measures designed to lift the burdens of debt. It undertook to do this in part by lifting the levels of prices, for the collapse of prices early in the depression had made people everywhere feel hopeless about the problems of ever paying their debts.

When the great depression descended upon us one of its first and most terrifying developments was the collapse of prices. Market quotations for stocks dropped fast and far, and later on those of bonds followed them downward. Real-estate values seemed to evaporate, and there were serious shrinkages in the prices of farm products, raw materials, and most wholesale commodities.

One of the inexorable laws of economics is that when prices fall the burdens of debt increase. The working out of that law on the farm is simple and direct. The farmer who had a mortgage of $2,500 on his farm when wheat sold locally for $2.50 a bushel could pay off his debt with 1,000 bushels of wheat. When the price at the farm fell to 25 cents, he could have paid off the debt, not with 1,000 bushels, but with 10,000 bushels. The law applies everywhere. In proportion as the levels of prices decline, the burdens of debt increase. The law operates against debtors whether they be individuals, families, corporations, municipalities, or nations.

Our first great recovery effort was an attempt to raise prices in order to lift the burdens of debt that were oppressing our people. As a part of that effort we outlawed the clauses in bond indentures that provided for payments in gold. In the effort to lift price levels we decreased the gold content of the dollar. Another part of that same program provided for the huge purchases of silver. Most of the changes that we made in our monetary system proved to be either outright failures or only partially effective. We did not succeed in bringing about any such lifting of price levels as had been planned, and we did not produce recovery.

Another important part of our effort to lift the burdens of debt consisted of the taking over by the Government of the mortgages on millions of homes of people living in towns and cities and the refinancing with public funds of the mortgages on millions of farms. In addition, the Government lent many millions of dollars to banks, railroads, insurance companies, and other corporations. These new lending activities of the Government did lessen the difficult problems of multitudes of individuals and corporations by reducing the burdens of their debts, but they did not produce recovery.

ATTEMPTS TO SPEND OUR WAY TO PROSPERITY

The second group of efforts designed to produce recovery includes the varied spending activities which we know by the name of pump priming. The purpose of these efforts is to increase consumer purchasing power. The economic argument behind them is that if great numbers of people can be given increased incomes, they will at once try to purchase larger amounts of all sorts of goods. Increased demands will call for increased supplies, and as producers strive to provide for those increases they will enlarge their plants, install improved machinery, build new factories, and in general do the things that will restore full activity to America's great productive industries.

It has been realized throughout the depression that the most serious unemployment was concentrated in the heavy industries that make durable goods rather than in the light industries which produce consumers' goods. The idle factories have been those that are engaged in normal times in making things for other industries to use. Such goods include machinery, and power plants, and railroad equipment, and building materials, and things of similar sorts. The theory of pump priming has been that, if consumer purchasing power could be increased, the producers of consumers' goods would so enlarge their facilities as to force into activity the producers of durable goods.

The pump-priming policies based on the theories of consumer purchasing power have been used to justify vast expenditures of the most varied sorts. Included among them have been the great programs of public works, the bonus payments to veterans and to farmers, slum-clearance projects, and the subsidies to home builders and to shipbuilders. Some part of the increased expenditures for military and naval equipment belongs in that category, as well as the T. V. A.; the irrigation, reclamation, and flood-control projects; and some of the activities for soil conservation.

THE GOVERNMENT AS BANKER

All this spending has been accompanied by lending, and as the Government has pushed forward its pump-priming efforts with increasing vigor it has at the same time been going more and more deeply into the banking business. It is now proposed as a part of the reorganization plans of the administration to bring together its new banking functions into one consolidated Federal lending agency. The new organization will come into existence in July, and it will probably have Jesse Jones as its head.

Some idea of the progress that the Government has already made in the banking business may be gained from the fact that the new agency will include the Reconstruction Finance Corporation, the Electric Home and Farm Authority, the RFC Mortgage Co., the Disaster Loan Corporation, the Federal National Mortgage Association, the Federal Home Loan Bank Board, the Federal Savings and Loan Insurance Corporation, the Home Owners' Loan Corporation, the Federal Housing Administration, and the Export-Import Bank.

The banking business of the United States Government is already the greatest banking business in the world. The loans and investments of its lending agencies now amount to more than $12,000,000,000. Most of this great total has come into existence in these recent depression years. It is worth noting that while the Federal lending agencies have been accumulating loans and investments of $12,000,000,000 the banks of the United States have lost loans and investments and the total that they have lost also amounts to $12,000,000,000.

WHY PUMP PRIMING HAS FAILED TO PRODUCE RECOVERY

The pump-priming activities of the Government have not succeeded in producing the recovery that was their aim. There are two principal reasons why they have failed. The first is that they have led the Government to intervene so deeply and in so many ways into the affairs of corporate business that men have become too doubtful about the prospects for future profits to be willing to take many risks in seeking them. Venturesome enterprise has come to believe that the risks involved in entering new undertakings outweighed the probable gains, and so money has been seeking security instead of assuming new risks.

The other reason is more concrete. It is that pump priming does not have the effects on industry that its advocates said it would. They assumed that when the demands of consumers were increased

by the lavish distribution of public funds the producers of consumers' goods would build new factories and order new equipment in order to meet the enlarged demands. Experience shows that the results do not work out that way. The annual volume of output of consumers' goods has never yet increased to levels as high as those of the prosperity period before the depression, and so there has been no need for many new factories or much new equipment in order to meet all demands.

It has become apparent that what happens during a period of pump priming is that the money spent by the Government is quickly used by its recipients for the purchase of consumers goods, and that as soon as it is spent it passes into business channels and most of it shortly comes to rest in the banks in the form of demand deposits. These deposits are largely those of businessmen and corporations. They have grown enormously during the years that pump priming has been under way. It is true that some part of them is the result of gold imports, but in large measure those demand deposits were originated by Government borrowing.

Demand deposits are now about 50 percent greater than they were in 1929 at the peak of prosperity. They are largely idle funds, and their rate of turn-over is lower than ever before in our history.

Pump priming does not operate successfully unless the pump itself is in good working order. In this case the pump is the great productive machine of American enterprise, and it is operating slowly despite the abundant funds that are available to speed it up. The reason why it works so slowly is that the only incentive which can accelerate it is the prospect for profits, and businessmen do not think those prospects are now attractive.

LENDING OUR WAY OUT OF DEPRESSION

A year from now the nominating conventions will be in session, and the political campaigns will be getting under way. Meanwhile, measures must be taken not merely to increase business activity, but to convince the people that the Administration has at last found a way to bring about recovery. There is increasing evidence that the new attempt will be to seek recovery through lending rather than through spending. The current hearings before the Temporary National Economic Committee, which is also known as the Monopoly Committee, indicate that the new plans for recovery by lending are now being formulated.

A month ago the case in defense of the new policy was brilliantly presented by an eminent economist, Prof. Alvin H. Hansen, of Harvard, and by the Assistant Secretary of State, Adolf A. Berle, Jr. Professor Hansen began his argument with the valid proposition that prosperity depends on a constant flow of investment into productive industry in order to supply it with improved equipment for taking care of its present output, in order to give it new facilities for making new products, and to provide greater capacity as population grows and demands increase.

This year, and during all the depression years, the flow of new investment capital into our productive industries has been abnormally small. Most economists believe that the reasons for that diminished flow are to be found in the barriers which the Government itself has erected against business enterprise, but Professor Hansen says that the reason is that this country has now reached such a stage of economic maturity that business no longer offers adequate opportunities for the profitable investment of our national savings. This creates unemployment in the capital-goods industries, and slows down the entire economic machine.

His remedy for this is that the Government should take our savings by taxation and spend them itself for the development of new products and industries, and for huge programs of public works. He blames our alarm about our continued unbalanced Budget on an obsolete system of public accounting, and says our accounting should list operating expenses separately from investments in public works, new industries, and the like. Then the Budget should not be considered to be out of balance as long as the income from taxes is sufficient to pay the operating expenses and the carrying charges on the public debt.

THE BERLE TESTIMONY

Mr. Berle agreed with Professor Hansen that private enterprise has failed. He advocated as a solution of the problem the creation of a public works finance corporation. Such an organization would get its funds by issuing its own guaranteed bonds, or by rediscounting its notes at the Federal Reserve bank, and by those means public works could be paid for without having to get the Congress to appropriate money for them. He also advocated the organization of a Federal system of capital credit banks to provide money for new investments, and as a temporary measure Federal insurance of loans to small businesses.

Mr. Berle is perfectly well aware of what is inevitably going to happen if the Government continues to extend its activities in the field of banking. He said in his testimony: "Briefly, the Government will have to enter into the direct financing of activities now supposed to be private; and a continuance of that direct financing must mean inevitably that the Government will control and own those activities. * * * Over a period of years the Government gradually will come to own most of the productive plants of the United States."

The Assistant Secretary of State appeared as the witness for the Securities and Exchange Commission, and he made it clear that he does not have a high opinion of our existing banking system. He said: "The theory that a bank must make a profit today has ceased to be valid, except in an extremely limited sense. The profit of the bank is interesting as showing that by financial standards its work has been well done. In the sense, however, that the bank is entitled to a profit, as a reward for something or other, there seems to be no reason for its existence."

Attention is now being concentrated at Washington on the part of this program for lending our way to prosperity which proposes a system of Government insurance of bank loans for business purposes. The proposal now under active discussion is the Mead bill, which is modeled after the F. H. A. program for insuring loans for home modernization. The bill would insure a bank against losses in excess of 10 percent on business loans up to $1,000,000 to any single borrower. The loans could run up to 10 years, and bear interest of not over 4 percent, and there is no provision that they should appear to be sound loans or that they should be amortized.

This proposed legislation is regarded with much favor at Washington where Senators and Representatives are saying that the Government must find some way to use the idle money in the banks if private industry will not. Governor Eccles, of the Federal Reserve System, is advocating an alternative proposal for the establishment of an industrial loan corporation to insure bank loans to small business and to provide long-term capital for business firms. Careful observers in Washington are freely predicting that some form of Government insurance of business loans will be enacted.

THREE FALLACIES IN THE LENDING THEORIES

There are at least three major economic fallacies embodied in these proposals for lending our way to prosperity.

The first and greatest is Professor Hansen's proposition that our national economy has now reached such an advanced stage of maturity that business can no longer offer profitable opportunities for the investment of the national savings, and so the Government must take those savings away from us by taxation and spend them itself.

The best evidence that nations are not condemned to depression by the maturity of their economies is available in the data published by the League of Nations comparing the volumes of industrial production of leading countries in 1938 with those of the prosperity year of 1929. If we consider production as being 100 in 1929, the figures show that in 1938 it was only 72 in the United States, but it was 116 in England, 146 in Sweden, 124 in Mexico, 137 in Chile, 165 in Greece, 157 in Finland, and so on through a list of 20 countries, with the United States at the foot of the list.

Production in Canada in 1937 was as large as it was in 1929. Some of the countries are more mature than we are in an economic sense, and others are less mature. In some of them there is more governmental participation in business than we have here, and in others there is less. Clearly economic maturity is not the explanation of depression.

The second economic fallacy embodied in these plans for lending our way to prosperity is the idea that capital can be created by a banking mechanism. That theory is inherent in the Berle proposals, and it is present, although less obviously, in the projects of Governor Eccles and of Senator MEAD.

The fact is that capital consists of savings, and it cannot be created by banks. If we are to insure loans and then rediscount them at the Federal Reserve bank, why should we not cut out all the intervening red tape of banking? Why not simply print the money and hand it out to the applicants who can persuade the spenders and experimenters at Washington that it is to be used for what Mr. Berle calls the plain needs of society, or still, in his words, the obvious need, or the needs which everyone recognizes?

The third great fallacy in the lending proposals is the idea that prosperity is created by bank loans. Our business history does not indicate that mere credit expansion is nearly as good an indicator of business prosperity as is commonly assumed. We have the records of the loans and investments of our national banks at 4 or 5 call dates each year for the past 75 years. Those records show that the loans and investments have always increased during every period of prosperity for three-quarters of a century, but they also show that they have increased during a majority of the periods of depression. The increase in the 16 periods of prosperity has averaged about six-tenths of 1 percent per month, while that in the periods of depression has averaged about five-tenths of 1 percent per month.

If one measures the changes in the loans and investments in each period of business expansion from the bottom of depression to the peak of prosperity, there was always credit expansion during recovery, but there was also credit expansion in a majority of the periods of business contraction from the peak of prosperity down to the bottom of depression. Periods of recovery are not notably periods of great credit expansion. They are periods during which money is more actively used, checking transactions become much more numerous, and as the economists would say, the velocity of circulation is greatly increased.

Rapid increases in borrowing have not often characterized periods of prosperity in this country. Bank loans have not, as a rule, increased much more rapidly during prosperities than during depressions, and long-term borrowing through bonds and notes has not usually grown much more rapidly in prosperity years than it has in depression years. A healthy economy is one in which business can raise new money by floating issues of common stock, and that is what we have always done in this country in periods of business recovery.

BUSINESS LOANS MORE HAZARDOUS THAN BUILDING LOANS

There are two principal purposes behind the projects for changing our banking legislation so as to provide insured bank loans for small business. The first purpose is to help stimulate business

recovery by making it possible for large numbers of small business undertakings to expand their operations, buy more materials, employ more people, and to increase their efficiency by making alterations and enlargements, and purchasing improved equipment.

We have successfully tried the experiment of providing insured loans for the construction of new homes and the improvement of existing ones, and now it is proposed to apply similar methods of lending to help businessmen finance the activities by which they earn their living and meet their pay rolls. The analogy between the existing insured loans for building and the proposed insured loans for business is an interesting and attractive one, but there is danger that it may be misleading.

The chief difference between the two classes of loans is that the safety of the building loan is secured by the value of the building itself so that the remaining part of the risk that is covered by the insurance does not create a dangerous credit hazard. There is no similar tangible security supporting the typical business loan. The prospects for the repayment of that sort of loan depend mainly on the quality of the management and its ability to earn continuing profits in the face of keen competition. Usually success depends on the continuing efficiency of a single individual, and it may be impaired by sickness, accident, or by any of a great variety of other unforeseen developments.

INSURED LOANS WOULD SUBSIDIZE FAILING FIRMS

The second principal purpose behind the projects for insured loans is that of aiding small-business men. At first thought it would seem clear that businessmen as a class would be benefited if they could secure credit more easily, more plentifully, and at reduced expense, but that conclusion may be unwarranted. Projects for insuring business loans contemplate that great numbers of loans will be made to people who are not able to borrow from banks under present conditions, and that the loans will be made for projects which bankers do not now consider safe risks.

Bankers are now seeking loans with a degree of eagerness and energy without precedent in the history of banking, and these projects for insured loans propose to grant credit for projects which bankers do not consider safe risks even under the present pressure to find employment for idle funds. Unless the credit judgment of thousands of bankers has been wrong about these projects, it must be expected that a large proportion of the proposed insured loans will later on become part of the liabilities of insolvent business.

Here is one of the real dangers connected with insurance for business loans. If the granting of such loans on a large scale should in practice result in an important increase in the number of failures among small businesses, the results would prove harmful not only to the businesses that secured the insured loans and then failed, but also to all their competitors. There is no competition that is as hard to meet as that of the business that is on the way to insolvency, and which is turning to desperate measures of price-cutting and wage reductions in the hope of avoiding failure.

There appear to be three chief unfavorable economic implications that are inherent in the projects for insuring loans made to small businesses. The first is that these loans are far more hazardous than insured loans secured by new building construction. The second consideration is that insured loans will not be very helpful as a recovery measure because they will not bring much aid to the heavy industries where unemployment is most serious. The third unfavorable economic consideration is that insured loans for business ventures that cannot now secure bank credit really constitute a form of Government subsidy which will create serious new competition for small businesses that are now in successful operation.

PUBLIC INTEREST UNAROUSED

This new movement for lending our way out of depression has gained great momentum without attracting much public attention. The newspapers have given it little space. The reports of the first hearings dropped into obscurity because they were eclipsed by the sinking of the first submarine. The subsequent hearings went almost unnoticed because our attention was completely distracted by the visit of royalty. Probably we have seldom had in our history so dangerous an instance of the failure of our people to pay attention to a development that gravely threatens our whole national future.

This project is sponsored by leading Senators; it is heartily endorsed by the Assistant Secretary of State; it is actively promoted by the Governor of the Federal Reserve System. Its major premise is that the American business system has failed, and that since it has failed the Government must progressively take over many of its functions and activities. The purpose is a vast increase in public spending, but it is to be spending disguised so that it will not appear to increase our national debt, and will not be represented by figures in our unbalanced budgets.

It is proposed to put huge additional sums of money into circulation by having private banks and public banks make great numbers of loans which are to be guaranteed by the Government. It is planned to make loans for public projects as well as for private ones, and by doing the spending that way the need for having the money appropriated by the Congress can be avoided. The voting public is becoming increasingly aware that public spending has got entirely out of control, and this new set of plans for guaranteed lending is a most ingenuous political device designed to circumvent public opposition to spending.

The productive industry of America is like a great powerful truck that has won all the international competitions for carrying capacity, speed, economy, and endurance. Recently the truck was put in the charge of a new operating crew who changed all the adjustments and added a great number of new accessories. Among other changes they set the emergency brakes. The truck will still run, but it performs very badly.

It keeps stalling, and it uses an appalling amount of fuel, and now it is to have ether mixed with the gasoline to make it run at all. The new crew is now making a report on its performance, and their recommendation is that it should be abandoned and that they should be commissioned to invent a different and superior type of vehicle. Our recommendation is that they should try the experiment of releasing the brakes.

The Neutrality Bill

EXTENSION OF REMARKS

OF

HON. LUTHER A. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 1, 1939

STATEMENT BY THE SECRETARY OF STATE

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave granted, I submit herewith statement made to the press today by Secretary Hull expressing his views concerning the neutrality bill, upon which the House voted last night:

I am still thoroughly convinced that the six-point peace and neutrality program set forth in my letters to Senator PITTMAN and Representative Bloom on May 27, 1939, would be far more effective in the interests of peace and in keeping the country out of war than the present embargo law or any equivalent.

This legislative proposal was submitted to the appropriate committees of the two Houses of Congress after lengthy conferences with members of these committees and with other leading Members of Congress of all political persuasions. It was my hope and belief that, while this proposal might not contain all that every individual Member of Congress or every official of the executive branch of the Government wished, it would in the present international exigencies be regarded as desirable by a majority of Congress. Its failure to pass the House by a narrow margin is a matter of regret and disappointment from the standpoint of peace and the best interests of this country in its international relations.

This six-point peace and neutrality proposal is not only best calculated to keep this Nation out of war in the event war comes, but also—what is all important at this time—best calculated to make a far greater contribution than could the present law or its equivalent toward the discouragement of the outbreak of war. At the same time, while doing this, it would likewise keep this Government and Nation 100 percent within the limits of universally recognized international law.

In these circumstances, I must continue to urge the adoption of this proposal.

Statement by President Galloway Before Labor Committee

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 30, 1939

STATEMENT BY FRED S. GALLOWAY

Mr. LUDLOW. Mr. Speaker, by unanimous consent of the House I present for printing in the RECORD a statement made before the House Committee on Labor on June 29 by Mr. Fred S. Galloway, of Indianapolis, Ind., president of the National Federated Independent Union. The committee had under consideration labor legislation in its broad aspects and particularly the proposed amendments to the National Labor Relations Act. Mr. Galloway's statement was as follows:

Recently there appeared in the CONGRESSIONAL RECORD, volume 84, No. 90, the radio address by Frank T. Bow, May 5, 1939. The address being made over the Mutual Broadcasting System, the CONGRESSIONAL RECORD stated that this was the true story of bona fide

independent unions. While it is not my purpose to criticize any statement by Mr. Bow, neither shall I attempt to contradict Mr. Bow's address. However, I do want to emphasize that the true story of independent unions has never been told, and that is what I will attempt to do today.

Prior to the enactment of National Labor Relations Act, there existed in industry the old type of what was commonly referred to as the company union, some used the term of employer and employee relationship. Many of those organizations were strictly dominated and some continue to be dominated by management, the employee had absolutely no voice or recourse in matters having to do with collective bargaining, all decisions were made by management and in many industries the decisions by management were final. During my many years of affiliation with the American Federation of Labor I caused many such organizations to be disestablished. However, I found in some instances that such organizations operated both successfully and harmoniously where collective bargaining was conducted on a basis of fairness to all parties concerned.

I am a Democrat and had charge of labor's campaign for President Roosevelt in Indiana during his first administration, but little did I dream that with the advent of the Roosevelt administration we would soon be confronted with the biggest legalized racket in the history of American labor and politics which started under the N. R. A.

I did not believe that the N. R. A. would ever function successfully, and so informed many of my congressional friends, insofar as carrying out the intent of the act was concerned—for the reason that history has proven that legislation does not, will not, and cannot prevent labor disturbances. Under the N. R. A. the minimum wage became the maximum wage. The wage and hour law has proven unpopular among millions of wage earners in this country. Time may not permit me to elaborate on the reasons for the failure of labor legislation that has been enacted under this and previous administrations. The intent and purpose of the Wagner Act has proven to be an absolute failure, and I lay the blame for the breakdown of the act directly at the door of its administration and the so-called recognized labor organizations.

I believe that President Roosevelt once stated in substance that if legislation were enacted that would prove detrimental to the general well-being of the people, that he would be the first one to ask for the repeal of such legislation. Had the intent and the phraseology of the act been placed into actual practice, this act would have proven to be the finest piece of labor legislation ever enacted by the Congress of these United States, although it was nothing new, for the reason that it merely legalized organizations of labor and collective bargaining, but to the disappointment of millions of wage earners and management.

Several persons have appeared before your committee, none of whom have a solution for a peaceful and harmonious relationship between management and employee. Neither do I profess to have the solution, but I state without fear of successful contradiction that the organization that I have the honor to represent, namely, the National Federated Independent Union, has proven and demonstrated that a peaceful and harmonious relationship can prevail between management and employee so long as the labor racketeer remains out of the picture. I do not attempt to place the labor racketeer and the agitator in the same category. I do not mean to infer that all labor men are racketeers. Some of the finest characters that I have known are members of the American Federation of Labor and the Congress of Industrial Organizations.

With reference to the National Labor Relations Act, I maintain that there is nothing wrong with the act itself, except that provision of the act which permits the National Labor Relations Board to establish its own rules and regulations—section 6A—and that is exactly where the trouble started.

But insofar as the National Labor Relations Board is concerned, majority rule usually applies as a result of intimidation practiced by the Board itself and assisted by the labor racketeer.

In my opinion and with due respect to the gentleman from Missouri who compared the National Labor Relations Board to a kangaroo court, he surely had never appeared before the National Labor Relations Board or a kangaroo court. I have personally been a victim of both; the difference between the two is that a kangaroo court in most cases is composed of a judge, jury, defense witness, and a prosecutor, and the prisoner in most cases is allowed to tell his story. Of course, the victim is always found guilty. The National Labor Relations Board hearing is composed of the trial examiner, the prosecuting attorney, and the company attorney. Those three men act as detective in the case who gathers the evidence, the judge who passes the sentence, the prosecutor and the jury, and the victim before this great bar of injustice is likewise found guilty, and oftentimes the prisoner is not allowed to plead his own defense. Following are a few of the facts and experiences that I have come in contact with. For instance, in Arkansas, after being on the witness stand over 2 hours in the Ward Furniture Co. case I was requested to answer a question in the negative or the affirmative, which was impossible for me to do. I asked the trial examiner if I did not have any constitutional rights in the matter, and he informed me that I had no constitutional rights. From that time on my memory was a blank. I could remember nothing. In the case the Board held that the company should reinstate three employees who were dismissed prior to the enactment of the National Industrial Recovery Act, while at the same time the president of the local union of the A. F. of L. testified that no organization of any character had existed prior to April 27, 1937. The Wagner Act was not even in effect at the time of the discharges.

In another Midwestern State charges were filed against our organization in the Karges Furniture Co. case by the Communist Industrial Furniture Workers of the World. When I protested the presence of the Communist Party and their participation in the hearings I was informed by the regional director that the Communist Party would be extended the same courtesy and consideration that was extended to our organization, and they were; yet I understand that the Congress of the United States appropriates millions of dollars for the investigation of communism and subversive activities. In the Nekoosa (Wis.) Paper Co. case, one employee, through the decision of the National Labor Relations Board, upset 1,200 employees. I ask this committee, Is this collective bargaining by majority rule? In the Girard Toy Works case 3 employees attempted to upset an organization of 750 employees. The case is now before the Board, or will be decided in the near future. The Board's attorney from its Pittsburgh office called on me personally in Indianapolis and requested me to turn over to him all correspondence that I had received from the independent unions of the State of Pennsylvania, in which there are many independent unions. I asked the attorney that if he made the same demand on John L. Lewis and William Green what their answer would probably be.

In the G. Sommers Co. case our organization defeated the American Federation of Labor to a standstill; only five employees were eligible for membership in the international union involved. We petitioned the Board for a hearing which was never granted because of the collusion between the Board, the American Federation of Labor, and the management, which was admitted to me by the management.

Our organization petitioned the regional office of the Board in St. Louis on March 29 of this year for an election in the International Shoe Co. case. The election was finally held June 15, 1939. We are informed that the Board's attorney, Mr. Sperry, advised the C. I. O. to build up their fences or they would be defeated by our organization. The intestinal fortitude and the desire on the part of the workers to maintain that which our forefathers fought and died for, namely, their independence, in my opinion, is the only thing that keeps the bona fide independent movement alive.

The Board is guilty of the same charge in dealing with our organization that they accuse management of being guilty of.

Now let us see how the whole situation works out.

Ninety percent of all labor disturbances are created by less than 10 percent of the employees. A very small minority of the employees become dissatisfied with the working conditions. Being afraid to approach the management, they send for an organizer. From that very moment (under the rulings of the present Board), the management, and likewise the majority of the employees are absolutely helpless. Is this industrial peace? The management is told by the organizer that if they fail to sign up they will blow up his joint and in some cases proceeded to do so. The employees are told that if they don't line up they may wake up and find their front porch missing, and the interesting thing is that this has happened. The employee is also told that his family will be taken for "a ride," and this has happened. Through the activities of the present Board and its employees, aided by the racketeers, the employee, as a result of intimidation and coercion, is forced to affiliate with an organization not of his or her own choosing, which is contrary to the terms and purpose of the National Labor Relations Act. Much has been said about collusion between the A. F. of L. and management; of the A. F. of L. being used against the C. I. O. I know of specific instances.

This condition has resulted in sabotage and violence, and is forcing our bona fide independent to violent action in self-defense, not because we desire to but we are forced to self-preservation. Recently our members were removed from a P. W. A. school building, Federal project, in Buffalo, N. Y., because they were not members of the A. F. of L. union.

No other law will do more to bring about the defeat of the Democratic Party than the National Labor Relations Act as now being administered. This was demonstrated in the last election, especially in Michigan, Ohio, Pennsylvania, New York, and Indiana, which were supposed to be C. I. O. strongholds. The workers in those States became fed up with intimidation and coercion by the labor racketeers and the Labor Board's administration, with the result that they revolted against the Democratic Party.

Again I repeat that the Labor Board and the labor organizations have created one of the greatest legalized rackets in America. There will be no upturn in business until this act is amended. Our 14,000,000 unemployed will remain unemployed and the number grow This condition will play a major part in the defeat of the Democratic Party in the coming election.

Our organization is composed of 450,000 wage earners in 23 States, of which 75 percent were formerly affiliated with the C. I. O. or A. F. of L. It is reported by the United States Department of Labor and several universities that there are 14,000,000 men and women organized in bona fide independent unions in this country. Approximately 7 percent of the estimated 45,000,000 wage earners belong to the C. I. O. or A. F. of L. In other words, the bona fide independent unionists represent approximately three times the combined strength of the paid-up membership in the C. I. O. and A. F. of L.

I ask this committee—do not these figures prove that the great mass of American wage earners are fed up with the racketeering

in the American labor movement and under the present National Labor Relations Board?

They are tired of the high-salaried officials, who in many instances have sold the workers down the river, tired of paying excessive dues and assessments and receiving but relatively little in return, and oftentimes nothing.

I am convinced, after 35 years of activity in the American labor movement, that the great majority of wage earners are interested in the number of hours that they may work and the amount of wages they are to receive for their labor. While I am opposed to long hours and low wages, which will not make for prosperity, and which will not provide the social and economic conditions which the American wage earner is entitled to, after all, it isn't so much what I desire.

We recommend to this committee that the National Labor Relations Act be amended so as to enable the employer to petition the Board for elections among the employees; we urge that the present personnel of the Board be removed and a new Board created, with the attorneys, economists, and investigators to be placed under the Department of Labor like the Wage and Hour Division. We are opposed to the craft or unit rule in collective bargaining or in the elections.

The following represent the fundamental principles and policies of our organization. We are organized to work and not to strike, but we shall never sacrifice the right to strike.

Coercion has no place in the picture of the National Federated Independent Union. We believe that nobody wins in a war or a strike—the wives and the kiddies pay for all the strikes.

Labor has injured itself, its whole cause, by strikes called too quickly and without provision being made for the families of the workers ordered to strike.

Labor cannot win with racketeers and highjackers infesting its ranks.

We strive to improve the working conditions of our membership.

We believe that honorable industrial relations call for clean hands on both sides.

Management and labor must learn to adjust their differences, if employers employ and workers work.

All labor disputes can be negotiated when both sides have an honest desire to be fair. If not, one side has no foundation for its position.

Gentlemen of the committee, we submit the foregoing for your consideration and respectfully thank you for your attention.

Will Rogers

EXTENSION OF REMARKS

OF

HON. WILL ROGERS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 1, 1939

POEM BY FRED B. WOODARD

Mr. ROGERS of Oklahoma. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following poem, written by one of my constituents in honor of the late Will Rogers:

WILL ROGERS

St. Peter swung open the Pearly Gates,
And held out his hand with a smile,
Saying "Will, your engagement is over on earth,
You'll "show" up here for a while.
I examined the books, when I saw you arrive,
Your record I know is good,
From the time you started at Oolaga,
Till you finished at Hollywood.
You'll like this place, when you've looked around,
A lot of your friends are here,
And loved ones to take the place in your heart,
Until those you have left appear.
Here are kings and rulers you used to know,
Indians and Congressmen, too;
(If you miss someone take a look at the list
Of those who didn't get through.)
You need a vacation, so be at ease;
Just make yourself right at home.
I have you booked for a trip of the skies,
As soon as you're ready to roam.
The first stop will be on the planet Mars,
Then a season or so on the Moon;
Jupiter wants to sign you up,
And I've promised you to Neptune.
You have done so well down there on the Earth,
Which was going from bad to worse,
That I want you to make a celestial tour,
And visit the Universe.
Some of the saints said "Let the man rest!
He's suffered enough for his sins."
But God, in His wisdom, who knows the best,
Said "That will be Heaven for him."

FRED B. WOODARD, *Dewey, Okla.*

Growing Use of Alcohol in Motor Fuels in Foreign Countries

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 1, 1939

EXCERPTS FROM AN ARTICLE PREPARED UNDER DIRECTION OF RICHARD A. STADERMAN

Mr. MARTIN of Iowa. Under leave to extend my remarks, I insert in the RECORD herewith excerpts from a study entitled, Growing Use of Alcohol in Motor Fuels in Foreign Countries, which considers precedents for us to think about and act upon in solving our own farm problems. This study was read into the record of the hearings of the Senate Finance Committee on Use of Alcohol From Farm Products in Motor Fuel, on May 29, 1939, by our distinguished colleague, the Senator from South Dakota [Mr. GURNEY], who has advocated exemption of alcohol-blended gasoline from Federal gasoline tax. The authors of the study, the American Good Government Society, inform me that it was prepared under the joint direction of the society's president, Richard A. Staderman, and of its vice president, H. W. Lincoln.

The matter referred to is as follows:

GROWING USE OF ALCOHOL IN MOTOR FUELS IN FOREIGN COUNTRIES

(Prepared under the direction of Richard A. Staderman, president, American Good Government Society, Tilden Hall, Washington, D. C.)

American agriculture has not been really prosperous since 1919. At that time farmers received dollars per bushel for wheat, corn, and other products.

Since that time there have been surpluses of crops of such size as to keep the price level down, and sometimes below actual cost of production.

Many remedies have been proposed, and among them the conversion of surplus crops into alcohol to be used as fuel in automobiles. Persons have wondered whether we might be able to take a sufficient amount of crops off the market this way to give a decent profit to the grower.

In addition there is the question of petroleum reserves. The best available estimates give us only a few years before we shall be able to get less oil than we need from our own wells, with a further steady decline after that until our production of petroleum products drops to the vanishing point. What shall we do then for gasoline and oil for our autos, our trucks, and our tractors?

An important background for consideration of our own problem can be found in the experience of foreign countries, where alcohol blends with gasoline have been in use for many years. A number of factors have brought about this blending, of which one of the most important is the nationalistic arguments of military chieftains who wish to be independent of foreign sources of petroleum which might be cut off any time in case a war occurred.

Another objective has been to provide a market for surplus crops, consisting of either potatoes, molasses, beet roots, or fruits—all surplus farm products abroad though different than our own surpluses of wheat, corn, sweetpotatoes, and such. * * * The American Good Government Society * * * national nonpartisan organization, with headquarters at Tilden Hall, Washington, D. C., is composed of leading citizens in various parts of the United States who are striving for a happier America. In addition to publishing a magazine, the American Good Government Review, this society strives for better legislation of broad national benefit and * * * of the use of alcohol in motor fuels as an important aid in solving our surplus-crops problem.

The appeal for the home product of alcohol is of a patriotic sort in nations having to import petroleum or gasoline, and is accentuated by the lack of sufficient foreign exchange to pay for all the products that would be imported by a country having no import restrictions.

In considering the foreign experience we must remember that in practically all instances the selling prices of gasoline and other petroleum products is much higher than here in the United States,

and the greater prices tend to encourage substitution or mixture of alcohol with gasoline in blends. For instance, in Sweden, alcohol can be produced at low cost as a result of being made from the waste or byproducts of the wood-pulp industry. Except in the case of Sweden, however, aid to agriculture has been a factor in fostering the use of alcohol for motor-fuel purposes.

The growing number of countries using alcohol-blended automobile fuels comprises Australia, Brazil, China, Czechoslovakia, France, Germany, Great Britain, Hungary, Italy, Japan, Peru, the Philippines, Poland, South Africa, and Sweden, as well as our neighbor Cuba and our island possession, Puerto Rico.

GERMANY

Of these Germany is by far the largest user of alcohol in motor fuel, having compelled importers and producers, by the Government decree of 1930, to take from the Government alcohol monopoly a quantity of alcohol amounting to a certain percentage of the amount of motor fuel handled, to be blended with gasoline as the dealers saw fit.

The required percentage of the decree was first 2½ percent, being increased by degrees to 10 percent by 1932, although lately having been lowered to 8½ and then to 6½ percent as explained below.

Under this stimulus German consumption of fuel alcohol expanded tremendously, growing to 17,000,000 gallons in 1930, to 55,000,000 gallons in 1934 and to an estimated 75,000,000 gallons in 1937—a growth of about 340 percent in the 7 years, according to data compiled by the American Good Government Society.

The primary purpose of German fostering of alcohol began as an effort to make a better market for potatoes, although since then the foreign-exchange situation has given another incentive for import restriction in addition to self-sufficiency for military reasons. This very foreign-exchange factor has in turn modified the alcohol policy. Due to the German Government's decision to encourage the people to eat more potatoes and less grains which have to be imported, the decreed alcohol proportion was reduced to 6½ percent as previously mentioned so as to release more potatoes for food instead of alcohol production. Whether this decree which was promulgated this year will affect alcohol production remains to be seen.

Technically the use of alcohol blends has been satisfactory in Germany. Some loss of power is complained of in small low-compression motors, but high-compression motors find it better than straight gasoline, due to its high octane rating, which means its antiknock characteristics.

About half of the motor fuel sold is ordinary gasoline. About one-tenth is a blend of 25 percent alcohol and 75 percent gasoline, and is sold under the trade names of "monopolin" and "bevaulin." The other four-tenths of motor fuel sold is a blend of 20 percent alcohol, 20 percent benzol, and 60 percent gasoline, this being sold as a quality product at a 4-cent premium over the ordinary gasoline or the alcohol blend, which both sell at the same price of some thirty-odd cents a gallon in our money.

German experiments are going even a step further and redesigning motors for using substitute fuels. Two steam-power trucks have been developed which use an oil burner in front to make the steam and have the pistons built into the axle housing at the rear wheels, there being only a pipe to carry the steam back.

For some years now wood-gas generators have been made to be attached to ordinary trucks. A 40-passenger bus can get 60 miles on a single tankful of wood, although charcoal or peat are preferred for these gas generators.

Other fuel-economy trucks include those which carry a cylinder of compressed gas from city mains in place of a gasoline tank. All of these are encouraged by the Government, as every gallon of motor fuel Germany doesn't have to import leaves just that much more foreign exchange at the command of Reichsbank President Hjalmar Schacht.

Then there is the Diesel type of motor. This special design to use low-grade fuels is an old story.

A German was the inventor of this type, and for many years Germany and other nations have taken advantage of the economy and efficiency of the Diesel motor, and in recent years thousands of trucks and busses have proven the economy of hauling by Diesel power.

Diesels have now been introduced in Germany on passenger chassis. One is mounted on a six-passenger Mercedes-Benz landaulet, designed for hire-car and taxicab service.

Thanks to the great economy of the Diesel, using oil instead of gasoline for fuel, this car is said to save the buyer at least half the purchase price within the first 60,000 miles.

The Diesel has been used for American airplane motors by the Packard Motor Car Co., and with apparent success.

FRANCE

Another important country where alcohol is mixed with gasoline is France, where beet roots, fruits, and molasses are the raw materials from which the alcohol is made. The French Government pays about 38 cents a gallon for alcohol and sells it for around 17 cents a gallon to oil companies, which is the approximate cost of gasoline. This loss is made up by a Government tax on all gasoline and kerosene, while the blended fuel is exempt from the tax.

Sold under the name of "Carburant Nationale," the product is a 50–50 blend of half alcohol and half gasoline. In 1930 about 7,000,000 gallons of alcohol were blended with an equal amount of gasoline to make a total of 14,000,000 gallons of blend sold, out of a total of about 700,000,000 gallons of total motor fuel consumed.

French statistics are notoriously incomplete and misleading, so that no precise later data than 1930 are available other than the total production of alcohol of all kinds, which from 57,000,000 gallons in 1930 had risen to 130,000,000 by 1935. A substantial part of this increase was presumably for motor fuel, but how much so it is hard to say exactly, according to the American Good Government Society.

SWEDEN

"Lattbentyl" is the name of a blend of 25 percent alcohol with 75 percent gasoline which is used in Sweden. Largely a byproduct of wood-pulp manufacture, half the industrial alcohol produced there is used for motor fuel. In 1930 Sweden consumed about 110,000,000 gallons of straight gasoline plus about 8,000,000 gallons of the blended type which contained 2,000,000 gallons of pure alcohol. By 1936 this amount of fuel alcohol had risen to 4,200,000 gallons, or a 110-percent increase in the 6 years.

One of the interesting facts about Sweden is its use of an alcohol blend without compulsion. The first trials of the alcohol obtained from fermentation and distillation of the cellulose residue of pulp factories was begun in 1911 and greatly stimulated by the World War. It is stated that the mixture or blend involved no change in the operation of the engine except for the better by increasing its power and smoothness. Fuel consumption is not increased, and in spite of the low temperatures in many parts of Sweden the blend, which includes some ether, remains homogeneous and no starting difficulty is experienced. Ether, incidentally, can also be produced from farm crops.

CZECHOSLOVAKIA

Blending of alcohol was not compulsory in the former Czechoslovakia, according to latest information available, although there has been a great increase in its use in motor fuel. The chief blend used is called Dynalkol and is composed of 30 percent gasoline, 20 percent benzol, and 50 percent alcohol.

In 1930 there were over 60,000,000 gallons of straight gasoline used plus blends containing alcohol totaling 2,800,000 gallons of blend, of which half, or 1,400,000 gallons, of actual alcohol were used. By 1932 there were 2,400,000 gallons of alcohol so used. In 1933 this jumped up to 15,000,000 gallons, and by 1935 to 20,000,000 gallons of alcohol used in motor fuels. This has been accomplished in spite of the fact that the alcohol blend sells for about 12 percent more than straight gasoline.

JAPAN

According to a recent press release of the Department of Finance of the Japanese Government dated last February, a million yen have been appropriated to begin construction of five new alcohol factories.

In the Japanese-owned island of Formosa the owners of sugar plantations are being encouraged to expand crop production and capacity of alcohol-manufacturing equipment. It is estimated that when present expansion is completed there will be 14,000,000 gallons of alcohol produced in Formosa alone.

In 1932 there were 200,000 gallons of alcohol used in fuels, as compared with a thousand times that much, or 200,000,000 gallons, of gasoline consumed. Since then the ratio of alcohol used has been increasing, total gasoline being 220,000,000 gallons in 1933 and alcohol 300,000. In 1934, 400,000 gallons of alcohol were used in fuel, as compared with 265,000,000 of gasoline, and by 1935 alcohol used was double the previous year at 800,000 gallons, whereas total gasoline had risen a much lower percentage to 290,000,000 gallons.

It is true that as yet the amount of alcohol used is only a fraction of total gasoline consumption, but at the rate alcohol blending is expanding and alcohol capacity is increasing, especially under the pressure of providing fuel for military purposes, it will not be long before alcohol forms an important part of the fuels used. Additional emphasis is given the matter from the striving for self-sufficiency, as well as by foreign-exchange considerations arising from the present need for Japan to raise over $50,000,000 a year to pay for the petroleum products now imported into Japanese frontiers.

BRAZIL

A number of interesting blends have been tried out by our South American neighbor Brazil. In Pernambuco one blend used contains 70 percent alcohol to 30 percent ether, another 90 percent alcohol and 10 percent ether, and the "Gasalco" brand 88 percent alcohol to 12 percent gasoline.

The total amount of gasoline consumed in Brazil in 1930 amounted to about 75,000,000 gallons. The amount of alcohol-blended fuel used is not available, though we are informed that blends were sold in only three cities, the ether blends in Pernambuco, and the "Gasalco" type in Rio de Janeiro and Nictheroy.

For 1936 we are informed that total gasoline consumed was about 150,000,000 gallons of which approximately 25,000,000 was of blends containing some 3,000,000 gallons of alcohol. This confirms the additional information that at present the blending is on the basis of about 10 to 15 percent alcohol to the remaining parts of gasoline.

Foreign-exchange difficulties have prodded Brazil into trying to do something about automobile fuels, especially where petroleum products form about one-tenth of total imports into that country. The amount of petroleum imported amounts to over $20,000,000 and so is a focal point for consideration of the Brazilian Government.

ITALY

There would be some very interesting information available about Italy, if it were not for the fact that the Government there keeps a great number of statistics confidential. We do know that the Government has decreed a 25-percent part of all alcohol produced

to be marked for motor-fuel use. This is verified by 1937 estimates of about 7,500,000 gallons of alcohol having been used for fuel purposes when compared with total production of alcohol for all purposes of around 29,000,000 gallons in 1936. This figure represents more than double the corresponding production of 13,000,000 gallons of all-purpose alcohol in 1935. With total consumption of gasoline by Italy estimated at 142,000,000 gallons for 1937, the 7,500,000 of fuel alcohol represents 5 percent as much as gasoline—a very substantial quantity.

The sources of Italian alcohol supplies vary from year to year. It is reported that the 1936 production was to the extent of 35 percent from sugar beets, with an unspecified amount from wines and other sources. The methods of obtaining alcohol vary widely from year to year, depending upon the quality of the wineries. If there are very low grade and unpalatable wines produced, these are almost unmarketable for beverage purposes, and thus are available for conversion into alcohol. With a varying quantity of poor wines depending on more or less natural causes, governmental policies must be flexible and adjustable to be successful.

PERU

A beginning has been made in Peru in using alcohol in fuels. In 1932 the total gasoline consumed amounted to 139,000,000 gallons; by 1936 this had grown to 160,000,000 gallons. In 1932 there were 420,000 gallons of alcohol used in fuels, and in 1936 this had risen to 546,000 gallons.

Although the total quantity of alcohol used remains small—less than 1 percent of gasoline consumption—we find that the increase in alcohol used amounted to about 30 percent, as compared to only about 8 percent in total gasoline consumption.

POLAND

The Polish Government since January 1933 has decreed that the producers of petroleum buy an amount of alcohol equal to 9 percent of the amount of gas sold. The actual figures on gasoline are somewhat complicated due to the fact that Poland is an exporter of petroleum products. The increase of alcohol used in fuel has been tremendous in Poland, rising from 270,000 gallons in 1931 to 2,400,000 in 1936—a growth of almost 800 percent in 5 years.

After deducting the amounts of petroleum products exported from Poland, we can get the approximate amount consumed in that country. For 1936 the actual consumption of gasoline was about 25,000,000 gallons, and comparing our previous figure of 2,400,000 of alcohol with this, we have approximately the 9-percent proportion of alcohol legally required to be used as motor fuel.

THE PHILIPPINES

It may come as a surprise to many Americans to learn that our semi-independent Territory, the Philippines, is one of the leading producers and users of alcohol in fuels. In 1930 the Philippines used about 4,200,000 gallons of alcohol, as compared to 27,100,000 gallons of gasoline, being a ratio of 15 units of alcohol to every 100 units of gasoline, as the American Good Government Society has pointed out.

By 1936 the consumption of fuel alcohol had doubled to 8,600,000 gallons and gasoline had increased to 41,000,000. This showed a substantial increase in the alcohol proportion to 21 units of alcohol to every 100 units of gasoline.

THE BRITISH EMPIRE

British interest in substitutes for gasoline, largely for defense reasons, is well manifested in the Government-subsidized plant at Billingham, England, of the Imperial Chemical Industries, Ltd., now under construction. The works will cost $55,000,000 and will have a capacity of 45,000,000 gallons of petrol a year from the process of hydrogenation of soft coal. The chief object seems to be that of getting some self-sufficiency in the sense that British coal deposits could thereby be turned into liquid fuel. Otherwise it would have been far cheaper to have built an alcohol plant of similar capacity which could have been done for only $7,000,000 or less.

A blend of alcohol and gasoline is being marketed today in England without Government compulsion but with encouragement by tax exemptions. Except for certain special cases, alcohol blends of gasoline are tax-free. In the case of the new Billingham plant, the Crown will pay the firm a subsidy of 8 pence (16 cents) a gallon of gasoline petrol for 9 years to encourage the enterprise.

In the British Dominion of Australia the sellers of gasoline are required to purchase 1½ gallons of alcohol for every 100 gallons of gasoline, this law applying only to the Province of Queensland. The product sold to the consumer is called Shellpol and has from 15 to 35 parts alcohol added to enough gasoline to make 100 parts of fuel.

The amount of alcohol reported used in 1930 was 240,000 gallons out of a total gasoline consumption of 268,000,000. In 1936 it is stated that 720,000 gallons of alcohol were so used with a total consumption of gasoline of 370,000,000. Although there is some question as to the accuracy of these figures, it would seem that the use of alcohol, while still small, is growing faster than the percentage gain in the amount of gasoline used.

British South Africa uses a blend of 60 percent alcohol and 40 percent ether under the name of Natalite, the sales being confined mostly to one city.

HUNGARY

Hungary is a substantial consumer of alcohol fuel. According to 1930 figures, the latest available, over 3,000,000 gallons of alcohol were used in blends, as compared with about 21,000,000 of gasoline, giving a ratio of about 14 gallons of alcohol for each 100 gasoline sold. The blend is called Motalco and consists of 20 percent alcohol to 80 percent gasoline.

FUEL ALCOHOL FROM WASTE SULPHITE OF PAPER PULP MILLS

The waste-product liquor from the pulping of wood by the sulphite process contains from 2 to 3.5 percent sugars, of which about 65 percent are fermentable to alcohol. Before this liquor can be fermented, the sulfur dioxide, as well as the acetic and formic acids in it, must be neutralized, either with lime or carbonate of lime.

As the fermenting agent, there is generally used a special type of yeast which has been adapted to sulphite liquors. The fermentation requires from 2½ to 4 days and produces an amount of alcohol equal to about 1 percent of the volume of the liquor fermented.

This process and material has not as yet been used to any great extent in the United States but is an important source of industrial and fuel alcohol in Germany and the Scandinavian countries.

ALCOHOL FROM MILL AND FOREST WASTE AND TREES

There are two important steps for the production of ethyl alcohol from wood. First, the hydrolysis of the cellulose of the woods to simple sugars. Second, the fermentation of these sugars to alcohol by yeast in the usual way.

Experiments of this sort have been widely tried in the United States and at one time ethyl alcohol was produced commercially from sawdust. Yields of 20 to 24 gallons of pure alcohol per ton of dry wood were obtained. In Germany a new process now yields 50 to 60 gallons per ton.

BLENDING AGENTS FROM FARM CROPS

Gasoline and ordinary alcohol form an unstable mixture, so that "blending agents" are needed to hold them together. These blending agents have a high fuel value and many of them, such as butyl, isopropyl, amyl alcohols, acetone, and ether, can be produced from agricultural crops.

Veteran Legislation

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Saturday, July 1, 1939

Mr. GEYER of California. Mr. Speaker, as the oppressive summer heat becomes more intense, we are hearing more and more rumors of early adjournment. Some think that we will be home in 3 weeks' time, others that it will be a month at the outside, while still others believe it will be longer. We all have our own pet measures that we would like to see passed, as well as those of greater importance. No matter how long we remain in Washington, there are sure to be some worthy measures that fail to pass, merely because time will not permit their consideration.

SERVICE MAN THEN AND NOW

There is one class of bills that I desire to call to the attention of all Members of Congress. These bills have to do with the welfare of those and the families of those who offered to make the supreme sacrifice for the protection of their country. Each time there was a crisis before the Nation, the service man was the hero. He was praised by the press, from the pulpit and everywhere that man communicated with his fellows. But when peace returned and the excitement subsided those who answered their country's call were soon forgotten in the mad rush to return to normalcy. Each year many bills that are worthy and just fall by the wayside.

BUT ONE LAW TO OUR CREDIT

Let us not have this happen again this year. The only bill that has become law this session in which veterans are particularly interested is H. R. 2320, restoring certain hospital, medical, and burial rights to all Spanish-American War veterans and making uniform treatment of all men who enlisted between April 21, 1898, and July 4, 1902. If we allow this to be the only bill among the many introduced, to be passed, it will be a very poor batting average.

SOME NEEDED LEGISLATION

We have bills at some stage on the road to passage covering all the various phases of veteran service. While time does not permit me to mention them all, I wish to call to the minds of my colleagues a few important measures: The Philippine travel pay bill, liberalizing the marriage clause for Spanish-American War veterans, measures of benefit to Civil War

widows, legislation to give peacetime veterans 75 percent of the rate of wartime veterans, as well as aid to widows and orphans of peacetime service men, pensions to all widows of World War veterans and aid to their orphans, unraveling the non-service-connected disability knot, polishing up of the veteran insurance, and the lessening the amount of red tape in general, as well as legislation improving the job situation for all veterans.

NEEDED LEGISLATION SHOULD BE PASSED

I am not saying that all of these measures introduced are drawn just as they should be, but I am saying all classes touched by these bills are in need of legislation. If the bills introduced are not what they should be, they should be amended and passed in the corrected form.

TIME IS SLIPPING AWAY

My colleagues, the time is slipping away. Let us not neglect the most worthy of all our citizens, those who through the years have made it possible for us to be citizens of the greatest democracy in the world.

The Dominated and Controlled Motion Picture Industry

EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 1, 1939

Mr. BOREN. Mr. Speaker, in the motion-picture industry, consumer rights are left to shift for themselves and the profit motive alone prevails. Unlike other business agencies, the motion-picture industry never consults the people as a whole or even have avenues for expression of consumer rights. The theater-going public has neither choice of pictures nor theaters and no practical right of selection in spending their entertainment dollar. Opportunity within the industry is stifled by the complete absence of competition.

The consumer as a patron of the movies should be given an active and significant role in the selection of pictures and theaters. Today he is told rather than asked what he would see for his motion-picture dollar.

In the production of commodities the consumer wants facts about price, quality, comparative values, and usefulness of goods offered for sale. The motion-picture industry exemplifies to a large extent the distance we have traveled from a competitive to a dominated and controlled economy. Under the present system the motion-picture patron is powerless to demand a good picture at a reasonable price. During these years, when $5 shirts have been reduced to $2, $2 shirts have been reduced to 90 cents, and in a similar fashion throughout the business world where consumer interests had opportunity through business competition to assert itself, the quality of goods have come up and the prices have come down. Exactly contrary, the quality of pictures and theaters have remained static or in some sections degenerated, while the price to the patrons has gone from 10 cents to 25 cents, from 25 cents to 66 cents, and from 50 cents to $1.10.

There have been a considerable number of Congressmen who have diligently studied the motion-picture industry during the past 2 years. We are united in our wish to give each community an opportunity to have the kind of pictures it wishes to see, and to give to the patron a price in comparison to the quality of the product offered.

The propaganda powers of the screen, including its influence on the thought and morals of people, especially children, is of great consequence and of serious public interest, but, more than that, the consumer lacks the force of competition. He must pay whatever freight the traffic will bear, admission prices being limited only by the factor of diminishing terms.

Among those of us who have devoted particular attention to this problem there is united purpose and a united program. The Congress will undoubtedly deal with the motion-picture problem in a comprehensive way in the not too distant future.

At the suggestion of interested colleagues I am presenting here a few preliminary facts for your analysis and consideration. I would like also at this point to call your attention to the Securities and Exchange Commission study on motion-picture producers and distributors, published June 30, 1938. If you care to pursue further the background of the present problem, it might be helpful to examine the Motion Picture Industry Study, No. 34, published by the N. R. A. in February 1936, and the N. R. A. report on code No. 124 in pursuance of the Executive order of November 27, 1933. I might add that if you are interested in the legal aspects of the problem, among us, we have prepared a memorandum and voluminous citations on cases in point, constitutionality of legislative approaches, and so forth, which we will present in the course of time.

I would like at this point to present a few basic facts pertaining to the motion-picture industry. We urge your thoughtful consideration of this great public problem and invite your particular attention to the study of this problem with a view to cooperative action in its solution.

A FEW BASIC FACTS PERTAINING TO THE MOTION-PICTURE INDUSTRY—PRODUCTION

Number of films: During the past 5 years, the eight major companies have released yearly an average of about 360 features, or about 70 percent of the yearly total of 500 pictures. Seven companies produce in the neighborhood of 50 pictures per year; the eighth, United Artists, produces from 12 to 25.

Numerous independent producers release about 150 features per year. Some 200 to 300 foreign features are also released annually in the United States. Few of the independent and foreign releases are of first-run caliber.

Value of films: Domestic feature releases by the eight major companies account for 80 to 85 percent of the total value of all films, based either on cost of production or film rentals. The major companies usually produce each year about 10 so-called class-A pictures, costing upward of $500,000, also 10 class-B pictures, costing from $250,000 to $500,000. The remaining 30 feature releases include program pictures, westerns, and serials, usually costing much less than $250,000. Most independent productions are shot in 6 to 10 days, at a cost averaging $5,000 per day. The majors also produce some of these "quickies" or "cheaters," as the independent exhibitors call them.

DISTRIBUTION

Key cities: The eight major producers have national distribution systems located in 31 key cities. (See map in Film Facts, and Equity No. 87–273 for details.) These affiliated distribution systems provide an outlet not only for all the product of the major companies, but also, under special circumstances, for that of a few independent producers. Gaumont-British has recently established its own American distribution system. Several independent or "States' rights" distributors provide distribution for independent productions. A few independent producers have distribution facilities of their own in a dozen or more key cities.

Major distribution control: The majors control distribution to an amount exceeding the value of their own films, by reason of the fact that important independents find it necessary to use the major distributive outlets in order to effect national coverage. For instance, Disney's Snow White was released through RKO.

EXHIBITION

Theater control: Five major companies are vertically integrated, owning production, distribution, and exhibition facilities. They operate about 2,400, or 13 percent of a total of some 17,500 theaters. Paramount operates 1,133 theaters; Warners, 527; Loew's, 119; RKO, 124; and 20th Century Fox, 518. These include the finest theaters in the choicest localities. They charge the highest admission prices, and they

represent about 3,000,000 seats, or roughly 30 percent of the country's total of 10,000,000 seats. The average seating capacity of the theaters owned by the major companies is about 1,250.

Lack of competition: Competition between the affiliated exhibitors has been largely avoided by dividing the country into noncompeting areas, by joint operation, and by splitting product. The majors then act in concert to protect each others' interests from outside competition.

Unaffiliated circuits: In 1937 unaffiliated circuits (comprising four or more theaters) operated over 20 percent of the total number of theaters and over 25 percent of the total seating capacity of the United States. Most of these chains are small but in regions not dominated by the major companies a few large chains exist which because of their superior bargaining power exercise a degree of control over competing independent exhibitors comparable to that achieved by the affiliated group in other areas. However, these chains, unlike the affiliated companies, never have to look on competing exhibitors as potential customers.

Independent exhibitors: Independent exhibitors operate about two-thirds of the number of theaters, comprising about half the total seating capacity. Their theaters average about 450 seats.

Pricing of films: Pricing of films is based upon the size and condition of the theater, the admission price charged, the protection period granted, and the bargaining position of the exhibitor. There are other factors in this intricate system of bargaining between the exhibitor and the distributor. Some contracts call for a flat sum, others for a percentage of the receipts, or a combination of both.

Runs: First runs of major productions are the lifeblood of the exhibition industry. First runs are protected by allowing a specified period of time to elapse before subsequent showings in a defined area. The prior-run exhibitor pays a premium for this protection. The second-run exhibitor attempts to get as much protection as possible against the third-run exhibitor. The value of a film usually decreases with each run, so that a film which brings a rental of $15,000 for first run downtown will often sell for as low as $15 in a subsequent run theater a year or so later.

Another Step Toward Totalitarianism

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, July 1, 1939

Mr. THILL. Mr. Speaker, the American people are discouraged with unemployment, tired of economic warfare, sick of relief, disgusted with the administration, and soured on life. Hope, courage, ambition—the key principles of the American way of living, have all been stifled by the New Dealers.

A. A. Berle, one of the ardent brain trusters of this admintration, proposes that Government credit be used to finance both private and public activities. Of course, any Government guaranties of loans would not be shown to the taxpayers as a public debt. But it is a Federal obligation resting finally upon the taxpayer.

In this two-way system of financing, the borrower, if he could not persuade private bankers that his enterprise is sound, could go to the Government, where he might have better luck. Political pressure and wire pulling might be used to put through the loan. Sound private judgment would find itself in competition with a tax-free, unsound political agency.

The Government could very easily make its loans at a lower rate of interest, because the overhead charged to the operation of the Government agency would most likely be set lower than that of the private organization.

We would again see the spectacle of the stifling of private enterprise which has been shown us to our sorrow so often during this administration. It would be just another step toward economic totalitarianism.

Celebration of the One Hundred and Sixty-third Anniversary of Declaration of Independence

EXTENSION OF REMARKS

OF

HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, July 5, 1939

ADDRESS BY HON. ALBEN W. BARKLEY, OF KENTUCKY, JULY 4, 1939

Mr. RADCLIFFE. Mr. President, I ask unanimous consent to have printed in the Appendix an address delivered yesterday by the senior Senator from Kentucky [Mr. BARKLEY] at Washington Monument, Washington, D. C. The address was a very interesting and a timely one.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, we are celebrating today the one hundred and sixty-third anniversary of the adoption by the Continental Congress of the American Declaration of Independence.

This Declaration was a revolutionary document. If promulgated today for the first time in America, it would frighten a lot of people into calling other people horrible names. But though it was a revolutionary doucument, it did not inspire the beginning of the American Revolution.

The Revolution had been in progress for nearly 2 years, and the Battles of Lexington and Concord had been fought more than a year before the Declaration was adopted.

But while its adoption did not inaugurate the Revolution, it undoubtedly inspired its continuance, because it marked the official separation of the Colonies from the mother country, and afforded them a definite goal of nationhood toward which to press.

It dealt principally with the unalienable rights of man—those rights which cannot be alienated, bartered, or bargained away—the right to life, liberty, and the pursuit of happiness.

Those who wrote those words realized that life without liberty is empty and barren, no less so today than when the words were written; and that the pursuit, attainment, and enjoyment of happiness through the fulfillment of these rights are the legitimate objectives of organized society.

Jefferson is credited with chief authorship of the Declaration of Independence. In his epitaph at Monticello, written by himself, he claims authorship, and to this claim he is entitled.

He was largely the author of the Bill of Rights, constituting the first 10 amendments to the Constitution, guaranteeing freedom of speech, of the press, of assembly, and of worship.

He wrote voluminously upon all subjects, with emphasis on government. He has been the victim of as much misquotation and misinterpretation as any man in American history.

While he is frequently quoted as saying "That government is best which governs least," his statement that all constitutions should be revised about every 20 years; that no dead generation has the right to bind a living generation in the form of its laws or its constitutions, is rarely referred to by those who would chain each new generation to the hitching posts of another century.

The two creative men whom we associate in our minds when we think of the American Revolution and its consequences are Jefferson and Washington. Jefferson, the sage, scholar, and political philosopher; Washington, the solid, determined, and inspired leader of military and civil authority which lifted him to a moral grandeur not approached by any other man.

Both were equally indispensable in the fields which they occupied.

Yet Washington, exact and meticulous in all that he said, is misquoted and misinterpreted no less than was Jefferson himself.

Washington did not believe that this Nation, even in its infancy, should or could encase itself within an impenetrable shell of isolation and take no part in the affairs of mankind.

In his Farewell Address he contemplated a broad range of human events on a world-wide front of international relations, as well as the foreseeable course of our domestic history, and cautioned us against permanent alliances with other nations, emphasizing the fact that temporary alliances entered into as exigencies might arise would more certainly promote the safety and welfare of our new Nation.

Let me quote his exact words: "It is our true policy to steer clear of permanent alliance with any portion of the foreign world; so far, I mean, as we are now at liberty to do it. * * *

"Taking care always to keep ourselves by suitable establishments on a respectable defensive posture, we may safely trust to temporary alliances for extraordinary emergencies."

There has never been a permanent alliance between this and any other nation, unless the Monroe Doctrine may be so described.

There has never been even a temporary alliance in the sense in which Washington foresaw and sanctioned them as possible and desirable.

We have been associated from time to time with other nations in the effort to foster peace and international law and regard for the rights of other nations, large and small. But even during the World War we had neither a permanent nor a temporary alliance with any European nation that bound us to do or refrain from doing anything in the future, as proof of which we declined to ratify the terms of peace when that conflict had ended.

Yet, in spite of Washington's Farewell Address, and in spite of our history to the contrary for 150 years, whenever the President of the United States, or the Secretary of State under any administration, seeks to cooperate with other nations to preserve peace and make wars less probable, or to insist upon the observance of the decent rules of international law which until recently have been recognized for more than a century, we are told that we are flouting the advice of the Father of his Country by conniving at some mysterious species of permanent alliance which will involve us in all the quarrels of other nations and destroy the fabric of our own independence.

I honor the advice of Washington, in the spirit as well as the letter. I rejoice that in all our history there has never been a permanent alliance which he condemned, nor even a temporary alliance which he sanctioned.

But this does not mean that America is a sand lot or that the United States constitutes a huge ostrich whose anatomy can be concealed by a buried head. It does not mean that we are afraid to recognize the world-wide struggle to preserve what democracy we have been able thus far to obtain. If we have not the courage to preserve it now, we are not worthy of those who gained it for us.

This democracy of which we speak, and to which we render genuine or lip service, as the case may be, is not merely a form or a system of government. It is a way of life. It may be consistent with various systems of government. It may rest upon a written constitution, as in the United States, or it may be governed by traditions, precedents, habits, as in Great Britain.

But it must be defended always and everywhere if it is not to be lost.

In an arresting and thoughtful article written last February the new Librarian of Congress, Mr. Archibald MacLeish, said this about democracy:

"The will to defend democracy demands a belief in democracy. And belief in democracy demands that democracy should be a way of life with future and unachieved objectives such as men can continue to desire.

"If the democracy to be defended is merely the status quo which the great corporations and the reactionary newspapers call democracy when they shout for its defense, then the belief will be cool and the will feeble.

"If, however, the democracy to be defended is a future democracy, a true democracy which will admit the failures of this democracy and set them right; if the democracy to be defended is a free man's way of dealing with a free man's evils in order to create a free man's world, then the will to defend and protect that democracy will be strong enough to sweep over any challenge. But that kind of will and that kind of belief are not achieved by refusing to permit democracy to be attacked. To refuse to permit democracy to face attack is to turn democracy into the status quo and freeze it in a form in which only a small minority can believe.

"Democratic belief in democracy and the popular will to defend it are achieved only by permitting democracy to face any attack, however slanderous, however murderous, answering the proposals of the attackers with such proposals as a democracy can make. Those who believe in democracy because they believe in the people will have no fear of the outcome. Those who believe in another democracy may very well fear, but their fears will be irrelevant."

It was this sort of democracy that the Declaration of Independence and the Constitution of the United States gave us. It is this sort of democracy which is under attack in America and throughout the world. It is this sort of democracy that we will defend against all enemies foreign and domestic. If this sort of democracy is not worth preserving, it was never worth achieving. Let us who believe in it rededicate ourselves to it and justify the faith and the sacrifice of those who, under God, achieved it and bequeathed it to us.

Neutrality

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, July 5, 1939

ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS, JULY 4, 1939

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have printed in the Appendix an able and interesting speech delivered by the Senator from Massachusetts [Mr. WALSH] at Fitchburg, Mass., on July 4, 1939, on the subject of neutrality.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

The most important question pending before the Congress of the United States vitally and affecting the life and future of our Republic is that of definitely determining our policy of neutrality. What should we do, and what should we refrain from doing, in our commercial and diplomatic relations with countries at war, in order to preserve peace for ourselves?

That it is impossible to stress too strongly the importance of our policy of neutrality may be realized vividly by calling attention to world conditions at the present time. It seems to be inevitable that war will come to Europe in the near future. It may not come immediately, but I do not see how it can be long postponed unless there is a radical change in the present belligerent attitude in Europe. To my mind there is only one thing that can possibly prevent another European war; namely, a genuine international conference for peace.

The difficulties in holding a peace conference that gives promise of success, however, are almost insurmountable. A genuine peace conference presumes that participants are ready to give as well as to take.

Let us consider briefly the conflicting claims and thereby realize the many difficulties.

Hitler demands the righting of the alleged German "wrong" incorporated in the Versailles Treaty. He asserts Germany has been "robbed" of her foreign colonies, and this is his defense for attempting to expand to the east on the European Continent in order that Germany may have more room. He asserts Germany's rivals, England and France, and even Belgium, have extensive and lucrative foreign colonies that are disproportionately and inequitably distributed.

On the other hand, England and France insist that the territorial status quo must be maintained and are unwilling to relinquish any of their holdings on the various continents.

A peace conference dealing with the redistribution of the surface of the globe would necessitate those countries which are alleged to have too much of the earth's surface to relinquish some of it to those who claim to have too little. The difficulties of bargaining for a redistribution are obvious. It is possible, of course, that England and France may come to realize their foreign possessions are a liability and that subject peoples are a source of trouble to the mother country because of the sense of injustice they invariably entertain. But this state of mind is clearly not now in sight.

Apparently the present attitude of the nations of the world is not much different from that of the masses. The masses everywhere today claim they are receiving too little benefits under present economic systems while a few receive too much. Likewise, certain ambitious nations are restless and discontented because they think they have too little while their neighbors and rivals have too much.

There being no hope of a repartition of influence and power among the strong nations, the alternative is war.

All these facts emphasize the supreme importance of a neutrality law which will assure our avoidance of involvement in any European war. These old and present European rivalries, ambitions, and hatreds are of no concern to us. We naturally have our sympathies and conception of the justice or injustice of the contending interests—but there is and should be no obligation upon our part to do other than use our good offices for peace and to make every effort to bring about arbitrations for we Americans are imbued with the principle that international quarrels should be settled by peaceful negotiations, rather than by resorting to arms.

The United States, more than any other country in the world, is free from the possibilities of starvation, invasion, and economic domination. There may be some justification for countries taking sides in a war between two rival groups of foreign powers, who fear these perils, but we have no such excuse. Furthermore,

it seems to me, it is ridiculous to say that anything like a real invasion of this country can be made unless all other nations of the world should combine against us.

It is certain, if anything is certain, that a world bristling with national enmities, a world divided into two war-like groups, can be no menace to us while we remain definitely neutral. We ought to do this for no other reason than that, if all the rest of the world crumbles, we shall preserve for humanity a haven of safety, containing all the elements on which we may continue to build a prosperous democracy.

A strictly neutral attitude does not imply a selfish concern with our own affairs or refusal to assume our part in the common burdens of humanity. That is always the argument advanced by those who wish us to share in their burdens. A strong neutral position will enable America to do more for humanity in general than an America growing rich through selling arms and munitions to belligerents, thereby arousing the hatred of those to whom we are unable to make sales of arms and munitions, and, after the war, with almost certainty, being plunged into another and greater depression.

Another important consideration which should prompt us to strict neutrality is the possibility that, should the United States join in another war, it would probably result in the end of American democracy and the rise of a totalitarian state.

In the light of these facts I am opposed to repeal of the existing ban on exports of munitions of war in time of war to nations at war. The provisions of the present Neutrality Act in this respect, in my judgment, are an essential element of any policy of real neutrality, and that is the kind of neutrality that the American people desire and ought to have.

The present proposal for the immediate repeal of the embargo provisions, however plausibly it may be presented, is, in fact, motivated by a desire to put the United States in a positon to supply munitions of war to England and France in the event of a general European war, and, in effect, to serve advance notice to the world that the material resources of the United States will be available to these particular nations in case of need. This is not disinterested neutrality, either in fact or in spirit. However well intended and expressive of our sympathies, it is, in effect, dangerous partisanship. It is not a policy adopted to keeping the United States out of war. It is just the reverse. It leads directly to our own involvement in foreign wars.

Congress, 4 years ago, enacted legislation embargoing in time of war the export of arms, ammunition, and implements of war to any foreign nation at war. This statute empowered the President to enumerate the prohibited items, that is, to specify exactly what was embraced within the general terms "arms, ammunition, and implements of war." It empowered the President to proclaim the existence of war, whereupon the statutory embargo automatically became effective.

I supported this legislation because I believed then, as I believe now, that it was embodying sound public policy and would help toward keeping the United States out of war if wars came elsewhere in the world.

In enacting this legislation, the so-called Neutrality Act of 1935, Congress specified that it should expire on March 1, 1936, with the idea that prior to this expiration date, broader and permanent legislation on this subject would be framed and passed.

The time proved too short, and by joint resolution, which received the President's signature on February 29, 1936, Congress extended the expiration date to May 1, 1937, and at the same time by substitution of the word "shall" for the word "may", made the issuance by the President of a proclamation as to the existence of a state of war (if such were the fact) mandatory rather then permissive.

When it is remembered that the taking effect of the embargo on munitions of war was automatic upon the issuance of a Presidential proclamation, this change in language from "may" to "shall" bespoke the renewed intent and desire of the Congress for embargo on munitions.

Congress, in 1937, enacted further amendments which amounted to a virtual rewriting of the entire Neutrality Act. This legislation received the approval of the President on May 1, 1937, the very day upon which the statutory permission for embargo upon munitions was due to expire. On the same date the President issued a proclamation enumerating the "arms, ammunition, and implements of war."

In 1937 neutrality legislation reenacted without time limit the embargo provisions on munitions of war and mandatory discretion to the President to proclaim existence of a state of war whenever he found such to be the fact. It is the repeal of this permanent provision of the 1937 act which is now proposed and which is now before the Congress.

The present neutrality bill, in effect, revives the cash-and-carry provisions and makes the same applicable to all materials and supplies, including arms, ammunition, and implements of war.

The present neutrality bill expressly repeals all of the prior neutrality acts of 1935, 1936, and 1937 previously referred to.

The new bill, insofar as it aims to lift the mandatory embargo on munitions of war and permit their shipment on a cash-and-carry basis, amounts to a complete reversal of the position taken by Congress 4 years ago, 3 years ago, and even 2 years ago.

I cannot accept the view that this complete reversal of our position is justified by any of the developments in the international situation in recent years and recent months. I cannot accept the view that we ought to let down the bars and give notice to the world that foreign nations with money to buy and ships to transport may procure their munitions of war from us in time of war. We know, and the world knows, that such an invitation means that Britain and France may count on our assistance because they have the money and Britain has the ships, whereas Germany and Italy, in actuality, will be precluded. This may be a course that appeals to the sympathies of the American people, but it is not neutrality and it is not conducive to keeping the United States out of war.

It also means that Japan can count on our assistance in the Far East as she has the ships. This may not appeal to our sympathies but if we are to be honestly neutral we cannot have one policy for Europe and another policy for the Orient.

I am not unmindful of the argument, not publicly asserted, of course, but secretly advanced, that the repeal of the arms embargo may be used in the nature of a threat to belligerents in Europe, as indicating the possibility of our alining ourselves with France and England, and possibly Russia, against the totalitarian states in the event of war. In my opinion, repeal of the arms embargo for the purpose of using it for this objective is playing with fire; is clearly a nonneutral attitude on the part of our country, and however much we may desire to use our good offices to bring about peace, is more likely to result in our involvement in any European war.

In a word, neutrality presupposes the elimination of prejudices and personal desires. Actions that prompt a course of conduct such as the furnishing of arms and munitions to one belligerent against another, is one of the surest ways I know of to become involved in a war.

The American people want peace and are determined to have it at any cost. Let us resolve, on this glorious birthday of this Nation, to turn all our attention to the solution of our own domestic problems and avoid alliances and policies that are certain to lead us into war.

Dust Bowls

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Wednesday, July 5, 1939

ARTICLE BY CHAUNCEY THOMAS

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an intensely interesting article from the pen of Chauncey Thomas, published in Colorado Magazine (May issue), upon the natural causes of the so-called dust bowls. Congress is spending billions trying to cope with this problem and might be very well interested in Mr. Thomas' able treatment of the subject.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BETWEEN ICE AGES

(By Chauncey Thomas)

The Northern Hemisphere is between ice ages and has not yet reached the middle period of warmth and dryness. Geology is a part of history; archeology is a part of geology, ancient concerning man but recent in the rocks. History from a scientist's view is "geography in motion," although there are many other equally unsatisfactory definitions. Let us here confine ourselves to ice—Arctic ice today, but not long since, even in human affairs, European-American ice—and it will be again unless the rocks deceive us.

Man must fit his environment; the most blatant cannot make environment fit man, nor successfully deny a fact, and environment is ever changing—sometimes for man's benefit, sometimes against him. No land, no climate, stays the same. It never has; it never can.

In the Northern Hemisphere records indicate that environment, due to the shrinkage of the Arctic ice cap, is at the bottom of all the unrest of the white race, both in Europe and in America, due to shrinkage of local food supply and balance of subsistence. No law of man can change a law of Nature. If the above is true, what follows must be true.

The so-called cycles of drought are somewhat like the ocean surface—tides, rollers on those tides, waves on those rollers, ripples on those waves. But when the tide is ebbing, the average level sinks, though lesser water movements do now and then splash higher for a moment. The graph traced by the scant weather

figures we have, including tree rings, is not circular, not a cycle at all, but a descending spiral. Take Colorado: Within my lifetime there was in San Luis Valley a shallow lake 50 miles across, now barely a few puddles. The valley as a whole was too swampy to cross; today it is necessary to irrigate there. Within the last 10 years even the Fraser and the Muddy Rivers in Middle Park have, for the first time in white memory, or in Indian legend, gone stone dry. When I first saw them 50 years ago a horse could not wade them. The Arapahoe glaciers, small but old, the United States engineers report will probably vanish within about 10 years. They are melting and drying back about 30 feet a year and are shrinking rapidly. The same is true of all the glaciers in the Alps and has been for over a century; also true for the glaciers of Alaska. The proof of the shrinkage of the Arctic ice cap is beyond dispute. When history keeps silent it becomes false and treacherous, and here are the facts. To hide them is impossible, useless, and needless. Man must adapt himself to them if he is to continue to exist in Europe, middle Asia, and in America.

Gibbon, who wrote a history, in chapter IX and elsewhere, says that since Caesar Scandinavia was one or more islands, that the Baltic has been falling about one-half an inch a year for centuries, that the Rhine and the Danube used to freeze over every winter so that Tatar and Germanic cavalry and heavy wagons could cross without fear, that there was frigid cold in northern Greece (Thrace), that Germany was a land of trees and swamps, that there were reindeer in Germany, and all along south of the Baltic. Today this is not so. Things in those places now are far warmer and drier. Great Salt Lake has fallen over 20 feet within the past 20 or less years, the Great Lakes over 18 inches, and they need fall only the depth of Niagara River to become salt. Where in Europe or in the United States is a case of an increase of water on a scale like these? Salt Lake used to be the size of Erie or Michigan, and seems shrinking to become another Humboldt Sink. See Asia Minor. Babylon, where millions once teemed, cannot now feed a goat. If it could be farmed, it would be. Palestine, once the "Land of Canaan, flowing with milk and honey," is today like parched Nevada.

Nothing has changed history more in the past 1,000 years than the drying of the Gobi. Gibbon, again, speaks of a Chinese minister, or some such official, in Rome, and several times of Chinese soldiers on the shores of the Caspian Sea. For half a century part of Germany and Austria paid taxes to Pekin, China, the then Tatar capital. Tatar Zingis—spell and speak it as you wish—led several hundred thousand cavalry about 5,000 miles (equal to from New York to Hawaii or Panama to Alaska) from Lake Baikal to the middle of white Europe, where that blood still is. Today this is a military impossibility. No grass on the Gobi now, and half a million horses must have grass. The discovery of America did not affect the Old World more than did the drying of the Gobi. And it is still drying—also, apparently is northern Europe and the United States. This ebb and flow of the ice, due to the procession of the equinox every 26,000-odd years, is what makes history—what humans do is the result of what the Arctic ice does.

We have not yet reached the middle of these ice invasions and retreats, that is why the belt around the Northern Hemisphere is drying and heating and widening to the northward steadily and relentlessly. Once the famous "Northeast Passage" was a sailor's dream; today Russia runs a line of steamers from Archangel to Vladivostok. Less ice there.

What is the answer? Each one may suit himself—mine I have given in my story in the January issue, 1938, of this magazine—Some Basics of History—that the white race cannot last more than 200 years longer in America—if that long. Since I published that the Norwegian Government, and also the United States Government, have in part confirmed it regarding the probably permanent change in wind and ocean currents—and these make climate, and climate makes history. I would ask that this story and that one be read together now as one.

It is also noticeable that the whites have been going to other continents out of Europe for several thousand years, but have never thrived, nor lasted anywhere outside the homeland of the white race. America is no more a second Europe than is Africa or Asia. Can the white race stay here? I think not. Man can do nothing about it till he changes the rotation of the earth, and that he will never do. Meanwhile the forces that are causing the shrinkage of the Arctic ice cap are drying the Northern Hemisphere, as it has done before.

As centripetal action and gravity are two terms for the same thing, and centrifugal action is the reaction of gravity, so constant change of climate, or climates locally, over the globe, and the procession of the equinox are but two terms for the same thing. Both are eternal and infinitely beyond man's puny powers to affect, though they affect man and all life more than does anything else, except the sun alone, known to man on this earth. All history is but a brief sketch, full of gaps, of the inevitable results of the swings of the ice caps. As the Arctic retreats, the Antarctic advances and the reverse is true. Because the Northern Hemisphere has been inhabited for ages it is there observable. Not so in the Antarctic, because there are no men there to see, and the ice edge enters the ocean, while in the north it is on the land, where man can see and feel its effects.

Land in northern Siberia that has been frozen to unknown depths for ages is now thawed. It used to melt down a few feet in summer on the surface, but the eon-old ice was far, far down. Today it merely freezes in winter down a few feet, while below is no longer the prehistoric ice. This portends well for the northern countries like Canada, Siberia, and Manchuria, but not so well for the Temperate Belt of the United States, Europe, and China. The result has been recorded at intervals for some centuries, and we see it today in action, but give it other names, such as drought, dust bowl, change of wind and water currents, fall of water levels, change of climate; yet all is but the swing of mother earth's ice caps, termed in astronomy the procession of the equinox. Which all life must obey or go.

Maeterlinck in his masterpiece points out that the beekeeper is so huge and deliberate that the bee probably cannot see him, though the bee vitally feels the effect of the master of the hive. And the same is true of the polar ice cap on this man-hive of the earth. As all American, and some world history rests on these basic facts, they rest well in this magazine of American history.

The Far East and America

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, July 5, 1939

ADDRESS BY HON. ELBERT D. THOMAS, OF UTAH, JUNE 29, 1939

Mr. BARKLEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by the junior Senator from Utah [Mr. THOMAS] before the Institute of Far Eastern Studies at the University of Michigan, Ann Arbor, Mich., June 29, 1939, on the subject The Far East and America.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In keeping with my talk on the first night I am, this evening, going to emphasize similar movements in various parts of the world.

While the American continent was being bridged by colonists, adventurers, fur traders, pioneers, and armies, the movement across eastern Europe and Asia was going on. No sooner had the Pacific been reached than within a few years Perry was in Japan. At about the same time, Russian missionaries reached that land over the Siberian route.

Japan was the last of the great hermit nations. When I say that, it should be remembered that Japan closed her doors deliberately against the foreigners who had obtained access to her land during the great burst of European people over the world in the century after the discovery of America. Japan's first contact, then, with the West was one which resulted in retreat. She saw the foreigner and wanted none of him. Unconsciously, though, she absorbed a lot.

When the foreigner came again and insisted upon staying, Japan succumbed wholeheartedly, and instead of attempting to fight off foreign things, the nation attempted to become completely foreign. Japan created armies on the western plan taught by westerners, built a navy under western direction, organized her government on a western scale. It was thought essential at one time that Japan should even become Christian in order the more to be western, and the story was told of how it was decided that the son and crown prince of the great Meiji Tenno should become Christian, then nationalism on the western plane would be assured. It was assumed by many that since intense patriotism had developed only in Christian lands, it was essential that Japan should be Christian to develop the theory of devotion to the fatherland rather than devotion to a king or a cause. It was pointed out that overemphasis of certain aspects of Shintoism would produce all of the essentials necessary for a nationalistic state. Young Japanese leaders were sent out to learn and to study, and Japan even adopted a constitutional form of government, taking her legal system from one land, her legal practices from another, a parliamentary system from a third, and the notion of a written constitution from a fourth.

Those persons who want to study modern tendencies in national planning should recognize Japan as being the first great modern planner, and while she imitated much that she saw elsewhere, Japan learned by doing. Probably in the history of nations, there has never been such a student nation before. In a sense, therefore, all that we do not like in Japan we ourselves are probably responsible for. The student is apt to learn both the good precepts and the bad habits of his teacher. When I say that, I can never forget that the "pidgin English" for an American is "goddam."

Now I am going to say something that may be deemed unkind by lovers of Japan. Great and fine and wonderful and splendid as Japan's ability to learn, to develop, and to achieve became,

she failed to get from her teachers that which comes only from maturity. Had Japan remained Japanese this criticism would indeed be unmerited, but she became western. As long as she stayed close to her teacher—let us, therefore, say as long as the Anglo-Japanese alliance lasted, that is, until our Washington conference—Japan made few mistakes. The World War gave her an opportunity to stand on her own a little too soon. She was made one of the great nations of the world; given a permanent seat in the Council of the League. That, she had hardly earned. She attempted and failed, due to the great statesmanship of Woodrow Wilson, to carry one of our international law concepts of the equality of nations, which was incorporated in the League Covenant, into the field of the equality of races. Wilson settled that question in a statesmanlike way by showing that no legal concept that was built upon an actual untruth could survive. Of course, there was no equality in nations, but in international councils nations vote as units and each unit has equal weight, just as under the American system equality of persons is reflected in the ballot box and before courts.

Japan's contribution toward the bringing about of world peace and a successful treaty after the World War must be put down as both an asset and a liability. Japan insisted upon the promises made in some of the secret understandings. Japan had in the past been deprived of some of her rewards gained by conquest, especially after the Chinese war; this time the nations of the world were in no position to deprive her.

I must not forget the great common sense and the tremendously great contribution of Nitobe, the Under Secretary of the League of Nations, in the Corfu affair, when Mussolini was hailed before the nations of the world for the first time. Mussolini refused to allow his difference with Greece to be handled by the League of Nations, but he announced that he did not object to the Council of Ambassadors considering these differences. The leaders in the League, especially the younger element, wanted the League to be strong and to insist upon having its way. Nitobe it was who pointed out that the purpose of the League was to attain peace in the world and that the method or the agency used was not therefore of primary importance; thus Mussolini's case was handled by the Council of Ambassadors.

Japan might have been saved from herself if it had not been for the action of the Washington Conference in breaking up the Anglo-Japanese alliance. Of course the idea was that alliances had become obsolete, and that idea was a good one; but it would have been well for Japan had some relationship like the old Chinese big brother-little brother national relationship persisted. Japan, acting entirely by herself or allied with those whose national objectives may bring self-destruction, may be her own undoing. Let me explain that statement. A nation that makes an alliance on any but a mutual basis may think so much of self advancement that when mutuality means giving a little more than receiving, the alliance seems to be unattractive and the overly selfish nation follows its own course regardless of promises and covenants.

The Washington Conference brought the end of the Anglo-Japanese alliance. Japan entered the Conference treaties as one of the great guaranteeing powers. Japan's position in the League was a dominant one. The peace of Versailles, the institution of the mandate system, the covenant of the League of Nations, the Washington Conference—all four world-wide attempts laid down at least one single rule for all nations to observe. That rule was thoroughly consistent with the rule the Monroe Doctrine of the United States had evolved. It was thoroughly consistent, too, with the suggestion of our President, Woodrow Wilson, that the theory of the Monroe Doctrine should be extended to the whole world. That theory, also, was accepted, with limitations to be sure, in a sense by the Japanese when they advocated a Monroe Doctrine for the Far East. It is a simple theory of genuine respect on the part of this Nation for the national boundaries and territorial integrity of all nations within the circle of the understanding.

When the nations of the world failed to stop the Chaco dispute in South America and then, in turn, failed in keeping Japan a respector of the restraint implied in League organization, Manchuria was lost to China. It will remain for history to decide the real loser in this complicated affair. But this much is certain: Had Japan had a "Sensei" nation to turn to, many things might have been different.

Now, I am not going to hold Japan alone responsible for this great slip from the peaceful attitude to the warlike one. I have pictured Japan as a great student. She was the first of the Far Eastern states to be accepted into the sisterhood of nations under the theory of international law. And the international law of war reached the highest pinnacle in history under Japanese auspices. When the Japanese were battling for the capture of Port Arthur, it was deemed necessary to take 203-Meter Hill before the Russian fleet bottled up in the Port Arthur Harbor could be destroyed and the city's fortifications brought within range of the Japanese guns. If the battles for Port Arthur had taken place in 1939, the capture of 203-Meter Hill would not have been necessary. It was actually not necessary then, excepting that the Japanese observed a standard in fighting based upon a theory of international law, that women, children, and noncombatants were entitled to an immunity from gun fire. That, I repeat, was the very acme of respect for the international law of war and to Japan must be given this high award.

To Japan also must be given condemnation for falling the farthest or the lowest, not in a return to barbarism, for no barbarian ever killed promiscuously and without object, but in causing a complete loss of any responsibility at all for an observance of any rule of law which had respect for women, children, and noncombatants; for when Japan sent her airplanes over Chapei in 1932 bombs were dropped on anything. It was not only Japan that had slipped so low but the whole of civilization suffered, for all civilization refused to be shocked. Something had happened. A new order had come, and what an order! An American naval captain was asked, "What about the women and children under such an arrangement?" His reply was, "It is just too bad." European residents of Shanghai rushed to the roofs of their hotels in that city with field glasses to watch the bombardment. Horror actually turned into a spectacle!

Now, I have already said that I am not going to hold Japan responsible, although it is chargeable to her history that this drop in respect for law and life came so spectacularly. The World War is responsible for this, as it is responsible for most of the ills that have come in its wake. Nations no longer use mere armies, they use every organized resource, economic as well as military. They use potentialities, and the baby is in reality a potential soldier or munitions worker and therefore must be reckoned a legitimate military victim. In the history of civilization it took until the time of Jesus to evolve a theory about the individual which was tangible enough even to develop the concept of an individual's right to life. In one generation civilization's struggle upward during those thousands of years was wiped out. Where can we turn today and find a nation, caught in war as the Japanese and Russians were in 1904–5, which will show concern over a rule of law instituted for the purpose of protecting the weak? A generation ago thoughtful man, conscious of the struggle up which civilization had made, would have deemed it inconceivable to have gone back so far in so short a time.

Every person here will have a different reason for justifying or condemning this new order. It means, though, that nations must build from the ground up; and where are we going to turn now for the teacher nation, and where are we going to find one willing to be a student nation again and admit that relationship? The Far East may bring it, but we have a new thing taking place in the Far East. Note the change that I have recited in regard to Japan. Now get this picture: Assume that China starts her new birth of nationalism as a result of a war which is causing her to shrink into her strongest physical places, build both men and factories, and put the whole Chinese nation on a unitary basis economically and militarily. Assume that the Generalissimo realizes his dream of unifying, centralizing, and building a national Chinese army which does drive Japan into the sea. For in Japan now is centered every grievance which China has felt toward every nation which has done her hurt since the Opium War. We must remember that for the first time in the whole history of China a nation is now being built upon a hate for a neighbor. The old China was built on pride of self and a belittling of the rest of the barbarian world. But with hate as the motive the result may be terrific. If, on the other hand, some teacher nation may be found to reintroduce into those two unhappy lands the gospel of the mean, the logic of self-restraint and cooperation, what cannot we dream as being the greatest promise for a future of world order?

How can this be brought about? Where can we turn to get the teacher nation, the nation which may have the respect of both, the nation sufficiently disinterested to act as a model and an advisor to thoroughly ill neighbors? There is in reality not a single conflicting aim of any consequence between the United States and China and the United States and Japan, excepting our almost universal condemnation of Japan's actions since 1931. We have settled the immigration questions, we have come out of the Far East, we are offering the Philippines their independence. Our fortifications and our Navy, to be sure, are both built to withstand possible attack from the west, but they are of primarily a defensive and not an offensive nature. If an enforced peace were our objective, we could bring it to the Far East without much difficulty—a mere taking of sides on our part openly would decide the issue of war there, and it could be done without European or other complications, whereas if England or Russia or Germany attempted the same thing a world war would be inevitable. Can we not see that that respect which both China and Japan have had for us, the faith which they have in the American people, might be turned to good effect if we were but willing to do our part? We cannot very well offer to mediate in a war which we do not even recognize; good offices proffered would be shunned by both China and Japan. We attempted a nine-power consultation in Brussels. It failed. We have refused to invoke our Neutrality Act primarily because such an invocation would have turned this terrible undeclared warfare into a situation wherein we would have declared actual war for both China and Japan and brought great complications and greater justifications for wrongdoing. Can we not, though, in our daily actions prove ourselves to be that friend who is worthy of being trusted to heal these wounds? Perhaps the time is not ripe, because, as I have told you, for the first time probably in the whole of China's history, China's great 400,000,000 human beings are united in a program based on hate.

Can proud Japan acknowledge an error and act without some face saving? She could if it had not been for the fact that Japan has not been Japan since 1931. She has been an imitator of the worst that the west has produced. When Matsuoka walked out of the League of Nations with a swagger, it was a swagger in imitation of the nations of the west who developed the theory of national pride. The Japanese way was nicer than that. The Japanese way was politer than that. The Japanese way had until

lately never been a rude way. Can Japan return to herself, the willing student, grown greater than any of her teachers perhaps because she never lost sight of the student attitude? The way of the good teacher is to bring about events so that the student acts of his own volition. We cannot take one side against the other. Peace must be brought about by both China and Japan.

I am firmly convinced myself, as I pointed out in the first night's address, that if we could restore peace to the Far East and peaceful cooperation between the two great peoples of the Far East, the world's ills would soon begin to be solved and the standard of life everywhere would be raised. China, the old teacher of all of the civilizations, ceased to be a teacher because she became self-interested. She assumed perfection in her attitude toward herself and the greatest of all world teachers, Confucius, committed the unpardonable pedagogical error of assuming, too a perfection. He put into his scheme of history teaching the "Hounds of Leu." You know the story!

A barbarian prince sent some dogs as a present to an early Chinese king or duke. The advisers of the Chinese king said he must return the present because if he were to accept something from the outside world his own people might think that there was something worth while in the outside world and they would cease to appreciate their own. The dogs were sent back.

The Chinese wall is the greatest monument on earth to a foreign policy, and it is the result of the teachings laid down in the Hounds of Leu. Confucius taught so well that his students were satisfied and they accepted in their learning a boundary for knowledge quite as high and insurmountable as the Chinese wall, and as a result Chinese scholars and Chinese experiences do not smack of having been touched by the great universals of the wide world.

America and the Far East! Is there statesmanship, is there wisdom, is there faith in the theories that are fundamental to our great democracy for us to assume the position of teacher for these two now teacherless civilizations? Some men have dreamed that there are elements in our pan-American treaties which could be extended to the Pacific area, and that all the nations, all the peoples that border on that great ocean shall be made friends under the theory of the good neighbor.

If we are to teach by example as well as by precept, America's mission in the world is seen. With the bulk of wealth, the mass of production, and the ability to produce on our side of the Pacific, and the world's greatest well of consumers on the other side, should not American statesmen lend every effort to bring about this happy condition? We can sell, they can buy, we can lend, they can borrow, we can raise our standard of life greatly and their standard manyfold. What a task for statesmen.

We do some things so well—entertaining a king and queen for example. That took energy, that took planning, that took forethought. Why do not nations use energy, planning, and forethought in bigger things as well?

Laying of Cornerstone of National Cancer Institute

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, July 5, 1939

ADDRESS BY SURG. GEN. THOMAS PARRAN

Mr. BONE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the introductory remarks made by Surg. Gen. Thomas Parran on the occasion of the laying of the cornerstone of the New National Cancer Institute near Bethesda, Md., on Saturday, June 24, 1939.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

We have come here to lay the cornerstone of the National Cancer Institute, a new division of the National Institute of Health. Because of the vision and foresight of our national Congress, and the generosity of a private citizen, Mrs. Luke Wilson, this beautiful building now stands before you on an imposing site.

It is a matter of national pride and gratification that we can say today: Nowhere in the world will you find in a single structure, the equivalent of what is here provided, in physical equipment and facilities, solely for scientific research in a specialized field of medicine.

Because of the excellence of the job done here, I should abuse my privilege of welcoming you if I did not first voice the appreciation of the United States Public Health Service to the many individuals whose imagination, technical knowledge, and labor have gone into the planning, construction, and equipment of the National Cancer Institute.

This institution will ever remain a symbol of the faith imposed by the American people in their Federal health agency—the United States Public Health Service. That faith is not founded upon the impressive aspect of splendid buildings, but rather upon an unbroken line of achievement stretching back 141 years to the establishment of the Marine Hospital Service in 1798. Indeed, we of the Public Health Service can say with pride and reverence that this institution—this National Cancer Institute—has been made possible by the splendid work of our pioneer investigators, living and dead.

Forty years ago, one of our young scientists grappled with a problem then as mysterious as cancer is today. Henry Rose Carter plodded through fever-ridden counties of Mississippi and emerged to establish the extrinsic period of incubation of yellow fever. Carter's demonstration led Walter Reed to his discovery of the mosquito as the vector of yellow fever and made possible our control of the disease.

Hunting for plague infection in California rodents, George McCoy discovered and described Bacterium tularense. Later, Edward Francis found this organism to be the cause of tularemia, or rabbit fever. Thus "a new disease of man" was discovered and the key to its control put into our hands.

Joseph Goldberger unraveled the problem of pellagra—one which had baffled scientists for many years. With his devoted co-workers, he proved conclusively that the disease is the result of dietary deficiency. Before his untimely death, Goldberger showed that pellagra is closely associated with a new vitamin which he discovered. He laid the foundations for continued research and recent achievement in this field. Moreover, from the epidemiological studies on pellagra, conducted by one of Goldberger's collaborators, Edgar Sydenstricker, have descended a long line of significant investigations of the mass problems of disease which form a necessary basis for effective control steps. In fact, one can say that the science of epidemiology has had its origin and greatest development in this country due to the pioneer efforts of Lumsden, Frost, Sydenstricker, and their colleagues.

What these men accomplished continues to activate further achievement. Their work may be likened to a pebble thrown into a pool. From it ever-widening rings radiate to send a wave crashing on the shore. This is true of all scientific achievement. It symbolizes the tradition of the National Institute of Health. These few attainments must serve briefly to mark the character of the manifold research activities of the Public Health Service. Much more has been and is being done. Even within the past decade studies on choriomeningitis, typhus, on Rocky Mountain spotted fever, on undulant fever, relapsing fever, meningitis, and the deficiency diseases have won world-wide recognition.

Aside from the public trust invested in us, the National Institute of Health has won and cherishes the respect of scientists in this country and the world over. In its report to President Roosevelt, the Science Advisory Board of the National Research Council stated: "The scientific achievements of the Public Health Service, both in the laboratory and the field, are unexcelled."

Only a few weeks ago a prominent physician made a statement which I believe is particularly significant in relation to this occasion. Speaking at the Senate subcommittee hearings on the Wagner health bill, Dr. David Seegal, director of the research division for chronic disease, department of hospitals, New York City, said: "It is the consensus of opinion of a group of disinterested individuals coming from countries other than our own that * * * an institution supported in the main by tax funds can add to the sum total of knowledge in the war on chronic disease. We have ample evidence that tax funds may be used for such a purpose in this country. I know of no finer place than the National Institute of Health."

This reputation is deserved, and it is my deepest concern that we continue to live up to it. As in any living organization, that responsibility falls heavily upon you, young men and women, of our staff, whose careers are before you. Back of you there is a rich heritage of hard work and achievement. The future of this new institution lies largely in your hands. It will be just what you make it.

I know that many of you have come into the Public Health Service at a financial sacrifice. That you are here signifies your personal awareness of and desire for greater satisfactions in life than the acquisition of money. You have been eager to seize the opportunities for professional achievement that a generous and wise Government has provided. You have enlisted for front-line duty in the conquest of truth, and I know that you will continue faithfully at your posts.

It is not likely that any one of you will conquer single-handledly this age-old enemy, cancer. Scientific knowledge has increased and has become so complex that no one individual can possibly become skilled in all fields of investigation. Research in the biological sciences continually becomes more closely interrelated with other branches of study. The Public Health Service, of which you are a part, has made its honorable contribution to this evolutionary advance. The complexity of medical research may best be appreciated when we realize that the staff of the National Cancer Institute will include pathologists, geneticists, cytologists, radiologists, biochemists, physicists, epidemiologists, statisticians, and, of course, physicians.

This is a cooperative venture—a group effort. Only the larger group can accomplish the larger task. Hence, I repeat, victory may not come to you as individuals. But if I read aright your spirit and enthusiasm, the aggregate accomplishment of this

group, wielded in the fraternity of the scientific discipline, will in the end impressively advance man's conquest of disease.

This assurance is strengthened by the willingness of the outstanding experts of the country to guide our policies as members of the National Advisory Cancer Council. We are honored to have their presence here today.

It seems particularly fitting that to lay this cornerstone, we have the one man whose vision and persistence is primarily responsible for this event. Unique in the legislative history of the country, the National Cancer Institute bill was introduced into the Senate by Senator BONE on his own behalf and on behalf of 95 other Senators. Similarly when the measure reached the House, no voice was raised in opposition. Such unanimity illustrates the fact that the health of the people is not controversial. It is my great pleasure and honor to present Senator HOMER T. BONE.

Progress of the Farm Security Administration Borrowers

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 5, 1939

LETTER FROM THE ACTING ADMINISTRATOR OF THE FARM SECURITY ADMINISTRATION

Mr. PEPPER. Mr. President, I do not know of any organization which has a better record for getting value received for the money it has spent than the Farm Security Administration. I have in my hand a compilation of something that has been done in my State in the recent past by the Farm Security Administration, and I ask unanimous consent to have that splendid statement incorporated in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FARM SECURITY ADMINISTRATION,
Washington, May 1, 1939.

Hon. CLAUDE PEPPER,
United States Senate.

MY DEAR SENATOR PEPPER: We have just received a report on the progress of the Farm Security Administration borrowers throughout the country, and we felt that the figures for Florida might be of particular interest to you.

As you no doubt know, our major activity is the rehabilitation of needy and low-income farm families through small loans, accompanied by guidance in sound farming methods to insure the best possible use of the money.

Most of these families are extremely poor credit risks, judged by normal standards. None of them can obtain adequate credit on reasonable terms elsewhere. Many have been on relief. Our program is designed to make them independent of further assistance, by providing them with the equipment and the training necessary for successful farming.

From the beginning of the program in 1935 until January 1, 1939, a total of $232,410,369 had been loaned to approximately 650,000 farm families in the United States. These borrowers already have repaid approximately $72,000,000 into the Federal Treasury.

The Farm Security Administration has made such loans to 12,930 farmers in Florida since the inception of the program in July 1935. The loans from emergency relief funds have totaled $4,333,335.07, an average of $349.66 per family.

These farmers had repaid $1,288,666.09 up to January 1, 1939, although much of the money will not be due for 4 or 5 years.

We have just completed a survey of the progress made by a group of typical rehabilitation borrowers as of January 1. This survey, covering 3,650 families in Florida, showed they had increased their total net worth since coming onto the program from $2,882,173 to $5,073,100 at the end of the 1938 crop year—over and above all debts.

These families, therefore, had added a total of $2,190,927 to the wealth of their communities, or an average of $600.25 per family. We consider these net-worth figures, which reflect the difference between total assets and total liabilities of each family, an even better indication of progress than repayment figures, because they show the actual progress made by the family.

During the past crop year alone these families increased their total net worth by $338,300, or an average of $92.69 for each family.

One of the primary aims of the rehabilitation program is to enable borrowers to raise their own food supplies and livestock feed so they will be less dependent upon cash crops. Their progress is indicated by the fact that the 3,650 typical F. S. A. families who reported in Florida had stored away 677,800 quarts of fruits and vegetables last year to tide them through the winter.

The average family has increased its annual production of home-canned food by 147 quarts since it first received an F. S. A. loan.

Moreover, the production of meat for home use has risen a total of 1,221,276 pounds annually, or 334 pounds per family; and the average increase in egg production for home consumption was 57 dozen per family.

Relatively few families owned milk cows when they first sought F. S. A. aid, and this lack often was reflected in the health of their children. By the end of the 1938 crop year, however, the borrowers in Florida reported that they had increased their milk production by an average of 283 gallons annually, or a total of 1,031,535 gallons.

This increase in the production of foodstuffs does not mean additional competition with farmers in other areas, since virtually the entire output was consumed at home. It represents improved diet, based on foodstuffs which previously were not available, usually accompanied by a marked improvement in health.

One of the most frequent causes of distress among farmers is the fact that they are overburdened with debts. Consequently the Farm Security Administration has set up local farm debt adjustment committees to bring the debtor and his creditors together for a friendly discussion of their mutual problems. These committees have no legal authority to compel adjustments, but usually they find it possible to reach agreements for extending the time of payment, reducing interest rates, or scaling down the obligations. As a result, the farmer is saved from foreclosure and his creditors obtain substantial payments on what might otherwise have been uncollectible debts.

In Florida 1,893 farm families had been helped through such debt adjustments up to January 1939. Their obligations were scaled down from $4,504,101 to $3,759,239, a total reduction of $744,862, or 16.5 percent. As a direct result of these adjustments a total of $117,910 in back taxes was paid to local governmental agencies. In addition, a group case was adjusted which benefited 527 farmers. In this instance uncollectible debts amounting to $4,075,500 were scaled down to $427,500.

Another main object of the rehabilitation program is to get better land tenure for borrowers who are tenants or sharecroppers. While many of the borrowing families are owners, the report showed that among the tenants, 1,612 had obtained written instead of oral leases. Moreover, 495 had advanced from a sharecropper to a tenant status during the year.

There are three other measures of the progress made by these rehabilitation borrowers. The report showed that 140 families were getting medical attention, through participation in group medical care programs; 796 were practicing definite erosion control measures; and 3,960 children of school age were enabled to attend school as a direct result of the rehabilitation program.

Our field workers reported that they knew personally of 4,844 families in Florida who were eligible and in need of rehabilitation loans, but were unable to obtain them because of lack of funds.

Next to the rehabilitation program, the Farm Security Administration's chief function is to make loans to tenants, sharecroppers and farm laborers for the purchase of family-size farms under the terms of the Bankhead-Jones Farm Tenant Act.

While loans have been confined to certain counties in each State, we will have made approximately 56 such loans in Florida, aggregating $214,702 by the end of this fiscal year.

Last year, the first in which the tenant-purchase program was in operation, 16 loans totalling $60,645 were made in Florida. This year we estimate we will be able to make 40 loans aggregating about $154,057.

If you would like any further information on the Farm Security Administration program, please let us know.

Sincerely yours.

C. B. BALDWIN, *Acting Administrator.*

Third Presidential Term

EXTENSION OF REMARKS
OF
HON. EDWARD R. BURKE
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 5, 1939

RADIO ADDRESS BY HON. JOSEPH F. GUFFEY, OF PENNSYLVANIA

Mr. BURKE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very effective speech delivered last Monday night over the air in opposition to a third term for President Roosevelt. The speech was delivered by the junior Senator from Pennsylvania [Mr.

GUFFEY], ostensibly furthering a third term, but I believe when the Members of the Senate who did not hear the speech read it, they will agree with me that it was a most effective argument against the third term.

I offer it for the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, my name is JOSEPH F. GUFFEY. I'm a lifelong Democrat and I come from Pittsburgh. I've been United States Senator from Pennsylvania since 1934—the first Democratic Senator to be elected from the Keystone State in more than 60 years—and next year I'm going to run for reelection on my record as a 100-percent pro-Roosevelt New Deal Democrat.

Tonight I'm speaking in answer to Senator BURKE, of Nebraska, who was also elected to the Senate as a New Deal Democrat in 1934. He recently attacked the rising popular demand that Franklin Delano Roosevelt shall run for a third term in 1940.

Now, I am for Roosevelt and I want him to have a third term. As a matter of cold political fact, if Franklin Delano Roosevelt is elected to the Presidency again, it will be his first real term of office. When you elected Roosevelt in 1932, his first term was canceled, vetoed, by the Supreme Court. When you reelected Roosevelt in 1936, his second term was stolen by Tories and political ingrates.

I'm for a third term for Roosevelt for four reasons—because I am a Democrat, because I am a practical politician, because I am a liberal, and because I am an American.

I'm for Roosevelt as a Democrat because it's the way to win the next election hands-down; no "ifs," "ands," or "buts," no alibis, and no double-crossing. As a life-long member of the Democratic Party, I want my party to win.

I'm for Roosevelt as a practical politician because anti-third-term talk is bad politics. A quarter of the Senate has served more than two terms, and another quarter of the Senators are serving their second term and hoping for a third. Three-fourths of the Members of the House of Representatives are in the same position; and, of course, we appoint our judges to serve all their lives. That's all right. I believe in experience. How stupid it is for men to say that a third term is wrong, that there must be rotation in office.

Who are the men who are talking against a third term for Roosevelt? Senator BURKE says he's in favor of one term of 6 years. Then there are other members of the Democratic Party who say that they have such high regard for President Roosevelt that they just feel sure he won't challenge the third-term myth. Some of these men have had such high regard for Mr. Roosevelt that they have balked, filibustered, or mutilated some of the President's measures during the last 2 years and have recently condemned a million American families on W. P. A. to beg or starve. If I were President Roosevelt, I'd rather not have the high regard of men like these. We love him for the enemies he has made.

I'm for a third term for Roosevelt because I am a liberal and I believe in democracy. The judges and the lawyers cheated the people out of President Roosevelt's first term. The ingrates and the "middle of the roaders" robbed the people of President Roosevelt's second term. If the Tory politicians and the big-business magnates succeed in bamboozling the American people for a third time in 1940, then there's going to be an upheaval which will sweep away all politicians and all big business. I don't kid myself that the American people love their politicians. As I study the election returns, I see the American people getting sick and tired of political machines and political wire pulling. It's time for all politicians to take notice when a serious historian like Herbert Agar, of the Louisville Courier-Journal, tells an audience in Massachusetts that, as now run, our political conventions are large-scale vaudeville shows which breed cynicism and contempt for the democratic system of government. If the people are short-changed again by the politicians in 1940, then there won't be any 1944, politically speaking. There will be dictatorship or civil war to take the place of shell-game elections between a Republican tweedledum and a Democratic tweedledee, or perhaps I should say between a Republican tweedledum and a Democratic tweedle-dumber.

I'm for Roosevelt for a third term in 1940, as an American, because I know what he has done to save America, our people, our peace, our free institutions, and our faith in God and man. When the worst that can be said of Roosevelt's W. P. A. is that perhaps the New Deal relief system gave hard-working decent Americans jobs which could have been done cheaper by machinery or by sweated labor, then I know that Roosevelt has been everlastingly right and that the opposition has been and is everlastingly cheap, timid, mean-spirited, and small of soul. And I know that the love and the trust of millions of loyal Americans for that stout-hearted, loyal man in the White House is a national asset worth countless billions of dollars. For, if we do not despair of the Republic, we can free any calamity which may befall us. But if we lose our trust in each other, our faith in democracy, we have nothing left but brute force and brute necessity to hold our society together. That's a job for a butcher, not one for a free man. And if the Tories and the ingrates succeed in breaking the people's faith in Roosevelt, I tell you that America, as we know and love it, will be done for.

Our people recognize this issue. They want our liberal democracy to continue. They know that Roosevelt alone can ensure its safety.

Throughout the country the tide for the third term has set in. Now it is running strongly. It is irresistible and will calmly push back all the King Canutes of big business and fat banking who try to order it not to obey the laws which govern the political universe. Only in the last few days, two of the greatest liberals of our time, Senator NORRIS and Secretary Ickes have declared in favor of the third term for Roosevelt.

These and similar forward-looking progressives have long been contemptuous of party lines in their long devotion to the liberal cause. They represent the millions of Americans who owe no party allegiance and who decide the outcome of national elections. Americans who are neither Republican nor Democrat, but who have the welfare of this country at heart, and who want the best and most effective Government they can get. Because millions of Americans think as he does, we must pay great attention to Secretary Ickes when he says:

"Liberals who left the Republican Party and who have followed Franklin D. Roosevelt from 1932 to 1939 will not stultify themselves by voting for a reactionary Democrat. They will not take any too kindly to a Republican reactionary, but if they have no other choice they will prefer a Republican to a Democratic reactionary."

Every member of the Democratic Party ought to remember these words, for they express the attitude of millions of American voters whose support we may lose more easily than we think. The New Deal Solicitor General, Robert Jackson, reminded us bluntly of this in his speech in Kansas last February:

"The plain lesson of history," Bob Jackson said, "is that when the country wants reaction it will take it from Republicans, who are experts in reactionism, and when it wants liberalism, and only then, will it turn to the Democrats. The Democratic Party will either be a liberal party or a minority party. If Democrats join Republicans in helping turn the people against the New Deal, they will find that they have also turned them against the Democratic Party and are authors of a ruin in which they will have to share."

As I said, I am a lifelong Democrat, and I want the Democratic Party to win the next election. It is the liberal group, the nonparty group, the group represented by men like Harold Ickes and Senator GEORGE NORRIS, which will hold the balance of power in 1940. So as Democrats we must pay attention when they say that Roosevelt is the only man who commands their enthusiasm and enlists their support.

The American people don't like turncoats or quitters. They admire men who go down fighting for their principles, even when they don't agree with those principles. Back in 1934, when Senator BURKE was running for election on Franklin D. Roosevelt's ticket, he praised the New Deal to the skies. He said: "It voices the deathless cry of good men and good women for the opportunity to live and work in freedom, the right to be secure in their homes and in the fruits of their labor, the power to protect themselves against the ruthless and the cunning." He said that the New Deal "seeks to cement our society—rich and poor, manual workers and brain workers—into a voluntary brotherhood of free men, standing together, striving together for the common good of all." As Mr. Dooley might have said, "Ye can waltz to it!" And Senator BURKE waltzed into office as a result of this lip service to the New Deal. And now it is Senator BURKE who rises to tell the radio audience what's what in the third-term tradition.

A few minutes ago I spoke of the practical politics of the third-term fight. Will Senators who have served 10, 20, and over 30 years in the Senate argue that it is morally wrong for a President to serve more than 8 elected years? Can Senators who have been in the Senate since the World War convince us that we must get rid of Roosevelt because he has been in the White House since 1933?

As a practical politician I tell you, and particularly those persons who quote Thomas Jefferson to you the way the devil quotes Scripture, that this anti-third-term talk is political dynamite.

Jefferson, we must remember, supported the principle of rotation in office, not for the Presidency alone but for the Congress as well. He believed that Members of Congress should not be reelected after 2 years in office. When Members of the Senate quote Jefferson, they had better remember that some young man may rise in their own bailiwick, when they are running for a third, a fifth, or a seventh term, and quote their own words out of their own mouths as a reason why the young man should unhorse them.

No one who believed in a third term for Theodore Roosevelt, or Coolidge—yes, even Coolidge and the powerful Wall Street interests behind him, who maneuvered him for a third term—none of these, nor any Senator who has served two terms or more and wants to run again, can safely oppose the third term for the President. For example, Senator VANDENBERG, in the hope of setting himself up in the role of Harding—as an imaginary point in the center of the Republican Party—assures us that if he is elected he will not encumber this country for more than one term. What a revelation in self-appraisal by a candidate for the Presidency. The best argument that he can give to our people to elect him is his personal guaranty that they will have him around their necks for the shortest time possible. But the desire of Senator VANDENBERG to relinquish power is somewhat clouded over by the announcement that he is hedging his candidacy for a first and only term in the White House by a simultaneous candidacy for a third term in the Senate.

No. These are dangerous times. We can afford nothing less than our very best man in the White House. What other man than Roosevelt could match the dignity of a king and queen, and handle them in a way that made this whole country proud of him, and at the same time know and feel the problems of the

unemployed miners of Pennsylvania, and the struggling farmers of the Middle West? In these times of real danger to America—danger from within and from without—we need a real leader, someone who can really represent our democratic will to survive. And we know that we have such a leader in the White House now—Franklin Delano Roosevelt.

Just suppose a few fixers conspire to thwart our democratic will. Suppose they force upon this country a figure head, a stuffed shirt, an incompetent middle of the roader, or a young and inexperienced man, when everyone knows that we need a man with knowledge of the world, knowledge of America, determination, and courage. Can these political fixers seriously believe that they will not be instantly branded throughout this country as the professional embezzlers of the rights of a free democratic people?

Can they seriously believe that the anger of the American people at this betrayal in their hour of need would stop at them?

I tell you that the disgust of the American people would reach not only to the dummy given the leadership of our country, but to the whole system of democratic institutions which can be captured and misused by selfish and scheming men. And who could blame our people for such a revolt in their hour of anger? Not they, but the schemers, the fixers, the old political hands, would be responsible for the death of one of the last, great free democracies in the world.

We Americans know that to our people Roosevelt is not just a name in the papers, as are the other candidates. Almost every American old enough to walk, has by this time actually seen President Roosevelt. He has seen and been seen by more of our people than has any other man in the United States. They don't want shadow candidates now. They want Roosevelt, because they trust him, as they trust nothing else in our political and economic life. They know that for the last 7 years, Roosevelt has been in there fighting for them, as no other President has fought for them. In 1932, Roosevelt began his fight to transform this country from disorganized, uncontrolled anarchy, to a Nation in which, by Government cooperation, our resources could be conserved, our level of production maintained, our people made secure. In 1936, the people of this country gave an overwhelming mandate to see the fight that Roosevelt had begun carried on. In 1939, that fight is not yet over. Our people demand that, under Roosevelt's leadership, it shall be carried through.

As Jay Franklin said in a recent broadcast discussion of the third-term issue, Roosevelt is more than a man, more than a politician—he is the people's President, their representative. Mr. Franklin said, "Who, then, is this Roosevelt that you are considering for a third term? You—millions upon millions of you—you are that Roosevelt, and he is everywhere throughout America."

He is the farmer whose land was saved by the New Deal. He is the factory worker who got decent hours and working conditions and who won the right to stand up like a man and bargain with the corporation. He is the voiceless and voteless sharecropper of the South. He is the homeless migratory worker in the West. He is the honest businessman who has been saved from bankruptcy. He is the man out of a job who got work relief on self-respecting terms, the youngster who got a chance to complete his education. He is the old people who got pensions, the sick who got medical care, the hungry who got food, the men and women everywhere who received justice and hope and who gained fresh courage and new faith in their own country and in themselves.

That is your Roosevelt. I have seen it on the picket lines and in the mines, on the production belt and behind the shop counter. I have seen it in the great dams and the terraced fields, in the C. C. C. camps and the W. P. A. projects. I have seen that Roosevelt when he faced a hostile crowd of men, men who were timidly thinking of their own bank accounts instead of thinking of your welfare, when Roosevelt broke through their fear and enmity, as a swimmer breaks through a toppling wave and emerges laughing, and made them stand up and cheer him. I have seen that Roosevelt in Congress, where even his political foes combined to pass the New Deal program against their own desires because it is what you want.

There is your President. It is not the smiling pictures in the newspapers and news reels; it is not the friendly voice of the fireside talks; it is not even the gallant fighter who has refused to let you down. You have made Roosevelt in your own image. It is you who must have a third term.

That is the story. You probably have heard of me as a practical politician. I am proud to be one. I tell you that this third-term demand for Roosevelt is the most remarkable development I have experienced in my 43 years of practical politics. It is not a led or manufactured movement. No group of politicians has met in a back room to discuss putting Roosevelt over in 1940. Most of the papers are not only against it but have refused even to print news about it. When Secretary Ickes first came out at a press conference with a demand that Roosevelt run again, the papers did not print it. Instead they published a story about his private life and killed his most important public utterance. And when he wrote a magazine article to express the same idea, the magazine edited his remarks so that they sounded like an attack on other Democratic leaders. No; this third-term-for-Roosevelt movement is of the people, by the people, for the people. All that liberals, New Dealers, Democrats, and practical politicians can do about it is to jump aboard and go where the instinct of America tells us we will find peace, dignity, and security—in the victorious completion of the New Deal under Franklin Delano Roosevelt.

All they can say against it is that it has never been done before.

Well, we never had all the banks closed before. We never had the Hoover bread lines before. We never had the Hoover apple sellers before. We never had mass foreclosures before. We never had such great floods or such dangerous dust storms before. We never faced such a challenge to democracy before. We never had to move the Government in to save business and labor and farmers and miners before. And we never had a Franklin Delano Roosevelt as President of the United States before. So what?

I, JOSEPH F. GUFFEY, am for Franklin Delano Roosevelt for a third term.

The President's Neutrality Bill

EXTENSION OF REMARKS
OF
HON. JOSH LEE
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 5, 1939

EDITORIAL FROM WASHINGTON DAILY NEWS

Mr. LEE. Mr. President, I ask unanimous consent to have printed in the RECORD an excellent editorial on the President's neutrality bill, published in the Washington Daily News of today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of July 5, 1939]

TODAY IN CONGRESS

In Congress today the President's leadership is being put to the test in two fields—his neutrality and monetary policies.

In our opinion the best interest of the country would be served in both instances if Mr. Roosevelt's views prevailed.

The President wants to keep America out of war. He is afraid, with good reason, that if a European war starts we will eventually be drawn into it. So he holds that we should at the very least do nothing to encourage European war.

The House, by writing into the administration neutrality bill last week a flat embargo on exports of arms and ammunition to belligerents, has won the cheers of the Axis press. For Germany and Italy would be blockaded by the Anglo-French Navy if war came and couldn't buy from us anyway; accordingly the House action is damaging only to the democracies. That is why the President says we are in the position of encouraging new aggression in Europe.

The Gallup poll has indicated that most Americans favor amending the law to permit the sale of war materials to England and France. But the House has read the country's pulse differently. It remains to be seen what will be done by the Senate Foreign Relations Committee, meeting today, and later on by the Senate.

For ourselves, we recoil from the prospect of having to reflect, if war does come to Europe, that the Congress of the United States helped to precipitate it.

Citizenship Day

EXTENSION OF REMARKS
OF
HON. RUSH D. HOLT
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 5, 1939

ADDRESS BY HON. RUSH D. HOLT, OF WEST VIRGINIA, JUNE 25, 1939

Mr. HOLT. Mr. President, it was my pleasure to participate in a great patriotic meeting in the city of New York. This gathering is best described in the words of Sanford E. Stanton, of the Journal and American. He said:

MORE THAN 20,000 HONOR NEW CITIZENS

In the greatest peace-time demonstration of patriotism ever witnessed in New York, Citizenship Day was celebrated on the Mall, Central Park, yesterday afternoon by a wildly cheering, enthusiastic throng of more than 20,000 citizens.

Facing the massed colors of 110 veterans' groups while an impressive silence hung over the vast throng, 2,000 young citizens took a solemn oath of good citizenship.

Deputy Chief Inspector John J. DiMartino, who headed a police detail of 75 uniformed men, estimated the Citizenship Day crowd at 20,000. Frank Sorace, of the park department, put the figure higher, and said:

"This is the largest and most orderly gathering ever held on the Mall."

Forerunner of a national holiday, dedicated to American citizenship, the ceremonies on the Mall took on historic importance.

Leaders of the city, State, and Nation rededicated themselves to the perpetuation of the principles and ideals of American democracy.

From the lips of one speaker after another came words of generous praise for the New York Journal and American and all Hearst newspapers in leading the movement for national observance of Citizenship Day.

I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a copy of the speech I delivered on that occasion.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As a young man, I welcome you young men and women as citizens of our country. It was only 13 years ago I was your age.

I am here this afternoon to participate in a great program, one that should be duplicated in every city in our country. What would be better than national citizenship day?

You are now a full-fledged voting stockholder in a great Government. You will find it is the best in the entire world. No, it is not perfect. But that should not discourage us. That should mean to you and to me an opportunity, a great opportunity, to serve our fellow men in making it more perfect. It is not an easy task. But the more you live the more you will realize that the greater the task, the greater the victory, when won. Many of you have been athletes. You know that the victory that meant the most was not a victory over a weak opponent, but a victory over a strong one. We can win a victory in making our Government better.

You are entering a competitive world. You have two large problems facing you—the problem of unemployment and the problem of war. We can and we must eliminate one and prevent the other in America.

The youth want to solve the unemployment problem, not through relief but through private jobs. That is our way out.

Because of widespread unemployment, many persons in this country are spreading discontent. They offer bright hopes that cannot be fulfilled. Their offer is to change our Government. We Americans can meet that challenge. The foundation of this country is strong. Keep it. Mistakes have been made. Eliminate them, but keep the foundation.

Those advocating many "isms," like the will-o'-the-wisp, never reach their goal.

They say, "Look at that country. There is no unemployment there." How was unemployment solved? Partially by putting the young men in soldiers' uniform, not in overalls; by putting men on possible battlefields, not by placing them in cultivation of fields. More than that, they paid a high price. They paid a price far too high—the price of their liberty.

No country in the world has more liberties than ours. The great Constitution gave them. Our forefathers protected them and handed them down to us. We must hand them down to our children. These rights and liberties must be zealously guarded by every good American citizen. "Eternal vigilance is the price of liberty." When our rights are challenged, we must meet that challenge, not by pussyfooting, not by evasion, but meet it directly as a menace that would take from us a precious heritage.

Too many persons believe in free speech for those who advocate their cause but not for those who oppose it. Free speech means either free speech to all or free speech to none. The right of free press, the right of peaceful assemblage, the right to worship God as one's own conscience dictates, the right of trial by jury, and those other guaranties must be protected.

We must say: I shall protect the rights of others as though they were my own. I shall not take privileges I refuse my fellow man. To the Communists, to the Fascists, I say, we have free speech, something you use here, but something you deprive your opponent in the country of your ideal. We have the right of free press, something you have here but something deprived your opponent in the country of your ideal.

We have the right of worship. Can you say as much for the land of the dictatorships, either the right or the left?

To those who advocate the overthrow of our Government I say, if you are arrested here you have a right of trial by jury. Can you say as much for your ideal country?

We have many rights here. Things we have every day do not seem so valuable. We realize their value when we lose them. Liberty can be lost gradually. Many have sacrificed their liberty in order to provide temporary security. Those who would sacrifice their liberty to acquire temporary security deserve neither.

I do not fear any "isms" as long as we have pure, healthy Americanism.

We see developing the advocacy of a religion of worship of the state. In many countries the citizen is a servant of the state. The state should be the servant of the citizen. We have in America those who would take away from the citizen rights and transfer those rights to a government. We must be awake to such a dangerous transfer.

You realize that both the forces of communism and the forces of fascism want to win their battle here through you, the youth of the country. They feel that it has been done elsewhere and that it can be done here.

Hitler says much of his rise came through youth. An order in Germany said: "All German youth within the borders of the Reich are united in the Hitler youth. All German youth outside parents' home and schools are to be trained bodily, mentally, spiritually, and morally in the spirit of national socialism for service to the nation and to the unified people."

Josef Stalin, the dictator of Russia, believes that the youth of that country should be trained for their service to communism.

But the challenge is here. Earl Browder, leader of the Communists, in his book says: "The winning of the working-class youth is the problem not of our youth organizations alone, but the problem of the entire party. * * * Every party unit and every party committee must take as a part of their daily concrete tasks the work among the youth." And he also says that the Young Communist League should "broaden out the scope of its activities to include everything that interests, attracts, and holds the masses of young workers."

I do not challenge his right to say those things. I believe in free speech. We who believe in Americanism should meet his challenge. We have a better product to sell than he has. We can meet him point by point and have many to spare to win. Let each of them bring their ism to light and light will destroy it. The way to destroy communism and fascism in America is to meet it through reason.

Some are now shouting, "Save the democracies." If we love democracy, let us save it here. There is our field. Democracy has worked here. No; not perfectly, but no government in the entire history of mankind has been perfect. Let's keep democracy working. Let's make our democracy better. You and I and the millions of other young men and women can help. Are you interested? I know you are. You wouldn't be here this afternoon if you weren't. I have been asked hundreds of times in many States of this Union, Will the young men and women of this country go Communistic or Fascist? My answer is "No. They are too wise to accept the false promises."

They know that thousands of young men, just their age, are carrying rifles in many countries, not because they have enemies. What sane young man wants to shoot another young man just because the other fellow is of another nationality?

Instead of preparing to die American youth must prepare to live—live for a better country.

The youth of America will die to protect America from invasion, but they do not want to be sent across the seas to die as a stake in an international game of power politics. The voice of the youth of this country says, "I will die here to protect America. Let those who want to protect other countries go there and die in such protection. Why should we die in a war where we have no business? Let those who declare war be the first who fight it."

Again I welcome you as citizens. The enthusiasm and vigor of youth are important. We have much to learn. Once Mark Twain said that when he was 14 he wondered why his father was such an old fool, but when he got to be 21 he wondered how his parent gained so much information in 7 years. We need the advice and counsel of age.

We have more opportunities in America than in any other place because of the sacrifices of our parents and their parents. They gave to their children more than they had received. We must not fail to carry on.

Success in the field of government is not different than success elsewhere. It is not acquired in that gotten but in that given. If you enter the field of Government service, you will have many reverses. Many times those who fight for the right are the victims of the most bitter abuse from those who would profit by the fight. If you are interested in popularity and you will sacrifice principle to acquire that popularity, do not enter the field of government. Stay out, not for your own sake but for the sake of your fellow men. No man can be a success if in his own heart he knows he has not been honest and has deserted his true principles. A man may have the plaudits of thousands yet fail.

The young men and women of the country have an opportunity. You have an opportunity to be a success. You have the greatest country in the world. Participate in its counsels. Make it better. We need you. America needs men—

"Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who posses opinions and a will;
Men who have honor; men who will not lie."

America needs you. Be American.

The Farm, The Press, America's Future

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, June 29, 1939

ADDRESS BY FRANK GANNETT

Mr. NYE. Mr. President, on June 9, Mr. Frank Gannett, in speaking before the State Editorial Association of Kansas in Coffeyville, Kans., addressed himself to the subject of The Farm, The Press, America's Future. The address is so fraught with worth while information that I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Some who live in cities come to believe that our national economic life centers in the offices and factories which surround us. They overlook the fact that the economic life of all cities is rooted in a background of generations during which farmers represented three-quarters of the population, and the further fact that, even today, nearly one-half of our population live on farms or in small rural communities, supported directly by the handling of products from farms, forests, and mines.

Farmers have played a major part in the building of this Nation. In 1790 four-fifths of the people of the United States lived on farms. The population, then but 3,930,000, was settled in a narrow band along the eastern seaboard. Thirteen Colonies, composed of farmers, fought the Revolution, set up our Constitution, and established a new form of government.

Then started the greatest pioneering trek that the white race ever engaged in. Courageous farmers settled the Eastern States, took possession of the Mississippi Valley, moved into the South and West; then the Southwest and Northwest were reduced to possession, and finally the Pacific coast. In four generations farmers of the United States cleared the forests, built roads and schools, and opened to cultivation as much land as the white race had gained in a thousand years of previous struggle.

For more than a century agricultural products, such as wheat, cotton, lard, were exported in exchange for the things America needed. Our agricultural exports paid the interest and repaid the foreign capital borrowed to build our railroads and industries. In cotton alone since 1800 the United States has exported 500,000,000 bales, worth $30,000,000,000, and since 1852 exports of 10,250,000,000 bushels of wheat have represented $12,000,000,000. No branch of industry has figures to compare with these returns for single commodities.

The freight paid on farm products moving to our cities and to export markets made it possible to build in the United States the world's most efficient transportation system, with 40 percent of the world's railway mileage.

American industry was built up on the shoulders of the American farmer. Mass production, which makes American industry the most efficient in the world, depends to a large extent and in many lines on the breadth of our farm markets. Nevertheless, through most of the Nation's history the farmer has had to sell his products in world markets without tariff protection, while the tariff wall shut off the inflow of cheap manufactured goods from abroad. The farmer, compelled to pay higher prices for machinery and goods, thus subsidized the development of United States industry.

The first great industrial development in the United States was the manufacture of agricultural implements. More new inventions and improvements in agricultural implements were made in 100 years in the United States than in 5,000 years—yes, since the dawn of the first day—in Europe. Selling to a vast domestic farm market, the United States implement industry expanded into every market of the world. But it was the broad domestic markets supplied by American farmers that supported this world-wide development until our vast diversity of manufactures spread into all the markets of the world.

It would promote sounder thinking by those who attempt to discuss the Nation's economic problems if they would first try to see the country as a whole by an airplane tour. Looking from an airplane traveling across the country, as I frequently do, cities disappear into insignificant spots. One gains the deep impression that this is a vast land of farms from sea to sea. One flies over the great cities in a few minutes, but it takes many hours to cover the country in between.

Born, myself, on a farm in central New York, I know childhood and youth in a farm home and what work on a farm means. Today as I drive through the country I am often appalled by the change that seems to be taking place. The farmer is not as prosperous as he formerly was. One does not see new fences, newly painted buildings, newly erected silos, and other marks of prosperity and high activity as formerly.

What has raised this havoc with the farmer's income? Not laziness, not thriftlessness. Reviewing the history of the successive waves of bankruptcy which have engulfed the American agriculture, we see that each has been caused by a collapse of commodity prices. Ruin has swept the countryside and driven our farm boys and girls to seek a less attractive livelihood in the city.

A crisis has developed here in America that threatens the future of our country and of our system of free enterprise. I am speaking of issues, not of men. I have no hatred for the President. If he would abandon his absurd economic ideas, would dismiss the group of theorists that surround him, and return to sound principles that would promote recovery, I would support him as I did when he first took office.

After 6 years of the Roosevelt program we find ourselves in a worse position than when the President was inaugurated. Today in this country we have some 11,000,000 or 12,000,000 unemployed, 7,000,000 on relief, 3,000,000 on W. P. A.—altogether about 26,000,000 persons living by some form of public assistance. Our employment problem is still most serious, our farm problem unsolved. In addition, we have increased our public debt by $20,000,000,000, until today it stands above $40,000,000,000.

The carrying charge of our national debt now is approximately $1,000,000,000 a year. Think of it. I remember how the country was aroused when the total appropriations of Congress first exceeded a billion dollars. Yet, today, on top of $40,000,000,000 of debt, we're going to add, under the New Deal program, still more deficits and still greater carrying charges.

This dire distress, this great poverty, this whole tragic situation is not due to any drought, flood, famine, or act of God. It is the result of our bungling ignorance, and our stupid failure to make our economic machine function as it should.

The program we've followed has frightened capital and slowed down business. The millions of consumers who earn money and have unsatisfied wants have also become frightened and doubtful of the future. They are afraid to buy because experience has taught them to be cautious so long as we are living under such a program of government. As a result, our banks are bulging with idle money. The total amount of money in the banks, only a few days ago, reached an all-time high. Interest rates have fallen so low as to bring dire disturbances and distress. Schools, hospitals, and charitable institutions find the return on their endowments no longer adequate. Still more distressing, millions of citizens, who by thrift and hard work have saved their money for the twilight days of life, find that the income from these investments will not support them. The value of insurance policies, equities in farms, homes, and other real estate, have fallen to a new low.

Heavier taxation is inevitable because of the Government spending program. Taxes will be increased until they become unbearable. Already nearly one-fourth of the national income—25 cents out of every dollar—goes for taxes. This, of course, is a positive check on all business, a burden on everyone, rich and poor.

What's the cause of this frightening situation? What's at the root of all our troubles?

This is the same country that only a few years ago was enjoying prosperity that amazed the world. What has stalled our economic machine and brought great distress to so many millions of our people?

I'll tell you the answer: Our plight is due to the collapse of prices of commodities, to the great loss in the income of the farmer. Let me repeat: Our troubles are due to a collapse in commodity prices, to the great decrease in the income of our farmers.

Furthermore, I need not tell you, who are so close to agriculture, that the Government's farm program has been a tragic failure.

Out here in Kansas, where you produce so much of the world's supply of wheat, you may be particularly interested in what I believe is the explanation of our distress. It is connected with agricultural pick-up.

The annual income of our farmers is some $5,000,000,000 a year short of predepression totals. Since 1929 there has been an accumulative deficit in the income of our farmers and producers of other raw materials of more than $50,000,000,000.

This great loss in income, a loss greater than our total national debt, is, of course, one of the most important factors in our depression which has now lasted 10 long, tragic years.

Let me say here that our economic troubles are not due to the development of machines. Research proves that machines result in giving more employment to workers. The development of the automobile threw many hack drivers out of jobs, but it gave new work of a new kind to hundreds of thousands—yes, millions—of workers. So it is in all other fields. Our troubles are not due to development of machines.

Nor is our trouble due to overproduction of farm crops. Figures are often dry, but let me quote a few reliable statistics. Take wheat. Between 1921 and 1929 the average crop was 820,000,000 bushels. Between 1933 and 1937 this average production dropped to 625,900,000 bushels. While this decrease was taking place the price of wheat, which averaged $1.41 a bushel between 1921 and 1929, dropped to 85.6 cents a bushel between 1933 and 1937.

The average value of the wheat crop between 1921 and 1929 was $1,156,000,000. The average between 1933 and 1937 dropped to $535,000,000.

Thus, from 1933 to 1937, we produced 200,000,000 fewer bushels of wheat. But the average price was 56 cents lower and the total value of the wheat crop was $621,000,000 less.

The average corn crop between 1921 and 1929 was 2,657,000,000 bushels. Between 1933 and 1937 the average crop had dropped to 2,016,000,000 bushels. The average price had dropped from 84 cents to 69 cents and the value of the corn crop had dropped nearly $900,000,000.

The average crop of oats between 1921 and 1929 was 1,286,000,000 bushels. From 1933 to 1937 this crop had been cut down to 876,000,000 bushels. The average price had dropped from 47 cents to 36 cents.

The average crop of cotton between 1921 and 1929 was 13,000,000 bales, but between 1933 and 1937 the average crop had dropped to 12,589,000 bales. The price had dropped from 21 cents to 10.9 cents. The value of the cotton crop had dropped from $1,374,000,000 to $687,000,000, or just about one-half.

The average production of copper between 1921 and 1929 was 1,618,000,000 pounds, but between 1933 and 1937 had dropped to 918,000,000 pounds. The price had dropped from 15 cents a pound to 9.3 cents; the value of copper produced was $157,000,000 less.

We might consider similar statistics for other farm products and minerals. In every case, they show less production in the years between 1933 and 1937, on the average, than in the years of 1921–29 when we enjoyed general prosperity. And in every case the return to the farmer is only about half as much as it was in those prosperous years.

So we see that all our efforts to decrease farm production and thus make prices artificially higher have failed. In spite of the government's efforts to regulate every farm, the farmer's income, to repeat, is $5,000,000,000 short of pre-war averages.

All Government aid amounts to only a fraction of what the farmer has lost in his earned income.

The farmer's loss of income is not due to overproduction. Reliable research, such as the Brookings Institution, proves conclusively that our farmers have never satisfied the real needs of the American people for food and clothing. Indeed, the United States Department of Agriculture officially shows that more beef, milk, eggs, vegetables, and fruit were required than were produced in 1929 or in any other year.

When we attempt to raise the farmer's income by reducing his production, we work in the wrong direction. Let me emphasize, at the time of our highest farm production we did not satisfy the actual needs of the population.

The whole problem comes down to buying power. At present, production is curtailed to meet a buying power which is grossly inadequate. When the farmers, the miners, and the lumbermen receive good prices, they are able to buy. Industry then booms and gives full employment. When industry booms, its buying power increases, and consumption of the farmer's products follows. But when farmers' prices fail, industry lags, and depression, like a great blight, comes over the land.

Since 1929 farmers have been in their worst depression in history. More than a million and a half farmers have lost their homes, representing savings of a lifetime. Prices were so low that they could not buy what they needed for farm or home.

What was the cause of this great drop in the income of farmers?

The answer is the increase in the value (not price) of gold.

We all know and understand the law of supply and demand and its effect upon prices. But we sometimes forget gold is a commodity just as is silver, copper, lead, wheat, cotton, corn, or timber. The value of any of these products, including gold, is affected by the law of supply and demand. When gold is plentiful, like any other commodity, its value is less and it will exchange for less, or, as we say, will buy less of any other commodity. When gold is in high demand, it becomes more valuable and will buy more of any other commodity.

In 1929, world-wide panicky hoarding of gold began. Between 1929 and 1932, the desirability of gold, its real value, increased two and one-half times because everyone wanted gold. I might say here that all the gold in the world, available, would occupy a cube not much over 37 feet in dimensions. So you see how little there is of it, how comparatively small is the supply.

When gold increased in value, because of the increased demand for it, the farmer whose prices are set by the gold value of his product in world markets—in reality, though he did not think of the transaction in those terms—had given 20 bushels of wheat during the twenties for an ounce of gold, now had to give 50 bushels for the same ounce of gold. In other words, wheat fell from $1 a bushel to 40 cents a bushel.

Instead of 200 pounds of lard the farmer had to give 500 pounds for an ounce of gold, or, stated otherwise, his lard brought 4 cents, not 10 cents a pound. Cotton, instead of 23 cents, brought him only 8 cents a pound. Butter brought 14 cents a pound instead of 35 cents.

Let us keep constantly in mind it wasn't overproduction that did this, for we were producing even less than we had produced and consumed in the previous 10 years. The change was in the commodity value of gold and the world used gold to measure other commodity values.

Years of painstaking research at Cornell University, Ithaca, N. Y., has produced abundant proof that the average price of farmers' products fluctuates as the value of gold fluctuates, and that when we use a certain number of grains of gold as a measure of value there must follow years of booms and depressions in the farmers' income to the extent that this little lump of the commodity gold fluctuates in value.

The gold standard has been used for relatively a short time. Many other commodities besides gold have been used as money and none has been found satisfactory. Whenever the commodity that happens to be used as money increases or decreases in supply, or when the demand for it increases or decreases, its value changes and prices of other commodities measured in that money commodity go up or down.

The monetary history of nations is the story of chaotic change from one money commodity to another in a blind fumbling for something that has stable value. This search has always failed. It is doomed forever to fail because no single commodity—gold, copper, wheat, or anything else—can be stable in its purchasing power over other commodities for the law of supply and demand acts relentlessly upon whatever commodity we choose to use as money.

A careful study of commodity prices in this country for the past hundred years shows that the average price rises or falls as gold rises or falls in value. This fluctuation in the value of gold as a measure of all other commodity values has caused our booms and depressions.

Between 1914 and 1937, gold varied more than 400 percent in its exchange value for other commodities. In 4 years between 1929 and 1933 gold increased in value 150 percent. This brought on the worst depression modern society has ever known. The depression was worse in the United States than in any other nation. Why? Because the United States was one of the last nations to leave the gold standard. Thirty-three other nations had taken action before we did anything to correct our unfortunate situation.

From 1923 to 1929 the gross farm national income had averaged $12,000,000,000 a year. In 1930 it had dropped to nine and a half billions; in 1931 to seven billions; in 1932 to five and a third billions. From 1929 to 1938, inclusive, the farmers of the United States because of depressed prices, received $35,500,000,000 less than their average predepression income. Producers of other basic commodities lost $15,000,000,000 more, making a total destruction of income and buying power of $50,000,000,000.

Just think what a terrific blow this was to America's prosperity! All of this happened simply because the United States refused to heed the fact that gold had become an unstable measure of value, sensitive to panic and war hoarding in Europe.

I doubt if the general public realizes what this great loss in farmers' income means to the farmer and to all of us. In 1932, when the gross income had dropped to five and a third billion dollars, we find after deducting taxes, interest, and other charges, the farmer's average income in cash and in goods produced and consumed on the farm amounted to only $204 a year for each worker gainfully employed in agriculture in the United States, or 65 cents per day. This allowed nothing for the return on the 50 billions of capital invested in farms.

How can the farmer, on such an income, buy from city industries?

Research shows that among our farmers there is an unlimited market for bath rooms, radios, washing machines, vacuum cleaners, sewing machines, automobiles, trucks and tractors, and farm machinery. If the American farmer had an income of five or six billions of dollars more a year than he now has what a market there would be for the products of our cities. There would be such a demand for these things the farmers need that there would be work for all willing workers.

Let me repeat, give the farmer the income that he should have and prosperity will return immediately to our cities and to the country as a whole.

What makes me burn with indignation is the fact that other countries have solved this monetary problem and are enjoying great prosperity while we ignore their experience and remain in deflation and depression.

A few years ago I flew to Buenos Aires, stopping in Brazil. While our farmers were plowing under wheat and cotton and killing pigs, these nations in South America were enjoying great prosperity. Farmers down there were receiving in Argentine currency, with which they paid their taxes, interest, and debt and bought their supplies, prices practically as high as during the predepression period. In Buenos Aires new buildings were being erected at an unprecedented rate. There was confidence in the future and there was no unemployment. These prosperous conditions still prevail there.

You will remember that the depression of 1929 hit the Argentine so hard that the Government was overthrown. Government bonds fell to almost nothing. This was all because the prices of commodities produced in the Argentine had collapsed, as they had throughout the world when measured by a single commodity, gold.

The farmers of the world, whether in Australia, America, or Argentina in reality exchange their staple products in the world markets for the same number of grains of gold. The Argentine financial leaders, recognizing the cause of collapse in prices, advised their Government to increase the number of Argentine pesos into which that gold could be converted. That is, the Argentine price of gold was raised, or in other words, the gold content of the Argentine peso was reduced. Thus, the farmer in the Argentine continued to receive high prices in pesos for his products while the farmers in America received lower prices than the Argentine farmer because the amount of gold in the dollar had not been changed after the price was fixed at $35 an ounce. The Argentine farmer

was able to pay his debts and taxes and have high purchasing power for the things he needed while low prices bankrupted American farmers.

Every nation with prosperous agriculture, and there are many of them today, has solved its price-level problem by correcting the maladjustments in its monetary system.

Forty of the world's most important commodities, weighted according to their importance and average for seven countries, which exchanged for 100 ounces of gold in 1926 now exchange for only 43 ounces. In other words, the average value of commodities has not fallen except when measured in terms of gold.

Of course you all remember how Mrs. Kelly thought all the boys in the regiment were out of step except her son, Pat. So it was with these commodity prices—gold was out of step, not all the other commodities.

You recall how our ancestors thought the sun rose in the East, crossed the heavens and set in the West, while the earth stood still. We know now that the reverse is true, that the earth moves from west to east and makes it appear that the sun traverses the heaven.

So it is with prices. It is not the value of all commodities that rises and falls, but the rising or falling of the value of gold that creates a price illusion.

Other nations, wiser in finance than we, correctly diagnosed the situation and have lessened the amount of gold in their currencies. As a result, their depression has been cut short and agricultural prosperity has been restored almost overnight.

Don't let anyone tell you that we're paying a high price for gold in the United States. Gold flows to this country as the only commodity that foreign countries can use to buy from us those things needed in preparation for war. Gold flows to us, too, because its owners believe that here in the United States they have a safe hoarding place. Our great supply of gold in this country does not result from our high price, and much of it is not ours at all. As a matter of fact, the price of gold in May of this year was in the United States $35 an ounce, an increase of 69 percent; in Denmark it had been increased by 117 percent, or equivalent to $44.85; in New Zealand, by 118 percent, equivalent to $45.06; in Australia, 120 percent, equivalent to $45.17; in Argentina it has been increased by 209 percent, equivalent to $63.87; while in Brazil it has been increased by 275 percent, equivalent to $77.51.

The average price of gold in these countries is $55.35 against the United States' price of $35. Let me say again that the farmers of these nations, selling cotton, wheat, wool in Liverpool, get exactly the same amount of gold for their products as our farmers receive for the same products. But when they take their ounce of gold home, it is converted to 40-percent more money in their domestic currencies in which they pay taxes, debts, wages, etc.; 40 percent more in their currencies than our farmers receive in dollars.

Thus they can undersell our farmers all the time and still enjoy great prosperity.

When our farmers were plowing under cotton and wheat, the farmers in the Argentine read placards on their highways saying, "Farmers, plant more wheat. Your day of opportunity is here."

And here is another important point in this monetary question not generally understood. We have two kinds of prices, flexible and inflexible. Commodity prices—that is, the prices of products of the farm, forest, and mine—are flexible, but most prices are definitely fixed, such as interest rates, taxes, freight rates, railroad fares, telephone and telegraph, insurance premiums, gas and electric rates, most labor, and service charges. The initial cost of raw materials is generally only a small part of the price to consumers of finished goods.

Take wheat for instance. A change in the price paid the farmer does not affect the price of bread as much as one would think. The cost of taking the wheat to the railroad, to the elevator, remains the same. Insurance and storage prices remain the same. When the wheat goes to the miller, his costs for labor, for depreciation, for taxes, for interest, and insurance remain the same. The flour goes to the baker and all his costs remain the same. Then on to the store and to the distributor. Nearly all the many factors in the price of bread are fixed prices, and the raising or lowering of the price of wheat is only a very small fraction of the final cost of bread to the consumer.

So it is that when the prices of commodities are raised, there need be only a slight increase in the cost of living.

When President Roosevelt assumed office, he took one step which has been outstanding in his administration. He took us off the old gold standard, and the price of gold was raised from $20.67 an ounce to some $30 in midsummer of 1933. Later the price of gold was raised to $35, but since January 1934, for 5½ years, our price of gold has remained at that fixed figure, although the value of gold has fluctuated and other nations have raised their price of gold to match that fluctuation.

When we raised the price of gold 69 percent, the price of basic commodities, farmers' products rose 67 percent, but the cost of living at the same time rose only 3 percent.

During the first 100 days of the Roosevelt administration, we followed the program that England, the wisest monetary nation in the world, had initiated 2 years before, and which Australia and the Argentine had begun several years before and which was bringing recovery to these various countries. We had during that period a greater increase in employment, and in recovery of farm prices, than at any period in the Nation's history. In July 1933, after a short trial this policy was abandoned in favor of regimenting and similar policies. Instead of reliance on this monetary program that brought recovery to the 21 sterling bloc nations, we began to place reliance on N. R. A. and on restriction and curbing of production.

And this program has failed.

After 6 years of failure, is it not time for us to discard this ruinous policy? Is it not time for us to adopt the policies followed by other nations that are prospering? Is it not time that we got at the root of our troubles and made it possible for men to exchange goods for services and services for goods? There's nothing the matter with our system of government. We are only suffering a defect in distribution caused by a dishonest, fluctuating dollar. That is the cause of our ills.

The price level of farmers' products must be restored. If we take 1926 prices as normal at 100, the average price of 35 basic commodities today is below 70—a loss of one-third. Think of it.

What can be done about it?

Here is a great opportunity for the newspapers of Kansas to start something that may save America. We need a great educational campaign. I plead with you to begin at once the fight to restore to our farmers a normal income for their crops by the successful methods used in other countries. This monetary problem must be understood and must be solved. I find that the farmers as a rule understand it better than our bankers and businessmen. In the Northeast, especially, farmers are well posted on this question. They understand that their income depends on the value of gold, and so long as the value of gold fluctuates as it does, their income will fluctuate. How unfair it is. How unjust to our farmers and those dependent upon them is this present dishonest monetary situation.

The first move to right matters is to demand that Congress take from the President that power, as great as any Caesar ever held, to change the value of our dollar, and give that power to a monetary authority, set up under a mandate of Congress. Such an authority should be composed of men of standing and integrity, comparable to the members of the Supreme Court. They should be free from financial or political pressure and hold office for life. It should be the duty of this monetary authority to regulate from time to time the gold content of our dollar.

Since gold fluctuates violently in value, as a yardstick to measure values, it is as variable in length as an accordion. The only fair way and safe way to measure values is to take as our base the average of 35 or 40 of our basic commodities—what is known as a price index. When the value of gold gets out of line with this average, the content of the dollar could be raised or lowered by this monetary authority, and the price level of the farmer's products maintained in a stable manner. This would give us an honest dollar, honest to creditor and to debtor alike, would make it possible to control our booms and depressions, restore prosperity to the farmer and to the producer of all basic commodities. Immediately it would bring this country out of its depression.

The farmers of America compose the most powerful group in our country. If they and those who depend upon their prosperity would only organize they could compel our Government to abandon the present monetary system that has brought such great distress to the farmers and such a terrible depression on our Nation.

Why should we be following a policy different from other nations that are enjoying more prosperity? While we have been going into debt at a fantastic, alarming rate, while we have been following a policy of restriction and regulation of production on field and in factory, what have other countries done? While we have been on a spending spree since 1933, others have been following business-like programs for recovery. Consequently many of them have balanced their budgets.

The net deficit for the sterling-area group of 21 nations, with 600,000,000 of population from 1935 to 1938, was $305,000,000. Contrast this with the accumulative United States deficit of $12,292,000,000 for the same period. Our deficit is almost $12,000,000,000 greater than the combined deficit of these 21 nations with a population 5 times greater than ours.

If other countries can balance their budgets, enjoy more prosperity than we, why should America stand alone as a spendthrift nation, following a system of regulation and regimentation with an accumulated debt that can never be paid?

Everyone in this room knows as well as I that you cannot produce less and less on field and in factory and have more wealth to divide. It can't be done. You can't tax yourself into affluence, nor can you spend yourself into prosperity.

How preposterous is this present situation. Not all of you perhaps have been so close to this tragedy caused by 6 years of depression and deflation as have I.

Through my work as chairman of the National Committee to Uphold Constitutional Government, scores of letters every day—some days hundreds—come to me from all parts of the country. From these wide contacts I get appeals for aid that touch my heart. When I see fine, outstanding, capable men, eager to work, unable to find jobs; when I see how families have lost their homes and their farms; when I see the great destruction that has been caused by this depression, I am deeply moved.

In conclusion, I must say that I am gravely concerned over the present conditions, because I know if they are continued much longer our form of government and our system of free enterprise will perish.

The dictators in Europe rose to power because of intolerable economic conditions. When people are hungry and unable to take care of those dear to them; when there is no hope for the future, they will listen to any demagogue who seems to have anything to

offer. So it was that the people of Germany, Italy, and Russia sold their liberties for a loaf of bread, their birthright for a mess of pottage.

If conditions such as we are now experiencing are continued, we shall have more regulation and regimentation, more restriction in every field of activity, on our farms and in our factories, until our central Federal Government has all the powers that are now used by the dictators in Europe. Give us prosperity, restore to the farmer, the miner, the lumberman normal prices and there will be no danger in this country of nazi-ism, fascism, or communism. Give us prosperity and all these other "isms" will be displaced by Americanism.

America today stands at the crossroads. What happens in the next few months or few years, will determine what the future of this country shall be. We can't go on the way we're going, spending and spending more than our income, regulating and controlling everything and everybody from Washington. That policy has failed and will always fail. It is sure to bring disaster.

The system of constitutional government and free enterprise set up in this country by our forefathers has given this Nation greater blessings, greater development, greater prosperity than any Nation in all the world's history ever enjoyed. Our system of government which made amazing progress possible in every field of activity, must be protected and preserved.

We must soon meet the challenge of the dictator-ridden countries. Unless we can do a better job here under our form of government than is done in Italy, Russia, or Germany, then we can expect our form of government to perish. And then will disappear all those precious rights that we now enjoy—freedom of press, freedom of speech, freedom of religious worship, freedom of assembly, protection for the home—all those liberties will be lost if in desperation and ignorance and because of the slowing down of our economic system, through a faulty money system we abandon our form of government and adopt some form of dictatorship.

That must not happen here.

In America we have the richest country in all the world, a people highly educated, inventive, resourceful, vast expanse of fertile lands, production capacity to meet our needs. Here we have everything. All we need to do is to correct some of the fundamental troubles—restore normal prices—and this country will march on to new frontiers in science, in industry, and in invention, making progress such as no dreamer ever dreamed, with an abundance of everything, prosperity and happiness for all.

1921–29 a period of relatively high prices and stability; 1933–37 a period of relatively low prices and instability, despite heavily curtailed production

Wheat:
1921–29:
Average price, $1.41 per bushel.
Average crop, 820,030,000 bushels.
Average value of crop, $1,156,242,300.
1933–37:
Average price, 85.6 cents per bushel.
Average crop, 625,904,000 bushels.
Average value of crop, $535,773,824.

Corn:
1921–29:
Average price, 84 cents per bushel.
Average crop, 2,657,574,000 bushels.
Average value of crop, $2,232,462,160.
1933–37:
Average price, 69 cents per bushel.
Average crop, 2,016,744,000 bushels.
Average value of crop, $1,391,553,360.

Oats:
1921–29:
Average price, 47 cents per bushel.
Average crop, 1,286,374,000 bushels.
Average value of crop, $604,595,780.
1933–37:
Average price, 36 cents per bushel.
Average crop, 876,918,000 bushels.
Average value of crop, $315,690,480.

Cotton:
1921–29:
Average price, 21 cents per pound.
Average crop, 13,090,000 bales.
Average value of crop, $1,374,450,000.
1933–37:
Average price, 10.9 cents per pound.
Average crop, 12,589,342 bales.
Average value of crop, $687,119,139.

Copper:
1921–29:
Average price, 15 cents per pound.
Average production, 1,618,000,000 pounds.
Average value production, $242,700,000.
1933–37:
Average price, 9.3 cents per pound.
Average production, 918,000,000 pounds.
Average value production, $85,392,000.

Lead:
1921–29:
Average price, 7.1 cents per pound.
Average production, 1,612,638,720 pounds.
Average value production, $114,497,348.

1921–29 a period of relatively high prices and stability; 1933–37 a period of relatively low prices and instability, despite heavily curtailed production—Continued

Lead—Continued.
1933–37:
Average price, 4.5 cents per pound.
Average production, 795,578,560 pounds.
Average value production, $35,801,035.

Zinc:
1921–29:
Average price, 6.7 cents per pound.
Average production, 1,211,188,160 pounds.
Average value production, $82,149,606.
1933–37:
Average price, 5.8 cents per pound.
Average production, 948,205,440 pounds.
Average value production, $54,995,916.

Beef (fresh carcass):
1921–29:
Average price, 18 cents per pound.
Average production, 6,402,000,000 pounds.
Average value production, $1,152,360,000.
1933–37:
Average price, 13.4 cents per pound.
Average production, 6,708,000,000 pounds.
Average value production, $898,872,000.

Lard:
1921–29:
Average price, 13 cents per pound.
Average production, 2,332,000,000 pounds.
Average value production, $303,160,000.
1933–37:
Average price, 10 cents per pound.
Average production, 1,854,000,000 pounds.
Average value production, $185,400,000.

	Price of gold		Increase since January 1934
	January 1934	May 25, 1939	
			Percent
South Africa	$32.04	$36.38	14
Canada	33.07	35.14	7
Sweden	33.90	38.86	15
Finland	36.79	42.58	15
Denmark	39.07	44.85	14
New Zealand	39.69	45.06	14
Australia	39.69	45.47	15

United States farm income

(Data for calendar year 1938)

Gross farm income, 1938 (This includes cash income from the sale of products, Government payments, and cash value of products produced and consumed on the farm.)	$8,750,000,000
Deducting cash operating expenses, taxes, interest, and rent	$3,250,000,000
Estimated net income for farmers, 1938	$5,500,000,000
Number of persons gainfully employed in agriculture	10,472,000

If no allowance is made for the return on capital invested, and no deduction made for the labor of women and children on farms, the entire net income divided among those gainfully employed, gives $525.21 per person per year.

On a 313-working-day-per-week basis, this gives an estimated daily income per person gainfully employed, including cash value of products produced and consumed on the farm, of $1.68.

At this daily income per person gainfully employed, nothing can be set aside for depreciation on land, buildings, and equipment, nor can any deduction be made for capital return on the $50,000,000,000 of farm investment, representing one-sixth of the national wealth.

In other words, of the thirty-nine and one-half millions of gainfully employed, the 25 percent of these engaged in agriculture receive only 8.6 percent of the Nation's income.

Taking the normal annual income of farmers and producers of other basic commodities during the period from 1921 to 1929 as approximately $17,000,000,000 per year as a standard, there has been during the 9-year period from 1930 to 1938, inclusive, a deficit of $50,965,000,000 in total basic producers' income due to the drop in prices of farm and other basic commodities.

Calculated for farmers alone the deficit from standard, based on the 1921–29 average, for the period from 1930 to 1938, inclusive, is $35,500,000,000.

In other words, in this 9-year period the decrease in prices, and therefore, in the income and buying power of the farmer and basic-producer section of our population, has been greater than the United States governmental debt. Had this section of the population received average prices of the 1921–29 period, and had a tax been levied on them as great as the amount of the drop in prices, the tax on this section of the population alone would have wiped out the entire governmental debt as it stands today and would have left a surplus of about $10,000,000,000.

Comparative budget positions of the sterling-area nations and the United States

FISCAL YEAR 1934–35

Surpluses (10): Australia, Bolivia, Denmark, Finland, Great Britain, India, New Zealand, Paraguay, Portugal, South Africa.
Deficits (6): Argentina, Brazil, Colombia, Irish Free State, Siam, Straits Settlements.
Balanced (5): Egypt, Estonia, Japan, Norway, Sweden.

Combined deficit	$118,590,000
Combined surplus	76,759,000
Net deficit	41,831,000
United States net deficit	3,210,000,000

FISCAL YEAR 1935–36

Surpluses (11): Argentina, Australia, Bolivia, Finland, Great Britain, India, Irish Free State, New Zealand, Paraguay, South Africa, Straits Settlements.
Deficits (2): Brazil, Portugal.
Balanced (8): Colombia, Denmark, Egypt, Estonia, Japan, Norway, Siam, Sweden.

Combined surplus	$80,524,000
Combined deficit	43,309,346
Net surplus	37,215,654
United States net deficit	4,550,000,000

FISCAL YEAR 1936–37

Surpluses (11): Australia, Brazil, Egypt, Finland, India, New Zealand, Paraguay, Portugal, Siam, South Africa, Straits Settlements.
Deficits (2): Great Britain, Irish Free State.
Balanced (8): Argentina, Bolivia, Colombia, Denmark, Estonia, Japan, Norway, Sweden.

Combined surplus	$101,955,000
Combined deficit	36,497,000
Net surplus	65,458,000
United States net deficit	3,148,000,000

FISCAL YEAR 1937–38 [1]

Surpluses (7): Bolivia, Denmark, Finland, New Zealand, Portugal, Siam, South Africa.
Deficits (5): Australia, Brazil, Great Britain, India, Irish Free State.
Balanced (8): Argentina, Colombia, Egypt, Estonia, Japan, Norway, Paraguay, Sweden.

Combined deficit	$393,002,408
Combined surplus	26,972,113
Net deficit	366,030,295
United States net deficit	$1,384,000,000
Net deficit for sterling-area group of 21 nations with 600 millions of population from 1934–35 to 1937–38	305,187,641
Cumulative United States deficit, 1934–35 to 1937–38	12,292,000,000

[1] Data for Straits Settlements not available for this year.

American Civil Liberties

EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, July 5, 1939

ADDRESS BY HON. ELBERT D. THOMAS OF UTAH, JULY 4, 1939

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by the junior Senator from Utah, ELBERT D. THOMAS, before the National Education Association, in San Francisco, Calif., July 4, 1939, on the subject of a Teacher's Interest in the Preservation of American Civil Liberties.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is not a mere coincidence that brings me, one of the committee that for the past 3 years has carried on the civil-liberties investigations, to talk for the first time on this subject to the teachers of our country.

In my history of political philosophy I like to hold that the American Government was established primarily for the purpose of giving liberty to the world and perpetuating on earth a system of government which will allow a development of the individual citizen in the fullest in those characteristics that will make of him in every sense a free man. In spite of the fact that this is the Fourth of July, I shall attempt to be philosophical and analytical in my deductions; not emotional, as probably a speaker should be on the birthday of our Nation.

Do not think from that statement I am going to remain in the realm of cold logic. Logic is an artificiality set up to defend a given proposition. While the American Government accepts certain premises in regard to man and his nature, never once has the defense of those premises been left to the realm of logic. They are now incorporated in a scheme of government deliberately and definitely planned to accomplish certain objectives. The success and the perpetuation of these objectives as they are guaranteed in the plan rest upon a faith in the patriotism, the loyalty, the training, the ability of the American teacher, for the American Republic puts its faith in its continuation in the good judgment of a trained citizenry.

The educational development of that citizenry is left to the school, the church, and the home. The church furnishes the bond which links the citizen to things that were and things that will be, thus putting purpose into life by making it part of a greater scheme. The home deals with "oughts" and "shoulds," aiding to make each person's life not only in accord with our Nation's mores but also in accord with the morals and character of our Nation's paragons. The school teaches the "ises" and the "ares," that our citizen's life may be based upon truth, fact, and science. The citizen's training thus in a way comes from three coordinate institutions, as our Government's authority is vested in three coordinate branches. The citizen's training, like his Government's activities, functions best when the three are complementary and contribute to a unity rather than functioning in three separate grooves or in antagonistic conflict.

Since upon the teacher rests the responsibility of teaching the facts of government and the rights and obligations of a citizen, it is proper that I should come before you and talk about what those of us who have had to do with attempting to overcome certain ills within our country have in mind and the reasons why we take our tasks so seriously.

What is a civil liberty? It is a right which the state guarantees an individual. The civil liberties which are ordinarily thought of are listed in our Bill of Rights. You study them and you teach them when you study and teach our Constitution. But as a mere legal concept or an actual legal right they do not seem to amount to very much to the average American citizen, because the average American citizen has enjoyed these rights and liberties to the extent that he is unconscious of them.

The American citizen generally, as a result of these rights, is free to come and go; he is free to buy and sell; he is free to own and to dispose; he is free to think, to worship, to write as he sees fit; he is free to join or not join; to identify himself with a given organization or not, as he wishes; his loyalties are multiple, and they reflect the complex nature of his life and his being. Man, and therefore the citizen, is not just a single thing; he is many things. He is a citizen of his nation; he is a citizen of his state; he is a member of his church; he is a member of his lodge; he belongs to a political party, to half a dozen fraternities; he is an officer in a corporation or he is an owner of a business. He is a father, a son, and a brother all at the same time. If he is hampered in any one of these activities or relationships, he is not a full man in the sense that the American Government expects its citizens to be.

Can you blame the fathers, restricted as they were by economic and social bonds, by such concepts as the divine right of kings and the privileges of an aristocratic class, for having little faith in the perpetuation of a political and social system which would allow such diversities of activities and which would scarcely provide for any limitations of grade? We find no eloquent defense put forth by any of the thinkers of the time for democracy as such. Jefferson comes closer than anyone else. He had faith that his four great freedoms—the freedom of property, the freedom of mind, the freedom of soul, and the freedom of body—would not produce complete anarchy because of individual restraint, and because he accepted the fundamental thesis that the nature of man was good.

The marvel of history is that our experiment has worked as well as it has. So well has it worked that we can say tonight that the theories on which our American system rests have contributed to the welfare of human beings the world over and have resulted in an enlargement of the standard of life for millions, and the enlargement of life itself to millions more. Can so much rest upon so little? I repeat the thought that it is so remarkable that it must be viewed as the outstanding miracle of social evolution. I say, take away from the American Government the civil liberties guaranteed its citizens and we destroy the greatest

blessings ever given to men in the history of all time. Can any task be more important to a congressional committee than that of preserving the essence of American liberty?

What is American liberty? In the Old Testament we find the word "liberty." It was known to the ancient Hebrews; in fact, the quotation engraved upon our Liberty Bell was taken from the Bible: "* * * and proclaim liberty throughout all the land unto all the inhabitants thereof" (Leviticus 25: 10). But liberty never was created under any system of government built upon theories of the Old Testament. I may go further and say that liberty never could be understood until the value of the individual had been made plain. Jesus' outstanding contribution to man and to man's welfare was that He not only discovered the individual but He taught the worth of a consideration of his welfare. Throughout the civilizations of eastern peoples who had had the thinking and the philosophy which underlie the scheme of the great oriental social democracies, liberty was sought, to an extent it was enjoyed, but it was never understood or made a political concept. Dr. Williams, in his Middle Kingdom, makes the statement that there is no such word in the whole Chinese language as "liberty." I disagree with Dr. Williams on that point, yet I emphasize it to stress the fact that liberty under our Constitution has a definite American meaning.

In the old oriental philosophies the value of the individual in the sense that he had rights was never conceived. He had a hankering for a life without restraint, and one of the poets gave us this great gem of freedom hundreds and hundreds of years ago:

"Work, work, from the rising sun
Till sunset comes and the day is done.
Oh, plough the sod,
And harrow the clod,
And meat and drink both come to me.
Ah! what care I for the powers that be."

But no one saw the point that the poet made, a free soul, but always interpreted the poem to reflect the husbandman's position as a slave to his work.

Of course, actually, regardless of any philosophy or of any theory, man, being a human individual, can have no liberty if his actions are prescribed by ill health, a broken body, by poverty, or by any other physical or economic hindrance. The right to buy and sell is worth nothing if there is nothing to sell and nothing to buy with. Freedom to go and come means nothing if you have no place to go; and as this is an educational meeting I cannot refrain at this point from getting in a little moral: "He that would bring home the wealth of the Indies must carry the wealth of the Indies with him." Why, of course, liberty is a matter of degree, and will ever be. Government must, therefore, see that there are physical, cultural, educational, and economic opportunities for its citizens if they are to have joy in their freedom.

But let us consider the concept of liberty as we use it under our Constitution. What is it? In a sense it is all those rights, all those privileges, all those advantages, all those hopes, all those freedoms, all those aspirations, longings, and relationships that government has determined by law to preserve to the individual. If government denies the individual the right to assemble with his fellows, if government fails in protecting his property, if government insists that he subscribe to a certain political or religious tenet, that individual is curbed in his life. He is not the well-rounded out, complex, social animal that Aristotle thought him to be, to say nothing of what I have called the Jeffersonian concept of man whose nature is good.

Here we may ask, Dare we accept the consequences of the theory of liberty as it exists in the American democracy? Once money is invented and used with liberty, as the ancients did in Lydia where money was first used generally (now children, slaves, and even our women can buy), we have the troubles that follow in the wake of the use of money. Sad as that fact is, we must be reconciled to the fact that we can have no political democracy without economic democracy and we can have no economic democracy without money. If we are going to accept the theory of the freedom of the individual we must accept the consequences of that freedom. If man is to be free to own, he must be free to own even an automobile. Grant him an auto and the freedom to go and come, and there, of course, may be dire consequences. But with a little knowledge of the physical fact that two bodies cannot occupy the same space at the same time, much of the danger is gone.

There are three great consequences of democracy: (1) Democracy is weak; it hangs on the thin thread of common consent; (2) the government in a democracy will always be against itself; (3) in a democracy where liberty is its aim the individual citizen will seldom have his own way; and (4) putting our finger on the ultimate authority in the American democracy is indeed a hard task. Our preamble to our Constitution starts with the words: "We, the people," and our textbooks tell us we have popular sovereignty in America, and our great Chief Justice at the one hundred and fiftieth birthday of our Congress said: "And what the people really want, they generally get." But 130,000,000 people getting what each wants is an absurdity.

I repeat, dare we risk the consequences of our four freedoms? Will not some man teach a doctrine that may actually destroy this liberty if we allow freedom of teaching? He may.

One day while Jefferson was playing with his grandchildren in the White House a visitor called on him, found him on the floor, his grandchildren riding on his back. That did not astonish the visitor, for all great men enjoy playing with their grandchildren. But on the table were pamphlets bearing untruths, pamphlets which attacked Jefferson unmercifully. Then was the visitor surprised, and he asked Jefferson, "Do you allow these terrible things to come into your house?" Jefferson said, "Yes! I not only allow them to come, but I read them when they do come."

He stood with Voltaire when that great philosopher said: "I wholly disapprove of what you say, but I will defend to the death your right to say it." He stood, too, with the Father of his Country, George Washington, who declared that "in proportion as a structure of a government gives force to public opinion it is essential that public opinion should be enlightened." And he trusted, as we do, that enlightenment will prevail. He was not afraid of the consequences of freedom of speech and freedom of the press among a people that had been properly taught. The American system of trial and error and freedom of expression will prove itself to make a very much more stable society in the long run than a system where only those things are taught which the teachers have assumed are for the good of those taught. You cannot preserve a democracy, you cannot preserve freedom of speech, freedom of worship, freedom of the press, freedom of the person by force because the instrument of preservation there actually becomes the instrument of destruction. While the consequences of political liberty and freedom carry with them the elements of their own destruction they cannot be preserved by being denied. Freedom and liberty constantly face the moral of Aesop's greatest teaching: An eagle in flight was shot down. Gasping, he turned to see what was the cause of his destruction, and lo, the arrow which had pierced him had been guided in its flight by eagle feathers. As the eagle breathed his last he moaned, "Alas, there is in each of us the element which will bring our own destruction."

But if there are in freedom and liberty the elements which will destroy both freedom and liberty, there are also in them the elements of their own perpetuation. That man can commit suicide does not mean that all men do commit suicide. Here again we must respect degree or I shall find myself a victim of my own deductions.

I know that some of you are asking, But why should the Civil Liberties Committee spend so much time on a study of industrial and labor abuses? It is, of course, true that a study of society anywhere results in the study of all sorts of abuses; but something was occurring in our American industrial life which had all of the seeds of the destruction of American fundamental rights.

In the first place, the Federal Government passed a given law. That law was challenged as being unconstitutional by great lawyers. That is one of the people's rights, to challenge an act of government. We had no criticism of the fact that men wanted to test this law in the courts, but certain of these lawyers actually advised their clients that the clients need not obey the law, because the lawyers deemed the law unconstitutional. The lawyers thereby in a sense took over a prerogative which we have recognized as belonging to the Supreme Court of the United States. Even that would not have been particularly bad under the American legal process, but some industrialists attempted to overcome what they considered was a natural resultant of the law by attempting to destroy certain rights in individuals that were part of their rights as citizens. The industrial spy was employed; was used to such an extent that men lost faith in one another. If I hire a spy to spy on you, pretty soon there comes to me the thought that I need another spy to spy on the spy; and trust leaves us, and we have no faith in one another. Society itself cannot exist without trust. No social or economic activity is possible. Fear takes the place of faith in the ordinary activities of men. Do we not see that such an order of things persisting in our industrial life has in it the elements of the destruction of the very best features in our industrial life? The spy was employed to cure what was thought to be an evil, but we cannot introduce into society an evil to destroy an evil without risking the consequence of having that evil turn on us and bring our own destruction.

When public police officers were hired, as they were, to do a given job for one part of the public against another part they ceased to be public officers and became representatives not of the public, which is the arbiter for the disputing parts in the body politic, but actually partisans of one side. When arms and gas were used, as they were, for industrial purposes, we had the elements of a civil war. When spy hookers and missionaries were used to create disturbances, their employers turned loose upon society the seeds of riot and civil disturbance. Thus it was not in any vindictive spirit to punish or to crush that these investigations were carried on. In spite of the criticism we have received, our purposes were not to punish, but to correct. And as time goes on corrected industry will be just as happy over the reforms as society itself will be.

I am happy to be able to report that the result of our investigations into wrongdoing is constructive legislation. I firmly believe that civil rights cannot be maintained in our Nation unless those who have the power to destroy one of those rights in a citizen shall desist and restrain themselves from destroying it. While I know that we have created a feeling on the part of thousands and thousands of American citizens that our Congress is interested in preserving the rights of the weak, the downtrodden, and the oppressed, the satisfaction which I as a legislator received from these years of hard work is the satisfaction of knowing that as a result of that work there is presented to the Congress of the United States, and therefore for the benefit of the people of the United States, constructive legislation which will, I firmly believe, prevent a repetition of some of the abuses, some of the killings, and some of the sufferings, but mainly the stifling of the personal liberties of many of our people in the past.

If on the shoulders of the teachers of our land rests the responsibility of preserving our Republic, as teachers, will you not grant to Senator LA FOLLETTE and our associates and myself after you have examined our 34 volumes of research and investigation, the compliment which all students like to receive. "That which you have done you have done after painstaking research of the highest order." I will say of the work of my associates what many a scholar who has studied this work has already said the reports preserve the best characteristics of American scholarship.

Can I not say, as one teacher to another at least here in the bosom of the family, that this investigation, its reports, and the projected legislation reflect the methods which scholars call good? The scientific method calls for action and deduction only after investigation. This method we have followed. May good result from our studies.

The President's Monetary Bill

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 5, 1939

EDITORIAL FROM WASHINGTON DAILY NEWS

Mr. LEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very good editorial on the monetary bill published in today's Washington Daily News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News]

The other issue is the President's monetary bill. The House has already approved it. The Senate will vote on it at 5 o'clock this afternoon.

Strangely enough, the self-proclaimed conservatives are the ones who are leading the fight to defeat this bill. They are loud in their denunciations of "money tinkering." But the defeat of this bill, which they so earnestly seek, in our opinion, would be money tinkering of the most radical nature, and at a most inopportune time.

It would wipe out a mechanism which for more than 5 years has maintained the dollar at a fixed gold content, has put a stop to the competitive devaluation of rival currencies, and has helped to establish and to maintain a high degree of stability among the world's principal monetary units.

By possessing the power to take another 9-cent bite out of the gold content of the dollar, though not exercising it, and by possessing also control over a $2,000,000,000 stabilization fund, the President and the Secretary of the Treasury were able to bring the Governments of Great Britain and France into a monetary agreement which since has kept the value of the dollar, the pound, and the franc on a relatively even keel. This three-power stabilization also has provided an anchor for the currencies of Switzerland, Belgium, the Netherlands, and other smaller democracies.

Defeat of the President's monetary bill would greatly restrict our Government's power to enforce and uphold its share of the agreement. That, in our opinion, would not be conservatism, but monetary radicalism of the worst sort.

What the consequences would be we do not know. But we cannot forget the chaos which prevailed in the world's money markets before the stabilizing agreement was adopted.

Monetary Powers of the President

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, July 5, 1939

ARTICLE BY HERBERT M. BRATTER

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the RECORD an article on the monetary powers of the President, written by Herbert M. Bratter and published in the Washington Sunday Star of July 2, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Sunday Star of July 2, 1939]

MONETARY POWERS OF THE PRESIDENT

(By Herbert M. Bratter)

The turmoil over the monetary bill, which came to a climax at midnight, Friday, was precipitated by the Senate's action 5 days earlier, although the makings of the filibuster had been brewing a long time. Today there is no powerful stabilization fund.

Its $2,000,000,000, plus profit, has been put back in the Treasury's general melting pot; also, the President does not have the power, given him in 1933, to change the amount of gold in the dollar. All this the Senate has done.

But the Senate's long night session has not changed two other important powers—the Treasury's broad authority to buy or sell gold at any price it chooses and the extensive power to buy domestic and foreign silver under the Purchase Act of 1934. Passage of that act, paradoxically, was resisted by the New Deal in 1934 when Congress wanted it, and yet its repeal the administration resists now when Congress favors it.

A further result of the silver stalemate is that, without new action by Congress, domestic-mined silver is legally at the mercy of a Treasury Secretary who is "opposed to all subsidies."

Meanwhile, officially, the Senate still stands on its action of June 26, when it performed plastic surgery on the House-approved administration bill.

LAWS CONFUSE PUBLIC

Whereas domestic silver has been acquired under the Thomas amendment since 1933, foreign silver has been bought under the separate 1934 law, a much broader and permanent statute. The existence of two silver laws has been enough to confuse the public. The vague terms of both laws have confounded it still more.

Consider the 1934 act. Under it the Treasury was told it must acquire one and one-third billion ounces of silver. To date it has actually acquired about 2,000,000,000 ounces. Yet, according to the same law there still remained to be bought over 1,000,000,000 ounces. "Mathematically impossible," you may say. Yet it is true.

We have bought silver hand over fist, at home and abroad, from friend and foe alike. We have scattered hundreds of millions of wealth to the four winds.

We have bought domestic silver at one price, foreign at another. We have bought from governments, from miners, from speculators. No one knows why. Even some Senators who voted for the law in 1934 now frankly ask, "Why did we do it?"

The secret is that we have seven States that produce almost all our silver. Seven States control one-seventh of the Senate.

So we started a silver policy. From one standpoint, the policy was really not so complicated. It may be restated as: "Buy silver. Buy, buy, buy; at home, abroad, everywhere. Boost the price, issue certificates; enrich the outside world. Proclaim the monetization of silver to cover up a shameless hold-up of the Nation for the benefit of a few western silver producers, of mining-share owners in the East as well as the West, and of the speculators who unloaded on Uncle Sam. And, incidentally, confer benefits on foreigners in China and Canada, Italy, Japan, and Mexico."

By official figures of the Bureau of Mines the silver program has already cost us over $90 for every $1 of subsidy received by American mining companies.

AIDS THE WARLIKE

Under the curious silver program, the United States actually helped Italy finance its conquest of Ethiopia. It has helped Japan invade China. It has helped Hitler. While Mexico has seized American-owned lands and oil properties, raised its import duties on American goods, and in other irritating ways has done anything but reciprocate this Nation's good-neighbor policy, the United States has steadily bought millions of ounces of Mexican silver monthly.

Under the 1934 silver law and present policy, should Herr Hitler nationalize and sell silver, our silver program is there to help him do it, the while our State Department seeks ways to stop him with economic pressure.

How neatly our silver program has dovetailed into Hitler's plans may be seen by the figures. During the 6 years prior to 1934, when our act was passed, Germany withdrew from monetary use less than 7,000,000 ounces of silver. During the 4 years 1934–37, while we supported the world price of silver, the German Government withdrew and demonetized 108,000,000,000 ounces.

Under the 1934 law there is simply no way of telling how much silver still must be purchased. In it the amount of silver required by its terms is linked to the gold stock, which has greatly increased, due in important measure to the devaluation of the gold dollar.

PROMISES ELUSIVE

The twofold domestic and foreign silver policy could never achieve a single promise of its advocates. Yet after 5 years of costly experiment the President publicly claimed it as one of the pillars of his recovery program. And in the Senate and the lobbies of Congress New Deal spokesmen still defend it. They want us to keep on buying Chinese silver from Japan to keep the Nazis out of Mexico.

Naturally Mexico seeks to put the worst possible face on the cessation of our silver purchases. We hear rumors of more confiscation of American properties. Mexico would like to stay on our silver dole forever. Mexico propagandized here to get us to establish that dole. The question is, Shall we let ourselves be blackmailed into continuing a foolish law which is a demonstrated failure?

More than four-fifths of the silver thus far acquired at a cost of over a billion dollars has come from foreigners, to their immense profit. Foreigners made additional profits on the silver accumulated in this country for speculative purposes during the silver campaign and nationalized in 1934. In the list of silver hoarders published by the Government in 1934 appear not only the names of domestic speculators but also those of beneficiaries in China, British India, Great Britain, Mexico, Egypt, France, and elsewhere abroad.

CHASING A RAINBOW

Our program, moreover, conferred a tremendous boon on the incredulous London silver market, while our Government took special measures to reduce trading in New York. Foreign brokers, trucking companies, steamship lines, and speculators have reaped rich returns. Thousands of tons of silver have been sold here since 1933. We have poured out our wealth, week after week, in exchange for the metal nobody wants. Yet the goal of the Silver Purchase Act has remained as remote as ever.

The Silver Purchase Act has completely failed in all its promised aims—except to line the pockets of a few. It was supposed to increase the monetary use of silver abroad. It did the opposite. It was intended to prevent silver's further demonetization. Instead, it encouraged it. It looked to the substitution of silver for small-denomination money. The reverse occurred.

Due to our program, the silver standard no longer exists, not even in China.

Before the inexcusable program was undertaken, the country was warned of its fallacies. This story of failure is nothing new.

In 1878 Congress passed a silver-purchase law, the Bland Act. Large deposits of silver had been discovered in the West. The Mountain States then sought restoration of bimetallism. They wanted the Treasury to buy all their silver at a high, fixed price. The Bland Act was a compromise. For a dozen years the Treasury bought silver. Yet, Historians Muzzey and Krout tell us, the act "accomplished none of the results that its supporters prophesied."

AGAIN IN 1890

Then came the Sherman silver law of 1890. More promises were made. Silver purchases were increased. The purchases were in vain. They weakened confidence in the dollar. By 1893 Cleveland had to call a special summer session of Congress to repeal the disastrous law.

There was a prolonged filibuster and no air conditioning. Senator John P. Jones made a 14-day speech, covering 100 pages in the CONGRESSIONAL RECORD. But the act was repealed.

The 1896 campaign centered on bimetallism. Silver was beaten. His "cross of gold" speech failed to elect Bryan President—but eventually it made him Secretary of State.

During the World War the India Government needed some silver. Britain came to us. Our Treasury held tons of Bland Act and Sherman Act coin. Only a very small fraction of it had gone into circulation.

We could easily spare what India needed. So we sold about 200,000,000 ounces under the especially passed Pittman Act. But there was a catch. The Treasury had to buy back that silver from American miners at a dollar an ounce. And nearly all the while it was done other silver was selling for less than 70 cents an ounce.

The silver bloc is always watchful of opportunities. No crisis is too severe to prevent it from eking out a subsidy in exchange for its patriotic votes. The depression of the 1930's was its next chance.

PROPAGANDA OF 1930

In 1930 the silver interests argued that there was a shortage of gold. They annexed the support of greenbackers, who wanted just more currency. They solicited export interests with the appeal that their foreign markets would expand if by buying foreign silver we would "build up the purchasing power" of half the world, three-quarters of the world, indeed, seven-eighths of the world, "whose only money is silver." No assertion was too fantastic.

Until the 1932 campaign the Hoover administration resisted the demands of the silver interests. But, as Raymond Moley has now revealed, the New Deal gave significant place to bimetallism on its campaign agenda.

In connection with preparations for the London Economic Conference of 1933, the Roosevelt administration gave the silver cause prestige and momentum. The conference refused to do anything for silver except pass a pious resolution. But, outside the conference, Senator PITTMAN committed the United States to the London silver agreement. Under it seven interested countries gave nominal support to PITTMAN'S effort to provide a Treasury market for silver.

Earlier in 1933 Congress had passed the Thomas amendment, giving the President broad powers over silver, including the temporary power to establish bimetallism. Citing this power, the President in December proclaimed the purchase of all silver to be mined here during 1934–37. This constituted our "ratification" of the agreement Senator PITTMAN had signed. The agreement was never submitted to the Senate for ratification.

The President's proclamation of December 21, 1933, went far beyond the obligations to which Senator PITTMAN had energetically committed the United States. The President took not merely the 23,000,000 ounces per annum promised, but all the silver our mines could turn out. This was a considerably larger quantity, because the President gave them a price of 64½ cents, or 50 percent above the then market price, and later increased it to 77½ cents an ounce, which stimulated production.

This "taste of blood" was too much. In 1934 a much larger silver program was enacted. Ever since Uncle Sam has been paying the piper.

The Neutrality Problem and Foreign Entanglements

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 30, 1939

Mr. PITTENGER. Mr. Speaker, for 3 days the House has debated one of the most important legislative matters that has come before it at this session. I refer to the so-called neutrality bill of the Congressman from New York, SOL BLOOM. Throughout this session the subject has been emphasized from time to time, and the committee hearings and the debates on the floor of the House indicate that you can find support for almost any position you wish to take on this subject.

PRESENT NEUTRALITY LAW

The existing Neutrality Act provides that when war exists among foreign nations the President shall so proclaim and an embargo shall be placed upon the exportation to such countries of arms, ammunition, or implements of war.

THE BLOOM BILL

The pending proposed Neutrality Act of 1939—the Bloom bill—has for its main purpose the repeal of the mandatory embargo provisions of the existing law. It permits the President to name aggressor nations and place an embargo against them. Such a policy, in my opinion, is not neutrality, but very definitely would put the United States in the position of "choosing sides" in a foreign war. Such an act would be unneutral and would involve this country in such a conflict.

LESSONS OF THE WORLD WAR

On June 28, 1919, the Treaty of Versailles was signed. That was 20 years ago. That war was fought to a successful ending, which would not have been possible without the men and resources furnished by the United States.

It was "a war to end wars," and we still remember that it was fought "to make the world safe for democracy." The Treaty of Versailles was hailed as a document that would make all good things come true. Now, after 20 years, there are more warlike preparations in the Old World than ever before. The war and the treaty settled nothing. Events since then have demonstrated that this country would do well to refrain from participation in a foreign conflict with American soldiers to fight the war in which the European viewpoint is one that has to do almost entirely with what the victor can acquire in the way of new territory taken from the conquered nation, or additional prestige and power that it can attain over the adversary.

THE PEOPLE OF AMERICA WANT PEACE

In the district which I am privileged to represent, the almost unanimous sentiment is for peace. One constituent in discussing neutrality legislation says that it appears to him that efforts are being made to draw this country into a war which would, in all probability, take our boys beyond American frontiers again. He protests such a policy unless and until American public opinion clearly sanctions the move or the electorate declares in its favor by popular vote. Another writes me that he feels that our Government should profit by our past experiences with foreign governments and stay out of foreign entanglements as much as possible.

WASHINGTON'S FAREWELL ADDRESS

There is no document that has more wisdom and guidance than this address of George Washington of September 17, 1796. It is interesting to note his attitude toward foreign entanglements.

I quote a few declarations by him on this subject to show how worth while it is to read and reread his immortal address.

He says:

Observe good faith and justice toward all nations; cultivate peace and harmony with all.

* * * * * * *

In the execution of such a plan, nothing is more essential than that permanent, inveterate antipathies against particular nations and passionate attachments for others should be excluded.

* * * * * * *

Against the insidious wiles of foreign influence (I conjure you to believe me, fellow citizens) the jealousy of a free people ought to be constantly awake.

After pointing out that the problems of the Old World and of the New World are different, and can never be the same, he says:

Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?

IN CONCLUSION

The judgment and advice of Washington to the people of his day is applicable to present-day problems. He discusses fundamentals which do not change. The United States should keep out of foreign controversies and foreign wars. It should attend to its own business. It will then be at peace with the rest of the world. This is the only safe highway. True neutrality requires that we travel it.

Under these circumstances, I am against the Sol Bloom bill.

Some suggest that at a future date foreign nations may engage in wars, and that such wars might endanger the safety of the United States or the safety of nations and governments with which we might have common cause or sameness of purpose. If such a situation develops, it can be met when it comes. That is the responsibility of Congress. The Constitution of the United States says,

The Congress shall have power * * * to declare war * * *.

That power will be exercised against any foreign government which seeks to carry out a policy that adversely affects our people or our country.

Fundamental Principles of Constitutional Money

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

RADIO COLLOQUY BETWEEN HON. CHARLES G. BINDERUP AND MRS. ETTA M. RUSSELL

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herein an illuminating radio colloquy between Hon. Charles G. Binderup, former Member of Congress from the State of Nebraska, and Mrs. Etta M. Russell, author and instructor, of Decatur, Ill. Mr. Binderup is recognized as one of America's leading authorities on the subject of money and credit. He has taken a leading part in developing sentiment designed to support legislation for the purpose of bringing our money legislation and handling of finance up to date. Whatever Mr. Binderup has to say is always thought-provoking and challenging and worthy of careful attention. Mrs. Etta Russell has written a monumental work upon the basic functions of money and has distinguished herself in research and scholarship in this connection. The radio discussion is as follows:

ANNOUNCER. We now present a special program, Fundamental Principles of Constitutional Money. High-school and college students this year for the first time will have at their disposal a new textbook on the basic functions of money. This book, the first of its kind ever written, is the work of Mrs. Etta M. Russell, author and instructor, of Decatur, Ill., whose text is based on the true Jeffersonian principles of constitutional money. Mrs. Russell will be interviewed by Mr. Charles G. Binderup, former United States Congressman from the State of Nebraska. Mr. Binderup.

Mr. BINDERUP. In behalf of the Constitutional Money League of America we extend greetings to our vast radio audience scattered over the greatest Nation in the world. This morning it is my pleasure to introduce our distinguished guest speaker, Mrs. Etta M. Russell, of Decatur, Ill., who for more than a quarter of a century served as a teacher, principal, and superintendent of schools. She is typical of that great group of women who have given the best years of their lives to a great public service. It was in the course of her duties as an instructor that she learned of the false monetary teaching which in some manner had been injected into our textbooks in the public schools, which she says accounts for the lack of understanding of that most vital question, our monetary system. Mrs. Etta M. Russell is author of the first textbook for schools ever written teaching the true Jeffersonian principles of money. I know you will all be pleased to hear a brief discussion on this very new plan of a text for schools on monetary education. Mrs. Russell.

Mrs. RUSSELL. Since public education is the foundation of a democracy, the general public must understand the basic principles of all important factors in our economic life. Money and banking is by general admission the least understood of all such factors. A textbook should make clear the basic principles of money, how it operates, and its great importance in our daily lives.

Mr. BINDERUP. Mrs. Russell, how did you become so interested in the subject of constitutional money?

Mrs. RUSSELL. My study of history shows that when man progressed from the age of barter to a monetary age, money, the one means of exchanging goods, became our greatest public utility. Naturally I saw that in a democracy based upon an intelligent public, everyone should understand the nature and function of so essential a factor in every life.

Mr. BINDERUP. And how did you discover that among the members of your own profession so many did not understand this subject of money?

Mrs. RUSSELL. In a recent canvass I visited each of the 102 counties in my own State of Illinois, visiting schools and institutions of learning. I discussed the great need for a widespread program of education on this subject. In the great majority of cases school superintendents and educational leaders admitted that they did not understand the subject, and, Mr. Binderup, you know we had the same experience with Members of Congress, many of whom so frankly admitted their lack of knowledge on this subject during our recent interviews with them.

Mr. BINDERUP. Yes; that is true, and so, Mrs. Russell, all these contacts have convinced you that education on this most vital question should be taught in schools before the minds of youth have become warped by the poisonous propaganda of the international bankers.

Mrs. RUSSELL. Yes; I soon realized that obscure ideas and even false notions planted in the minds of our youth were the basic cause for the present lack of understanding of so simple and yet so important a factor in our economy.

Mr. BINDERUP. Hasn't this proved that the many conferences—State, National, and international—by groups of financial leaders have not been effective in providing an understanding of our economic problem? And haven't all the efforts of the past proved that it is time for the people to have a monetary conference in the little red schoolhouses, where the spirit of democracy and patriotism was originally born, and where it still abides?

Mrs. RUSSELL. It certainly has shown that money properly explained must be simply taught in every school in America. The simple elements of money must be clearly understood by the masses of our people.

Mr. BINDERUP. When wrong ideas are absorbed in our early years, isn't it more difficult to change them in later life?

Mrs. RUSSELL. Without doubt as we grow older personal and selfish interests are more likely to obscure our reasoning on many questions.

Mr. BINDERUP. Mrs. Russell, can you tell me the causes of business panics or depressions?

Mrs. RUSSELL. I have found that explanations of so-called business cycles in orthodox texts, still in use, did not satisfactorily explain them. The scientific method of ascertaining the cause of any malady is by a process of elimination until but one common factor is always present.

Mr. BINDERUP. And you found that in times of depression a scarcity of money was a factor common to all of them?

Mrs. RUSSELL. Without question, the element of money was the only factor of importance which had disappeared. After, in every panic, it was obvious that nothing of real value or wealth had disappeared. We were experiencing a period of unprecedented prosperity when, without any natural calamity to destroy our national resources or equipment, business stopped and the plague of unemployment was upon us.

Mr. BINDERUP. Isn't it strange that the factor of money was not long since suspected of being the chief cause of panics or depressions?

Mrs. RUSSELL. Not so strange when we realize that money and banking is the one important factor in our modern economy which is the least understood, not only by the general public but by students, teachers, and men of letters as well.

Mr. BINDERUP. But why is it that so many people know so little about so important a factor as money?

Mrs. RUSSELL. Such a condition proves that for succeeding generations we have been teaching theories for facts. Also that texts commonly used do not give a simple explanation of the true nature and function of money and how it operates in our modern economy.

Mr. BINDERUP. How do teachers account for the amazing inconsistencies, now so obvious, such as poverty in a land of great potential abundance?

Mrs. RUSSELL. They do not satisfactorily explain it, not even to themselves. How can they see that money, or lack of purchasing power, is the missing factor when most of them do not understand what we are using for money?

Mr. BINDERUP. When you say they do not understand what we are using for money, are you referring to the use of credit for the greater portion of our medium of exchange?

Mrs. RUSSELL. Exactly that. The average person still thinks of money in terms of paper notes and coins.

Mr. BINDERUP. And when were you convinced that money or lack of purchasing power was the root of our economic troubles?

Mrs. RUSSELL. When I saw want in the midst of plenty, people starving in a land of abundance, food destroyed. While bread lines and relief rolls increased, all this convinced me long since that ours was a problem of distribution; a lack of purchasing power. And my conviction was strengthened by the testimony of Governor Eccles, of the Federal Reserve System, and that of the Honorable Robert L. Owen before the Banking and Currency Committee of the House of Representatives on the 1935 Bank Act.

Mr. BINDERUP. To what testimony are you now referring, Mrs. Russell?

Mrs. RUSSELL. To their testimony concerning bank credit when Mr. Eccles said, "Bank credit is money and makes up the major portion of our money supply." Now it is estimated to be 95 to 98 percent of our total circulating medium.

Mr. BINDERUP. You also mentioned the testimony of Senator Owen, which is interesting to me, as I discovered on my recent European trip that in Europe Senator Owen is considered an international authority on the question of money.

Mrs. RUSSELL. Yes; the simple and forceful explanation by Senator Owen of how banks and their borrowers create bank-credit money by making loans, and destroy it when loans are called and credit is contracted.

Mr. BINDERUP. Do teachers generally understand this particular phase of our monetary system?

Mrs. RUSSELL. On the contrary, from their own admissions they do not. Like the average person they, too, think of paper and coins as comprising our supply of money. This is the reason that the general public cannot see how banks create and control our money supply.

Mr. BINDERUP. But just what convinced you that the disappearance of our money was that common element which caused depressions?

Mrs. RUSSELL. Bank-credit money was the only important element which disappeared according to our records. The lack of money or purchasing power was soon conceded by all our leaders to be the missing element. When the present administration created its lending agencies to emit more money into the money stream the one great objective of all of them was to increase purchasing power.

Mr. BINDERUP. Do you think these activities made the people money-conscious?

Mrs. RUSSELL. Without doubt, more people are now thinking about money and studying it than at any previous time.

Mr. BINDERUP. Isn't it a fact that teachers as well as others are asking for a textbook which will clarify their thinking on the subject?

Mrs. RUSSELL. Many superintendents of schools have told me that such a book is most essential. The fact that so many do not understand our monetary system proves that texts now in use have failed to give a clear picture of the nature and function of money and how it operates in our modern economy.

Mr. BINDERUP. Just what do you consider the basic elements of such a book?

Mrs. RUSSELL. We must first make it clear that money is not wealth, but merely a receipt for wealth. It represents goods or services surrendered and then becomes a demand claim check upon society for other goods to replace those given up.

Mr. BINDERUP. Do you mean people must be taught that fundamentally money is only a ticket or a claim check for goods?

Mrs. RUSSELL. Quite right. Money need not and should not have intrinsic value. The material of which money is made is not important. Its important characteristic is acceptability. Money is redeemed every time it is accepted in payment for goods or services. The widespread use of scrip proved this point.

Mr. BINDERUP. But isn't it strange that for so long a time the people have not seen that printing bonds creates no additional wealth to secure our money?

Mrs. RUSSELL. Yes; it is strange, for in practice we create a debt based on our wealth and then the bankers create our money based on this, our debt. Who can explain why we should not base money directly on our wealth and thereby eliminate the debt.

Mr. BINDERUP. Wasn't it Thomas A. Edison who said, "Any government that can issue a good, interest-bearing bond can issue an equally good non-interest-bearing note"? The same element that makes the bond good makes the note good.

Mrs. RUSSELL. Yes, indeed, and it is quite evident that Edison acquired his information about money from his association with the late Arthur Kitson, of England, the first great pioneer in monetary reform. As an inventor, Mr. Kitson worked with Edison on electric lighting.

Mr. BINDERUP. Then you believe that private control and regulation of money prevents full employment of equipment and labor?

Mrs. RUSSELL. Mr. Binderup, in your congressional breakfast talks over this station WOL you illustrate the results of private control. Your history of the crime of May 18, 1920, shows so plainly the far-reaching and disastrous results of the private control of credit as exercised at that time. Here it seems to me was laid the foundation for our present farm problem and the present need for subsidies to farmers.

Mr. BINDERUP. But you do believe these subsidies and other Government spending was a necessary expedient for temporary relief?

Mrs. RUSSELL. Certainly. After $20,000,000,000 of our bank credit money supply, as confirmed by Governor Eccles, was destroyed by banks calling loans and refusing new ones, this money had to be restored to circulation before recovery could be possible. But the issuance of this money followed the traditional method. The Government issued bonds or debts to the banks in return for the banks' credit on which the United States Government could check. This means that all the money so issued must be recalled, with interest, from circulation by taxation to pay these bonds.

Mr. BINDERUP. Didn't Governor Eccles say in some of his testimony that bonds were not necessary to back our money?

Mrs. RUSSELL. In his testimony on the 1935 Bank Act, he said, "We finally recognized that we did not have to have gold to back our money, and we didn't have to have bonds or eligible paper but could take any sound asset into the bank and issue Federal Reserve notes on it."

Mr. BINDERUP. But if Congress should advocate the issuance of United States notes instead of bonds it would be condemned as inflation.

Mrs. RUSSELL. That has been the method in the past for continuing bank control and discrediting Government control of our money. But now Governor Eccles has defined inflation so splendidly. Don't you think that should help overcome this bogey of inflation?

Mr. BINDERUP. Just what was his recent definition of inflation?

Mrs. RUSSELL. In his testimony on the silver question in April he said in substance that inflation would result only when the supply of money in the hands of those who spend exceeded our capacity to produce. Of course, no one believes we are producing at capacity with 11,000,000 people still unemployed.

Mr. BINDERUP. Do you think we as a nation could consume the products of industry with full employment?

Mrs. RUSSELL. With one-third of our population ill-fed, ill-clothed, and ill-housed, who can doubt that if they had the purchasing power, surpluses would vanish? Some even estimate that there would be a shortage of labor to supply the demand for goods, if all were living on a satisfactory American standard possible at this time.

Mr. BINDERUP. Then you think our program of cutting down production is basically wrong?

Mrs. RUSSELL. Thinking people can see no logic in an economy of scarcity when an economy of abundance is in sight for all. I believe with Senator Owen that when we release the forces of production by supplying an adequate purchasing power instead of cutting down production to fit our money supply, we shall have such an era of prosperity in this country as we could never envision under our debt-money system.

Mr. BINDERUP. Then, Mrs. Russell, you believe that in order to solve this economic problem we must educate our young people so that they understand the important function of money?

Mrs. RUSSELL. When we read the statements and wise counsel of such men as Franklin, Jefferson, Jackson, Lincoln, Garfield, and Bryan on the subject of money and credit, and then realize how little we have profited from their wise counsel, doesn't it prove that instead of writings which few ever read, we need a simple textbook which every citizen in his youth will study and understand? Jefferson warned us against private bank control of money in that immortal prophecy of his when he said, "If the American people ever allow private banks to control the issue of their money, first by inflation and then by deflation, the banks and the corporations that will grow up around them will deprive the people of their property until their children will wake up homeless on the continent their fathers conquered." And now as a member of the Advisory Business Council of the Constitutional Money League of America, let me thank this broadcasting station for this great privilege of bringing this message to our people and of presenting a textbook for schools as my contribution to this great cause of public education.

ANNOUNCER. You have been listening to a discussion of the fundamental principles of constitutional money. The speakers were Mr. Charles G. Binderup, former United States Congressman from the State of Nebraska, and Mrs. Etta M. Russell, author and instructor from Decatur, Ill. Mrs. Russell has just completed a textbook on the basic functions of money, the first book for schools of its kind ever written. This program was arranged for by the Educational Features Division and was a special presentation of the Mutual Broadcasting System.

The Senate and Hitler

EXTENSION OF REMARKS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

EDITORIAL FROM THE WASHINGTON DAILY NEWS

Mr. IZAC. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the Washington Daily News of July 3, 1939:

[From the Washington Daily News of July 3, 1939]

THE SENATE AND HITLER

If a general European war started tomorrow, under existing law the United States would find itself in this position:

1. The President (presuming that he would "find that there exists a state of war") would have to forbid the export of arms, ammunition, and implements of war to the belligerents.

2. But, since the cash-and-carry section of the Neutrality Act expired May 1, Americans could deliver to the warring powers as much cotton, petroleum, steel, hides, foodstuffs, and what not as they could sell.

Would that "keep us out of war?" Would German submarines, surface raiders, and aircraft lay off our merchantmen just because they were carrying wheat or gasoline instead of machine guns? It doesn't seem likely, or even possible.

There is talk in the Senate of doing nothing about neutrality legislation—of leaving us in the fix described above. We can't believe that the Senate will shirk its high responsibility. We think the Senate should take prompt and positive action not only to help preserve our neutrality in the event of war but also to help prevent war from starting at all.

The bill just passed by the House would restore the come-and-get-it principle to our commerce with belligerents. To that extent it is desirable and necessary. But the House insisted, in a close vote, on entirely forbidding the exportation of arms and ammunition to belligerents, as under the existing law (except that the House omitted "implements of war" from the ban).

Thus the House said, in effect, that Americans can sell everything that is needed to make guns and bullets, but not the finished product. It rejected the administration's plea that such a provision might encourage Hitler to stir up a war.

The situation in Europe is precarious, to say the least. The British and French are going to unprecedented lengths to convince Hitler of their solidarity and their determination to reject any more blackmail propositions of the Munich type. But Hitler, communing with the intuition which has served his ends so well to date, continues to tauten the frayed line that divides peace from war. He seems determined to put the London-Paris warnings to a test at Danzig.

Perhaps, as is reported, Hitler is convinced that at the eleventh hour the powers will decide "Danzig isn't worth a war." Perhaps he is convinced that, even if he is challenged, he will win a "lightning war." But perhaps, on the contrary, he is plagued by the thought that the great empire he has won with bloodless conquests might crumble in the muck of trench warfare and the misery of blockade.

How could any mortal man escape such fears?

And yet, with Hitler possibly teetering between a test of arms and the economic benefits he could certainly gain at a conference table, the House has formally refused to make the gesture that might crystallize his fears and turn Europe back from the brink of war.

The Senate still has the opportunity to make the gesture. If it were to pass the House bill with the arms embargo amended out, there is a good chance that the House would yield and concur.

That seems to us the least this country could do in defense of its own self-interest in world peace.

The Attainment of Peace

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 30, 1939

Mr. VOORHIS of California. Mr. Speaker, through all the ages man has struggled to overcome two terrible scourges—poverty and war. Both of them could be conquered today by an application of the true spirit of the Christian religion to the affairs of men. But neither of them has been conquered.

To anyone who has endeavored to the best of his ability to find the really right course of action the world of today presents a choice of alternatives so confusing as to make it most difficult to find a solution in which right and wrong are clearly separated and ranged opposite to one another.

In the course of the recent debate on the so-called neutrality bill there were many things I should like to have said. I did not say them. Instead I listened and tried to learn from those Members who seemed so positive of their position and so certain they were right. But not in all the course of the debate nor in all the conversations I had with other people in various posts of government nor in any communications that I received did I find the clear answer to this problem of international relationships for which I was looking.

THESE THINGS ARE CERTAIN

Of one or two relatively simple things I am myself certain. One of these is that mankind has come to the end of an epoch in human history and that much of our trouble lies in our unwillingness to face that fact with courage. The coming of the machine has required that the needs of the people be met; and, so far as the necessities of life are concerned, fully met. If we would have peace and an end to poverty, we must devise a way of distributing this abundance into every single home. It is no longer a question whether this can or should be done. It is an imperative that it must be done if mankind is not to perish of hunger in the very midst of what is falsely termed a surplus of production.

Another thing of which I am sure is that this distribution of abundance can only be accomplished when we have rendered a scarcity of money in the Nation impossible and have effected a system whereby our means of payment for goods is nationally created and nationally controlled and whereby that means of payment increases in volume as the Nation and its wealth grows, rather than as private or public agencies contract additional debt.

And I am sure, too, that we shall not be able to endure much longer a condition where some types of goods flow freely from producers into the markets of the world—there to seem a glut of superabundance without actually being so—while other needed goods which could be abundantly produced and freely delivered to market are neither so produced nor so delivered because a small group of people exercise effective control over their production. I think we shall have to assert a public interest in these monopoly industries and, in whatever way may be best, bring about a full production of these goods to match the full production of other goods which are produced under competitive conditions.

I am sure of this, too: That war has never yet settled any problem; that it has so far led only to more war, more suffering, more confusion, more enslavement of men. Nor can war over a very extended period of time be prevented by the apparent protection afforded by arms and evidences of superior force. I have voted for many of these things for the United States in the hope that they might implement so constructive a policy on the part of this Nation that the day might speedily come when a surer and saner protection could

be found. This is not to say that a constructive policy has not been followed, but only that its goal has not yet been attained.

MISUNDERSTANDING

Why is this true? When all the people of the world know nothing so certainly as they know that war can bring them no good thing but only evil ones, why cannot a great Nation effect progress toward the peace of the world?

Clearly the very existence of dictatorship is one reason, but I am convinced that a fundamental reason lies in lack of understanding. We are so close to our own struggle that we cannot understand the struggle of other peoples. We do not grant them either the same motives or the same objectives as we claim for ourselves. We are prone to conceive a great clash of forces in the world and we always picture our cause as the altogether righteous one and the opposite cause as altogether unworthy. How rude would our awakening be if we could understand that all these causes are the same and that reduced to their least common denominators the purposes of the peoples of the world, however they may seek to attain them, are simply three: To have bread to eat, and safety, and a measure of freedom for their souls and spirits.

For political purposes it is always safest to condemn and never to praise or defend. But I am certain that no nation or people in the world is half as bad as its enemies claim it is nor probably as good as its advocates would have us believe. Systems of government are not simply principles written in books and embodied in officials but efforts on the part of nations to gain the bread, the safety, and the freedom for which they long.

If the world is to have peace, then a basis for peace must be found and established. If that cannot be done, then the cause of humanity is lost. Often as it has been said—often, indeed, as I myself have said—that the first principle for Americans is to keep our Nation out of war; that is only a portion of the truth. The other portion of it is that we must seek also a basis for world peace.

The nations of the world are divided between great nations and small nations. They are located in certain places on the globe and surrounded by certain neighboring states. Each is different from the other. Some, indeed, are rich, and others very poor. The peace of the world will always depend, therefore, not on how small nations treat great ones or on how poor nations treat rich ones, but on how great nations treat small ones and how rich nations treat poor ones.

And the one great obstacle to just treatment of small nations by great ones is this: That the great states have not yet provided a means of distributing to their own people the plenty they themselves produce and therefore out of their poverty the common people, even of the great States, have little they can give away.

ULTIMATE BASIS FOR PEACE

And so, if we take a long-range view of the situation, we can clearly see that peace depends ultimately and primarily upon such reforms within the great nations as I have suggested above—reforms which will make of the machine a means of raising the standards of living of the people instead of causing unemployment. Not one nation which has done that will be a threat to the peace of the world, and no nation which has not done it can be effective in working toward that peace.

And from this it necessarily follows that the defense of freedom and democratic institutions—and they are a thousand times worth defending—is to be found ultimately in the perfection of the economic machinery within the great democratic nations themselves.

THE GREAT INJUSTICE

One more thing I know. It is that war as it is fought today requires horrible sacrifice for one portion of a nation and in many cases no sacrifice at all and even great gain for other groups. This, I believe, is one of the main reasons why war continues to be a scourge of mankind. It is the reason for the surprising opposition expressed by some people over the proposal recently advanced in the American Congress that wartime tax rates be so fixed as to make impossible the grossest inequalities of sacrifice in time of war. It is the reason why the greatest crime upon the whole record of mankind is the fact that always wars have been declared by people who—in most cases—have not been, and are not today, the people who must fight in them.

IS IT HOPELESS?

Must the world go to war this summer or next year or in the next decade? Must the American Congress consider only the questions of how to keep this Nation out of war or how to help friendly nations win a war? Is it beyond possibility that we could consider also attempting to find a basis for peace?

The answers to these questions it is, of course, not within the power of any living man or even any single nation to give. But this much is certain: Not until the problems of all the nations have been considered; not until the complaints of the dissatisfied peoples, both strong and weak, have been analyzed and understood; not until all questions of empire, "appeasement," and national glory have been, for a brief historical moment, laid aside and an earnest attempt made to meet the needs of all peoples equally; not until then can any man say that war needs to be inevitable.

The danger of the hour is—and perhaps they are right who say it is an overwhelming danger—that the people of the totalitarian nations cannot speak for themselves nor even question for a moment their spokesmen. This is the reason dictatorship must always threaten the world more than democracy can possibly do.

My hope has been that the United States, as the most powerful Nation in the world, might open the way to a peace along the lines of agreement. That is why I have wanted her to be strong. But I am told that because I have been one who has voted for legislation which I believed was calculated to keep this Nation from involvement in war I have contributed toward making such action by this country difficult. If that be true, then I have chosen a course of action that was second best, indeed. But the alternative to it has always been to take the position that only by being able to threaten war could we help to bring peace. I have been loath to take such a position, partly because I believed it dangerous to this Nation's peace, partly because I have feared it might interfere with the evident duty of the United States to give example to the world here in the Western Hemisphere of how a great nation could deal with smaller ones on a basis of equality and fairness to all. But I have not abandoned my hope, and I shall not be able to abandon it until such time as the last inevitable step toward war has been taken by the nations. To lay a basis for peace, to found it on agreement rather than on conflict and defeat is and must always be our greatest effort.

THE TWO DANGERS

I do not believe the economic problems of the world are insoluble. I do believe that a solution of those economic problems would open the way for the avoidance of war over an indefinite period of time.

No doubt it is true that threats of armed aggression are bound eventually to bring their disastrous penalties. However much it may appear that saber rattling has been successful, it is only a matter of time until the number of peoples offended becomes so great that the swaggering dictator will face hostility too general to defy. Just how far the dictator can go, just how long he can feed his people and the world on threats and sudden sorties, I do not know. I do know that there is an end to such things—a certain and unavoidable end. Peace cannot be got that way, and neither in the end can national greatness.

On the other hand, neither does peace lie along the path taken by the victors in the last war and still pursued substantially by them. Not one single instance can I find where a sincere effort was made to assist republican Germany in meeting her impossible economic situation. Today I agree that it cannot be a matter of "giving in to Hitler." But it is

still and will continue to be a matter of giving economic opportunity to the German as well as to all other peoples.

SOME DAY AN EFFECTIVE BLOW FOR PEACE WILL BE STRUCK

The peoples of every nation in this world fear and dread war. It is important to remember that gradually the realization is coming over them that war within the next few decades may well become exactly a matter of mass race suicide. Some day some nation or its government will make exactly the right move at exactly the right time for peace. It will be a move that will ring with sincerity and will catch the imagination of every people in the world. The President has already shown himself capable of such action.

And so I say today that America's first and principal task is to try to be the Nation that strikes that telling blow for peace. Perhaps this is not the hour when it can be struck. But certain it is that it must be found soon.

TAX PROFIT OUT OF WAR

I wish I knew for certain how to write a neutrality bill that would keep this Nation under every circumstance out of war. I doubt that that can be done. As many Members have said, the question of American neutrality will in the end be largely a question of the state of mind of the people. I do believe that a bill providing for taxing all profit out of war will help and will be a most important deterrent to our Nation being dragged into a foreign war. I think the opposition to such a measure proves that to be true.

Beyond these things the United States, protected by a strong and adequate national defense, can and, I believe, must do whatever she can to help bring peace to the world. The only method I know is the method of agreement. It has been tried and failed. But no one knows how many times prehistoric man tried and failed to form the first clan or tribe as the first peace group in the world. The important thing is that at last it was done. It was done because some of the primitive people refused to stop trying to accomplish it. This is why I hope sincerely that there is foundation for recent press reports concerning the possibility of another attempt being made by the United States to bring together the representatives of the nations in an attempt to achieve peace by means of agreement instead of by conflict and defeat.

WHAT THE UNITED STATES CAN DO

What should be the role of the United States? We are the greatest, most powerful Nation in the world, and we cannot escape that fact. Furthermore, we are a Nation which has engaged only to a very limited extent in imperialism—and is probably sorry even for that; and we are a Nation which is so fortunately situated that there is no need nor inclination for aggression on our part.

Therefore we can work for peace. We can continue a thoroughgoing good-neighbor policy toward the American republics, thus giving example to the world of how great nations and nations of smaller wealth and population can live together at peace. We can solve the problem of distribution to our own people in our own country, thus rendering it less necessary than it is today for us to seek foreign markets. We can, and I believe we should, take a more deliberate and a cooler view of the world situation than most other nations can do. I believe we could make plain at one and the same time that either continued unwillingness to adjust the world economic situation, or certainly continued armed aggression, will inevitably have their effect on American policy and action. I believe we could say that on mature judgment it appears wrong for this Nation to continue to supply to one nation the essential means of fighting a war of conquest on the soil of another nation in violation of a treaty which we ourselves have signed. And I think at the same time we should grant freely and frankly that the abandonment of that war will find us ready to admit that the interests of Japan in the Orient are as natural and understandable as are our own interests in the Western Hemisphere.

I think the job of the United States, even now, is to contribute a maximum of sanity to a distracted world.

PROVISIONS OF HOUSE BILL

The House has passed its neutrality bill. It says either the President or Congress can "find a state of war to be existing" and that thereafter (1) no arms or ammunition shall be shipped to belligerents, nor (2) shall loans or credits be extended to them; nor (3) shall goods be shipped to them unless, first, title has been transferred to the foreign purchasers; nor (4) shall funds be collected for any belligerent nation in the United States except under strict regulation. It continues the National Munitions Control Board, and its control over the munitions traffic. Under its terms American citizens would ride on belligerent ships only at their own risk.

Are these provisions so far reaching that they render effective action by our Nation in foreign affairs impossible? I cannot see why, nor can I see that they do more than provide (1) prudent caution against this Nation being led by events along a course of action which, in judgment, it should not take; and (2) safeguards against our domestic economy being made to depend to an overwhelming extent upon the munitions industry. That is why I voted for the arms embargo and then for the passage of the bill amended to contain the embargo.

NEUTRALITY LAWS NO GUARANTY OF PEACE

And I would point out that the provisions of this bill or of any other neutrality law cannot be mistaken either by our own people or the people of any other nation as any sure defense against this Nation taking the fatal step into war. The peace of America can only be maintained either by the absence of war in the world, or, if war is in progress elsewhere, by a resolute determination on the part of the people and Government to stay out of it. And, neutrality law or no neutrality law, the measure of that determination will be largely found in the extent to which other nations or the leaders of other nations may go in insisting upon either continued aggression or continuing imperialism.

I am quite ready to say that these considerations are not to me absolutely conclusive as to whether my vote to embargo arms and ammunition to belligerents was right or whether my vote for passage of the Neutrality Act of 1939, as amended by the House, was right. Were I to have to cast these votes again, I know I should have to go through the same inward struggles all over again. All I do know is that there is nothing I seek so much as a clear and certain answer to the question: What ought a Member of the House of Representatives to do to protect the peace of his own country and to promote the peace of the world? May a guidance wiser than any human mind give us courage, wisdom, and vision in these difficult days.

Who Owns the Money? Who Owns the Gold?

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

Mr. THORKELSON. Mr. Speaker, Congress has made so many mistakes during the past few years that I am sure the mentioning of one or two more will make very little difference. Members of Congress should not be alarmed because the President's devaluation power has expired, for it was a privilege that Congress had no constitutional right to grant to the President.

Practically all our trouble is due to the Gold Reserve Act and the monetary power given to the President and the money changers in his temple. He himself has talked about the money changers so often that I hope no offense will be taken if I use the same term.

Gold is the international standard for money. If any changes are to be made in the value of gold, it must be

agreed to by every nation in the world. It should be obvious to everybody that nothing but confusion will come from constant changes of grains of gold in the dollar. It is indeed unfortunate that we have tied our dollar to a fixed gold content, for had we simply abandoned the gold standard and continued international trade in grains of gold, as we are now doing and will always do, our industries and business would have been protected. Had we abandoned the gold standard entirely, all international transactions would have been conducted on the old gold standard of 25.8 grains of fine gold. This would mean that all commodities would be sold to foreign nations at the prevailing price in our market, and United States bonds would be sold at 100 cents gold to the dollar, or at 25.8 grains of gold to the dollar. As it is now, or will be when the dollar is again devaluated to 12.9, every nation in the world will buy United States commodities for half of their real value. A foreign nation with one million gold credit in the United States will be able to buy $2,000,000 of merchandise after devaluation of our dollar to 12.9.

Should all nations decide to go back on the gold standard, it is only reasonable to suppose that all United States bonds and securities that were bought with the dollar containing 15.521 grains of gold and 12.9 grains of gold cannot be negotiated with a dollar containing 25.8 grains of gold, without creating a loss in our Treasury from 40 percent to 50 percent in gold. In other words, a bond bought by the English Government for a dollar with a gold content of 12.9 cannot be redeemed by us with a dollar of 25.8, for in such transaction we lose 12.9 grains of gold. I hope this is clear to everyone, for I have certainly tried to cover it from different angles.

The Chairman of the Federal Reserve System and the Secretary of the Treasury are to a certain extent responsible for the muddle of our financial structure. Their advocacy of queer financial formulae has upset business, upset the Nation, and left us with a "phony" dollar which the gentlemen call "legal tender." These gentlemen and others are treating the American public with studied indifference and little consideration. They want us to believe that our hocus-pocus money is good enough for us and gold is not necessary. Yet the New Deal, in which these gentlemen may be found, has deprived the people of all gold and set it aside for the money kings.

I now ask, Why are they breaking their necks to corner the gold market if this metal is useless and superfluous? Why is gold an absolute necessity in international transactions and why is gold set aside for the use of those in the invisible government that are now bent on the destruction of the United States? To tell the American public that gold is not needed is perfectly stupid on the part of those who advance such information. Gold is a most tremendous power, and it is set aside at the present time for one purpose, and that is to place the invisible government and its disciples in complete control of the United States. These facts might as well be known, for no one is going to tolerate such imposition.

Further devaluation can only bring about greater disaster to the Nation, to add to the many planned disasters we have had for the past 10 years. It is now time for us to reverse this procedure so that the planners may have a taste of their own medicine. We can do that by returning to sound, constitutional government.

If the dollar is devalued to 12.9 grains of fine gold, what will happen? Nothing except greater confusion. The increment on gold is called profit by our new experts. One thousand gold dollars, or 25,800 grains of gold, in the United States Treasury before devaluation became $2,000 in gold after devaluation without increasing or decreasing the 25,800 grains of gold. In other words, the gold in the dollar was cut in half, and each half became $1. This is a delusional state in which the administration has been operating since it came into power.

The Federal propaganda machine in black headlines announces, United States buys gold. It looks fine on paper, but here is what happens: Before the 1934 devaluation we bought 25,800 grains of gold with a $1,000 automobile. After devaluation to 12.9, we will buy the same amount of gold, that is, 25,800 grains, with two $1,000 automobiles. The New Deal calls this good-neighbor policy, and it is, to foreign nations, but not to us. At this point it is well to bear in mind that our own citizens do not enjoy this privilege because we have no gold and our wages and expenses are approximately the same now as they were 10 years ago. We cannot make a comparison for we are not allowed either to own or use our own gold. That privilege is only given to those who live in foreign countries. It is the most damnable fraud perpetrated on the tolerant, unsuspecting American citizen.

Let us now go a little further in this comparison. If Mr. Citizen is fortunate enough to have 1,000 gold dollars representing 25,800 grains of gold, the Federal Government takes it from him and gives him in return $1,000 in our commodity or hocus-pocus money. For these thousand confiscated dollars the Government pays the owner $20.67 per ounce, but when it reaches the United States vaults it is set up at $35 per ounce, and after the next devaluation it will be $41.34 per ounce. The Federal Government calls this profit and that is the only kind of profit the Federal Houdinis have made.

Mr. Citizen, from whom the gold money was taken, may remain free, but there is a possibility that he may be jailed for illegal possession of gold; and, remember, it was his own property. This is happening here in the United States of America, and we, like fools, let the Government get away with it. I wonder what in hades is wrong with us for allowing these internationalists to rob us of our own property to fatten their own pockets. Mr. Citizen needs a new spine, so that he can stand up straight and kick this horde of pillagers into the ocean.

When I oppose this public fraud and speak in defense of my own and the people's rights I am called a Nazi or Fascist. I am headlined in the invisible government's owned and controlled press and, as would be expected in all radical and communistic papers. What is the relation between the subsidized press and communism itself? Both speak in the same voice. This is something to which the American people should give serious consideration, for there is a definite alinement between the invisible government's press and all communistic publications.

The morale of our people is gradually undermined by filthy, lurid, degrading propaganda. Pride and patriotism are ridiculed to such an extent that when a person speaks on ideals and sound government, he is treated with defamatory remarks and smeared in the daily press and in the communistic papers. Patriotic citizens are now publicized by this press as "Reactionaries," "Tories," "Nazi," or "Fascist," and we have reached such a low ebb in nationalism that patriotic publications can no longer be subscribed to or delivered free from Federal investigation. Patriotic citizens today must meet in dark back rooms, but the Communist and his radical tribe meet on the public squares in a blaze of lights. We have indeed reached the end of the road, and our only hope is the reassertion of the principles on which our Nation was founded, and faith rekindled in the heart of every stanch, patriotic citizen, so that the country may be saved from complete disintegration. I hope all patriotic citizens will arouse themselves and unfasten the bonds that bind them. Let us set America free out of respect to our forefathers, so that we may enjoy the rights and liberties for which they gave their lives. Let us swing on to the halyards and hoist the Stars and Stripes to the masthead as a warning to all who entertain our destruction.

Do you not think, Mr. Citizen, that this Government is just about owned and controlled by the administration's money changers? It certainly looks like it, does it not?

All of this has been brought about by your Congress—the one you elected in 1930, and that you have perpetuated because it supported the President. Your own Congressmen have sold you, as well as the Nation's industry and business, to the money power in the invisible government, the same gentlemen who bought out property in Germany during the inflation. It is a peculiar situation because this invisible

government is in reality a nation within a nation but never an assimilable part of any nation.

Mr. Congressman, do you believe that you have honored your oath of obligation and have you been fair with your own people? Have you been fair with the people that elected you to office, the same people who are now paying your salary and the total expense of the Nation; the people whose children are facing a future in which they may not have control even of their own destinies? Think it over, Mr. Congressman, because one of these days you will be one of those people.

I also understand that the $2,000,000,000 gold stabilization fund expired in company with the devaluation power. And what a blessing that would be to the people. We were informed that this fund was used to stabilize the dollar. What a joke that is. Nothing but a deliberate falsehood. The international dollar contained 15.521 grains of fine gold, which gives it value. No stabilization fund is required to stabilize the dollar any more than another stabilization fund would be necessary to stabilize the present fund. It certainly would be foolish to say that another $2,000,000,000 in gold would be necessary to stabilize the present $2,000,000,000 gold stabilization fund. Even a child knows that.

The $2,000,000,000 stabilization fund bestows extraordinary powers on the President and the Secretary of the Treasury. Two billion dollars in gold is more money in cash than all the business in the United States ever has had at its command at one time. This money may be employed in so-called squeeze transactions to destroy ownership, change ownership, or place those in power who have control of the money. Two hundred million dollars of this money is used by certain banks in New York City, and I am sure the taxpayers would be interested in knowing for what purpose. So would I. This stabilization fund is used for no other purpose than to play the stock market, to sustain the prices of bonds and other market transactions. A $2,000,000,000 toy for the President and the Secretary of the Treasury is rather expensive, and the fact that nothing is earned on this money is reprehensible indeed. If the $2,000,000,000 had been used to retire foreign obligations that are always payable in gold, the taxpayers would have been richer by $200,000,000 in gold, for that is just about the interest we have paid to foreign investors.

Let that be as it may, this fund is clearly unconstitutional and it is too much money for the President and the Secretary of the Treasury or anyone else to have at their own disposal, because no one yet has shown sufficient ability to be trusted with that much money. I do not make this statement in the sense of an accusation. My statement is made upon the evidence with which we are confronted today. Our monetary policy is rapidly destroying all private industry and the Nation as well.

The Gold Reserve Act is clearly unconstitutional in principle and in fact, and it should be repealed and all expenditures and receipts published, as is required in the Constitution. As evidence of unconstitutionality, I quote from article I, section 10:

> No State shall make anything but gold and silver coin a tender in payment of debts.

The States have been deprived of this right, for no one is now allowed to use gold, and very little silver. Article I, section 8, further provides:

> The Congress shall have the power to coin money and regulate the value thereof, and of foreign coin.

Congress here, as is clearly stated, has the power to regulate value, but it has no power either to steal or confiscate value. The Gold Reserve Act stole the gold from the people, confiscated gold money, and repudiated gold securities. The whole thing is obnoxious and so flagrantly unconstitutional that respect has been lost for the Federal Government. The Supreme Court, which upheld the constitutionality of this most abominable act, has lost much esteem by such an unconstitutional decision.

Gold is property, and, of course, our most valuable property, so recognized by us as well as other nations of the world. Gold was and is earned by the people in the United States; it belongs to them, and Congress has no right to confiscate this property. This gold is absolutely necessary as a standard security for money, for life insurance, and for all investments. The great unrest throughout the world today is caused by a concentration of gold in the hands of the invisible government. If we set this gold aside as security for our people and repudiate the gold certificates now held by the governors of the Federal Reserve banks, and interests outside of the Treasury, peace again will prevail. It is no greater crime to repudiate these gold certificates held by foreign interests than it was for Congress to repudiate the Government's obligation to its own people. One thing, however, is certain: When we have locked up the gold as security for currency and for other obligations, when it is back in the hands of the people where it rightfully belongs, we have then locked up the god of war.

The Cost of Taxation

EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

EDITORIAL FROM THE MILWAUKEE SENTINEL

Mr. BOLLES. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and include therein an editorial from the Milwaukee Sentinel of June 24:

[From the Milwaukee Sentinel of June 24, 1939]

HOW WASTEFUL TAXES LOOT AN INDUSTRY

Nothing better illustrates the frightful consequences of the waste-pipe and drain-hole methods of our tax policies than the figures printed by the Pure Oil News, of Chicago, under the signature of Henry M. Dawes.

All wage earners and businessmen should read this record.

The petroleum industry paid $1,200,000,000 in taxes last year.

That $1,200,000,000 in taxes from one industry is more than it takes to maintain the Army and Navy, which was $974,157,232 in 1938.

But are these taxes expended for that laudable defense purpose? The country is beginning to wonder.

What grudge have the tax-levying politicians against oil?

That $1,200,000,000 tax levied on oil is—imagine—12 times the net income from all corporations in 1934, which was $94,170,000.

The onslaught of taxes on oil is finally evidenced by the fact that this $1,200,000,000 is nearly four times the taxes paid by the railroads in 1937, which was $352,047,524.

If the railroads are bowed down to the ground under the weight of the tax moloch, what is going to happen to the petroleum industry, which carries nearly four times that weight?

Mr. Dawes inquires what becomes of the $1,200,000,000 collected from petroleum?

No one knows. Not even President Roosevelt knew in his purely defensive speech before the retailers of America.

Taxes there must be, of course. But the bulk of the taxes today go to finance vast political schemes and chimerical projects in the various States which carry the deceptive label of social welfare or public improvements.

The country is sinking under the tax load which is looting our industries, prolonging the depression and perpetuating unemployment.

Pickwick Dam and Shiloh Battlefield

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

Mr. RANKIN. Mr. Speaker, for the last few years I have exerted every effort to try to develop the hydroelectric power

of this Nation for the benefit of the American people, and to get it transmitted to every home at rates based upon the cost of generation, transmission, and distribution.

I believe in stimulating and developing the forces of construction instead of stimulating and encouraging the forces of destruction.

One of the dams that has been constructed partly as a result of my efforts in the House, is the Pickwick Landing Dam on the Tennessee River, which lies within the very shadow of the battlefield of Shiloh where a little more than three-quarters of a century ago the forces of destruction were gruesomely busy at their appointed work.

A splendid word picture contrasting the battle of Shiloh with the construction of Pickwick Dam, appeared recently in the Baldwyn Home Journal, a weekly paper published at Baldwyn, Miss., which reads, in part, as follows:

> Not long ago we viewed in a single day two widely contrasting scenes; one showing the wonderful progress of the human race when working, through Nature, with God; the other disclosing the horrors wrought by man when engaged in a devastating war.
>
> At Pickwick we scaled a mountain of masonry and stood in the midst of the beautiful Tennessee River listening to the thunder of its turbulent waters at our feet, dashing and splashing, frothing and foaming as if fretted by the audacity of man in curbing its course to the sea. Tall movable towers of steel on the dam raise and lower the ponderous sluice gates with the power generated at the plant.
>
> On entering the spacious reception hall we found this inscription on the wall: "1935—Built for the use of the people of the United States—1939." A uniformed guide met us and showed us through the plant, explaining its intricate mechanism.
>
> As we stood on a balcony in the observation room and leaned over the balustrade, listening to the murmur of the mammoth machines below, we thought of this mysterious power we call electricity, generated by man through the medium of impounded waters and flashed with lightning speed from lofty towers, over a tangled web of wires, to serve humanity myriads of miles away, we exclaimed, "What a wonderful piece of work is man."
>
> The scene shifted. We left Pickwick and motored to Shiloh, where 75 years ago, the death angel touched with deft fingers the swift keys of war, and the earth trembled from the awful symphonies; "the bursting shell, the rattling musketry, the clashing blade, and ever and anon, in tones of thunder, the diapason of the cannonade."
>
> We drove over winding roads, through the beautiful forest of oaks, where grim instruments of war still stand in battle array just as they stood on that fatal day when shot and shell were falling fast. We saw the spot where Albert Sidney Johnston fell. We viewed the frightful field round the Hornet's Nest, the Peach Orchard and the Bloody Pool, where death took its heaviest toll. Passing magnificent monuments of marble and granite, we visited the silent city of the dead on a high bluff of the Tennessee River, where long rows of ghastly stones mark the last resting place of thousands of unknown heroes.
>
> When we had viewed these scenes of carnage, we thought of the two forces in the breast of man forever contending for supremacy; the spirit of truth, leading him in paths of peace and happiness; and the spirit of war, driving him to destruction on the battlefield. We find a harvest from each of these powerful forces exemplified at Pickwick and Shiloh: "By their fruits ye shall know them."

Federal Grants-in-Aid for Probation and Parole

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 30, 1939

Mr. CELLER. Mr. Speaker, on June 12, 1939, I introduced a bill (H. R. 6793) providing for Federal aid to State probation and parole systems.

The proposed legislation calls for an initial appropriation of $2,500,000 to be allocated to those States which request grants on the basis of the number of individuals in prison and on probation or parole, the financial needs of the State, and any special problems which exist in the fields of probation and parole.

The primary purpose of the bill is to carry out the recommendations of the National Parole Conference which was called by Attorney General Murphy, at the request of the President, on April 17 and 18, 1939. The 800 delegates to that conference, who represented every branch of law enforcement, agreed that properly administered parole is the best method of releasing prisoners and emphasized the fact that only eight States now have adequate parole administration. To a great extent the failure of the remaining States to develop satisfactory parole systems was attributed to the lack of funds.

The language of the bill makes it clear that the Federal Government does not intend to take over local responsibility for the administration of probation and parole but only to give financial assistance to enable the States to meet proper standards of personnel and service. Justification for Federal aid is found in the growing recognition that the control of crime is a Nation-wide problem with definite interstate aspects. This was emphasized by President Roosevelt in his address to the National Parole Conference on April 17, when he said:

> All of us have come to realize that while the responsibility for the control of crime falls primarily in the States and their subdivisions, the activities of criminals are not limited by local and State boundaries. The consequences of lax law enforcement and crime-breeding conditions in one part of the country may be felt in cities and villages across the continent. For instance, I think of the operations of a criminal gang which had its origins in the slum section of a small southwestern city. Before the members of this gang were rounded up, successfully prosecuted, and put in prison by the Federal Government, they had left a trail of robbery and violence in seven Midwestern States. This illustrates the essentially Nation-wide character of the crime problem.

Speaking particularly of parole, the President said:

> How well or how poorly a parole system operates in one section of the country may affect the lives of citizens throughout the Nation.

This point of view was endorsed by the conference and Federal aid was suggested as a possible method of achieving high standards of probation and parole administration in every jurisdiction.

The greater proportion of the grants-in-aid provided for by the bill would be devoted to paying the salaries of probation and parole officers. All authorities are in agreement that close supervision by qualified and competent personnel is a fundamental requirement of both methods of dealing with offenders. Some idea of the urgent need for additional officers may be gained from the fact that while 46 States have parole laws, only 8 States and the Federal Government provide full-time, efficient supervision. Between 80 and 85 percent of all parole officers in the United States are employed by the Federal probation and parole system and those of the 8 States referred to. It is conservatively estimated that there are not less than 20,000 persons on parole without supervision in the United States.

It is believed that the expenditure of funds for improved probation and parole work will result in large savings to the Government and to the States by reducing the number of persons held in prison and decreasing the number of repeating offenders. One-seventh of the amount spent to keep a man in prison will provide adequate supervision on probation or parole, and when proper supervision is provided the courts and parole boards can safely make greater use of these devices.

The bill places the responsibility for administering the grants-in-aid upon the Director of the Bureau of Prisons in the Department of Justice, and it requires that States

applying for allotments must present approved plans for probation and parole administration which include the selection and tenure of personnel on the merit basis.

The Neutrality Issue

EXTENSION OF REMARKS

OF

HON. JOHN KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

EDITORIAL FROM THE BALTIMORE SUN OF JULY 3, 1939

Mr. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the Baltimore Sun of July 3, 1939:

[From the Baltimore Sun of July 3, 1939]

THE NEUTRALITY ISSUE

Secretary Hull's statement on the neutrality law indicates that the administration intends to keep up the fight for the repeal of the embargo provisions of the present act. The House refused to go the whole distance in the matter of repeal. It was willing to eliminate the provision for a mandatory embargo on shipments of implements of war to belligerents. But after a bitter fight it voted, by a small majority, to retain the embargo requirements as to shipments of arms and munitions. Whether the chances of repeal will be better in the Senate than they were in the House remains in doubt, but it will be extremely unfortunate, as Mr. Hull insists, if this part of the administration's program is defeated.

The whole idea that we can escape involvement in war by devices such as an embargo on arms and munitions is founded on a misconception. It presupposes that the only trade which counts in war is trade in the articles which troops use against an enemy. From this supposition, the advocates of the embargo plan proceed to the conclusion that we avoid complications with belligerents by refusing to ship other belligerents arms and ammunition. But in modern warfare industrial capacity counts for as much as efforts of armies in the field. A belligerent nation needs cotton and oil and scrap iron to feed its factories quite as much as it needs arms and munitions for its troops. But we cannot hope to embargo cotton and oil and scrap iron and other products unless we are willing to live in economic isolation. And economic isolation for a Nation of 130,000,000 people drawing its supplies of rubber and tin and coffee and many other materials from abroad is unthinkable.

The sort of partial and limited isolation which is required under the existing embargo policy ought to be equally out of the question. For, while the embargo program is futile as a protection against involvements in war, it represents a serious obstacle to the conduct of our foreign policy. It interferes in a sweeping and even a dangerous manner with the steps it may be necessary to take in the presence of a European war to protect American interests. For it indicates in advance the course we intend to pursue in certain matters, and to this extent it reduces the power of the President and the Secretary of State to bargain with other nations. Moreover, since the embargo policy is in effect favorable to Germany and Italy and unfavorable to England and France, a vote committing this country to such a policy is in effect a go-ahead signal to the Nazis and Fascists.

This country ought not to be in the position of encouraging aggression abroad. It ought not to place itself in a strait jacket which would interfere with the protection of its own interests in case aggression occurs. If we wish to go further and adopt the cash-and-carry sections of the Bloom bill, that will not be open to serious objections. A cash-and-carry policy under which our interest in and title to exports to belligerent nations would cease at the water's edge would minimize the danger of involvement in war without tying the hands of the President and the State Department so tightly as to prevent them from adapting our policy to unforeseen situations in which our interests might be jeopardized by a European conflict.

But because such a policy might interfere with the protection of our interests in the event of a declared war in the Far East, its adoption is less desirable than the repeal of the embargo requirement. The elimination of that requirement is a task upon which Congress cannot afford to turn its back.

Democracy and National Defense

EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

ADDRESS BY HON. LOUIS JOHNSON, THE ASSISTANT SECRETARY OF WAR

Mr. BUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Louis Johnson, The Assistant Secretary of War, before the Institute of Public Affairs, University of Virginia, Charlottesville, Va., July 4, 1939:

Ladies and gentlemen, it is indeed an inspiration to return to the lawn of my beloved alma mater on this day, so sacred in the annals of our university, in the history of our country, and in the destiny of all mankind. On this day in 1776, America gave to the world the immortal Declaration of Independence and, on this day, 50 years later, its illustrious creator died, asking posterity to remember him simply as "Thomas Jefferson, author of the Declaration of Independence, of the Statute of Virginia for religious freedom, and father of the University of Virginia."

To the hand of Thomas Jefferson there was a certain touch which indelibly impressed on every document that he penned, in whole or in part, the fundamental precepts of liberty and equality. In the heart of Thomas Jefferson there throbbed a sympathetic understanding of the aspirations of the average man for contentment and prosperity that prompted him to adopt "the pursuit of happiness" as a goal for organized society. In the head of Thomas Jefferson there ruled a strong and practical mind, familiar with the strength and the weaknesses of man that caused him to insist upon safeguards against aggression and chaos.

Our Republic was founded in the dark days of war; and when that war was over, a young and struggling nation anxiously faced an armed and predatory world. Adequate defense was essential, if the great experiment which Jefferson had dreamed was to be fulfilled. Though a peaceful Nation, the new Government had won its right to exist by force; only through force was it able to cling to its new-won independence; only by force could it keep the great powers of France and Spain at bay on the southern and western borders; only by force could attacks of savages be warded off from the frontiers. Our fathers addressed themselves to a problem as old as government itself, but amazingly modern in the light of today. How could a republic assure itself of that force necessary for its protection, without jeopardizing its free institutions? Even now the problem is frequently discussed in the light of present necessities. Is it possible to defend this country in time of war without engulfing our constitutional civil life in military dictatorship? Will not the outbreak of war be the death knell of democracy in this country?

Defense, in a democracy, means more than merely repelling an enemy attack. It means more even than preserving the security of the country. It means winning a war and at the same time preserving the fabric of democratic government set up by the Constitution. If in the process of defeating an enemy, our country loses its democratic liberties, the Nation will have lost the war. The task, therefore, is to plan a defense program based so firmly on our traditional institutions that their safety shall never be in doubt.

Happily, the able group of devoted men which framed our Constitution foresaw this problem. Realists as they were, they took steps to assure themselves that the new country should be adequately protected. Mr. Justice Story later summed up the doctrine:

"A country would be in danger of losing both its liberty and its sovereignty from its dread of investing the public councils with the power of defending it. It would be more willing to submit to foreign conquest than to domestic rule."

In consequence the framers of the Constitution, in their determination "to provide for the common defense," placed practically no limitations on the powers of the Federal Government, save two, but those two are essential.

First, the civil government was always to be supreme over the Military Establishment. Sweeping though the war power or the defensive power might be—and, indeed, must be—its use and guidance lay in the hands, not of generals, but of civilians; the paramount power resided in the elected President and Congress of the United States.

Second, they provided that military appropriations would be made only for a term of 2 years, and that expenditures could not be made without congressional authority. Thereby they protected the republican institutions of the country against the danger of large standing armies, and particularly against the possible corrosion of the State by mercenary troops. They held before themselves constantly the symbol of the hated Hessian mercenaries who had been hired by the British to fight in the war against independence; and, good classical scholars that they were, they never forgot the danger of an unwieldy standing army exemplified by the Roman legions, which had eventually made the Roman Empire a succession of military dictatorships.

Within these two guaranties, the framers of the Constitution gave the Federal Government practically a free hand. They were wise in doing so, realizing that no group of men can foresee the necessities which defense may involve. Thus, Congress may draft into military service every able-bodied man and woman in the ccuntry; and the Supreme Court has upheld its authority to do so. Thus, for military purposes, Congress can take the last dollar out of the pocket of every taxpayer. Thus, Congress can declare war, and the Constitution does not pretend to define the nature of the war upon which America may embark. Yet behind this apparently sweeping grant of power are the underlying controls: The civil authority is supreme, and the Government must come to the Congress once in every 2 years for its funds.

Throughout the intervening years, America has tried to adhere to the pattern thus outlined. Its armed forces are trained to carry on their duties along these traditional lines. The Army, consequently, is a small, professional force, ranking seventeenth among the nations of the world. It is made up, not of foreign mercenaries bent on spoil or conquest, but of American citizens with a love of their country and a devotion to its institutions. As a result, the American Army is a recruited cross-section of American life, representing farms and factories, schools and homes. They have joined the colors to improve their bodies and their minds; many leave that training for civilian advancement, others remain to serve in the honorable profession of arms in the service of the United States. It must never be forgotten that an army, like any other institution, expresses the ideas and the ideals of the men who make it up. So long as these are firmly based on American concepts, the design of our fathers is protected.

Our officers are not of a special class, separate from the rest of the body politic. They are your sons and your neighbors' sons who have won their spurs at West Point or who have risen from the ranks of the Regular Army and the National Guard to serve as commissioned officers. Considerably less than half the officers of the Regular Army are graduates of the United States Military Academy.

They came from all walks of life and richly represent all the democratic stocks that have gone into our successful "melting pot." I know of no better way to illustrate the all-American character of our all-American Army than to read the first 10 names, arranged according to rank, and the home addresses of the second lieutenants who graduated from the United States Military Academy less than a month ago. They are: Dziuban, of Yonkers, N. Y.; Goodpaster, of Monrovia, Ind.; Rogers, of Munger, Mich.; Kunzig, of Fort Benjamin Harrison, Ind.; Samuel, of Hinsdale, Ill.; Wolfe, of Opportunity, Wash.; McCutchen, of Columbia, S. C.; Kirby-Smith, of Sewanee, Tenn.; Coates, of Waban, Mass.; and Frazer, of Elizabeth, S. C.

From the moment these 10 young second lieutenants and their classmates report for duty in September until they reach the end of their military careers, perhaps 40 years hence, they will live in the democratic environment of our Army, close to the heart of the American people. They will no longer be called upon to serve on frontier posts remote from civilian influences. They will live at Army posts not far from civilian centers and will learn to work with and in civilian communities. In later years they will live in continuous contact with civilians, perhaps for years at a stretch.

During the course of their careers they will command not only Regulars but Reserves and National Guard men. They will instruct high-school boys in the C. M. T. C. and college students in the R. O. T. C. They will serve with white troops, colored troops, and perhaps with Philippine Scouts. They will learn to lead by example and not by fiat. They will learn to command and to obey, to exercise initiative, and to accept responsibility.

They will recognize the fundamental distinctions between officers and enlisted men deemed necessary for discipline, but they will allow no barriers of misundertanding to keep them apart. Our Army is free from caste. On the basis of brains, character, and application, men may raise themselves freely from enlisted ranks to commissioned roles. The low-ranking private may sometime rise to command a division, as did Maj. Gen. James G. Harbord in 1917–18, or he may win an appointment to the United States Military Academy to take the prescribed course leading to a commission, as 180 former enlisted men of the Regular Army and National Guard are doing today.

As our young officers prove their mettle they will be ordered to schools, colleges, factories, and laboratories for research and study. They will hire civilian labor and they will work with industry. They will build bridges and improve harbors. They will try to lead exemplary lives, always conscious of the honor and the traditions of the service. They will prove that they belong to the corps d'elite of Regular Army officers upon whom every President at various times has called for special duty requiring courage, intelligence, integrity, and leadership in civilian as well as military emergency. They will live among professional soldiers who have a passionate desire for peace but who in an emergency will stand ready to answer any call for the defense of their country.

The democratic ideal that permeates our Army in peacetime, in conformity with the patterns set by our forefathers, we expect to keep before us in an emergency. If war comes, we shall expect democracy in service. We shall require every man to respond to the call of his country. Deferments we may have to recognize, but only for cogent reasons bearing directly upon the successful conduct of the war. To no one will we grant complete immunity from the obligation to serve. We realize that certain limited numbers of keymen in industry, indispensable to the success of the mobilization of our resources for war, may serve their country best on their accustomed jobs rather than in the Army and the Navy. Their selection, we shall defer, but only in the interests of national defense.

Should war come, it will be essential that we wage it democratically. This means that the democratic ideal of universal service which we hope to achieve in manpower, should be equally applied to resources. Realism forces us to accept the fact that in a modern war, the winning of that war, with a minimum loss of life and treasure, must inevitably become the primary aim of the country for the time being. Every other force of private or public activity must become secondary to it. Not otherwise can the country be defended. To a degree as yet unknown in this country, there must be mobilization of men and resources.

This places a new burden on democratic government, and gives us a new lesson which we shall have to learn. Where government is autocratic, it is relatively simple to focus the whole life of a nation upon a war objective. In such countries, regimentation is normal; control is continuous; it is, in fact, only a short step from peace organization to war organization. In democratic countries the exact opposite is true. Here, bred in freedom and basically opposed to all forms of regimentation, the very idea of control is repugnant.

And yet we cannot permit it to be said that a democracy cannot wage war successfully, and that without surrendering its essential democracy or endangering its free institutions. We must not permit it to be said that a free people cannot make for itself a discipline which enables it to submit to needed controls willingly, even enthusiastically. When the World War broke out it was thought that America could not mobilize. No one familiar with the history of that war would aver today that a democracy cannot marshal its resources for victory against an autocratic power.

I believe that should war come we shall be able to meet the test on the traditional basis of American life. Certainly, the present Government is determined that we shall do so. We shall continue to subordinate the military to the civilian authority. We shall continue our faith in democratic institutions. We shall continue to trust to cooperation, rather than compulsion; to the spirit of true patriotism and self-imposed discipline rather than to coercion, to self-interest, or to terror. This does mean sacrifice; all of us know it. Yes; we may have to regulate our foreign trade, our finance, our price structure, our transportation system, our industrial output. Many normal activities will have to come under temporary control; perhaps every phase of civilian economic life will have to be brought into alinement. But the difference between the democratic and the autocratic method will be that here the work of control will be carried out, not by men in the Army and Navy but by patriotic civilians; by people who better understand the psychology of the American people; by mechanisms designed not only to win the war but also to maintain American democratic institutions. In the War Department plans as at present drawn it is contemplated that controls affecting civilians will be administered by civilians, in the true spirit of the Constitution of the United States.

If you search below the surface I think you will find that the peculiar contribution of the American theory of defense is its constant insistence that a war machine is a means to an end, and never an end in itself. It has indeed only one reason for existence. It exists to defend the American system, to maintain in time of war that which was achieved by severe, bitter, grueling years of war, and which we have built up by processes of peace. Loyal soldiers and patriotic civilians on this point are in complete accord. So long as our armed services are continued on a democratic basis, so long as our Army and our Navy are subordinate to civilian control, we shall remain loyal to the principles of our Constitution and to the traditions of our forefathers. History imposes on every nation the duty to remain strong; it imposes on America the equal duty to be strong in order to remain free.

Our duty to be strong must, in these troubled times, be kept steadily in mind. Rarely, indeed, has the logic of events made this so mercilessly clear. Europe and Asia hear today the clatter of armed forces which were dramatized not long ago as the Four Horsemen of the Apocalypse. Only America is free from their shadow; and it is strength, not weakness, which keeps this menace from our own shores.

To maintain our freedom, we must assume certain definite duties. We must be prepared to prevent the seizure and occupation of any additional territory on the Western Hemisphere by a European or Asiatic power. This means that we must be able to concentrate men, guns, and planes in adequate force at any vulnerable point in the three Americas, from Point Barrow to Tierra del Fuego. In order to do this, we must have an adequate force on land, at sea, and in the air. The basis for that defense is already laid; we confidently believe that the program of preparedness envisaged, and in considerable measure already executed, by the President, will create for us defense forces sufficient to repel

any threat to the peace of the Western Hemisphere. This is no light task; and none of our seeking. Yet it was foreseen when our Nation was born. Long ago, John Jay, one of the framers of the Constitution, wrote: "The safety of the people of America against dangers from a foreign force, depends not only on their forbearing to give just causes of war to other nations, but also on their placing and continuing themselves in such a situation as not to invite hostility or insult." One hundred and thirty years later, President Wilson restated, with even greater clearness, the basic principle:

"Great democracies are not belligerent. They do not seek or desire war. Their thought is of individual liberty and of the free labor that supports life and the uncensored thought that quickens it. Conquest and dominion are not in our reckoning, or agreeable to our principles. But just because we demand unmolested development and the undisturbed government of our own lives upon our own principles of right and liberty, we resent, from whatever quarter it may come, the aggression we ourselves will not practice. We insist upon security in prosecuting our self-chosen lines of national development."

Only by creating and maintaining a national defense capable of guaranteeing this security can we continue to keep our cherished democracy inviolate.

The Neutrality Bill

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the New York Herald Tribune of July 4, 1939:

[From the New York Herald Tribune of July 4, 1939]

RECONSIDERING THE NEUTRALITY BILL

It would be unfortunate if the impression were to get abroad that the vote in the House of Representatives on the neutrality bill last week was intended in any sense as an indication of America's policy in the present European crisis. Every well informed European statesman knows that the American people are as anxious as ever—or even more so—to see the United States kept out of another world war. What the House vote, in the final analysis, represented was in part a partisan revolt and, in part, an honest difference of opinion as to how best to keep the country out of war. A large number of Members of Congress earnestly believe that this can be done by establishing hard and fast rules in advance, freezing American diplomatic action into a sort of impotent paralysis. An equally large number of persons inside Congress and out feel that even such a comparatively mild restriction on Executive action as the modified arms embargo handicaps the State Department in its efforts to discourage the nations of the world from going to war.

In this second group, besides its leader, Secretary of State Cordell Hull, are such prominent Republicans as former Secretary of State Henry L. Stimson and Representative JAMES W. WADSWORTH, Jr. To the credit of Republican Representatives BRUCE BARTON, ROBERT W. KEAN, THOMAS R. BALL, W. S. COLE, M. J. MAAS, and F. STEARNS be it said that, like Mr. WADSWORTH, they voted against the mandatory embargo. Such men realize that in a crisis like the present it is particularly undesirable to bind the freedom of action of the Executive.

The more farsighted among those who support the administration's plea for an unrestricted hand—and Colonel Stimson made this amply plain when he testified before the Foreign Relations Committee of the Senate last April—realize that the most effective way to keep the United States out of war may well involve going beyond mere dogmatic interpretations of neutrality. It may not be necessary to go as far as the President and Colonel Stimson went and envisage what Mr. Roosevelt referred to as "measures short of war which are more effective than words," and what Mr. Stimson enlarged upon as the use of economic pressure, to realize that mere diplomatic action can be much more effective if it is not restricted by such binding handicaps as Congress seeks to impose on the President.

In particular it is important that misinterpretations do not arise, such as that the real purpose of restricting the President is to help or injure one or other group of potential belligerents. Here, again, it is to the long-range interests of the United States to enable the President and his Secretary of State to act freely. As Colonel Stimson pointed out, a situation may well arise when it is "in our own peremptory interest to distinguish between an aggressor and its victim," or in which it might be to our interest to enable an ill-prepared nation to purchase arms from us in order to defend its liberties after it had been aggressively attacked. But such eventualities cannot be foreseen by congressional resolution. They must be left to diplomatic discretion. This is why it is to be hoped that the Senate, when it reconsiders the neutrality bill, will take the long view—not the merely political view. As a Republican newspaper, we regret that in the House so many Republicans seemed to vote on the neutrality problem primarily with a view to embarrassing the President. The crisis is far too serious for such petty spitefulness.

Opening of the Cicero-Ogden Grade Separation in the Town of Cicero, Ill.

EXTENSION OF REMARKS

OF

HON. A. F. MACIEJEWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

ADDRESS BY HON. A. F. MACIEJEWSKI, OF ILLINOIS, JUNE 30, 1939

Mr. MACIEJEWSKI. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I insert a speech made by me at the dedicatory ceremonies attendant upon the opening of the Cicero-Ogden grade separation in the town of Cicero, State of Illinois, on June 30, 1939:

As far back as 1788 the builders of this great country foresaw the absolute necessity of an adequate highway system to serve the Nation. Evidence of this is substantiated by the work of the framers of the Constitution of the United States. Article I, section 8, clause 7, of the United States Constitution states: "The Congress shall have power to establish post offices and post roads." Referring further to the Constitution, we find in it the broad power of Congress to legislate on questions affecting interstate commerce. In a general sense, the exercise of these two powers granted to Congress, together with the exercise of the powers granted by the people of the State of Illinois to the State legislature, has resulted in the building of this magnificent superhighway grade crossing at no cost to the taxpayers of the town of Cicero and Cook County.

The cost of the building of this structure was borne almost entirely by the United States Government. During the third session of the Seventy-fifth Congress, namely, on June 16, 1938, H. R. 10238, Public, No. 644, was passed. This act provided for making appropriations for the Department of Agriculture and for the Farm Credit Administration for the fiscal year ending June 30, 1939, and for other purposes. The act included an appropriation for the Bureau of Public Roads—elimination of grade crossings. "For the elimination of hazards to life at railroad grade crossings, including the separation or protection of grades at crossings, the reconstruction of existing railroad grade-crossing structures, and the relocation of highways to eliminate grade crossings, $40,000,000, to be immediately available and to remain available until expended, which sum is the remainder of the $50,000,000 authorized to be appropriated for the fiscal year 1938 by section 8 of the act approved June 16, 1936 (49 Stat. 1521)."

In other words, this grade-crossing separation was built from funds provided by the Federal Government to the States. In this case, the Federal Government expended close to $700,000. To give due justice it must be stated that the State of Illinois, department of public works and buildings, division of highways, provided the necessary engineering.

It should be borne in mind that this was not a W. P. A. nor was it a P. W. A. project. Contracts were let to individual contractors who hired their own individual union labor.

We can all see what the money expended by the Federal Government plus the engineering supplied by the State has purchased at no cost to the taxpayers of Cicero. The figure is close to $600,000. Perhaps we can have a clearer picture of the fundamentals underlying such a magnificent and highly purposeful structure if we are permitted to quote a few figures relative to the making of this great coordinated mass of steel and stone.

In all there were seven individual contracts. They included the fabrication of the structural steel, erection of the structural steel, building of the substructure, paving of the ramps, laying of the concrete on the deck, painting, and lighting.

There was utilized in this connection 146,694 man-hours of labor. This means the continuous and steady employment of 66 men during an 8-hour day and 5-day week for a period of 14 months, or 60 weeks.

As to the amount of material used, there was 8,022 cubic yards of concrete, 16,559 barrels of cement, 1,223,960 pounds of reinforced steel, and 4,406,867 pounds of structural steel.

Work on this grade separation began on March 22, 1938, and was continuous throughout the winter, with no let-down except during extreme bad weather. As we all know, this dedication marks the completion of this project.

And now that the building and financing of this huge overpass has been explained, due regard to the unceasing efforts of the board of trustees of the town of Cicero should be given respect. It was primarily because of their deep regard for the safety of those using Cicero's public thoroughfares, and especially the Cicero-Ogden intersection, that this project has had its inception and ultimate completion. Long and arduous were the efforts of the town board to find some solution to the hazards of this intersection. After numerous conferences with the State and Government officials, the town board, and notable local citizenry, this tremendous structure was finally planned and executed.

Through the aid of the United States Government and of the State of Illinois, and at no cost to the taxpayers of the town of Cicero or the county of Cook, the Cicero-Ogden grade separation is now without a doubt Cicero's most valuable permanent public improvement.

What H. R. 6466 Proposed, and What It Did Not

EXTENSION OF REMARKS

OF

HON. FRANCIS H. CASE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

Mr. CASE of South Dakota. Mr. Speaker, recently I spent a few days in my State of South Dakota. I found considerable interest in all the legislation that is here being considered. Most of it is well understood, but there was considerable confusion over the terms of H. R. 6466, the so-called Townsend bill, which we voted on June 1.

SOUTH DAKOTA LEGISLATURE VOICES INTEREST

South Dakota's interest in an improved method of paying old-age pensions was manifest early this year when the State legislature adopted Senate Concurrent Resolution No. 7, calling for action on the General Welfare Act, H. R. 2. The resolution was introduced by the Honorable Marion Barrett, State senator for Meade and Perkins Counties. It was referred to the senate's committee on Federal relations, consisting of seven of the distinguished members of the State senate, most of them senators of long service. They were the Honorable Arthur S. Mitchell, of Brookings County; the Honorable C. A. Stensland, of Moody and Lake Counties; the Honorable L. M. Simons, of Butte and Harding Counties; the Honorable Carl H. Weir, of Beadle County; the Honorable Sioux K. Grigsby, of Minnehaha County; the Honorable E. E. Morford, who represents the large district of Jackson, Mellette, Washabaugh, Bennett, and Todd Counties; and the Honorable Kenneth Kellar, of Lawrence County.

The journal of the State senate reports that the resolution was introduced February 2, 1939, reported favorably by the committee February 10, adopted by the senate February 11 and by the house February 14. Copies were duly transmitted to you, Mr. Speaker, and to the Senators and Representatives in Congress.

ORIGINAL BILL WAS GREATLY MODIFIED

The confusion now over H. R. 6466, the bill we eventually voted on here, is not surprising. H. R. 2 was substantially identical with H. R. 4199 of the previous Congress, and thousands of copies of that bill were in circulation all over the country. H. R. 6466, a drastic revision, was introduced one day, reported the next, and voted on a week later under the most vicious form of gag rule that allowed only 4 hours of debate and no amendments. The country did not know and does not yet know what the actual terms of the bill were. Copies were not circulated and it is evident from the record that few Members of the House had actually read the bill.

It is to be regretted, Mr. Speaker, that the leadership of this House did not follow the request of my State legislature that opportunity be given for "full consideration and discussion."

NOT $200 A MONTH

H. R. 6466 does not provide for pensions of $200 a month. It did not propose a general transactions tax. It did not continue but repealed the old-age sections of the present Social Security Act.

The original Townsend bill was H. R. 2. It proposed a general 2-percent transactions tax. A modified bill was H. R. 11, that proposed a broad gross-income tax. Those and other bills were introduced early in the session. The Ways and Means Committee took over 3,000 pages of testimony on them, but decided only to report some amendments to the Social Security Act.

Those amendments proposed, in general, to increase benefits, extend them to more people, reduce tax schedules, and postpone payment of the bill. That was typical New Deal economics.

The Townsend people wanted a record vote on a pay-as-you-go bill. Word was circulated that the President would like to see a Townsend bill voted on to embarrass Republicans ahead of the vote on Social Security Act amendments. Thereupon the chairman of the Ways and Means Committee, Mr. DOUGHTON, agreed to report a modified Townsend bill without recommendation.

HISTORY OF THE GAG RULE

The gentleman from Florida [Mr. HENDRICKS], author of H. R. 2, and Dr. Townsend hurriedly drafted and introduced a bill, H. R. 6378. That was about May 20. Next day they asked the document room not to give out any more copies of H. R. 6378, redrafted it, and offered a new bill, H. R. 6466. That was May 23. Next morning the Ways and Means Committee, without hearings, reported H. R. 6466, as Members know, and the gentleman from North Carolina [Mr. DOUGHTON] went with the gentleman from Florida [Mr. HENDRICKS] to the Rules Committee to ask for a closed rule—4 hours of debate and no amendments.

Rules, after two sessions, postponed action indefinitely, and the chairman of the Committee on Rules [Mr. SABATH], Chicago Democrat, went home to take part in a city election. The gentleman from Illinois, LEO ALLEN, Republican, went home for the same purpose. Next morning under orders rumored from the White House the Rules Committee held a rump meeting, put the bill on the calendar for the day following Memorial Day under a gag rule.

Under the circumstances, many Members never read the bill. Many of them came from States without sales taxes and opposed it on that ground. Farm leaders who front for New Deal policies gave out an analysis that was partly an analysis of H. R. 11 or H. R. 6378 rather than H. R. 6466. Pro and con, the debate went far afield.

ONE-HALF-PERCENT TAX ON CASH SALES, NOT ACCOUNTS

H. R. 6466 did not propose a general transaction tax; it proposed a sales tax of one-half percent on producing, manufacturing, and selling, and a 2-percent tax on other income, chiefly employment. A great many people are under the mistaken impression that H. R. 6466 proposed to levy a 2-percent tax on retail sales. That is not correct. The tax for all forms of selling was one-half of 1 percent. Paragraph (d) of section 3 said a levy of "one-half of one per centum" of the gross revenue of persons "in the business of selling any tangible property whatsoever."

In addition, this tax would have been only on moneys actually received. Paragraph (1) of section 2 specifically provided for making returns on actual cash returns instead of book accounts.

H. R. 6466 did not provide pensions of $200 a month. It provided for annuities of whatever the tax would bring, less costs. Estimates ranged from $17 to $51. Most estimates were from $30 to $40. The gentleman from New York, JOHN TABER, ranking Republican in the Appropriations Committee, made the $17 estimate; Dr. Townsend the $51.

H. R. 6466 did not confine annuities to those who could prove poverty, but proposed to extend them to all who had paid taxes to create them. Neither did it keep out farmers and professional people that social-security's annuity plan does; H. R. 6466 recognized that they pay taxes, too.

REPEALED THREE TITLES SOCIAL SECURITY ACT

H. R. 6466 specifically repealed titles I, II, and VIII of the present Social Security Act.

Title I is old-age assistance with its companions of State taxes—in South Dakota the sales tax—to finance State matching and Federal taxes—which we pay, too—to provide funds for Federal matching.

Title II is the old-age annuity section of the present act, which excludes farmers, most professional people, and other classes, although all classes will pay taxes to pay 3 percent interest to make wage taxes grow into the annuity payments promised those included.

Title VIII is the present wage-tax section, under which employers now pay one-half percent and employees one-half percent on pay rolls, and which increases January 1 to 1 percent on each, and thereafter increases to a total of 6 percent unless existing schedules are revised.

Title VIII is also the part of the present act which requires these wage taxes to be "invested" in Government securities paying 3 percent interest, even though the Government can borrow money cheaper on the open market, and which eventually ties up $47,000,000,000 in 3 percent obligations.

These three titles, I, II, and VIII, of the present Social Security Act were specifically repealed in H. R. 6466, the so-called Townsend bill.

NO PROVING OF PROVERTY OR POLITICS

In place of this double system, old-age assistance to those who prove poverty and proper politics, old-age annuities some day to those favored classes who are required to loan a portion of their wages to finance today's spending, H. R. 6466 proceeded on an economic principle given some standing by the late Ogden L. Mills, a fairly brilliant and respectable one-time Republican Secretary of the Treasury.

H. R. 6466 proposed a pay-as-you-go plan of annuities by a direct and widely distributed tax on all classes of population. It proposed doing away with a fictitious reserve system. It recognized that by a general tax everyone would automatically purchase his annuity and make it unnecessary to continue the monstrous record system under which already 44,000,000 employee records have been established in Baltimore to keep track of every numbered employee from now on, every wage paid him, every pay day, every change in pay, every absence from work, every change in employment, all necessary to pay the correct annuity under the present system if future Congresses find the money.

H. R. 6466 was not perfectly drawn. The administration leaders never intended that it should be. They insisted on a gag rule that would not even permit obvious clerical errors in section reference numbers to be corrected.

A BETTER DEAL FOR SOUTH DAKOTA

So the bill had faults, major and minor, but it was distinctly a proposal to substitute a pay-as-you-go system for the unequal, complicated monstrosity with hidden taxes involved in the present system.

As nearly as could be told from the limited consideration that could be given, it would have cost South Dakota less than the present system and returned more to more people.

The Arms Embargo

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

EDITORIAL FROM THE NEW YORK TIMES

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the New York Times of July 2, 1939:

[From the New York Times of July 2, 1939]

THE ARMS EMBARGO

Several considerations help to explain the defeat in the House of Representatives, by a narrow margin, of the proposal to repeal the present absolute and automatic embargo on the export of arms and munitions to belligerents in time of war. In the first place, Congress was in a mood of revolt against anything and everything that the administration wanted, and repeal of the embargo was part of the administration's program. In the second place, there was evidence of genuine concern in the House lest the export of American munitions, even on a cash-and-carry basis, involve this country in any European war that may now be in the making.

Opposition on this second ground was undoubtedly sincere, but, in our judgment, seriously mistaken. Experience has shown (on two great occasions in our history) the difficulty of keeping any important country out of a general war, once such a war has broken out. The best hope of keeping the United States at peace does not lie in attempting to isolate it from the consequences of a world catastrophe; it lies rather in a foreign policy which will make such a catastrophe less likely.

Notice to potential aggressors that American arms and munitions will be available to their opponents, fighting a war of self-defense, would throw the influence of the United States where it ought to be, for our own safety as well as for our self-respect—on the side of peace and of international law and order. It is to be hoped that despite its defeat in the House, the administration will continue to press for repeal of the arms embargo in the Senate, and that it will succeed, before the present session ends, in persuading the House itself to reconsider its decision.

At this critical moment in the world's affairs, American policy ought not to offer a tacit invitation to aggressors.

Woolens and Paper Makers' Felts

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

LETTER FROM APPLETON WOOLEN MILLS

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Appleton Woolen Mills, of Appleton, Wis.:

APPLETON, WIS., *June 27, 1939.*

Hon. JOSHUA L. JOHNS,
House of Representatives, Washington, D. C.

DEAR SIR: We have received statistics to the effect that during January and February 1939, importation of wool piece goods had increased 83 percent.

We were not very much alarmed by these figures. We thought most likely goods had been piling up in the customhouse awaiting withdrawal when the reciprocal treaty with Britain should go into effect.

Further statistics, however, indicate that there is a real cause for apprehension. For example, the imports of such fabrics from the United Kingdom during May show an increase of 353 percent as compared with the same month a year ago. The increase in shipments of woolens in which we are interested as distinguished from worsteds was 407 percent. The increase of woolens and worsteds combined for the first 5 months of this year over last year is 121 percent.

Please remember that 4,368,000 square yards of woolen piece goods were shipped from the United Kingdom alone and does not include shipments from other countries which obtain the same reductions in duty. At the present moment Italy and Japan are busy with their own markets but because of the further reduced labor cost in these two countries the competition will be ruinous.

The State Department had expected that there would be some slight imports in the fine cloths, but actually imports indicate that goods are coming in all along the various-priced brackets and coming in in increasing quantities.

It is commendable that we increase our business of those industries which are slow, but it does not seem fair to increase such business at the terrific price which the woolen industry is paying.

In spite of the fact that experience indicates that the State Department was not justified in its action in the British Trade Treaty, as refers to wool textiles, it is reported that further assaults on our tariff rate are being made in reopening the agreement with France, Belgium, Netherlands, Switzerland, Sweden, and Finland in order to make further reductions.

Yours very truly,

APPLETON WOOLEN MILLS.
A. H. WICKESBERG.

P. S. Some of these 4,000,000 square yards of wool-piece goods would look very attractive in the form of orders to some of us who are either running very slow or closed down.

A. W. M.

How Long Can We Be Fooled and Misled?

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

ARTICLE FROM AMERASIA

Mr. ALEXANDER. Mr. Speaker, in the July issue of the magazine Amerasia is an illuminating article entitled "The United States Continues to Arm Japan." I hope everyone interested in the preservation of peace and of the principles of government laid down in the Constitution of this Republic will take time to study the amazing facts this article contains. I ask unanimous consent to insert same herewith.

Read especially the paragraphs entitled "Democracies Supply Shipping Facilities to Japan, Too." After reading the story of our aid to this international law-breaking aggressor nation, ask yourself the question: In view of all the facts and circumstances pointed out therein, in view of a similar situation now in Europe, and in view of the fact that the records and history of the World War indicate the same trafficking in war supplies and war materials on both sides of the line in aid of the enemy and in utter disregard of human life and the principles of justice and decency, in view of these facts. I say, is it not necessary for us to probe deeper for the answer to war than most of us have yet done? Is it not necessary to discount and to deny the efficacy and practical value of all the cures and panaceas we are now applying in the name of peace?

Unless we do this and grasp and apply the needed cure it will soon be too late and we will be involved in the international disaster which impends.

Our forefathers fortified their villages and armed themselves because of the ever-present menace of the savages. Their very existence, they knew, depended on their ability to withstand the enemy who would destroy them.

WAKE UP, AMERICA

We of today face no less a peril than that which confronted our forefathers; for regard for international law and morality, which has been our chief protection these many years, has vanished, and the law of the jungle, that only the fittest have the right to survive on this earth, has been proclaimed. Like our forebears, we of today must gird ourselves, mentally and physically, to resist the enemy that would destroy us, but we must broaden our horizons, because the attack today is no longer local. It is not from the surrounding forests and woods as in the days of our forebears. It is from the air, the sea, and from far-distant points. For that reason a new sort of cure must be applied. Wake up, Americans.

Although mistaken as they are in their lust for power, we should recognize Hitler and Mussolini for what they are—two of the greatest leaders the world has ever known, in the same sense that Napoleon, Caesar, Tamerlane, and Genghis Khan were great leaders. And also we should recognize the Japanese menace and leadership for what it is. Here is the article to which I refer:

[From Amerasia]

THE UNITED STATES CONTINUES TO ARM JAPAN

One of the deep mysteries of American foreign policy is the divergence between public opinion and congressional action. For the past several months both Houses of Congress have been deliberating on the revision of our existing neutrality legislation. Through all these deliberations it is very difficult to observe any vital relation between the desires of the American people and the speeches of many of the most vocal of our leading Senators and Congressmen. The Sino-Japanese war provides perhaps the best illustration of this contradiction within our democracy. During 2 full years of warfare waged by Japan upon Chinese soil, Japan's aims have become clear. Can there longer be doubt in anyone's mind that the Japanese military machine plans not only to conquer China and other sections of the Far East but also to make these areas the private and exclusive stamping ground of Japanese industry?

In response to what has become so clear a motive, our administration has repeatedly sent notes of protest to Tokyo. These notes in the main come to about the same conclusion; namely, that we do not intend to recognize acts by the Japanese which are carried out by military force against the will of the Chinese Government. And yet during these 2 full years of war we have continued to send strategic war materials to the very country to which we send so many notes. When, a year ago, it was definitely proved that the United States in 1937 supplied 54.54 percent of all strategic war materials imported by Japan, the American people were surprised and shocked. The White House and Congress took cognizance of these figures, and yet a year later we find that for 1938 this percentage increased to 56 percent. In fact, as Japan's economy is being strained more and more by the unexpected duration of the war, it is the United States which, in a very real sense, serves as her chief prop. It is therefore entirely pertinent to ask of Congress what it has in mind when it deliberates on legislation concerning foreign affairs.

The Gallup poll of June 16 last concludes that "American public sympathy for China in her war against Japan has increased sharply in the past year and a half. Today an overwhelming majority of the voters favor a boycott of Japanese goods and an embargo on the shipment of American war materials to Japan." Whereas in September 1937, 2 percent of the people interviewed favored Japan, 47 percent favored China, and 51 percent favored neither side, today 2 percent still favor Japan, 74 percent now definitely favor China, and only 24 percent are neutral. Today 66 percent favor joining a movement in this country to boycott Japanese goods, as compared with 37 percent in October 1937, and 72 percent are in favor of forbidding the shipment of arms and ammunition from this country to Japan. It is this positive reaction on the part of the American people which makes congressional neutrality deliberations today so inexplicable. But even more inexplicable is our continued and increased arming of Japan.

Japan's chief weakness in her present war of conquest is her lack of foreign assets, foreign exchange and extensive foreign credits. In an effort to continue to wage war successfully she has been forced to initiate a strict import control system so as to conserve her dwindling resources and thus be able to pay for war materials with the credits derived from her export trade. A very revealing table, prepared by Miriam Farley, appeared in the Far Eastern Survey (vol. VIII, No. 11, p. 124):

Japan—Imports of selected wartime and peacetime materials

[In million yen]

	1936	1937	1938
Wartime materials:			
Ores and metals [1]	375	901	662
Oils, other [2]	184	280	320
Machinery [3]	92	159	236
Automobiles, etc. [4]	44	58	62
Total	695	1,398	1,280
Percent of total imports	25	37	48
Peacetime materials:			
Raw cotton	850	850	436
Other vegetable fibers [5]	37	41	27
Wool	201	298	94
Rubber	73	99	51
Wood pulp	67	117	42
Wood	56	65	28
Total	1,284	1,470	678
Percent of total imports	46	39	25

[1] Ores and semimanufactures, including scrap iron.
[2] Including most petroleum products.
[3] Industrial machinery, not including radios, scientific instruments, etc.
[4] Category including several articles no longer separately listed, of which in 1936 the chief item was automobiles and parts; also firearms and steam vessels.
[5] Manila hemp, jute, ramie, etc.

As Japan becomes more deeply involved in her war of conquest, she is progressively increasing her purchases of wartime materials and reducing her purchases of peacetime goods. It is not unreasonable to expect that if the war continues for another 2 years, Japan's purchases from the United States will be almost exclusively war materials. An examination of the above table shows that only the purchase of raw cotton (which we arbitrarily continue to call a peacetime commodity despite its extensive use in the manufacture of explosives) prevents the realization of this result. A combination of continued import restrictions with the extensive development of cotton growing in the occupied areas of China may be expected to reduce our cotton exports to Japan to the vanishing point.

Of chief importance to the American people, however, is not so much that Japan is increasing her purchases of war materials at the sacrifice of peacetime goods, but that we as a Nation are selling her the major portion of the former. A study made by T. Y. Hu, entitled "Sale of War Materials by the United States to Japan, January–November 1938," special bulletin, the Chinese Council for Economic Research (Washington, D. C.), proves that

for the year 1937 the United States supplied Japan with 54.54 percent of her strategic war materials exclusive of cotton. A similar report by the same writer just issued under the same auspices reaches the astounding conclusion that in 1938 this percentage was increased to 56 percent.

United States share in world exports to Japan essential for war purposes, 1938

Commodity	World exports		United States share	
	Value	Percent	Value	Percent
Total	$306,393,950	100.00	$171,574,167	56.00
Petroleum and products	81,034,885	26.45	53,135,672	65.57
Metal-working machinery	36,448,527	11.90	24,454,707	67.09
Scrap or old iron and steel	24,407,089	7.97	22,061,212	90.39
Copper	24,385,546	7.96	22,163,779	90.89
Aircraft and parts	22,692,655	7.41	17,454,477	76.92
Other iron and steel semimanufactures	20,973,343	6.84	11,251,804	53.65
Automobiles, parts and accessories	18,635,299	6.08	12,050,536	64.67

In 1938 Japan imported $306,000,000 worth of materials essential for war purposes from 27 countries and colonial possessions. This represents a decrease of 3.4 percent from the $317,000,000 worth imported in 1937. World exports of all merchandise to Japan declined by 30.43 percent in 1938—27 percent more than the drop in the value of war-material sales. If we consider peacetime materials alone, the drop is even more striking. Cotton and wool perhaps illustrate this point best as these two commodities are largely used for nonmilitary purposes. Cotton imports declined by 49.28 percent and wool imports by 68.73 percent.

For purposes of simplification the above table is limited to the seven leading commodities out of a possible list of 25. These seven accounted for 74.61 percent of all Japan's war-material imports. Of the seven, oil and aircraft and parts showed increases over 1937, while the other five showed decreases. Oil sales were 18 percent greater while sales of aircraft and parts rose from $2,484,000 in 1937 to $17,454,000 in 1938—an increase of 603 percent. But for the purposes of this study it is not important whether a particular commodity increased or decreased in sales. Such changes may occur for a dozen different reasons. The important fact for the American people is the very large percentage of essential war materials which the United States is supplying to a nation which is openly intent upon destroying our interests in an important section of the world.

An interesting sidelight appears when we consider the question of rubber. In view of the fact that we have just concluded what might be termed "an emergency barter agreement" with England for the exchange of our cotton for her rubber, involving the sum of approximately $30,000,000, the following table showing sales of scrap rubber to Japan is very enlightening:

United States scrap-rubber shipments to Japan

	Pounds
1938:	
November	2,821,843
December	2,866,596
1939:	
January	3,126,381
February	4,313,893
March	4,753,823
April	5,076,412

NOTE.—United States Commerce Department officials, noting Japan was falling back on the use of scrap rubber, attributed the situation to increasing foreign-exchange stringency. Scrap rubber sells for about 1⅓ cents per pound, while crude rubber costs about 16 cents per pound.

It would almost seem that whenever Japan is embarrassed, she can turn successfully to the United States for help. Shipments of scrap rubber increased from 4,524 long tons in 1937 to 7,426 long tons in 1938. The above table indicates that a further substantial increase is likely in 1939.

The recent crisis in China centering around Japan's effort to capture control of all foreign concessions, with the excitement high lighted by the Tientsin incident, draws attention to the fact that, though the United States is the chief supplier of strategic war materials to Japan, the four democratic groups as a unit practically control the economic life of Japan. The United States and the British, French, and Dutch Empires, each with very vital interests in the Far East, provide Japan with more than 85 percent of her essential war supplies, while the axis group—comprising Germany and Italy as well as Austria and Czechoslovakia—supplied Japan with only 8.64 percent of such materials in 1938. It seems almost incredible that the democratic powers are consciously arming a nation which has made a pact with the Rome-Berlin axis for the destruction of their economic security.

In addition to T. Y. Hu's study, there appeared on June 15 a Foreign Policy Association report by T. A. Bisson, entitled "Japan's Economic Outlook," which contained the following table. This table differs from that compiled by Mr. Hu only in that it includes only American exports to Japan proper and excludes Manchuria and Shanghai:

Analysis of United States exports to Japan

[In thousands of dollars]

	1937	1938	Total
Petroleum, motor fuels, and oils	42,075	49,490	91,565
Iron, steel, and tinplate scrap	39,386	22,035	61,421
Copper	19,212	22,146	41,358
Metal-working machinery	11,904	23,614	35,518
Iron, steel, and tin semimanufactures	23,003	6,523	29,526
Automobiles and parts	13,581	10,142	23,723
Pig iron	9,672	4,886	14,558
Aircraft and parts	2,484	11,069	13,553
Hides and skins	2,691	2,652	5,343
Ferroalloys	1,366	2,332	3,698
Lead	754	2,100	2,854
Internal-combustion engines	434	413	847
Aluminum	280	476	756
Leather	703	45	748
Other metals and alloys	95	320	415
Nickel	219	157	376
Arms and ammunition	49	100	149
Zinc	54	27	81
Total	167,962	158,527	326,489
War materials	167,962	158,527	326,489
Raw cotton	61,724	52,644	114,368
Other exports	58,872	28,404	87,276
Total exports	288,558	239,575	528,133

Mr. Bisson's conclusion from the above table is as follows: "The statistics for American exports to Japan during 1937–38 are a commentary on the importance of the United States market to Japan's war machine. With a few exceptions, such as rubber, the table represents a comprehensive list of the strategic materials which Japan must obtain abroad. At least four of these commodities, high-test motor fuel, automobiles, machinery, and scrap metals, cannot be secured, either in similar type or quantity, outside of the American market. The total amount, as well as the percentage, taken by strategic materials is extraordinarily impressive. In 1937–38, out of $528,000,000 of American exports to Japan, $326,000,000, or 61.2 percent, were essential materials of war. The volume of these commodities, owing to certain price declines, probably increased in 1938; their value declined but little; and their percentage of the total markedly increased. In 1937, the percentage taken by war materials was 58.8; in 1938 it advanced to 66.3. Within the year Japan had reduced its 'nonessential' imports from the United States by more than half, and its imports of raw cotton by nearly 15 percent. In this table, moreover, raw cotton is not classified as a war import, although it is essential to Japan's textile industry and has a partial war usage. The value of American petroleum and petroleum products sold to Japan in 1937–38 nearly equaled that of raw cotton. Finished munitions are a negligible item on the list."

DEMOCRACIES SUPPLY SHIPPING FACILITIES TO JAPAN, TOO

An interesting addition to the study of how the democratic powers are helping to arm Japan has been made by Kurt Bloch in an article appearing in the July issue of Asia entitled "How Japan Feels the Strain." Dr. Bloch points out for the first time the fact that one of the chief obstacles in the way of Japan's military maneuvers in China is her lack of sufficient shipping tonnage; that all of the crucial battles of the past 2 years were forced to remain incomplete due to this shortage. For the offensive against Hankow and Canton in December 1938 no less than 1,750,000 tons of shipping facilities were employed. Of this, 900,000 tons had to be chartered from foreign countries, chiefly from the sea-faring nations of northern Europe. Of this 900,000 tons, the British supplied 466,000, the Norwegians 302,000, from which fact Dr. Bloch concludes "that more than half of the shipping space needed by Japan for her successful attacks on Hankow and Canton was supplied by Europe, no less than one-fourth by the British. (Incidentally it seems remarkable that neither German nor Italian shipowners participated in this business.) Thus the war supplies shipped by American businessmen to Japan are rivaled in importance by the tonnage put—indirectly—at Japan's disposal for the capture of Hankow and Canton by British shipowners."

In the light of all the above facts and figures, and in the light of the most recent Gallup poll, it seems incredible that Congress does not respond to the will of the American people by refusing to continue to be a partner in Japan's war of plunder. In all of the current discussions in Congress on the question of neutrality, there is not one word about a resolution introduced on April 27, whereby the President would have the power, with the consent of Congress, to place an embargo against Japan on the grounds that she had violated the nine-power treaty. Also, very little is heard of a bill introduced on March 29, which clearly and unmistakably calls for an embargo against Japan on such commodities as scrap iron, finished munitions, metals, oils, machinery, and any other commodity which might be converted for military purposes.

The most recent bill introduced on this subject would authorize the President to withhold from export all materials except agricultural products which there is reason to believe will be used to violate the sovereignty of any nation whose "sovereignty, independence, or territorial and administrative integrity," the United States is obligated by treaty to respect. It is high time that

Congress should take the interest of the American people as the only consideration and enact legislation which would once and for all put an end to our anomalous position as a partner in a war which seeks to destory our own interests.

There are some individuals in this country who believe that Japan is destroying herself and will ultimately be so weak that she will accept peace on any terms. Their argument, therefore, is "not to become excited or hasty, for after all, profits are profits. Let us wait another year or two until Japan is helpless." But this type of reasoning is very deceptive because totalitarian nations, by callous regimenting of their own people, have shown their ability to last a lot longer than was generally believed possible. It is by no means improbable that Japan may force her people to an increased tightening of their collective belt for a period of several years. In the meantime, China and other parts of the Far East may be so wantonly destroyed by American-made munitions that when the time comes for the so-called peace of exhaustion, the world will be faced with the problem of rehabilitating a devastated Far East at a cost thousands of times greater than the puny profits which a handful of people now make out of our war-materials trade with Japan.

The Neutrality Bill

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

EDITORIAL FROM THE WASHINGTON SUNDAY STAR OF JULY 2, 1939

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the Sunday Star, Washington, D. C., on July 2, 1939:

[From the Washington Sunday Star of July 2, 1939]

THE REAL LOSERS

The administration's neutrality bill, designed to discourage the outbreak of a major war and to keep this Nation at peace if, in spite of its provisions, other countries should take up arms, was shorn of its essential safeguards and all but hopelessly wrecked in the course of its passage through the House. Already, in some quarters, this action is being hailed as a defeat for the President, and so it is. But Mr. Roosevelt is not the only loser. If the bill be finally adopted in its present form it will serve at best as only a feeble deterrent to war in Europe—if it would not actually encourage war—and, if that conflict should come, there is very little in the measure to shield America from involvement. In those circumstances the President's defeat is the public's defeat, and in the long run it is the men and women of the United States, and not Mr. Roosevelt, who will suffer the greater loss.

As the bill came out of the House it carried a modified embargo, which forbids exportation of "arms and ammunition" to warring nations. The administration had sought the elimination of the even broader embargo in the existing law and the substitution of a cash-and-carry provision, under which foreign nations at war could acquire American supplies and munitions by paying cash for them and transporting them in their own vessels. That was frankly intended to discourage the already well-armed dictator nations from launching a war of conquest because of the knowledge that this country's material resources would be at the disposal of the French and the British, through their control of the seas, if they should be attacked. The President and his advisers believed—and there was sound basis for the belief—that such a statute might prevent war by persuading the German and Italian leaders that the democracies, fortified with American supplies, would emerge victorious in the end.

But if the House bill becomes law Hitler and Mussolini will know, if they contemplate further aggression, that their chances of success will be brighter, for they are abundantly supplied with arms and ammunition, while the potential victims of their attack are not. The British and French, it is true, might buy other supplies in this country, but on the basis of the experience of the last war they will sorely need cannon and shells as well.

With these facts in mind, it is difficult to understand how the House majority could have failed to recognize that it was making war more probable. Representative FISH, a leader of the coalition that opposed the President, told the House that "the world is on the verge of war." It can only be concluded that mankind is a little closer to the brink of that awful catastrophe as a result of Friday night's vote.

Nor does the House action in any way assure that America will not be drawn into the war, if and when it comes. In fact, the contrary is true. Under the administration bill American shipping would have been kept out of war zones and thereby protected from the danger of being sunk by belligerents. Under the bill as approved by the House our vessels, loaded with military supplies other than arms and ammunition, may enter European waters, and if they do it is certain that some of them will be sunk, and American lives will be lost. To understand what that means, it is only necessary to read the story of the months preceding our entry into the World War.

The House bill, with its effort to make a distinction between a machine gun, which may not be sold to a belligerent, and a bombing plane, which presumably might be sold, is ridiculous on its face. It is exceedingly doubtful whether it should be permitted to become law. And if it is rejected in the Senate or vetoed by the President, the alternatives are not encouraging. An effort might be made to induce the Senate to approve the administration's measure, but such a move would seem doomed to certain failure. The only other choice is to let the present law, with its comprehensive embargo, stand.

If that is the final result, those who have opposed the President's program will have achieved their victory. And if that victory should prove to be the deciding factor in favor of war as against peace, civilization as we know it will have sustained a defeat from which it may never recover.

Forward America!

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

ADDRESS BY HON. JOSEPH W. MARTIN, JR., OF MASSACHUSETTS, BEFORE A REPUBLICAN RALLY IN SPRINGFIELD, MO., ON JULY 1, 1939

Mr. SHORT. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Hon. JOSEPH W. MARTIN, Jr., of Massachusetts, before a Republican rally in Springfield, Mo., July 1, 1939:

It is a real pleasure to come to Missouri tonight to participate in this great gathering of patriotic men and women.

You are assembled for the purpose of honoring a group of legislators who have fought courageously for clean, honest, and efficient government. In honoring these faithful public servants you are at the same time dedicating your energies and best efforts to the greater tests of patriotism that are ahead.

NATION IN DANGER

The United States of America, which has given so much happiness and comfort to its people, is in grave danger.

The stability of its financial and economic structure is threatened, and the moral character of its people is under pressure.

The great need of the hour is for all patriotic Americans to forget old prejudices and join in the crusade of 1940 to battle for clean politics and to restore honesty and sanity in government.

TRIBUTE TO DEWEY SHORT

Missouri is justly proud of her many notable contributions to the building of America. And she can well be proud in these last few years—when representative government has been at a low ebb, when the American system of free enterprise and free institutions have been imperiled, when individual initiative and individual opportunity have almost banished—proud that during all these trying times one of the great Americans who materially aided in keeping alive our cherished American system was your own Congressman DEWEY SHORT.

DEWEY in the years he has been in Congress has won a high reputation among his associates and throughout the country. A brilliant, two-fisted debater, he has fearlessly and intelligently battled for the causes he knew would contribute to the prosperity and progress of the people. He had the courage to take this position when it was unpopular, and wait for time and experience to justify his good judgment. He is one of our really great Congressmen, and I am happy to have the privilege of so stating before his own neighbors and fellow countrymen.

We are confident 1940 will bring a Republican House to Washington, and in that House we must have DEWEY SHORT. We will need the benefit of his wide experience and sound judgment, so we can give to the American people a real constructive and progressive program.

MORE THAN 10,000,000 UNEMPLOYED

There is much work to be accomplished in Washington. Only sound policies and wise administration of the public business can put this mighty Nation back on the track to prosperity.

Despite billions and billions in public spending during the last 6 years, we still have more than 10,000,000 unemployed. That is the great challenge before this Nation today. No economic system can survive nor can any scheme of Government maintain itself

indefinitely with 10,000,000 men and women walking the streets seeking jobs in vain.

We have been told often during the last 7 years that huge Government deficits would bring recovery. We have been told that we might spend our way to prosperity. But the bitter fruits of this Brain Trust dream are now before us—a public debt exceeding $40,000,000,000; billions upon billions of idle capital piled up in our banks awaiting an opportunity of profitable investment; 10,000,000 unemployed; farm prices at ruinous levels; our export markets for farm products dwindled almost to the vanishing point; and our rich markets at home flooded with an ever-increasing tide of cheap imports from the low cost countries overseas.

NEW DEAL RETARDS BUSINESS

We are far from the accustomed level of real American prosperity, only because this New Deal crowd in Washington have refused to embrace common-sense American policies. As a result the entire Nation is drifting gradually to a constantly lower standard of living.

The time has come to reverse this tragic trend of events. We have the resources. We have the manpower. We have the technical skill. We have the plant and machinery. We have right in our hands every essential ingredient of solid and sustained prosperity. We have need today of only one missing link—we need a common-sense government in Washington which will encourage the initiative of our people, and give assurances that our American system of private enterprise and balanced constitutional government will not be undermined.

That is the great promise held out by the 1940 crusade for Americanism.

RECKLESS SPENDING FAILS

Certainly, these 6 years have demonstrated one thing clearly—that the essence of new dealism is extravagant spending of the people's wealth and substance.

We are told that such reckless spending contributes to economic recovery. But the facts now available explode that theory to smithereens.

Let us look at the figures for a minute. A recent official survey of business conditions by the economic section of the League of Nations, shows that the United States ranks seventeenth in the list of nations today, as measured by actual recovery toward the 1929 level of industrial production.

Think of it—seventeenth among all the nations of the world in point of recovery over the last 10 years!

Last year, 1938, our total industrial production was only 73 percent of the 1929 volume; but England, where there has been no crazy spending program, showed a recovery up to 115 percent of her 1929 industrial production; Poland, 117 percent; Norway, 127 percent; Denmark, 135 percent; Sweden, 146 percent.

How can all these less-powerful nations outstrip the manpower and resources of this mighty land in climbing back the steep trail to prosperity? The answer is easy to find in Washington; these other nations have not had their resources and manpower hobbled by hit-or-miss government experimentation and by a top-heavy snooping bureaucracy. They have not tried constantly to go both ways at the same time.

SPOILS AND CORRUPTION

Every bit of evidence before us today indicates that our people are eager for a real business boom. Once the shackles of new dealism are removed—once the spirit of enterprise and courage are restored, once the Government passes into an era of sound policies to revive popular confidence—then we shall begin a period of prosperity unmatched before in our long history.

Only the people themselves can demand and enforce an era of economy and tax reduction. Only the people can demand an end of the cruel political spoilsmanship which has dominated and corrupted both relief and civil administration throughout the entire Federal establishment during the last 6 years.

Several days ago in Washington I gave public endorsement to a bill introduced in the Senate by a Democrat—the Hatch bill. Why did I publicly endorse a Democratic measure? Simply because I regard it as a sound bill, which merits the support of every right-thinking individual.

The Hatch bill imposes mandatory criminal penalties upon all W. P. A. supervisors and foremen who try to coerce or intimidate relief workers. It also would impose criminal penalties upon political activities by civil-service employees, and by all Federal workers generally.

Today this bill is being opposed in committee by every power of the New Dealers. Why? Because it would drive the political racketeers out of the work-relief system, and because it would clean up the rotten scheme of political spoils which has turned our Federal Government into a gigantic machine for New Deal propaganda and electioneering.

That is not what the American people are paying taxes for. They do not want their Government to be concerned chiefly with purges and elections. They want their Government to confine itself to administering the public business—wisely, soundly, efficiently, and economically. Whenever government diverts a dollar of the taxpayers' money from the essential functions of administration to purely political purposes, it betrays the people, betrays the Constitution, betrays the honor and dignity of the whole theory of orderly representative government. Here is a type of moral corruption which the American people have instinctively resisted at every opportunity since enactment of the first civil-service law 55 years ago.

That is why I am pledged publicly to support the Hatch bill. It is an issue far above the narrow concerns of mere partisanship. It is an issue of patriotism, which touches the very heart of our fine American ideal of honest and faithful public service.

Every citizen, regardless of party, can rally behind such a crusade to clean house in Washington. Help us drive out the political racketeers.

INCREASING FARM IMPORTS

You folks in this part of the country raise a lot of cattle and ship a lot of pork. Perhaps you have been wondering why livestock brings an average of less than 7 cents a pound on the farm.

Well, I have been wondering the same thing—and I have got some figures from the Department of Agriculture which give me the answer.

The answer is simply this—the United States during recent years has been importing livestock and dressed meats at the rate of over 1,000,000 pounds a day.

That seems hard to belive, doesn't it? It was difficult for me to believe my own eyes when I read the official figures, as published this month by the Department of Agriculture.

But there are the facts—our imports of meats and livestock under the so-called reciprocal trade program of the new dealers have averaged a little more than 32,000,000 pounds per month during the last 4 years. This is at the rate of 12 pounds of meat a year for every family in the United States—more than a pound a month for each family.

If that makes sense, then I say that DEWEY SHORT is the King of Siam.

Seriously, why should these United States, the richest meat-producing country in the world, import more than 1,000,000 pounds of meat every day of the year? Since 1935, when the so-called reciprocal trade treaties became effective, we have imported an average of 387,500,000 pounds of beef and pork every year.

Such a policy places our American farmers in competition with the peasants of Europe and the peons of Mexico and South America. It means a constantly lower standard of living for every farm home in America, for it applies not only to meat but dairy products, potatoes, fruits, and vegetables, and many other farm products.

Worse, imagine how many acres of American land could have been employed profitably had these imported meats been produced at home. Does it make sense to spend billions of dollars to reduce American farm acreage while at the same time taking increased farm imports from all the low-cost nations of Europe, South America, and the Orient?

The prosperity of the American farmer is to be found in the rich American market. The first step to agricultural recovery is to protect that home market. We must get away from the wrecking free-trade theories of the reciprocal-trade program and give the American farmer an American price. We must stop this flood of cheap farm imports from abroad.

MORE SPENDING MAGIC

I have yet to find a man or woman in the United States—and I have traveled from coast to coast during the last 2 years—I have yet to find a man or woman who honestly believes the Nation can regain prosperity simply by deficits.

Since 1933 the New Deal has spent more than $47,000,000,000 and has loaned an additional $15,000,000,000. Yet these $62,000,000,000 have not absorbed our 10,000,000 unemployed. They have not produced prosperity. They have not brought any real American progress. All the essential problems of real recovery remain to be solved. And now we approach them with a national debt in excess of $40,000,000,000, instead of the $20,000,000,000 of national debt we carried when the New Deal began its fabulous magic in 1933.

But even in the face of this record they want to start playing that record all over again. Ten days ago the White House sent up to the Capitol another disguised spending scheme—this time for $3,860,000,000. It is another pump-priming scheme. It is supposed to do all the things that all the previous pump-priming schemes failed to accomplish. Well, the truth is, it is only a scheme to prime 1940 elections.

The new dealers are in a panic. They know they must have recovery and reemployment if they are to continue in power. In desperation, they have decided to try all their past mistakes over again.

They know very well they are running up a crushing burden of debt. They know they are playing with the fire of a cataclysmic inflation. But panic knows no obligation to mere taxpayers. The new dealers must have recovery at all costs. Spending other people's money is the only program they know. It has not succeeded in the last 7 years, and the country knows it will not succeed this time.

QUOTES ROOSEVELT ON DEFICITS

We all know that this program is very dangerous, for it bears directly upon the Government's credit. Hear what Mr. Roosevelt himself had to say on this subject in a campaign speech right here in Missouri in 1932. Speaking at St. Louis on October 21 he said, referring to Government bonds:

"They suffer only to the extent that government is permitted to be extravagant, wasteful, or ill-managed. They suffer if the Federal Budget is not balanced, and particularly where the deficit of one year is not cleared up in the succeeding year."

And at another point in that same campaign speech at St. Louis Mr. Roosevelt had this to say about economy. Again I quote the President:

"It is my pledge and promise that this dangerous kind of financing shall be stopped and that rigid governmental economy shall be forced by a stern and unremitting administration policy of living within our income."

So now we see the promise and the performance all in one piece; and I think it a fair question to ask whether an administration which has shown such contempt for its solemn public pledges ever can be worthy of the confidence of the Nation?

KEEP OUT OF WAR

One other vital policy of this administration is retarding recovery—the foreign policy which threatens to involve the United States in the bitter diplomatic feuds of Europe and the Orient.

This country has had its lesson in fighting other people's wars.

Our people are determined to keep out of it.

The whole history of representative government is a story of progress under the ways of peace. Free governments, by their very nature, are geared to the constructive pursuits of peace. War demoralizes representative government and invites dictatorship.

America has no imperial designs. Our security is not based upon piratical dreams of territorial expansion. The free heart of America despises dictatorship.

War involving this country would mean dictatorship almost overnight.

We must avoid military alliances which might again take American soldiers to foreign battlefields.

The road to peace begins at the gateway of neutrality. The New Deal is preparing to take sides, but I do not believe the American people will sanction any policy of involvement overseas. We Republicans take our stand for real neutrality, and for peace.

Several months ago we published in Washington a 12-point recovery program. The first plank was—

"Keep the United States out of war!"

That 12-point program, and in particular this strong pledge against military alliances with foreign powers, has commanded almost unanimous support among our people.

The preservation of peace is the real social-security program of the hour.

SOUTH AMERICAN LOANS

Now, I want to tell you something more about this new Roosevelt plan for spending and lending another $4,000,000,000—the so-called self-liquidating scheme, which we are told will not cost the taxpayers a penny.

You have all noted that one provision in this program calls for new loans totaling $500,000,000 to foreign nations. It is intended that these loans shall be made principally to Latin-American countries.

Has Mr. Roosevelt forgotten that today no less than 14 nations of Latin America are in default on their loans from American investors?

Nothing has been done by this administration to collect even the interest on the $11,000,000,000 of war debts owing us from Europe. Happily the Johnson Act forbids new Government loans to these defaulting powers.

But the defaults in Latin America are on private bond issues. Now Mr. Roosevelt proposes to lend them more money; this time, Government money—$500,000,000 of it guaranteed by the taxpayers of the United States.

Brazil, for example, has $357,000,000 worth of bonds outstanding in this country—and every penny of them is in default as regards both principal and interest.

Mexico has $273,000,000 worth of dollar bonds outstanding, and every penny of them is in default as regards both principal and interest.

Chile has $216,000,000 worth of dollar bonds outstanding, and every penny of them is in default on both principal and interest.

So the story runs, through Bolivia, Colombia, Costa Rica, Cuba, the Dominican Republic, Ecuador, Guatemala, Panama, Peru, Salvador, and Uruguay.

How many of you folks in this audience would like to chip in tonight for a jack pot to promote recovery in 14 Latin American countries before our own 10,000,000 unemployed get back to work?

That's the proposal Mr. Roosevelt has presented to Congress—to take funds raised through Government guaranteed bonds and loan them to 14 nations already in default on their previous American private loans.

How many American taxpayers want to underwrite such new loans by placing an unconditional first mortgage against all their property holdings, all their chattels, and all their future income—if any?

I measure my words when I say this is a preposterous proposal.

And yet, we are informed, that the White House is "turning on the heat" to lash this monstrosity through the House and Senate before adjournment.

I contend the American people will not tolerate such un-American policies.

And I contend that Congress, with 168 fighting Republicans in the House cooperating with the real Democrats, will never submit to such economic folly.

Let us remember the Republican pledge given last January, "the rubber stamp days are gone forever."

If the plan of the administration is simply to scatter public funds to the four winds, let us at least have the sense to scatter at home rather than in the jungles of the Amazon and the highlands of the Andes.

If this new program be charity, let it follow the Biblical injunction that charity should begin at home.

If it is intended to be business, let it follow the mandates of common sense, integrity, and a proper attitude of official responsibility in the management of public affairs.

SEVEN FRUITLESS YEARS

Here, in brief outline, are a few of the constructive and progressive principles which have been defended by the Republicans in Congress during this long interval of New Deal hysteria.

Seven years of political panaceas and economic nostrums have carried us to the brink of national bankruptcy. They have deprived our young men and young women of their richest birthright—an equal chance to get a job. They have strangled the spirit of business and enterprise almost to the point of despair.

And now, after 7 fruitless years, the New Deal comes forward to tell us there is no cure but more spending, more debts, and more deficits.

We Republicans emphatically reject this sterile defeatism. We do not believe that we must always have 8,000,000 or 10,000,000 unemployed in this country. We do not believe that America has reached the end of the road. We do not believe that American youth must forever take a job in the woods at a dollar a day. We do not believe that our unemployed face no better future than a subsistence job in the W. P. A.

Such beliefs do not reflect the sturdy spirit which steadily pushed back the wilderness from the Atlantic to the Pacific, until a whole mighty continent was occupied by industrious and happy people. Where is the spirit that made these United States of America the richest and mightiest empire the world has ever known?

NEW DEAL DEFEATISM

Fellow citizens, I plead with you to repudiate this demoralizing New Deal philisophy of futility. The ingenuity and skill of our people hardly have tapped the wealth and resources of this continent.

This Nation is in depression today, not because we lack the vision of progress, not because we lack the courage of enterprise, but only because the spirit of our people is hobbled and hog-tied by devitalizing bureaucratic restraints. Nothing can be more fatal to business than excessive meddling on the part of Government. Hordes of Federal bureaucrats swooping down on business like a swarm of locusts can quickly destroy incentive and be the means of depriving men and women of jobs. We are a Nation in the chains of uncertainty and confusion.

From this wilderness our vision is forward.

We look forward to the day when the eyes of youth shall glow once more with the light of hope, adventure, enterprise, and a fair chance.

We look forward to the time when American farmers and wage-earners may do more than work for the tax collector.

We look forward to the day when the job-maker and the job-giver rightfully will be regarded once more as honorable and respected citizens in a revived scheme of economic abundance.

We look forward to the day when our national income easily may reach $100,000,000,000 a year, as against the $64,000,000,000 distributed last year under New Dealism.

Our first task is to restore the vigorous, hopeful, and forward-looking spirit of our people—to help them from the dead-center of New Deal defeatism.

Recovery will begin as soon as all Americans may again face the future with full confidence in the security and stability of constitutional government, and in the safety of our bountiful American system of private enterprise. But confidence never can be restored to a harrassed and worried business by words alone. If we are to have that confidence essential to recovery, actions must square with appeasement promises.

THE ROAD TO RECOVERY

We can, if we will, realize the glorious destiny of this Nation.

But every patriot must join the crusade.

Let us banish selfishness, secure in the knowledge that all will share in the blessings of order and in the solid prosperity which must follow a revival of real Americanism.

This crusade to save America transcends mere partisanship. The sensible, sound-thinking, true-blue Americans are an overwhelming majority in this country. In the fight for peace, progress, and prosperity they must not allow themselves to be divided by an honored party name which recently has come to be a shield for hateful alien "isms" imported from abroad.

As you join this crusade, sound the battle cry of our revitalized and determined Americanism. Let these Ozarks ring with the glad tidings of hope—"Forward to Forty."

But our vision is never to be accomplished by brain-trust theories and administrative brainstorms. It may be accomplished only by practical measures, by wise policies, by firm loyalties to the fundamental traditions of this Republic, and by a decent respect for the lessons of history.

Thus guided, patriotism cannot fail.

Our motto must be, "Let's put America back to work."

Then our slogan will sweep America to a brighter day—"Out of the red to recovery."

Forward, America!

Neutrality

EXTENSION OF REMARKS
OF
HON. PETE JARMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 5, 1939

EDITORIAL FROM THE WASHINGTON POST OF JULY 5, 1939

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the Washington Post of July 5, 1939:

[From the Washington Post of July 5, 1939]

THE "GO" SIGN

The neutrality bill as passed by the House last week is some improvement over the existing measure. In particular, it modifies the present mandatory embargo on the shipment to belligerents of "arms, ammunition, and implements of war." The ban, in the event of outbreak of war, would be applicable only to what are vaguely described as "lethal weapons." Airplanes, for all their death-dealing qualities, could seemingly be exported.

Airplanes are an implement of war of which the British and French would stand in great need, should they let themselves be forced into hostilities by further aggression on the part of the Berlin-Rome axis. Assuming continued control of the seas by the democratic allies, they would, under the House bill, be able to supplement their own air resources. And removal of the ban on airplane shipments seems the more impressive because Great Britain and France are in a position to meet most of their needs for arms and ammunition.

Nevertheless the administration's failure to get the entire embargo removed has aroused enthusiasm in Italy and Germany; gloom in France and Great Britain. The dictatorships regard the House action as a friendly gesture from the United States. The democracies feel that it is directed against them. And regardless of how blameless and patriotic the motives in Congress, both camps in Europe are correct in these assumptions.

The failure to remove all trace of mandatory embargo from the neutrality legislation is clearly advantageous to the Berlin-Rome alliance. It continues the revision of international law in the interests of Hitler and Mussolini and, at a most critical period, it gives tacit encouragement to these dictators to proceed with their expansionist plan. The tragedy is that here in America there is so little realization of the unneutral nature of this so-called neutrality.

Soviet Russia, whether or not intentionally, has already given much aid and comfort to Hitler by its curious reluctance to join the antiaggression bloc which Great Britain and France have sponsored. But the Congress of the United States is dealing these two democracies a far more serious blow. For all that the Anglo-French alliance wants of this country is restoration of that right to purchase arms which has always automatically accompanied the possession of sea power. And it is that right which is now pointedly curtailed for Great Britain and France.

With Russian support withheld and the United States, in effect, favoring the axis, it seems dubious that the British and French will risk hostilities over a Nazi seizure of Danzig, or over whatever other coup may come next on Hitler's calendar.

The possibility that planes might be forthcoming from this country is not enough encouragement for London and Paris to take the awful risk of war. Of course, there will be no admission from London or Paris to that effect. But Hitler needs no formal admission. He is quite shrewd enough to judge for himself as to the combined effect of Russian and of American policy on Anglo-French morale.

Ironically enough, it may therefore happen that the House action, plus the strength of isolationist sentiment in the Senate, will help to avert immediate war. But the bitterness lies in the expectation that this would again be purchasing peace by surrender, at the cost of further acquisitions in aggression. Nor will any rational person suppose that the scheduled seizure of Danzig, whether unresisted or accompanied by the destruction of Poland, would be the end of the democratic retreat.

Both in Russia and in the United States there was much criticism of the Munich settlement, which paved the way for the destruction of Czechoslovakia. But Russia and the United States, in their separate ways, are now paving the way for another Munich. And for this forthcoming Munich which is threatened the responsibility would be readily defined.

If the United States actually decides to give aggression the all-clear signal, it will not be the fault of the administration. Both the President and Secretary Hull have done all they can to make clear that the future of civilization depends very largely on the direction in which the present Congress throws the tremendous weight of the United States.

In spite of these efforts, the great influence of America is, on the whole, still being directed to encourage the spread of aggression. That this should be the case is a major tragedy of history, and one with much ultimate bearing on our own security.

Mining Measures Passed or Proposed

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 5, 1939

Mr. MURDOCK of Arizona. Mr. Speaker, legislative action at Washington during the last few weeks has been of great concern to metallic mining in this country. I am taking this means of pointing out my own connection with this legislation, or attempts at legislation, a little more fully perhaps than has been done otherwise. The particular bills referred to deal with dollar devaluation, the purchasing price of silver, strategic war minerals, moratorium on mining-claim assessment work, extension of time for assessment work, extending R. F. C. mining loans, and liberalizing S. E. C. regulations on mining investments.

On April 21 the House passed the dollar-devaluation bill, extending the President's power for 2 more years. Eastern opposition fought it fiercely but we got the bill through the House. In addition to the effects upon our monetary system and foreign trade policy, it assured a price of gold at $35 an ounce, and a price for silver of at least 64 cents an ounce. This measure was brought before the Senate late last month when a strange thing occurred. Republicans and certain western Democratic Senators voted down the President's power over the gold dollar, voted out the purchase of foreign silver, and fixed the price of American silver at 77 cents an ounce. This disagreement went to conference about June 29.

Naturally I urged the House conferees, before they went into conference, to save the President's power and to save silver, and I was highly pleased with the conference report brought back to the House the next day. The conferees agreed to continue the President's power over the dollar, to permit the Secretary of the Treasury to continue the purchase of foreign silver, and to fix the price of domestic silver at 71 cents. I should say that there had been no disagreement about the stabilization fund. The opposition Senators filibustered on this matter until after midnight June 30. On July 5 the Senate accepted the conference report, just as the House had accepted it on June 30.

BUY AMERICAN ACT APPLIED

For a long time western Congressmen have determined and worked for development of strategic war minerals in this country. We know that manganese and tungsten, in unlimited supplies, are to be found in several States. When the Faddis bill was passed some weeks ago, the gentleman from Nevada [Mr. SCRUGHAM], and I, aided by other westerners, wrote into the bill a "Buy American" provision which was as favorable to home production as we could possibly make it. Of course, in this matter we were up against an immediate emergency need for such material, also up against the Army officers' contention that it would take years to bring American mines into production, even if we did have the ore, and also up against the steel corporations' desire to get cheap manganese from abroad.

The provisions, looking toward American development of manganese and the other strategic minerals were fairly satisfactory in the face of all these circumstances. However, westerners must not get the idea that $100,000,000 is going to be spent at once by the Government in developing manganese and tungsten deposits, no matter how rich they

may be, in our Western States. The money has to be appropriated, as the bill was only an authorization.

MORATORIUM BILL HAD NO CHANCE

I worked with some other western Congressmen in May and June of 1937 to extend a moratorium on mining-claim-assessment work for the year ending July 1, 1937, and it was done. On June 16, 1938, I got through the House a bill, which had already passed the Senate, extending the moratorium for the year ending July 1, 1938. Many mining men told me that the granting of an annual moratorium should stop, as it was hurting mining development to continue it. I was also told a few weeks ago there was no chance of passing another such bill this session. For these reasons I did not introduce any moratorium bill this session, although after Congressman O'CONNOR's bill was definitely blocked, I was urged to introduce a compromise moratorium bill, the text of which was furnished me by small-mine operators in Arizona. Again I was told that that bill could not be passed this session and I did nothing further with it except to discuss it with my committee.

Failing to get this relief measure through, and feeling that an injustice would be done some bona fide claim holders, who had made their locations years before any moratorium was granted, and who had spent much time and money on such claims, and were unable, from lack of time or money to get work started—to say nothing about completing it by July 1—I introduced a bill to extend a short period of grace as the next best thing I could do for hard-pressed claim holders.

EXTENSION OF TIME CRITICIZED

Some criticism has come out of the West for this extension of time; therefore, it needs a little explanation of our purpose as well as what was done. Having been named chairman of a subcommittee of the House Committee on Mines and Mining to see what we might do for mining in general, I consulted with my committee members two easterners, the gentleman from Florida [Mr. PETERSON], and the gentleman from Ohio [Mr. LEWIS], and we three approved several things, one of which was a slight extension of time in which assessment work might either be started or completed. It seemed, too, that a moratorium which had been extended every year for 7 years—although it had to stop sometime—should not be stopped too suddenly, even though repeated warning and notice had been given holders of unpatented claims. Then, too, there was some uncertainty as to whether work had to be begun or completed by July 1.

On Friday, June 23, a meeting of western Congressmen directed me to introduce a bill extending the time for assessment work at least 60 days. In preparing the bill I made it 90 days, with the expectation that if it got through the Senate at all it would probably be cut down some. The gentleman from Utah, ABE MURDOCK, who was fully as much interested in this measure as I was myself, did quick work in getting it through the House. In the Senate the bill was amended and cut down to 60 days, and again the Murdock partnership rushed it through the House, accepting the Senate amendment, followed it all the way to the White House, and burned up telephone wires on June 30 urging the President to sign it. The president signed this bill a few minutes before midnight June 30.

So, for good or ill, claim holders may begin their assessment work for the year beginning July 1, 1938, at any time prior to September 1, 1939, provided they carry the work properly to completion. We Congressmen who favored this short extension of time have not worked for the interests of one group as against another group, but we have been actuated solely by a desire to help distressed claim holders preserve their property rights and interests as against claim jumpers and others who have less rights and interests in such mining claims.

Personally, I feel that the moratorium had to come to an end, because we want mineral lands opened up by those who will develop claims, and we want as much employment as possible furnished on assessment work and development. Claim holders know now that they cannot have another moratorium; therefore, the work must be done even though the time of beginning has been put off 60 days. Those who seek employment in doing assessment work should, therefore, get their employment exactly the same as if no moratorium and no extension of time had been granted.

OTHER EFFORTS FOR MINING

The Yavapai Council of Small Mine Operators at Prescott, Ariz., has been active in promoting legislation to aid the industry. I have introduced two bills along the line of their suggestions. One of these bills would extend the power of the Reconstruction Finance Corporation to make loans for mineral development, other than gold, silver, or tin, and especially of the strategic minerals. The R. F. C. has been asked to report on this bill but declined to do so on the ground that it was a matter of policy which was at the discretion of Congress. It seems that the R. F. C., however, although it may be lukewarm, is not really hostile to the proposal. If we could get this bill enacted, it would help some, without doubt, but, of course, very much would depend upon how such a bill would be administered.

Mining is a very speculative industry. Hard-headed businessmen and bankers hesitate to put money into mining. The Securities and Exchange Commission's regulations are very strict; therefore, the small-mine operators call for a Mines' Finance Commission charged with handling investments of that sort, and providing Government funds to aid mining. Since my bill, H. R. 6131, has been introduced the S. E. C. has taken a step, though only a step in this direction, by creating a division for mines within its own organization.

Bills almost identical to H. R. 6131 have been introduced by the gentleman from Nevada [Mr. SCRUGHAM] and the gentleman from California [Mr. THOMAS F. FORD]. These bills are now before the Banking and Currency Committee. The gentleman from California [Mr. THOMAS F. FORD], being a member of that committee, is likely to get a hearing on them in the near future. I have, of course, no pride of authorship in this case, since the proposed legislation was drafted at Prescott, but I am naturally very anxious for committee hearings on such an all-important matter, and hope for favorable action in the near future. However, I must warn the enthusiastic supporters of this legislative move that it takes time to get any action on so significant and far reaching a proposal, and much educational groundwork needs to be done.

Presidential Candidacy

EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

LETTER OF HON. HAMILTON FISH, OF NEW YORK, IN REPLY TO HON. CARL G. BACHMANN, URGING HIM TO BECOME A CANDIDATE FOR PRESIDENT ON THE REPUBLICAN TICKET

Mr. SCHIFFLER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include a letter from Hon. HAMILTON FISH, of New York, to Hon. Carl G. Bachmann, of Wheeling, W. Va., in reply to his letter urging Mr. FISH to become a candidate for President:

HOUSE OF REPRESENTATIVES,
Washington, D. C., July 1, 1939.

Hon. CARL G. BACHMANN,
Wheeling, W. Va.

DEAR CARL: Your letter, urging me to be a candidate for President on the Republican ticket, is deeply appreciated.

During the past 6 months I have received numerous letters from various sections of the country making the same suggestion and offering support from leading members of our party and from the rank and file who constitute the real voting power. In addition a number of Jeffersonian and constitutional Democrats, with whose views I am generally in accord, have written expressing similar sentiments.

While there is no objection to my friends expressing their views and presenting my qualifications, I determined at the beginning of this session of Congress to hold the matter in abeyance until after adjournment.

Furthermore, in view of the fact that I was elected president of the American group of the Interparliamentary Union, composed of Senators and Representatives, which holds its annual conference at Oslo, Norway, on August 15–19, I believe you will agree with my decision to wait until my return in September before making any definite commitment.

Your confidence and that of your friends in me is far above my deserts. I have been and am still anxious to support any sound, liberal Republican candidate who can unite the conservatives of the East and the liberals of the West against the radicalism, collectivism, and internationalism of the New Deal. There can be no compromise on these issues.

With kind regards and best wishes, I am,

Sincerely yours,

HAMILTON FISH.

Shall We Send Our Youth to War?

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 5, 1939

ARTICLE BY HON. HERBERT HOOVER

Mr. CHIPERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the August 1939 issue of the American Magazine by Hon. Herbert Hoover:

SHALL WE SEND OUR YOUTH TO WAR?

(By Herbert Hoover)

We have urgent need today to recall the realities of modern war. And we have desperate need to take into our national thinking the gigantic yet invisible forces behind war which are again moving in Europe.

I am perhaps one of the few living Americans who had full opportunity to see intimately the moving tragedy of the World War from its beginnings down through the long years which have not yet ended. I saw it not only in its visible ghastliness, but I lived with the invisible forces which moved in its causes and its consequences. I am perhaps justified in recalling that experience.

Before the war I knew Europe—Russia, Germany, France, Italy, and England—fairly intimately, not as a tourist but as a part of their workaday life.

I was drafted in 1914 to preserve the lives of 10,000,000 people in Belgium and northern France who had been overrun by the German armies.

When America joined in the war I was asked by President Wilson to return to America to become a member of our American War Council and to administer the food supplies of our country and for our allies.

At the armistice I was drafted back to Europe to direct activities of the Allied and Associated Governments to defeat unparalleled famine and pestilence, to restore economic life among both the victors and the vanquished.

I did not participate in making the peace. I was daily called upon for advice and information. And I observed its disastrous course. Subsequently, during a period of 8 years in Cabinet position, I dealt with the troubled seas of unceasing political and economic storms the world over.

As President I dealt unceasingly to bring about reduction of arms, economic readjustment, and peace.

A year ago I spent some months in Europe with unique opportunity to discuss its problems with leaders in 14 nations.

That is 20 years of opportunity to observe European peoples and their leaders, with all the forces of good and evil in which they live, and to relate them to our American scene.

Ten million men died or were maimed for life in that war. There were millions who died unknown and unmarked. Yet there are miles of unending crosses in a thousand cemeteries. The great monument to the dead at Ypres carries the names of 150,000 Englishmen who died on but a small segment of the front. Theirs was an inspiring heroism for all time. But how much greater a world it would be today if that heroism and that character could have lived.

In another even more dreadful sense I saw inhuman policies of war. That was the determination on both sides to bring subjection by starvation. The food blockade by the Allied Governments on the one side, and the ruthless submarine warfare by the Central Powers on the other, had this as its major purpose. Both sides professed that it was not their purpose to starve women and children. But it is an idiot who thinks soldiers ever starve. It was women and children who died of starvation. It was they who died of the disease which came from short food supplies, not in hundreds of thousands, but in millions.

And after the armistice came famine and pestilence, in which millions perished and other millions grew up stunted in mind and body. That is war. Let us not forget.

We were actually at the front in this war for only a few months, but it cost us the lives of 130,000 men. It has placed 470,000 persons on the national pension list already. It has cost us 40 billions of dollars. And that represents more than just dollars. Today we have a quarter to a third of the American people below a decent standard of living. If that 40 billions of wealth had remained in America, these people would not be in this plight. A large segment of our people have already been impoverished for a quarter of a century. And the end is not yet.

We may need to go to war again. But that war should be on this hemisphere alone and in the defense of our firesides or our honor. For that alone should we pay the price.

The endless books tell us how the Great War originated. They do not agree. But some salient facts do stand out that are pertinent today. It began by a quarrel between three dictators—the Czar of Russia and the Emperors of Germany and Austria. They were competing for "power." France, a democracy, was dragged in because, out of fear of the dictators of Germany and Austria, she, a democracy, had made a military alliance with the Czar. The British democracy was drawn in partly out of idealism to defend liberty, but also partly to save its trade and its possessions from too great a concentration of "power" on the Continent. We finally joined in the war wholly out of idealism.

What is happening today? Europe is suffering repeated earthquake shocks from the fault of the Treaty of Versailles.
